HERE is the latest automobile story: A physician started a model insane asylum and set apart one ward especially for crazy motorists and chauffeurs. Taking a friend thru the building, he pointed out with particular pride the automobile ward and called attention to its elegant furnishings and equipment.

"But," said the friend, "the place is empty; I don't see any patients."

"Oh, they are all under the cots fixing the slats," explained the physician.—*New York Sun*.

AN advanced young woman who rejoiced in the possession of academic degrees attacked a clergyman distinguished for his deep reading, with the evident intention of proving to him that science has destroyed the myths of religion—a controversy which appealed to him not at all. "Madame," he said finally, "I once knew a member of your sex who perfectly reconciled science and religion. She is a prominent member of the Young Women's Christian Association, and she was making an address to a large gathering of women which was interrupted by a terrific thunder shower. She shared with many the awful fear of thunder and lightning, and with the others she trembled in silence for a few moments. When a blinding flash was swiftly followed by a frightful clap of thunder, she struggled to her feet and began to pray: 'O Lord, take us under Thy protecting wings, for Thou knowest that feathers are non-conductors.'"—*The Electrical Age*.

## Report of the Insurance Committee

LIKE the investigation upon which its conclusions are based, the Armstrong Insurance Committee's report must be regarded as a model for all who may hereafter be engaged in similar tasks. The inquiry was conducted with impartiality, calmness and courage. It was marked by no attempt to give sensational emphasis to the discoveries that were made. We do not say that it was exhaustive, for additional facts of considerable interest might have been shown if it had been prolonged; but within the limits which conditions imposed it was quite comprehensive. The results of it have been carefully and dispassionately set forth in the report, and with them are recommendations of great importance, which, if carried into legislation, will be of enduring service to the public.

The reforms suggested are designed chiefly to withdraw the business of life insurance, as it has been conducted by the greatest of American companies, from the control of millionaire speculators and greedy executive officers, and to confine it within its legitimate limits; to prohibit technical methods which have served the interests of unworthy managers rather than those of the policy-holder; to prevent the use of policy-holders' money for the corrupt purchase or prevention of legislation; and to give policy-holders that influence in the management of mutual companies which it is their right to exercise. The recommendations of the long report are so many that we can only make brief reference to those which are most prominent. All these, it should be said, are embodied in bills carefully drawn by the committee and now pending at Albany.

Elaborate provisions are made for enabling policy-holders to take part in the election of the controlling officers of mutual companies, and it is urged that stock companies should be mutualized, but not by compulsory process. If these provisions shall be enacted, the policy-holders of our great companies in New

York will have lists of all policy-holders at their disposal, will be able in small or large groups to make nominations, and will not be excluded by proxies effective for long periods. It is proposed that all existing boards shall be legislated out of office on November 15th next. This gives ample time for preparation. Proxies now in existence—many of them recently collected in campaigns for control—are to be cancelled. It will be within the power of policy-holders to govern the companies to which their premiums are paid, and their exercise of this power will be facilitated in many ways.

Great surpluses have attracted financiers and speculators, who planned to use the money, and did use it, in their projects. These surpluses were due in large measure to the use of the "deferred dividend" method. The use of policies with provision for deferred dividends is to be forbidden. All new business must provide for an annual distribution. There must be no non-participating policies, no prizes or bonuses to agents. Commissions must be uniform, and those upon renewals are limited in amount and term. The wild competitive race for new business is discouraged by restricting to \$150,000,000 the amount of such business to be taken by any one of the great companies in a year. The reception of a rebate, as well as the giving of one, is to be a misdemeanor. Standard policies are to be prescribed and they are to be of only four kinds—ordinary life, limited payment life, endowment, and term. These are the leading reforms of a technical character.

Companies are forbidden to invest in the stock of corporations (municipal stock excepted) or in collateral trust bonds secured to the extent of more than one-third of their value by stock. Such shares or bonds now owned must be sold within five years, and the great companies hold between \$200,000,000 and \$300,000,000 of them. In this way they are required to give up the control of subsidiary trust companies and banks, whose connection with them has been an evil of considerable magnitude. Participation in

syndicate transactions is prohibited, and no officer or director is permitted to be interested in any purchase, sale or loan made by his company. Salaries are not restricted, but it is provided that all exceeding \$5,000 must be fixed by the full board of directors. It is to be a misdemeanor for any officer to make, or help to make, a campaign contribution out of his company's funds, and the laws defining forgery are to be made more specific in order that they may clearly provide punishment for those who make misleading entries in the books. A long list of requirements for the annual statements seems to omit nothing of a statistical character that could throw light upon any expenditure as to which the severest critic could desire information.

There must be publicity, also, concerning all legislative expenses. The names of legislative agents must be filed with the Secretary of State, with a statement as to the work for which they are engaged, and the companies must submit itemized and explanatory accounts of all moneys paid for such work. The committee thoroly discusses the evils to which these provisions relate and has sought diligently to suppress them. It is recommended that the law which prevents a policy-holder from suing a company without the Attorney-General's consent should be repealed. A Supreme Court Justice recently characterized this as an "infamous" statute. Superintendent Hendricks is sharply censured. He had power enough, the committee says, but failed to use it, and made no effort in his official examinations to detect the abuses now revealed by the investigation.

We have pointed out in this brief summary what the committee and its very competent counsel, Mr. Hughes and Mr. McKeen, ask the Legislature of New York to do. The bills have been introduced, and they should be passed. Doubtless, they may need some amendment, but in essence they are clearly in the public interest and they should become laws. The need of all this legislation is emphasized by what has taken place in one of the three great companies within the last few days. Mr. Stuyvesant Fish resigned from an investigating committee appointed by the directors, and then from the board itself, be-

cause information which the committee sought was withheld by the new president. His very commendable attitude was offensive to powerful financial interests that are understood to be supporting the present management, and it is commonly believed that those interests have now set out to punish him by deposing him from the office of president of the Illinois Central Railroad Company, which he has held for many years. This insurance company, the Mutual Life, could and should be controlled by its policyholders. It ought not to be under the domination of any group of capitalists identified with great industrial and railway combinations.

Something has already been accomplished by the Armstrong committee's exposure of abuses, but this incident plainly shows how much remains to be done. Not until the recommendations of the committee's remarkable report are embodied in laws will it be possible to free these great fiduciary institutions from the harmful influences that have made the mismanagement of them a scandal thruout the world.

## The Quick and the Dead

ARE the alert elements in American society ignoble and unclean, and are the clean and noble elements as dead as Egyptian mummies? This question is raised in Jack London's remarkable paper, "What Life Means to Me," in the current issue of *The Cosmopolitan*.

Whatever may be thought of Mr. London's social theories, there can be but one opinion of his powers of observation and his mastery of English style. There is nothing dead about his literary art. Its spell holds thousands who hate and fear his "views." They find their hate and fear put out of mind for half an hour by the fascination of his story of what life means to a man who, still in his youth, has known it on every side, and has brought to its interpretation the insight of genius. We have had many ambitious studies of American life, from De Toqueville to Münsterberg, but not one of them has penetrated so deeply into the heart of it as does this frank self-revelation of an American gifted

with the divine fire, who has intensely lived it.

Born on a California ranch to a life of hard work and sordidness, London became in turn a newsboy, an oyster pirate, a sailor before the mast, a man of all work, an electrician, and a professional tramp. He had tried to climb the ladder from the working class into what he had imagined was the nobility and beauty of the social life higher up. He had lost his footing and been thrown down, and revolting at the grinding exploitation of his manual labor by those who bought it, he had sunk to a level lower than that at which he began, to the cellar, the pit, the abyss, that underlies our civilization. Then he reflected that brain might be worked longer and better to advantage than muscle. He plunged eagerly into the pursuit of knowledge, and found himself in touch with those that he regarded as the true intellectuals, the leaders of idealism and reforms, the unfrocked preachers, who could no longer lead the herds of mammon worshippers, the broken professors, driven from their university chairs by influential patrons of learning, and the class-conscious workingman. Among these men of the social attic he made, he would have us believe, his first discoveries of unselfishness and self-sacrificing heroism.

But all at once he found himself a success. With enough and to spare of this world's goods, he could come and go as he pleased, and his presence was as eagerly sought at "functions" as were his wares in the mart of the publishers. He was now living on the parlor floor of the social edifice, as once he had lived in the cellar, and afterward in the attic. But he found it not what he had dreamed. The ladies were beautiful and gentle, but materialistic, and not ready to see a change made in the social system that would deprive them of anything which they enjoyed. The men were typified by two classes; one, business men, alive but ignoble and unclean; the other, university professors, editors and preachers, noble and clean, but dead, passionlessly living up to "that decadent university ideal, 'the passionless pursuit of passionless intelligence.'"

Mr. London discovered that he did not

like to live on the parlor floor of society. Intellectually it bored him, morally and spiritually it sickened him.

"I remembered my intellectuals and idealists, my unfrocked preachers, broken professors, and clean-minded, class-conscious workingmen. I remembered my days and nights of sunshine and starshine, where life was all a wild, sweet wonder, a spiritual paradise of unselfish adventure and ethical romance. And I saw before me, ever blazing and burning, the Holy Grail. So I went back to the working class, in which I had been born and where I belonged. I care no longer to climb. The imposing edifice of society above my head holds no delights for me. It is the foundation of the edifice that interests me. There I am content to labor, crowbar in hand, shoulder to shoulder with intellectuals, idealists, and class-conscious workingmen, getting a solid pry now and again, and setting the whole edifice rocking."

When they have toppled it over, "along with all its rotten life and unburied dead, its monstrous selfishness and sodden materialism," they will cleanse the cellar and build a new habitation for mankind, where there shall be no parlor floor and all the rooms shall be bright, and the air that is breathed shall be clean, noble and alive.

As we read this revelation of a man's soul, and look upon the reflection of our American life as he seemed to see it, we are reminded of that portrayal of an earlier materialistic society which has come down to us in a queer little old book—not as well known nowadays as it ought to be—called the Gospel according to St. Matthew. It shows us a sordid Roman world, in which the ruling and business classes, as in America, were intensely alive, but ignoble and unclean, and the professional class of Pharisees was learned in the law, but was passionless in its pursuit of a passionless knowledge. There, too, as here, "was a great, hopeless mass, neither noble nor alive, but merely clean. It did not sin positively or deliberately, but it did sin passively and ignorantly by acquiescing in the current immorality and profiting thereby." And there, as now, was a little group of idealists, of unfrocked preachers and reformers, who preferred to abandon the parlor floor of society and give their lives to the cause of the common people.

The men that constituted that little band did not amount to much—if we may take their own word for it—in their

own day and generation. They had a hard time, and many of them paid with their lives for what their "betters" called their crowbar work on the foundations of the social edifice. But, somehow, their example was contagious. Thruout the centuries their number multiplied, and, as we look back now upon their work we can see some things that may help us to estimate the probabilities of success and failure for the enterprise in which Mr. London declares himself engaged. They did not altogether overthrow society, and they did not completely rebuild the edifice. But they did, to some extent, clean its cellars, and they did make a good many of its rooms more bright and airy than they were before.

The ignoble that are alive and the noble that are dead we shall perhaps always have with us; but, on the whole, the number of those that are both noble and alive will increase. And, on the whole, the structure of society will become cleaner and brighter, and sweeter to live in, as the years go on.

## An Appeal From Georgia

WHITE Georgia may well listen to the appeal of black Georgia. And yet black Georgia is not all black; we know one or more of the signers of this protest by the Georgia Equal Rights Association that are as white, to the eye, as is Hoke Smith himself.

This appeal, or protest, is extraordinarily well written. Among the signatures, representing two hundred delegates from the eleven Congressional districts of the State, are those of Bishop Turner, Hon. J. W. Lyons, W. J. White, D. D., Prof. W. E. Burghardt DuBois, and other leading colored men. The document has the intensity and passion of style of Professor DuBois, of Atlanta University. It is full of facts which ought to bring shame to the rulers of that State. We give some of them, which show the inferior privileges allowed a struggling race. At to education, we are told:

"We are still ignorant, partly by our own fault in not striving more doggedly after knowledge, but chiefly because of the wretched educational opportunities given us in this State.

The white and black school populations are nearly equal, and yet out of every dollar of the State school money 80 cents go to the white child and 20 cents to the negro child; each white child receives \$5.92 a year, while the negro child receives \$2.27; white teachers receive over a million dollars a year and negro teachers less than three hundred thousand. Less than half our children have school facilities furnished them and not a cent is given by the State to the higher training of negro teachers and professional men. Of more than \$1,000,000 given by the United States Government for agricultural training, we, who are pre-eminently the farmers of the State, have received only \$264,000; and the fund is at present being divided at the rate of \$34,000 to the whites and \$8,000 to the negroes."

That such an unwillingness exists to educate the citizens who most need it would be incredible if it were not true. It is evident that Georgia does not wish her negro children educated. The \$8,000 for an agricultural college is allowed only because the Federal law requires it; the Federal grants by previous legislation are all absorbed for the white education. It is a disgraceful condition.

What is said of the convict system opens one of the disgraces of the State. This is so well understood in Georgia that just now the fact of his relation to the convict leases is destroying the political and social ambitions of a prominent public man there, and has entered into a bitter newspaper fight threatening a duel. Says this address:

"Colored men are punished in this State without intelligent discrimination: old and young, thug and mischief maker, and often men and women, are herded together after unfair trials before juries who would rather convict ten innocent negroes than let one guilty one escape. The sentences inflicted are cruel and excessive; twenty-five per cent. of the convicts are condemned for life and sixty per cent. for ten years or more. White men often escape conviction or are promptly pardoned. These slaves of the State are then sold, body and soul, to private capitalists for the sake of gain, without the shadow of an attempt at reformation, and are thrown into relentless competition with free negro laborers.

"The fortune of many a prominent white Georgia family is red with the blood and sweat of black men justly and unjustly held to labor in Georgia prison camps; the State today is receiving \$225,000 a year of this blood money and boasting of her ability to make crime pay."

These two counts in the indictment which black Georgia brings against white Georgia are enough. We do not need to enlarge on the others. But there are others. The vagrancy laws are op-

pressive. The negroes are allowed no representation in the State Legislature or in Congress. In every way they are shut out from the polls. They pay first class railway fares and can get only second class accommodation. They are segregated and harassed on street cars. In twenty years there have been 260 negroes lynched. They are shut out from the militia. They have no place in the jury box. They are not allowed the equal civil and political rights of other men. It is not strange that there is a tone of almost bitter indignation in this protest. It is an appeal for fair and equal treatment, which has not been received, and the refusal of which is driving multitudes of negroes to other States less congenial, but where they will receive fair legal protection.

From a sense of fairness the white papers of Georgia ought to publish this appeal in full, but the Southern Press Association gives it no adequate report. We wish that, as a first reform, Georgians would open a thoro discussion of the matter of the convict leases, which are responsible for more personal injustice than anything else in public or private affairs in the State. This is a wrong against poor men who have no defense.

### Another Missionary Massacre

It was only a local disturbance, we are assured, which resulted in the assassination of six Catholic and two English Protestant missionaries at Nan-Chang, in the Province of Kiang-si, last week. But the local conditions are so similar in many other places that other outbreaks may be feared. It is only a few weeks since American missionaries were murdered in another city.

Nan-Chang is a large city on a branch of the Yang-tse River, some 500 miles a little to the south of west from Shanghai. There were several American Methodist missionaries there, and a number of English missionaries of different societies. The reports of the case differ, but the more likely is that there had been no little friction between the Catholics and the Government and the people. In China the Catholic bishops most unwisely assume the state and dignity and garb of

mandarins; and the Chinese authorities report that in this case the bishop had sent out circulars in the official style for the building of the cathedral, and that this had given offense. There was question as to the rights or protection of some Catholic converts, and in an interview—or, more likely, a court proceeding—before the Nan-Chang magistrate on last Thursday he was assaulted and stabbed. One report said this attack was by the French missionaries, who are also designated as Jesuits, but this is most unlikely. It may be that some of the converts assaulted the magistrate, but the other report is that he stabbed himself, evidently, if this is true, as a protest against pressure which he could not resist. This aroused the anger of the populace, and the result was the murder of the six Catholic missionaries, followed by an attack on the English missionary and his wife, who were not at all involved, and the destruction of the cathedral and of the American Methodist establishment, altho all the other missionaries were protected by the authorities and sent to Kiu-Kiang, on the Yang-tse River. Beyond question the authorities were anxious to protect all foreigners, and special orders had been sent from Peking to that effect as the result of a warning from the Japanese Government. An American and a British gunboat have been sent up the river to Kiu-Kiang to protect foreigners.

We may rejoice to know that no Americans were injured, and that this was not a case of anti-American feeling, nor related to the boycott of American products. Yet it was anti-foreign. It was a quarrel with French missionaries, this time Catholic, as it was with Protestant missionaries at the last murderous outbreak. Then the American missionary had attempted to remove some objects which had been put on his grounds during a religious celebration. In this case last Thursday it was the usual difficulty over the protection of converts by the Catholic priests. On this point there is the greatest contrast between the policy of the Protestant and Catholic missionaries. The Catholics believe that it is their duty to protect their converts when they get into any troubles with their neighbors or in the courts. This is the purpose of the state and retinue

and official garb of the bishops. They are constantly charged with intimidating the magistrates. The Protestant missionaries are agreed that they must not interfere, but let the courts take their own course, believing that thus they will escape the danger of having converts join them for such special protection, and will avoid complications with the Government. This action has been taken after the fullest consultation in conference. As a result, the native feeling, so far as it is directed against Christians, is against the Catholics; but in case of troubles, all that espouse the foreign religion are liable to suffer together, as in this case. This was one of the provoking occasions of the Boxer outbreak.

It is well that our Government has sent a gunboat up the river. Secretary Taft has had difficulty in persuading Congress to make the necessary appropriations for the comfort of the additional soldiers sent to the Philippines, apparently not putting full credence to the reason given, that troops may be on hand in case of disturbances in China. We trust this new outbreak may be taken as a further warning. We have large interests in China, and should be ready to protect our citizens, whether missionaries or merchants.

## The French Bishops

AN extraordinary event has just occurred in Rome, affecting the history of France in a way that has not been possible for a hundred years. The Pope has appointed and consecrated nineteen bishops, by his own sole authority, not nominated to him by the French Government. For some years a number of sees have been vacant owing to a difference between the French Government and the Vatican. Now, paying no regard to the wishes of that Government, utterly indifferent to it, but consulting only the interests of the Church itself, as he understood it, the Pope has filled all these vacancies. We doubt not that both the Elysée and the Vatican will feel a sense of relief now that neither has to concern itself with the affairs of the other.

Not yet, however, is it quite clear that the State will let the Church alone. We

are inclined to think it will, but the vicious feeling toward the Church, as an enemy to the Republic, will not immediately pass away. M. Brunetière, who is a good Catholic, declares that the over-faithful people who resisted the attempts of the officers to make an inventory of the property of the churches were guilty of great folly; but it is also true that the Government was hasty in making the inventories. The chief purpose of them was to make ready to pass the properties over to the new lay associations for worship. But those associations have not yet been constituted, and a year was allowed for that purpose. There are no bodies yet to whom the property could be transferred, and it seems hasty, in the heat of this excitement, to crowd the inventories. Indeed, it may be that there will be serious trouble in creating these associations. It is hinted that the Pope may forbid them, unless these associations for worship are in some way under ecclesiastical control.

Another matter worthy of very serious thought is the effect of separation of the Church from the State in the Church itself. We do not doubt that the worshippers will rise to the emergency, and support the Church with enthusiasm and liberality. But what will be the character of this liberated Church? Will it really be more liberated? It will be less under the control of the State; will it be more subservient to the will of the Pope and his advisers? There will be no more nomination of bishops by the State, and the State would be likely to nominate a fair number of liberal bishops. But now the entire authority will be with the Pope. Probably the course taken will be the same as in the United States. Here the priests nominate three candidates and the bishops of the archdiocese nominate three. One of these the Pope may or may not select. The other day the Pope jumped the whole number nominated by the priests and the bishops, and appointed another man as Associate with the Archbishop of Boston with the right of succession. We may be sure that the appointments in France will represent the type of churchmanship in control at the Vatican. Of late there has been a growth in the French Church of something approaching Gal-

licanism, with an unusual freedom of critical and theological views. The Abbé Loisy is not the only example of this increasing liberalism. But he is not in favor at Rome; he has been condemned, and is liable at any time to be required to renounce his errors, which we are free to believe he will refuse to do. It is not at all likely that any liberal bishops will be selected at Rome. Rome will thus control the bishops, and the bishops will equally rule the priests, and there is likely to be less liberty of thought than there has been, as there always will be in an established Church. In England and Scotland the Established Churches, Anglican and Presbyterian, make larger room for difference of views than is likely to prevail in a non-conformist body. France is over supplied with dioceses. There are now eighty-four dioceses, of which seventeen are archdioceses. This excessive number is less than under the *régime* before Napoleon; for there were then 136 episcopal sees, and one of them actually had but a single parish. But one thing was required of every one of the eighty-four bishops and archbishops under the Republic, that they should be its friends. A known Royalist had no chance of nomination by the State. Yet this did not assure that they should remain republicans after their elevations. Indeed, it is no uncommon observation that one becomes conservative on reaching a desired promotion. The late Archbishop Goutte-Soulard, of Aix, was such a hot republican, as a parish priest, that he mightily vexed the soul of his Archbishop, Cardinal Caveret. But his political zeal won him the appointment as Archbishop; and during the rest of his career he was the active enemy of the Republic.

There is one bishop in Italy, the aged Mgr. Bonomelli, called "the learned Bishop of Cremona," who has held the episcopate for thirty-six years, who is known to be most liberal in his views. He has just issued a pastoral, which is from beginning to end a pean on the separation of Church and State. He refers to the success of the Church in England and the United States, where it is disestablished, and does not fear at all the rule of an "Atheist State." He explicitly affirms

that "the system of a free Church in a free State is the one best adapted for the social requirements" of the time. Such a declaration must have great influence, altho no other Italian bishop has ventured to take so advanced a position. The argument from England and the United States is very strong, but this seems, to the conservatives, a strange time to promulgate these views when France is "persecuting" the Church.

## Industrialism

WHEN we call our age industrial we do not mean that we are doing more work than our fathers, but that thought, culminating in science, is applied to those achievements which are worked out by the hand. "Commercialism" does not cover the case. That means making money by traffic in the accomplishments of industrialism. In the middle of the nineteenth century science discovered, first of all, the need of better tools for the hand. It displaced the wooden plow; it relegated the sickle, the cradle, and to a large extent the scythe to the museum of farm curiosities. It applied horse power to nearly everything that was done in the way of cultivating the soil or gathering the harvest. Still it was horse power; while steam power was doing the trader's work. The latter end of the nineteenth century met agriculture frankly with electric power, and placed industrialism of all forms on an equality.

This new spirit invaded the school as manual training. Education, according to Darwinism, should be applied at the imperfect functioning of any being. With the horse it is applied to increase speed and draft. With man it should be applied to the frontal brain, the articulating organs and the hands. At these three points Nature has left man still unfinished. Heretofore the schools had cared for the brain alone, at serious cost to the hand, and even to the art of expression. When manual training was finally grafted on the public school system, it was inevitable that labor should be rescued from dishonor. The school was evidently on a road to revolutionize our whole conception of toil. The road was long, but the end was secure. To-

day our schools include hand culture as essential to a sound education.

How absolute and complete the change is to be even our teachers do not seem to be aware. A system of industrial schools is slowly, but steadily, spreading over the States. When the Agricultural College was established it was considered a mere annex to the school system. As such it was tolerated, but not honored. Most of the States were slow in accepting the proposition of Congress; and in many cases, as in New York, the Agricultural College was attached to a classical institution. Ninety per cent. of the earlier graduates of these colleges went directly away from agricultural employment into professional life. Farming was still disreputable for a college graduate. The result has, however, come about that ninety per cent. of the present graduates go into industrial employments. And this is not all; the spirit of industrialism has caught into the classical part of the organization, and wherever the two schools have been united we find that the whole institution has become permeated with the idea of work as well as study.

In several States the Agricultural College is supplemented, or rather completed, by a system of agricultural high schools. In Georgia the Legislature has made appropriation for the establishment of such a school in every Congressional district. In other States the normal school system is so reorganized that pupils are compelled to study nature at first hand, one-half of each day, using manual tools, and keeping pace with a notebook. In other words, experimentation, and the solution of problems that have to do with breadwinning, have come to the front. Gradually this readjustment is elevating the Agricultural College to a position of commanding importance; and its graduates, instead of being "mere farmers," are becoming the leaders in shaping the future community and State.

Getting a good foothold in the schools, industrialism has reached over to create a new sort of religious sentiment; the "Gospel of Doing" undertaking to supplement the gospel of believing—"Laborare est orare." There seems to be much in the Bible that such an age as

ours for the first time makes vital. The Fourth Commandment is not so much the establishment of a day for rest as it is a command to work six days—and to do all our work. There is nothing finer in ancient literature in the way of creating an industrial spirit. The law was not so much rest as labor—and equally for the glory of God. In the same spirit Jesus says "My Father worketh hitherto, and I work." A farmer who runs a straight furrow praises God. If we would serve God and man we must "do with might what our hands find to do."

A boy is not educated in this industrial age because he can tell us about Romulus and Remus, or the wooden horse that invaded Troy. He is educated when he can use himself—every faculty in his body and his mind—for the well being of himself and his neighbors. An honest up-to-date farm is the grandest poem man ever wrote; and a boy who can read Homer, but cannot translate that poem, is not educated. An orchard that pays because of intelligent care is an essay equal to any Lord Bacon ever wrote. The kind of education the people are now establishing glorifies the hands as well as the head.

In civic affairs the result is equally telling. There is a growing respect for labor. The appeals of the politician to the farmer have wholly changed in tone. The agricultural paper is a scientific paper, and up-to-date in the applications of science. There is no topic discussed by the platforms of the great parties that has not been thoroly discussed by agricultural clubs, by the National Farmers' Congress, and by the Granges. They have thoroly threshed over these questions, and it will be found that the opinion of these organizations will be expressed at the polls.

Industrial organization of society has to be anticipated. Some phases may be more socialistic than now; but others will be less. Co-operation in production and distribution will tend toward social equilibrium and equality of privilege, but cannot produce equality of power. It remains to adjust ourselves to this order of affairs. President Eliot warns labor organizations that they are largely on the wrong track. Only when work is joy does man rise to his true position as mas-

ter. The hoe is something greater than the sword. Its hearty wielder is more to be envied than the epauletted soldier, who enriches battle trenches. Manual work must not be held to be a burden or a bare necessity. It is a privilege, a glory, and a delight. It is along this line and in this direction that industrialism is ultimately to lead us.

#### Mr. Tillman and the Rate Bill

We must look for something more than the lack of provision for judicial review in the Hepburn bill to account for the action of Senator Aldrich and those who voted with him to place the bill in Senator Tillman's hands. Mr. Knox's amendment, which Mr. Aldrich and his associates had expressed a willingness to accept, does not, as we understand it, provide for such a review as they want, being substantially in accord with the Hepburn bill so far as giving the courts power to decide as to the reasonableness of a rate is concerned. Probably the bill was turned over to Mr. Tillman by the conservatives in the committee because they saw in his handling of it their only chance (and that a small one) to accomplish the defeat of it. These Senators are unwilling that any bill for Government rate-making shall be passed, and probably are not eager to strengthen (as this bill would) the existing laws against discrimination. They realize, however, that public opinion demands the enactment of a rate bill acceptable to the President, and that it is probably impossible to prevent the passage of this House bill or something very much like it. Perception of this fact appears to have made Mr. Aldrich irritable and reckless. Mr. Tillman has said in the Senate that the bill now in his hands is a sham, and has also expressed a belief that the President knew it to be a sham. It does not follow, however, that he will not support it after offering certain amendments, against which the Senate will not care to vote. These will relate to the coal railroads. It is delay caused by judicial review, rather than the review itself, which he desires to avoid; but his views as to rate-making appear to be in substantial accord with those of the President. It would be a curious result of

this controversy if his friendly management of the leading legislative project of a Republican Administration should bring him into friendly relations with the President, to whom he has been bitterly hostile since February 22, 1902.

#### The Divorce Congress

It is impossible for any divorce congress to agree that there shall be but a single cause allowed for divorce, and that the so-called Scriptural ground. The common sense of justice revolts against it. So the congress which met the other day recommended, besides the causes that make a marriage invalid, such as consanguinity, former marriage, fraud or force and insanity unknown to the other party, these post-nuptial causes: infidelity, bigamy, conviction of felony, intolerable cruelty, willful desertion for two years and habitual drunkenness. Of these, that of desertion for two years may allow of collusion, but that is a matter in which the court should exercise the greatest care. It is a wise recommendation that divorces should not be granted secretly, but in open court, which will make divorce less easy. Of other provisions one of the wisest is that which will make the State defend the marriage against the applicant, so that there shall be no collusive agreement of the parties. It is by concurrent State action that uniform legislation must be sought, for it is of no use to try to secure a constitutional amendment so as to give the control to Congress.

#### Consulting the Supreme Court

The Constitution of New Hampshire has a curious provision, not usually embodied, under which either branch of the Legislature or the Governor and Council have the right to ask the advice of the Supreme Court "upon important questions of law and upon solemn occasions." Not half a dozen times in the history of the State has this privilege been exercised, but the Governor and Council have just asked that advice on a serious matter. By a bit of sharp practice some New York racetrack men, using New Hampshire politicians as decoys, rushed thru the Legislature a bill,

which the Governor signed, incorporating a so called "New England Breeders' Club." Its real unsuspected purpose was to establish a new racetrack, after our style, with all the assured gambling attachments. When this was discovered a great protest was raised, led by Thomas Chalmers, D. D., of Manchester, N. H. The people want no such corrupting evil in the State. The Governor was disturbed, and has asked the Supreme Court to tell him whether the bill creating this Breeders' Club will allow it to have gambling there, and whether the present laws would forbid it. If not, it is proposed to call a special session of the Legislature to annul the charter or enact effective laws. Here is a lesson as to the importance of scrutiny of proposed legislation, while we discover the prime duty of Governor and Legislature is to protect the moral interests of the community, even before material and financial interests. By all means New Hampshire should shut out such gambling resorts as disgrace some of our great cities.

**Unitarian Standards** It is an interesting question that has been raised, What are the Unitarian standards, if Unitarianism has any? This question *The Christian Register*, organ of the body, attempts to answer. The Unitarian National Conference was founded forty years ago, and it established the following basis:

"Resolved, That, to secure the largest unity of the spirit and the widest practical co-operation of our body, it is hereby understood that all the resolutions and declarations of this convention are expressions only of its majority, committing in no degree those who object to them, claiming no other than a moral authority over the members of the convention, or the churches represented here, and are all dependent wholly for their effect upon the consent they command on their own merits from the churches here represented or belonging within the circles of our special fellowship."

This makes room for anybody, of whatever divergence of faith. In 1894 this was repeated as follows:

"The Conference of Unitarian and other Christian Churches was formed in the year 1865, with the purpose of strengthening the churches and societies which should unite in it for more and better work for the kingdom

of God. These churches accept the religion of Jesus, holding, in accordance with his teaching, that practical religion is summed up in love to God and love to man. The Conference recognizes the fact that its constituency is Congregational in tradition and polity. Therefore, it declares that nothing in this constitution is to be construed as an authoritative test; and we cordially invite to our working fellowship any who, while differing from us in belief, are in general sympathy with our spirit and our practical aims."

This is thus interpreted by *The Christian Register*:

"That which shows itself in right living and in noble forms of social leadership and service seems to Unitarians much more important than metaphysical speculations concerning the nature of God or any of his children, including Jesus of Nazareth."

This certainly includes the Brahmo Somaj of India, and the Babism imported from Persia, and the progressive sects of Buddhism in Japan, as well as what has usually been called the Christian faith; for they have drawn much from the Christian Gospels.

**Denominational Names** A curious thing about the union planned for at Dayton recently is the fact that no name for the combined three Churches was settled on. This is not regarded as a very serious bar, but there is a curious sentiment that clings to old names. Only women are willing to change their names, and they only, as a usual thing, when they are quite young. It was thought best to wait until the other agreements are all reached and to leave the choice of a name till the last. The name which the Presbyterians, Methodists and Congregationalists have taken for their Church is The United Church of Canada. Speaking of it the *Christian Advocate* of this city says:

"It is to be observed that these three denominations appear to be willing to surrender their separate names. "Presbyterian," "Methodist" and "Congregationalist" disappear. No one of those three names is naturally suited to a Christian Church. Presbyterian merely suggests a form of government, as does Congregational. Methodist is a name given by flippant opponents, and as adopted indicates a derivation and a spirit and methods. The United Church of Canada would at least mean that this particular communion consists of separate bodies welded together by a common spirit and faith."

What the most progressive men in the South think of the higher education of the negro may be judged from the address by Chancellor Kirkland, of Vanderbilt University, at the fortieth anniversary of Fisk University. Of the two institutions, one is for white students, and it is one of the two or three leading universities in the South; the other is one of the two or three leading institutions for the education of the colored race, in a section where they are not allowed to attend any school together. Dr. Kirkland said of the work at Fisk:

"It has my highest respect and sympathy. I believe in that work, and that it will be a distinct contribution to the uplifting of the negro race, and the establishment of the kindest and friendliest feelings between the black and white races. We have more in common than separates us."

Booker T. Washington spoke on the same platform, and expressed his firm belief in the higher, as well as the industrial, education of the negro.

Secretary of State Root tells the American public that, whatever the wrongs inflicted upon the people by the Kongo Free State—which is not a free state in any sense, but which belongs personally to the King of Belgium—the United States Government has no such relations to it as give it any special right to interfere. That right does belong to other Powers. To be sure, we recognized the Kongo Free State, and we do have treaty rights as to destroying the slave trade, but that is all. That is the way we had understood it, and, accordingly, we have not been among those who urged American intervention. A committee met in this city some months ago and made careful investigation at Washington, and reached this conclusion. We have only the common right to call attention to evils commonly reported, as we have in the case of the murder of Jews in Russia.

What Germany did some years ago France is now likely to do in the way of old age insurance. A bill has passed the French Chamber of Deputies to this effect almost unanimously. The employer, the employee and the Government

unite in creating the fund from which the workingman receives a pension after reaching the age of 65. The current moves in that direction, and the tide will reach us one of these days. But there are other steps first, especially in parcels post, and postal banks, and municipal and State ownership, in which we lag behind.

The ridiculous expense and display of funerals was very admirably rebuked in the funeral last Monday, in Chicago, of Father van de Laar. He had long opposed the extravagance of his people, and provided that his funeral should not waste their money. The funeral procession was composed of street cars, and two thousand people followed in cars the car which was used as a hearse, and paid five cents apiece. The example is a good one for other people.

The Mrs. Morris incident will be allowed to pass into oblivion. The answer given out by the President to Mr. Morris's letter shows that the case has been carefully investigated, and it seems that no more force was used to remove her than was necessary. The letter from her brother, Congressman Hull, of April 23d, 1902, asking for his removal from office, creates a very strong impression against Mr. Morris.

The testimony already given tells of enormous political collections made in Cincinnati by Boss George B. Cox. We trust that the legislative committee will go to the bottom of the matter, no matter where it leads. It is evident that the banks were heavily bled, or, we may say, blackmailed. It is a merry year for investigations, and no suspicious town should be overlooked.

The temperance movement grows in Europe as well as in this country. There have been so many accidents the past year on the railroads in Alsace-Lorraine that an order has been issued, forbidding any employee to touch alcoholic liquors during the hours of service. The rule is not quite so strict as it is on some of our American railroads.

# Insurance

## The Mutual's Affairs

THE resignation of Stuyvesant Fish as a member of the Mutual Life's self-investigating committee, as reported last week, has been followed by the resignation of Cornelius Vanderbilt from the Mutual's directorate. Rumors of other resignations to follow are current. It is considered unlikely in banking circles that the use of the Astor holdings in Illinois Central Railroad will be permitted in any attempt that may be made to punish Stuyvesant Fish. Meanwhile the seemingly changed attitude of those in present control of the Mutual, notwithstanding denials, appears to point toward something very much like hostility toward the Truesdale Committee, now consisting of William H. Truesdale and John W. Auchincloss. Progress in the Mutual's house cleaning department is now sadly halting, and even the eminent counsel that once represented this great company has resigned office without any successors having as yet been chosen. It appears to us that the Mutual ought to court the fullest publicity, in order to re-establish confidence on the part of the insuring world.

## More New York Life Insurance Activities

THE very air seems filled with revelations regarding transactions of various life insurance companies that never were contemplated by the law under which they are supposed to do business. The New York Life, which was recently charged with furnishing the capital for the exploitation of Nicaraguan gold mines, has now to meet a far more serious attack upon some of its transactions. According to the report of the Insurance Commissioners of the States of Tennessee, Kentucky, Wisconsin, Nebraska and Minnesota, first published in the *World*, this company admits loaning \$5,000,000 in bonds of the State of Massachusetts to the First National Bank, of this city, to enable it to obtain a large amount of Government deposits. The bonds so loaned continued to stand registered in the name of the New York Life, to whom

the interest was paid without interruption. A loan of \$700,000, the exact nature of which does not yet appear, was also made by the New York Life to the Central National Bank, of New York city. Of payments aggregating \$1,915,123 for legislative purposes only \$7,466 has been accounted for. A \$500,000 loan made to E. H. Harriman was liquidated without the payment of interest charges, and the company knew nothing of this fact until the attention of its officers was called to it by the examiners employed by the Insurance Commissioners, and the deferred interest charges, amounting to \$6,250, were paid about a year after the amount became due and payable. United States Senator William A. Clark appears as a borrower from the New York Life. According to the Commissioners' report, no collateral was obtained by the New York Life from the Senator for this loan. A transaction to which Kidder, Peabody & Co. were parties presented some points of irregularity. A frequent practice obtained of loaning on collateral to the officers of other insurance companies at rates much under the market. These loans were paid on or about the last of the year, and were renewed with astonishing frequency during the first week in January. No evidence of such loans consequently appeared in the annual statements of the New York Life. The whole report is filled with transactions by no means conservative, many of which were not brought out by the Armstrong committee.

The London *Times*, in its financial leader, on February 10, sharply criticised the New York Life Insurance Company. The Thunderer takes exception to Messrs. Clafin, Straus and Mackay as proxies, because of the connection of these gentlemen with the company prior to the irregularities in management, which were so startlingly revealed by the Armstrong investigation, so ably conducted by Mr. Hughes. It says:

"One would have thought that the board, anxious to retain the confidence of policyholders, would have nominated as proxies gentlemen who had no previous connection with the company except as policyholders."

# Financial

## Trust Company Reserves

ALTHO the representatives of the trust companies and those of the banks were unable to reach an agreement as to trust company reserves, at the conference recently held in this city, we are glad to see that a settlement of this question will in all probability soon be made by legislation to which neither party will offer persistent objection. The bill introduced at Albany some weeks ago required trust companies in this city to maintain a cash reserve of 15 per cent., half of which must be in the vault. It appeared at the conference that the trust companies were willing to accept the compromise suggested by Senator Stevens, chairman of the Senate Banking Committee, which was that 5 per cent. should be vault cash, 5 per cent. cash deposited in other institutions, and 5 per cent. cash invested in securities of the class in which the companies may invest their capital. For companies in other parts of the State, the total was to be 10 per cent., of which 3 per cent. should be vault cash. The banks were unwilling, however, that the vault cash in the city should be less than 6 per cent.

It is now understood that a bill embodying the substance of this suggestion will be introduced, supported by the two legislative committees and passed. The requirement will be 5 per cent. vault cash, 5 per cent. in cash deposited in approved reserve banks, and 5 per cent. in Government or New York State bonds, with the reduction above noted for companies outside of the city. This the companies have virtually accepted, and the bank committee, while withholding complete approval, will not oppose the bill. As the average vault cash reserve of the companies in this city in November last was less than 2 per cent., the proposed bill provides for a considerable increase. We hope that the projected legislation will lead to a return of the companies to the Clearing House Association.

## National Biscuit Company

THE National Biscuit Company reports sales and profits, year by year, since its organization, to January 31st last, as follows:

|           | Sales.          | Profits.       |
|-----------|-----------------|----------------|
| 1898..... | \$34,051,279.84 | \$3,292,143.10 |
| 1899..... | 35,051,898.84   | 3,302,155.00   |
| 1900..... | 30,439,160.00   | 3,318,355.19   |
| 1901..... | 38,625,134.78   | 3,670,445.05   |
| 1902..... | 40,221,923.08   | 3,689,338.09   |
| 1903..... | 40,532,114.59   | 3,709,515.62   |
| 1904..... | 41,040,495.80   | 3,731,927.80   |
| 1905..... | 39,702,566.44   | 3,822,338.02   |

The officers of the company are: A. W. Green, president; J. D. Richardson, first vice president; F. M. Peters, second vice president, and F. E. Bugbee, secretary and treasurer.

....The net increase of the number of national banks in January was thirty-seven. At the end of the month the whole number was 5,945, with an authorized capital of \$822,022,000, against 3,617 on March 14, 1900 (the date of the new law), with an authorized capital of \$616,308,000. Circulation has increased from \$254,402,000 to \$543,230,000.

....Breckinridge Jones, vice president, has been elected president of the Mississippi Valley Trust Company of St. Louis, in place of Julius S. Walsh, who becomes chairman of the board. John D. Davis and Samuel E. Hoffman are the vice presidents, and James E. Brock the secretary. The capital, surplus and profits are \$8,400,000.

....The Lawyers' Title Insurance and Trust Company, of which Edwin W. Coggeshall is president and general manager, in its annual statement for the year ended December 30, 1905, shows total assets \$20,213,380. The capital stock is \$4,000,000 and the surplus and undivided profits nearly \$6,000,000. The mortgage business of the company last year aggregated nearly \$50,000,000.

....William L. Moyer, formerly president of the International Bank, and of the National Shoe & Leather Bank, was recently elected president of the Mechanics & Traders' Bank. Mr. Moyer's banking experience in the West as well as in New York eminently qualifies him for the presidency of the Mechanics & Traders' Bank. The capital of the Mechanics & Traders' is \$700,000, its surplus is \$350,000, and its total resources are \$8,275,271. The bank was organized in 1830.

NEW YORK, THURSDAY, MARCH 8, 1906

No. 2988

## Survey of the World

### Railroad Freight Rates

It has been decided that the Senate shall vote upon the Statehood bill of the House on the 9th inst., and it is expected that the Railroad Rate bill will be taken up immediately thereafter. Supporters of the Foraker amendment, which provides that the people of Arizona and those of New Mexico shall be permitted to vote separately upon the Statehood question, are confident that it will prevail by a considerable majority, and that in this way the proposed admission of the two Territories as one State will be prevented. The Railroad Rate bill is now in the hands of the Democrats. This was shown quite plainly last week, when, in the absence of Mr. Tillman, notice was given by Mr. Bailey, the Democratic leader, that he should ask for a prompt consideration of the bill after the disposal of the Statehood measure. At the same time, however, it is on the Republican side that negotiations are in progress for an agreement upon amendments that will be acceptable to the conservatives as well as to the President. It became known on the 1st that the President thought the bill could be improved, and that he would be glad to see three amendments adopted: First, cutting out the provision putting the ordered rate in force within thirty days, because, as pointed out by several Senators, it has the appearance of requiring the courts to reach a decision within that time; second, adding a provision that, when an ordered rate is not enforced, pending appeal to the courts, the railroad company shall pay into court the difference in cash, the same to be returned, or given to shippers, as the case may be, after final decision; third, adding specifi-

cations as to the ground for and scope of the court review, these specifications providing that the court shall determine whether the Commission has exceeded its authority and whether the ordered rate is confiscatory. The conservatives, of course, would like a much broader court review amendment. It is held by prominent Senators whose opinion the President respects, and also by Secretaries Root and Taft, that such specifications as are set forth above are needed to make the bill constitutional. There will probably be added an amendment forbidding railroad companies or their officers to own coal mines or oil deposits, and thus to compete with private shippers in the production and sale of commodities produced along their lines. Even Mr. Aldrich and Mr. Elkins support such an amendment, and Mr. Knox says the roads should be confined to the business of transportation. There is pending an amendment proposed by Mr. Clay, providing that the penalty for a violation of certain parts of the law shall be imprisonment, without any alternative of a fine. Various rumors are in circulation, as to agreements among Senators, by which the Rate bill is to be passed in return for the defeat of the Philippine Tariff and Statehood bills.

### Speeches For and Against the Bill

Mr. Foraker spoke at length against the Rate bill, on the 28th ult., arguing that it was unconstitutional and asserting that all the evils complained of, including discrimination between localities, could be removed by the use of existing laws. These laws were broad enough, he said, but there had been no serious attempt to enforce them. If gen-

eral rates were to be regulated, it was better that the work should be left to the courts, because in this way all questions of constitutionality—which, in his judgment, were fatal as to Commission rate-making—would be avoided. Mr. Dolliver made a long speech in support of the bill, holding that it was constitutional, and pointing out that both Mr. Foraker and Mr. Elkins some time ago introduced bills giving to the Commission the same powers that are granted by the pending measure. Having mentioned the need of bringing private car lines, private side tracks, etc., under the jurisdiction of the Commission, he denied that existing laws were adequate even for the prevention of ordinary rebating. This was so because they did not provide for the detection of the offense, as the present bill does. The battleground was now around a court review, and the bill left the way open for such a review as would protect all constitutional rights. He was not in favor of government ownership, but he asserted that a storm was brewing and that the people were going to inquire how men could gain fortunes of hundreds of millions in a few years. If Congress failed to provide for the regulation of railways, the country would soon face the problem of government ownership. Mr. LaFollette made an earnest speech, in connection with a bill concerning the settlement of the affairs of the five civilized tribes in Indian Territory, and in support of his amendment prohibiting the acquisition of the coal lands of the tribes by railroad companies or their stockholders. Several Senators questioned the constitutionality of so excluding stockholders. Mr. LaFollette said it was a radical provision, but radical measures were needed to prevent such railroad coal monopolies as were to be seen in Pennsylvania and elsewhere. He wanted it to be shown that the Government was stronger than the railroads in the aggregate or all the centralized power of corporations. He would have an effective statute requiring the railroad companies to be common carriers and nothing else. There was no direct vote upon the amendment, but the Senate decided that sale of the lands should be deferred until after the expiration of existing leases.

#### Philippine Tariff Bill Rejected

The Philippine Tariff bill, passed in the House some weeks ago by a vote of 258 to 71, has been rejected by the Senate committee (on the Philippines) to which it was referred. Various amendments had been suggested, and after these had been added, a motion to report the bill favorably was lost by a vote of 8 to 5. Those in the affirmative were Messrs. Lodge, Beveridge and Long (Republicans), and Messrs. Carmack and McCreary (Democrats). In the negative were Messrs. Hale, Burrows, Dick, Nixon and Brandegee (Republicans), and Messrs. Culberson, Dubois and Stone (Democrats). The opponents of the bill would not permit it to be reported either without recommendation or adversely. Motions for such action were lost, 7 to 6. Only by a motion in the open Senate to discharge the committee from further consideration of the bill can it be brought before the Senate for a vote. Some think that Mr. Lodge will make such a motion, which would be at variance with the Senate's customs; but it is said that a majority of the Senators would be found opposing it. While the rejection of the bill was due in part to the objections of the protected tobacco and sugar interests, it is believed that other adverse influences were exerted. It is said that certain Senators who have been disturbed by the President's attitude toward the Senate were willing to kill a measure in which he was deeply interested. There is a report about an understanding between groups of Senators that votes for the Railroad Rate bill should be given in return for votes against this tariff bill; also another, that a promise of reconsideration is to be used to induce certain Senators to consent to a court review amendment of the Rate bill. Some probably voted against the bill because they thought the passage of it would bind the islands more closely to the States. This seems to have been the belief of Mr. Hale, whose remarks at the hearings show that he regards the Philippines as a heavy and costly burden. It is pointed out that failure to pass the bill will cause much disappointment and promote discontent in the islands, whose economic condition is now deplorable.—The provincial elec-

tions in the islands on the 1st were quite satisfactory to the Government. There was no disorder, but in three instances charges of bribery were made. Eight of the Governors were re-elected. The Governor of Albay is Captain Reynolds, formerly of the army. A Spanish firm and an English company are the only bidders for the contract for carrying mails and passengers from one island to another, thruout the archipelago. The city of Tacloban, capital of Leyte, has been almost wholly destroyed by fire. It was the center of an important hemp district, and in population the fifth of the Philippine cities.

#### Race Riots in an Ohio City

For two nights, on the 27th and 28th ult., parts of Springfield, Ohio, were given over to a mob that attacked the negro residents of the city, burned several dwellings, and in other ways caused much loss of property. It was in the same parts of the city that a mob burned many houses in March, 1904, and lynched the negro, Richard Dixon, who had killed a policeman. The cause of the rioting last week was the shooting of a railroad brakeman, named Mark Davis, by a negro (Edward Dean), for refusing, it is said, to answer questions about the time of the departure of a train. Davis was taken to a hospital, where he died on March 3. Dean and his companion, Preston Ladd, who was wounded, were arrested and secretly taken to Dayton, because the mob intended to lynch them. On the evening of the 27th the mob attacked that part of the town in which negroes and whites of low character lived together, destroying a saloon and burning six houses. The police were brushed aside, and after long delay only eighty members of the two local militia companies responded to the Mayor's call. By cutting the hose, the mob prevented the firemen from working effectively. Companies of militia were summoned from other cities, and on the following evening eight companies were on guard, but the rioting was resumed, three houses were burned, and one of the visiting militiamen was mortally wounded by the mob. A negro woman broke her leg by jumping from a window of her burning house. A

great majority of the negro inhabitants are thrifty and worthy citizens. All suffered from the attack, or were in danger, as the mob was composed of the city's roughest white element. On the third night there were several small fires, but on March 2d peace had been restored. In the police court several of the rioters were fined and sent to jail. Governor Pattison had been ill for some time, and his anxiety and worry over the situation in Springfield caused a relapse.

#### Coal Miners and Their Employers

The attitude of the bituminous coal operators toward their employees' demands has been affected by the interference of important manufacturing interests. Mr. Robbins, to whom President Roosevelt addressed his letter of the 24th ult., is the president of the Pittsburg Coal Company, which employs 70,000 miners, and with which the United States Steel Corporation has a long term contract calling for at least 8,000,000 tons of coal per annum. Mr. Robbins was told that the Steel Corporation, with orders for a year's work on hand, could not afford to be embarrassed by a strike at the mines. At about the same time the Gould railway companies, intimately related to the bituminous coal industry in the West and Southwest, exerted their influence to prevent a strike. H. C. Frick, at Pittsburg, and President Cassatt, of the Pennsylvania road, desired, it is said, that a strike should be avoided because it would very injuriously affect the steel industry, now enjoying unprecedented activity, and would thus reduce the profits of railroad freight business. Therefore Mr. Robbins conferred with other operators at Pittsburg, on the 28th ult., and a call was issued for a general conference to be held at Indianapolis on the 19th inst., "entirely in deference to the President of the United States." Owing to the President's letter to Mr. Mitchell, a national convention (1,300 delegates) of the miners' union is to be held on the 15th in the same city. It is expected that the bituminous miners will now receive an increase exceeding the 5½ per cent. that was recently the subject of negotiations. Mr. Robbins lets it be known that his company will comply with the demand. Many other operators

angrily object, because their business, like that of his own company, has yielded little or no profit for some time past. They would be helped if there should be a strike confined to the anthracite industry, and therefore it is reported that some of them have urged Mr. Mitchell to insist upon the demands which the anthracite miners have laid before the anthracite coal railroad companies.

#### Mollie Maguires in the West

The arrest of President Moyer, Secretary Haywood and other officers of the Western Federation of Miners, charged with the murder of ex-Governor Steunenberg, of Idaho, and with many other crimes, was the result of an investigation made by James McParlan, who won fame as a detective thirty years ago by breaking up the band of murderous conspirators known as the Mollie Maguires, in Pennsylvania, and by sending eleven of them to the gallows. Full confessions have been obtained from Harry Orchard, who admits that he placed the bomb which killed ex-Governor Steunenberg, and from Stephen Adams, another prisoner. These confessions, which relate to not less than twenty-six murders, including the killing of fourteen non-union miners at the railway station in Independence, Colo., on June 6, 1904, have been corroborated and confirmed by special inquiry. Adams was caught at Haines, Ore., on the 20th ult. About the same time Vincent St. John, formerly president of the local union at Telluride, was arrested in Idaho. A man named Simpkins, who is missing, appears to be the only conspirator for whom the authorities are still searching. Orchard is ill and has not long to live. No promise of clemency was made to him. "In his boyhood," says Governor Gooding, of Idaho, "the Bible was read night and morning by his parents. The impression of his early days came up and smote his conscience when he was brought face to face with his God. He told me that he believed in a Supreme Being and a hereafter, and that now his only thought was to make his peace with his Master." It is asserted that the Federation was controlled by an Inner Circle of five persons, and that the assassinations were plotted by them in Denver

and elsewhere. Orchard, Adams and others were the hired agents. One or two others who had been employed, but who fell under suspicion, are said to have been removed by poison. Among those whose death was decreed were Governor Peabody, Chief Justice Gabbert and other judges of the Colorado Supreme Court. A bomb buried at Justice Goddard's gate by Orchard failed to explode. Since Orchard confessed it has been found there. Chief Justice Gabbert avoided the trap set for him by departing, on a certain day, from his usual path to the court house. A man named Walley was blown to pieces by the bomb intended for the Chief Justice. By accident also Governor Peabody escaped. It is said that the detailed accounts of all these attempts and escapes, as narrated by Orchard and Adams, have been verified. Among the murders to which these accounts relate are those of Martin Gleason and Arthur Collins and two other superintendents of mines, and of Detective Gregory. Steunenberg was killed because of his vigorous prosecution of dynamiters during the strike riots of the Cœur d'Alene district in 1899. Three attempts to assassinate him were made. On one occasion he escaped by stepping over a wire. Governor Gooding has published a long statement as to the substance and trustworthiness of the confession. It is recalled that McParlan lived for two years with the Mollie Maguires and then came out with evidence upon which eleven were hanged and fifteen sent to the penitentiary. He now asserts that the evidence against the men in custody in Idaho is ample, and that he could convict them of a dozen atrocious murders in Colorado if they should be returned to that State.

**Cuba and Porto Rico** Señor Mendez Capote, leader of the Moderate party, who was recently elected Vice-President of Cuba, gives notice that he does not intend to take the office, but will withdraw before the popular decision is confirmed by the formal action of the Electoral College. The office, he says, is a negative one and purely ornamental. He prefers to resume his law practice. Señor Capote was president of the Senate and had been president of the

Constitutional Convention. He has recently suffered a loss of influence, owing mainly to the rise and prominence of General Andrade, Secretary of the Interior. At the suggestion of the latter, President Palma a few days ago revoked the concession of a corporation that had undertaken to make a system of conduits in the streets of Havana; and this corporation is said to have employed Señor Capote as counsel.—After their visit to Santiago, and their inspection of the battlefields near that city, Mr. and Mrs. Nicholas Longworth returned to this country, and they are now in Washington.—A. W. Moerke, postmaster at Columbia, Isle of Pines, has been placed in jail by the Cuban authorities for refusing to pay the customary license fee for his business, which is that of a retail merchant. He is an American, and was an officer of the so-called Territorial Government, which American residents attempted to set up some months ago.—The Chambers of Commerce in Porto Rico are considering the expediency of boycotting rice produced in the States, because of the indifference of Congress concerning the welfare of the coffee industry of the island.

#### John Morley and General Kitchener

The promises made by the Liberals to restore the conditions in India between the Governor-General and General Kitchener have not been yet fulfilled by Mr. Morley, who is in charge of Indian affairs in the new Liberal Cabinet. The difficulty that led to Lord Curzon's resignation was his insistence that the civil government should, as of old, be supreme over the military, while General Kitchener insisted that he, as commander of the army, should take no orders from the Governor-General. In order to keep himself informed as to military affairs, Lord Curzon had a military adviser who was not under General Kitchener's orders. But this relation was changed, so that Curzon's adviser should be one of General Kitchener's subordinates. In the late Parliamentary campaign the Liberals had taken the part of civil government in India as against military independence. But when Mr. Morley became Secretary for India he found Lord Minto in office

as Governor-General, and he and General Kitchener were in perfect harmony, and the Governor-General apparently quite satisfied with his subordinate's authority, which he had accepted under Mr. Balfour's Premiership. Under these circumstances not much could be done, and Mr. Morley has simply tried to strengthen somewhat the position of the military adviser by giving him full access to all military orders and proceedings; but, as Lord Curzon shows in a letter to *The Times*, this amounts to very little so long as this adviser is a subordinate under General Kitchener and so dependent on him for approval and promotion.

#### The Moroccan Conference

The Conference at Algiers holds the center of the world's interest this week. The sessions are likely to come to an end on Saturday of this week, and even yet there is no indication of any agreement on the important question whether France is to have predominant rights, as she has predominant interests, in Morocco. The time has been taken up in the sessions with discussions as to subordinate matters, other than the disputed police arrangements, and even in these the main question was recognized as involved, and the real conflict was being carried on, not at Algeiras by the nominal commissioners, but at Paris and Berlin by the Cabinets of the two Powers. There is no definite sign that either will yield, and the Conference may thus prove abortive. Little confidence can be put in the conflicting reports that the United States, Great Britain, Russia, Austria and Italy have urged the two nations chiefly involved to come together on any suggested basis, altho it is in every way likely that they have expressed the hope and desire for some agreement. Meanwhile the correspondents devote themselves to conjectures and impressions, of which the most plausible is that Germany does not desire or intend to go to war over the question, for the very good reason that it is clear she will have, in that case, England against her as well as France. But the condition looks so critical that France thinks it well to be ready for war, and has made the necessary immediate preparations and

orders. Because of the urgency of the present crisis, the Emperor of Germany has delayed his visit to the Mediterranean, and will remain at Berlin for the present. While no conclusion has yet been reached in the Moroccan Conference, an apparently indifferent question—that as to whether to proceed to the discussion of the policing of the country—indicated the attitude of the Powers. Germany, which voted against it, was supported by Austria, but the great majority of the Powers, including Great Britain, the United States, Russia and Italy, sided with France. This has given great encouragement to the French, and France is not willing to come to any decision as to the bank question until the police question is settled with Germany.

**Russia** If any trust can be put in the Czar's promises, the Duma will meet in May, as provided for, and free elections will be held. All the moderate parties support it and hope for success. But the more advanced parties put not a bit of faith in the Czar or in Witte, and seem determined that it shall not meet, because they regard it as a mere ruse to satisfy the money-lenders of France. Without money the machinery of Government must break down, and of this there is no little fear. There has been a sharp decline in Russian securities, indicating much apprehension of the result. It is charged that there continues to be police suppression of free elections, which turns public opinion against the Duma as not a serious effort to give representative government. There is great depression on the Moscow Produce Exchange, which is generally accepted as a barometer of the situation in the central provinces. The peasantry are increasingly inclined toward the revolutionary party. The landowners in Nijni Novgorod Province say the peasants there are almost unanimously supporting the Constitutional Democratic party, whose success is ascribed to the Government's attempts to suppress it. Accordingly, they will not be represented in the Duma, and will direct their efforts to the overthrow of the *régime* rather than its imperfect reform. Indeed, the Czar, in a late address to a deputation of the autocratic party, said:

"While the rights accorded by me to the whole people remain unaltered, my autocratic power will ever remain as it always has been."

An attempt to murder the Czar was frustrated by the arrest of two men armed with bombs.

**Japan and the East** The bill introduced in the Diet providing that the Japanese Government may purchase the railroads of the Empire is strongly opposed. It makes the amount to be paid for them the total cost of their construction plus twenty times the average profits of the past three years—in all about \$250,000,000, to be paid before 1911. The Japanese Government has forbidden the papers to continue publishing accounts of the return of the soldiers from Manchuria. This gives rise to the suspicion that Russia and Japan do not intend to keep their agreement to withdraw their regiments. Russia is taking active measures to enlarge and control trade in Northern Manchuria, which is her sphere of influence, and where she was to be allowed to keep a limited number of soldiers along the line of the railway. Plans are now hastened for developing Vladivostok as a great trade center, and for keeping the harbor open in the winter, and for inviting American and other trade by the use of the railway for transporting tea and other products to Europe. The docks are to be enlarged, storehouses erected and cargo landing facilitated. This means competition with the Japanese, and an interesting condition will result. The Japanese merchant marine have apparently recognized this, and while Japanese affairs are being adjusted in the former war zone, their steamers are getting ready to enter the Vladivostok trade. It is also argued by those who are interested in Vladivostok that it is naturally the port for American Manchurian commerce, being closer and easier of access in every way.—The Japanese Government seems to fear trouble in China, and has announced its intention to adopt the two years conscription plan, which would increase the war establishment one-third. Japan is to build no more naval vessels in England, but is now to enlarge her navy by using her own dock yards.

Rumors, quite unsubstantiated, have been abundant the past week of the sickness and even the death of the Empress Dowager. More plausible are the reports of a plot to dethrone her, or even to overthrow the Manchu dynasty. The eunuch, Li Yen-yang, who has been the Empress's chief attendant and adviser, was accused of a part in the plot, and has been put in seclusion. In the rivalry between the two parties in the court of the Empress, both are seeking the support of foreign influence, and the foreign residences are well protected. Beyond question there is unrest in the provinces, but it seems to be quite as much anti-dynastic as anti-foreign. The American residents at Newchwang, who fled to Kiu-kiang, on the Yangtse river, on the occasion of the late murder of missionaries, have been met by the American and other gunboats and are under full protection. The magistrate who was wounded in the conference with the Catholic missionaries has died of his injuries. It was his wounding that was the occasion of the murder of the Catholic missionaries and of two British missionaries. One report made it that he was attacked by a native Catholic and another that he stabbed himself. No American property was injured there. The Taotai of Shanghai has been appointed Governor of Peking, which is regarded as a promotion, and is not approved by the foreigners in Shanghai, who regard him as the representative of the Chinese side of the late controversy there.—An interesting development of the independent Chinese spirit is reported in the effort of a native Presbyterian pastor, formerly of San Francisco, to organize an independent Chinese Church, for the support of which \$10,000 is said to have been subscribed, and in the direction of which no foreign missionaries are to have part. It is not clear that this report may not come from a confusion with the attempt now making to unite a large part of the Christians of China in a national Chinese Church. The distinguished missionary, Arthur H. Smith, is now in this country, and he urges upon the President and the country that now is a critical time for the United States to secure the good will of China. He would have us use the \$20,000,000 indemnity

from China, which we are not willing to use, as a fund to educate choice Chinese youth in this country, and in other ways to help Chinese educational development.

#### The Pope on France

Pius X has not yet given definite instructions to the French bishops as to how they are to act in reference to the new conditions under the separation of Church and State, so that they do not yet know whether or not they are to submit to the law putting the property of the churches into the possession of lay religious associations and not under the authority of the priests. The most he has done as to conduct is to forbid violent resistance to the law. He has, however, addressed an encyclical to the bishops, at great length, on the principles involved, and severely condemning the overthrow of the Concordat and the injustice of the withdrawal of support of the Church by the State. The encyclical begins with an expression of the great grief and anxiety with which he views the Separation Law, "which, violently severing the immemorial ties by which your nation was bound to the Holy See, places France in an unworthy and lamentable position." The principle of separation, he says, is entirely contrary to the teaching of the Church as to the relations which should exist between the religious and civil elements of society. In the case of France separation is especially deplorable; for not only did France owe much of the historical grandeur and glory to her close union with the Church, but also in her case the relations between Church and State were determined and sanctioned by the Concordat of 1801, a solemn and mutually binding compact. This breach of faith, this violation of international law, was made the worse by the insulting manner in which it had been effected; by the omission of all those ordinary formalities and regards which it is the custom even for the smallest States to observe toward each other when denouncing treaties. As to the law itself, the Pontiff is constrained to condemn it utterly and entirely. It is contrary to the divine constitution of the Church, in that it disregards the divinely instituted hierarchy and entrusts the exercise of public worship to lay associations which

are subject to the jurisdiction of the Council of State. It is destructive of the liberty of the Church, making it dependent on the civil authority. It is further an offense against the laws of property; despoiling the Church of her sacred and other buildings and her pious endowments, and depriving her also of the support which is not only due from the State to ministers of its worship, for reasons of legal obligation, but which also represented the compensation given to the Church by the State for the confiscation of ecclesiastical property. Such a law cannot fail to injure the internal peace and unity of France at a time, too, when the European situation should require the utmost concord and union among the French people. The Pope concludes with a stirring appeal to French Catholics to maintain unity at least among themselves. They must sacrifice their own opinions when necessary to the common safety and the good of the Church and abandon disputes and all sources of disunion. Further instructions are promised later. It is a dignified document, but proposes nothing except protest.

#### "Academic Freedom" in Germany

The most notable of the new developments in German university circles is the appearance of denominational antagonisms in the student body. The movement began originally some months ago in the Polytechnic Institute in Charlottenburg, near Berlin, the Protestant and non-religious student organizations of all kinds uniting in a protest against the continuance of the exclusively Catholic student associations, on the claim that they were breeding places for ultramontane political and religious tendencies, and hostile to the historic and time-honored "academic freedom." The movement spread like wildfire among the universities and other institutions of the same grade; students' conventions were held in Eisenach and Weimar, with fiery demands on the academic authorities; and this has now ended in the organization of a student "Verband," representing all of the higher institutions of learning in the Fatherland, embracing hundreds of students' associations in all of the university and

polytechnic towns in the Empire. The Berlin local union of such societies consists of no fewer than seventy-eight separate organizations of all kinds, political, literary, religious, etc. Naturally the Catholic students are fighting fire with fire, and have succeeded in forming a distinctively Catholic inter-university league with a membership of 2,229 and representing fifty-one local organizations. These extend not only over Germany, but also Austria and Switzerland. The state and the university authorities are doing everything to suppress the agitation, which has almost led to "student strikes."

#### Other Items

King Edward is off for a two months' holiday in Paris and Biarritz, and a subsequent cruise in the Mediterranean. As he travels nominally incognito he will be known as the Duke of Lancaster. Nevertheless, the French people have shown their satisfaction with the pact of the two Powers by their most enthusiastic reception of the King. Doubtless at some place he will meet the Emperor William, and during his stay at Biarritz he will meet the King of Spain and arrange the details for the marriage of the latter to the Princess Ena of Battenberg. Princess Ena was to go thru the ceremony of changing faith on Wednesday of this week. King Alfonso is very attentive to Princess Ena, and has this week visited San Sebastian, where she is to be converted for marriage. The wedding is to be of unparalleled splendor, the peculiarly Spanish attraction being some forty gorgeous state coaches, made or set apart for these historic occasions.—Several extraordinary accidents have been recorded this week. One is the probable loss of eight hundred Norwegian fishermen who were on an ice floe which in a storm broke away from the shore and was driven to sea. Another was the fall from the side of a mountain of an entire village, which fell into an Italian lake, but fortunately the noise of the cracking of the rock warned the inhabitants, who escaped. Another was the death of a score of people at a dancing party at a village near Florence. The straw in the floor below caught fire, and the floor fell, carrying the dancers into the flames.

# The Past and Future of the Sexes

BY LESTER F. WARD, LL.D.

[Professor Ward is one of the leading sociologists of the world, and his volumes on "Dynamic Sociology" and "Pure Sociology" have given him an international reputation. He has now in press his concluding sociological study, entitled "Applied Sociology." Last Christmas, at its foundation, he was elected the first President of "The American Sociological Society." The very significant conclusions about the past and present of the sexes which follow are largely based on data given in his "Pure Sociology," and those who want to weigh his evidence are referred to that volume. What he has to say about the future of the sexes, however, is, we believe, entirely original in this article.—EDITOR.]

THE idea of progress is so generally entertained by the public that at first glance everything seems to be capable of progressing. Yet a little reflection will show that there are certain things which are not so considered. The most notable of these, of course, is religion, but this is not the only one. Another is the relations of the sexes. These are commonly regarded as, theoretically, at least, exactly what they should be, as not subject to change, and as quite incapable of improvement. A knowledge, however, of the entire history of mankind shows that there is scarcely anything that has undergone greater changes than the relations of the sexes. Not only is this true, but it is also true that among the existing races of men there are no customs and no institutions that differ as widely among themselves as do those that concern the relations of the sexes.

Such being the case, it certainly ought not to be expected that the existing state of things in this respect will always remain exactly what it is now. But to predict in this broad way that there will be changes in the present relations of the sexes is a very different thing from predicting what those changes will be. The days of prophecy are, indeed, over, and the previsions of science are simply conclusions logically drawn from known facts as premises. In certain sciences, as, for example, in astronomy, the facts are so exactly known that predictions are comparatively safe, and some notable ones have been made. But the sciences differ in this quality of exactness in such a way that they may be arranged in a sort of scale from the most exact to the least exact. In this scale the science of man and human activities stands at the top as the

least exact of all, and therefore it is clear that it is in that science that all predictions must be the least safe. The various Utopias, which are simply attempts to forecast the future of man in his social relations, have fallen wide of the mark, and no scientific man seriously ventures into this field.

The difficulty, as with most things human, has always been a much too narrow vision, especially the lack of a *cosmological perspective*. Very few have any conception of the stability of structures, even of social structures, and no adequate allowance is made for the time required to bring about changes in nature. Then, again, this scientific attitude fails to satisfy. The future that it contemplates is too remote, being far beyond the possible experience of any person living at the time the prediction is made. This robs it of all its interest for those impatient natures that care only for practical things.

The only person who, to my knowledge, has clearly brought out this cosmological perspective, not merely in things human, but in the vast reaches of organic evolution, is a woman.\* That the little five-toed Eohippus was actually transformed into a horse; that some ape-like animal developed into a man; that the paleolithic troglodyte rose thru the various stages of savagery and barbarism to civilization and enlightenment, are simply facts in the history of this planet. How enormous the transformations! But, too, how immense the periods required to effect them!

Now if we are to deal with the future of the sexes we must approach the subject from some such point of view as

\* CHARLOTTE PERKINS STETSON, [GILMAN]: *Similar Cases*. In *This Our World*, Boston, 1898, pp. 95-100.

this. The only possible scientific basis for forecasting the future of the sexes is a study of their past history from the very origin of sex. For sex, like everything else, has had a beginning. It also had a purpose, and this purpose was the cause of its existence.

The history of sex, very briefly stated, is something like this: Primarily there was no sex and every organism was fertile. At a certain point, doubtless quite late, absolutely speaking, the *male sex* was developed, first as an organ attached to the fertile organism, but capable of introducing a second element into the reproductive process, thus constituting the simplest form of crossing strains. This made possible some variation and progress in structural development. Later on the male sex became detached from the fertile organism, and existed as a minute separate fertilizer. This increased the difference between the new element and the primary one and led to greater variation and further progress. The separation of the male fertilizer from the primary fertile organism resulted in a plurality of the former, and made possible a selection by the latter from among a number slightly differing in certain qualities. In this the fertile organism selected the best and rejected the inferior. This still further heightened the tendency to vary and improve. But it had another effect. It led to a rivalry to be selected among the male fertilizers, which rapidly modified their structures. They grew in size and regularity of form, and acquired those qualities which were most certain to be selected. As these qualities were the biologically best, the male fertilizers, which were primarily shapeless masses (sperm sacs), developed into true organisms. As the fertile organism had only itself as its ideal, the selected fertilizers grew more and more into the image of their creator, the fertile organism. At length they came quite closely to resemble it, and in some cases approached it somewhat in size as well as in form. It is at this stage that the biologist chiefly observes the organic world, and ignoring the origin of the male fertilizer, as above described, he classes it on a par with the primary fertile organism, which has undergone no change, and he calls the former the male

sex and the latter the female sex. If the fertile organism was the female sex after the development of the male sex it was the female sex before there was any male sex. It follows that thruout untold ages the female sex alone existed, and that life was originally and is essentially female.

The process went on. The "females" continued to select and the males continued to compete. The latter continued to develop while the former remained stationary. At last along some lines the males became nearly the equals of the females, and toward the close of the Mesozoic period of geology, when birds and mammals were introduced, the males of certain species actually acquired superiority over the females in size, strength, and ornamentation. Indeed, some of these ultimately went to extraordinary lengths in these directions, as in the stag and the peacock. It happens that these two classes of animals, birds and mammals, are the only ones that are at all well known to the public at large, and all ideas about sex are derived from a superficial observation of these. What does the general public know about sex among insects, for example, which numerically so enormously exceed all birds and mammals? But scarcely any insects have attained to male superiority in any respect, and in most of them the male is a very inferior creature, often still a simple fertilizing adjunct to the female, with no other purpose in life. The same is largely true of most of the so-called lower organisms, and male superiority is an almost negligible factor in biology.

The great utility of sexual reproduction led to its universality among organisms at all developed. There may still exist more asexual than sexual organisms in the world, but they are all of a low order, because evolution to higher stages is possible only thru sexual reproduction. The universality of sexual reproduction had another result. It led ultimately to its necessity. From habitually reproducing sexually thru unnumbered generations, the fertile organism gradually lost the power of reproducing asexually. It has thus come about that in all the higher organisms sex is now really a condition to reproduction. This generally observed fact, in the absence of

all knowledge of its causes, as above sketched, has led to the prevailing erroneous idea that reproduction is the purpose of sex, whereas, as we have seen, the purpose of sex is the crossing of strains and the consequent improvement of animal races, *i. e.*, organic development.

fore, when man proper did at last appear it was with this characteristic highly developed. But it must not be supposed that this so-called male superiority carried with it any true supremacy or dominion of the male over the female. Thruout the animal world the primary fertile organism, which biologists are

Lester F. Ward.

Man is a mammal, and therefore belongs to that great class, the highest in the animal kingdom, in which the male sex attained its maximum development. Male superiority in the qualities enumerated—size, strength and ornamentation—had been attained in the line to which man belongs long before any being in that line had reached a condition which could properly be called human. There-

pleased to call the female, has always been supreme in the government of the animal economy. The males, however superior they may have become in size, strength and weapons of combat, have always been compelled to submit to her will. They never use those powers to force her into subjection to them. All they can hope to do is, by the display of prowess in combating rivals of their own

sex, to win the favor of the female and be selected by her.

Such was the condition of things when man came upon the scene, and for countless generations woman was supreme. This is the great matriarchal stage, which ethnologists are just beginning reluctantly to recognize, but the survivals of which are being discovered in all human races. It is, however, now difficult to find it in its purity even in the lowest existing races. In nearly all it has been superseded by the patriarchal stage, in which man exercises dominion over woman. How was this great change brought about? By the discovery of paternity.

No animal has the least idea of paternity. Reproduction is insured by instinct, not by design. During the transition period, when a certain animal was becoming man, this was as true of that animal as of any other. It remained true long after the human stage was reached. Indeed, there still exist human races in which the father has no knowledge of his relations to his children, and mothers attribute their pregnancy to some form of sorcery. But the transition from the animal to the human stage was accompanied by—in fact, was chiefly due to—the growth of the rational faculty, and it was simply a question of the degree of rationality attained when man should discover his paternity. That degree has been long past by most races, and as soon as it is reached in any race it tends to overthrow the matriarchal system and set up the patriarchal system in its stead. Unfortunately, it is always reached before the sympathies have correspondingly developed, and the result has been the enslavement of woman by man and a long train of horrors which cannot be described here.

We have thus passed in review three great revolutions: First, the transition from asexuality to sexuality thru the origin of the male sex; second, the passage of the male from the condition of a minute fertilizing adjunct to a condition of superiority in size, power and beauty to the organism proper, then called the female; and third, the change during the early human period from female dominion, or matriarchy, to male dominion, or patriarchy. This last stage happens to

be the one in which most human races find themselves today. But within it there have been transformations which, tho of minor amplitude, are of the highest importance, and really concern the civilized world more vitally than any of the three great cosmic revolutions enumerated.

In fact, there is a fourth great revolution to be noted. The patriarchal system almost universally led to polygamy, or rather, to polygyny, *i. e.*, the possession by the men of a plurality of women. In other words, the strongest men owned all the women, or all of them that they considered worth having. This was really a form of selection. Thruout all stages anterior to the patriarchal, the females had done the selecting, and had thus brought the male sex up from nothing to a condition of actual superiority to themselves. Now the tables were turned and it was man that selected. As the esthetic sense had developed somewhat equally in both sexes, men naturally selected the most perfect women. The great biologic law took effect here as everywhere, and woman, who had thus far been devoid of the attribute of beauty, began to acquire that attribute. It was thus, during the prolonged period of male selection, that woman was transformed from the unadorned but stern and peerless ruler of household destiny into an ornament of the seraglio and a model for the sculptor.

But man selected scarcely any but these esthetic physical qualities, and, as all know, qualities not selected become atrophied and are lost. Thus woman lost her power and dignity, probably considerable of her stature, and certainly, in a large degree, her mental capacity for protecting and defending her offspring. Had not these tendencies been checked by other influences too numerous to mention, and by a certain incompleteness in the polyamic system, she would have degenerated into a mere bauble to pander to man's tastes and a voluptuous charm to gratify his lusts. While no one could wish to dispense with female beauty, and while it is probably worth all it has cost, still it must not be forgotten that it has been attained at the expense of the greater part of all those sterling qualities that primarily characterize the female sex as

the original trunk of all organic existence and the source and prop of life itself. It is this degenerate but highly esthetic being, made so by man's preference for esthetic degeneracy, that forms the subject of all modern speculations respecting woman and her future. In the absence of all knowledge of woman's real history, the argument naturally runs:

. . . You always were as small  
And weak as now we see,  
And that's conclusive evidence  
That you're always going to be.

But revolutions in matters of sex are not yet ended. A fifth revolution has actually begun in certain parts of the world and bids fair to extend to all parts. In one great race of men, and that the race that now leads the world, the polygamic system has chiefly given way to the monogamic. The history of that great change cannot be even recapitulated here, but we may glance at its principal causes. These may be reduced to two: emotional and intellectual development. The former taught man to despise the sex slavery of polygamy, and the latter overthrew the monopoly in women and demanded a more equitable distribution of human affections. Instead of female selection, as thruout the animal kingdom below man and the matriarchal stage of human development, and instead of male selection, as thruout the patriarchal *régime*, there was ushered in a system of mutual selection by both sexes of all the best qualities in either.

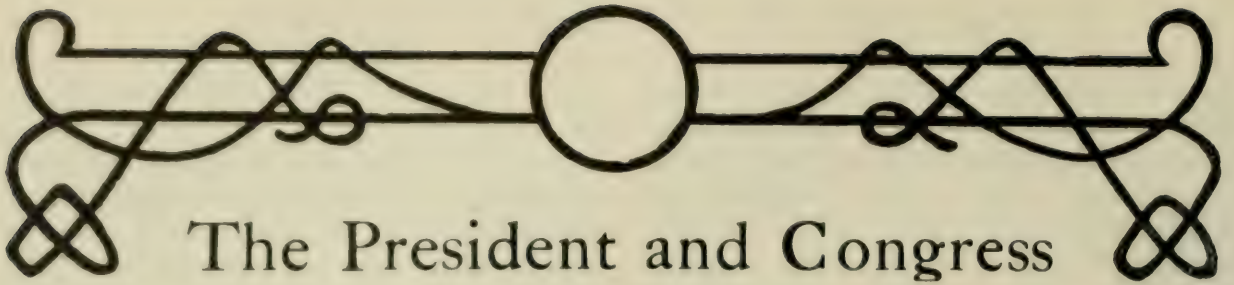

Altho the period of this new *régime* is comparatively short (less than ten centuries), and altho the system is restricted to that one race and has never been perfect in any time or place, still it has already begun to show its effects in removing the distortions of both sexes wrought by the one-sided systems of the past. These effects are most apparent in woman, who is rapidly rising both physically and mentally, and regaining much of the power that she lost during the long night of subjection to man.

The imperfection of the mutual or monogamic system, as it exists today, is most plainly seen in the almost complete economic dependence of woman upon man. She has not regained her pristine independence, not to speak of her pri-

mary dominion. The latter, indeed, is not desirable. Female supremacy would be as inimical to true progress as male supremacy. But mutual independence in the economic sense and complete equality in all things not otherwise ordained by nature are the great ends still to be attained. Their accomplishment is the one step needed to complete this fifth and last revolution in the relations of the sexes.

Is any one authorized to say that this stage will never be attained? Such a declaration can emanate only from the same myopic form of reasoning which characterizes the discussion of this entire question. It is only necessary to employ the cosmological perspective, to look back, as we have just been trying to do, over the entire field of sex evolution, in order to grasp the immense possibilities of the future. The past has always been characterized by inequality of sex. The future will be characterized by greater and greater equality. The inequalities that have been inherited from the past prevail to a large extent in the present, and most persons assume that they are natural and necessary. There could be no greater mistake. Shall we say that the female sex, which constituted the whole of life long before the male sex existed, which forms the main biologic trunk thruout the whole organic world, and which reigns supreme over the entire animal economy and did so far down into the human period—shall we say that this being, now become woman, is destined to remain forever in an inferior and subordinate state, subject to the will of man, whom she has created? Nothing in the history of the world justifies such an assumption. The movement now begun cannot stop until complete equality of the sexes is attained. It will not stop then, but its further march will not be in the direction of any new form of inequality. When complete equality shall be reached, and not until then, the human race will be really prepared to begin its career. Handicapped by this worst of all inequalities, it has thus far been incapable of any great action. Freed from these trammels and doubled in its powers, it can then at last enter upon the real task that lies before it and work out its grand destiny.

# The President and Congress

BY AUGUSTUS O. BACON

[Augustus O. Bacon, United States Senator from Georgia, during his eleven years' service in the Senate, has gained for himself a prominent position among the shrewdest and most brilliant Constitutional lawyers in America. He is a member of the Senate Committees on Foreign Relations, the Judiciary, Railroads and Rules, showing the value placed upon his legal insight. He is also one of the most graceful and effective speakers in the Senate.—  
EDITOR.]

IT is a matter of frequent remark in the American newspapers that the President of the United States exercises more power than any crowned head of Europe. The same opinion is also expressed by some of these crowned heads, as they contemplate the increasing exercise of a power greater than that wielded by themselves. The contrary of this was designed by the founders of our Government; nevertheless, it is a fact not to be disguised that the actual exercise of power by the executive branch of the Government in this day exceeds the bounds originally contemplated for it by the Constitution.

It is a remarkable fact that in England, a monarchy, not only has the King abandoned all pretense of any control over legislation, but he has practically surrendered the exercise of executive power. The constant progress has there been toward restraint of executive power in the Crown, and the enlargement of the power of the legislative branch of the Government, until now practically all political power, both legislative and executive, is in the control of the elected representatives of the English people. It is a fact still more remarkable that in the United States, a nation born of a rebellion against a monarchy, and designed distinctively as a representative republic, the President has not only retained all original executive power and greatly enlarged it, but there has been a no less steady progress in the direction of the absorption of legislative power by the Executive and of its practical surrender in large degree by Congress.

While such is already the largely accomplished result, with a steadily increas-

ing progress in that direction, there was nothing more foreign to the purpose of those who framed the Constitution, and nothing further from the understanding of the thirteen States which adopted it.

The first sentence in the Constitution following the preamble is as follows:

"All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist in a Senate and House of Representatives."

No grant of power could be more comprehensive, more explicit and more exclusive than that which is thus expressed in the first section of the first article of the Constitution. It is the law on the book today. No one, however, who is familiar with existing conditions will say that it is such in effect. There is no Senator or Representative who in an unbiased expression will say that the exclusive legislative power of this Government is now exercised in the two branches of Congress. It must be admitted by all having knowledge of everyday occurrences that the most influential and controlling part of the legislative power of the Government is at the other end of the avenue—in the White House. Intending that this article shall so far as practicable be impersonal, it is proper to say that this statement is not intended to apply, except in degree, to any particular occupant of the White House. The executive has for many years, in the effort to control legislation, continuously encroached upon the legislative branch of the Government, thereby practically in part usurping its powers; and, as that encroachment has been a progression continuously enlarging in breadth and reach, it is but fair to say that it has never been so pronounced and undisguised as it is today.

The time was when one who desired legislation by Congress came to Congress and endeavored to secure its enactment. How is it today? Who is it that wants legislation who now comes to the House of Representatives or to the Senate for the purpose of securing it? We see every day in the newspapers accounts of pilgrimages to the White House for the purpose of securing legislation; we see every day in the newspapers forecasts as to whether or not such legislation can be passed, according as it may be announced that it will receive the active support or the active opposition of the Executive. Within the recent past statements have appeared in the public press that the quotations of certain securities had gone up or gone down on the stock market because of the announced position of the Executive as to proposed legislation which would, if enacted, affect the prices thereof. And within the same period statements have repeatedly appeared in the public press telling that Members of Congress, Senators and Representatives, had gone to the White House to solicit the aid of the President to secure the passage of certain desired legislation; and other statements are almost daily appearing in the newspapers that in the varying fortunes of the legislative battle Senators and Representatives hurry to the White House to secure the aid of the President to regain a position lost or to advance still further a line pressing on to victory. More's the pity!

To every lover of our institutions such a spectacle cannot be otherwise than deeply disturbing. Such recourse to the White House in time of stress can only be taken as a public confession by Senators and Representatives of the recognized fact that the influential, the controlling factor in national legislation, is not in Congress, where the Constitution vests it, but in the President in all cases where he seeks to use the vast power which is always ready to hand. The time will come in the not distant future when, if this practice continues and increases, the question of the attitude of Senators and Representatives with reference to any proposed legislation will not be an important matter, and when it will be well understood that such and such legislation is to be enacted or defeated, as the case may be, according to the will of the Pres-

ident, and regardless of the personal views of Senators and Representatives. It is a popular practice to criticise speech making in Congress, but it will be a sad spectacle to contemplate when members of each House will cease to discuss measures actively favored or opposed by the President because of the absolute uselessness of such a discussion. Only "Administration measures," or those concerning which the Executive is indifferent, will be enacted, and none others will be attempted from very hopelessness.

It is scarcely conceivable that this lowest level will ever be reached. But our eyes are not to be closed to the possibility of reaching another level, not so low, where, with the mere show of independence on the part of the legislative branch of our Government, the executive department may still practically dominate and control its action in all important matters. When that is reached, it will be so that the question of what the Congress shall do in any important matter will be a question not to be decided by its own judgment, or by a judgment of a majority, but to be decided by the will of the President. More and more the idea will be that, excepting "Administration measures," the only business of Congress is to pass appropriation bills and disperse. It is not to be denied that it is largely so now. There is still some evidence of a remnant of independence in Congress of the Executive will in legislation, but, nevertheless, it is notorious right now that most important subjects of legislation of great public interest are receiving no attention, and the questions whether Congress will or will not legislate on them, and what particular enactment will be made when there is legislation, depend solely on whether such subjects will or will not be made "Administration measures." That is openly and undisguisedly now recognized and asserted with almost daily reiteration in the public press, with specifications of the subjects of legislation which will immediately be pressed for action in Congress so soon as they are made "Administration measures"; and upon which, with equal definiteness, it is also asserted Congress will not legislate until the Executive will is made known in regard thereto.

The studied effort of the framers of

the Constitution was to concentrate in the Congress all legislative power, giving it even the power to override the veto of the President. Not only in the clause quoted was there given "all legislative powers" under the Constitution, but in that instrument almost all the powers of sovereignty were enumerated and placed within the control of the legislation of Congress. It was the design that legislation on these great matters should be by Congress, without control, direct or indirect, by any other official. These great powers thus confided exclusively to Congress to legislate upon are found in the first article of the Constitution. Among them are the following powers:

"To lay and collect taxes.

"To provide for the common defense and general welfare of the United States.

"To regulate commerce with foreign nations.

"To coin money and regulate the value thereof.

"To define and punish offenses against the law of nations.

"To declare war.

"To raise and support armies.

"To provide and maintain a navy.

"To suppress insurrections and repel invasions."

Each of these powers thus given to Congress for legislation, besides others of which I have omitted to make mention, is a distinct power of sovereignty—the powers which kings with sovereign power personally wield; and in addition thereto, after enumerating these powers, there is the following comprehensive grant of power to Congress:

"To make all laws which shall be necessary and proper for carrying into execution the foregoing powers vested by this Constitution in the Government of the United States, or in any department or officer thereof."

By this not only is Congress clothed generally with all power of legislation necessary to carry into effect all the powers granted to Congress, but Congress is further and exclusively vested with the power to make any and all laws necessary and proper for the execution of any of the powers of the Government of the United States and of any department of the Government, including both the executive and judicial departments. When to these great powers is joined the power to impeach and remove from office any officer of the Government, from the President to the lowest civil officer, little could be added to completely invest

Congress with every attribute of the sovereignty of Government.

Compared to this great array of sovereign powers granted to Congress, those powers conferred upon the President present a most striking contrast. In the powers given him by the Constitution he has, in conjunction with the Senate, the appointment of officers and the making of treaties. Outside of that, substantially his whole power as founded in the Constitution is embraced in one line: "He shall take care that the laws are faithfully executed." There is his great office, and that is what the Constitution intended should be his great function. "He shall take care that the laws are faithfully executed." He is, as has been said, the organ of communication with foreign governments; but his great function, that which gives dignity and power to his office, is that he is to execute the laws; and beyond this the only prerogative of sovereignty with which he is exclusively vested by the Constitution is the pardoning power, and even that is denied to him in cases of impeachment by the House and conviction by the Senate.

We have passed, by more than 200 years, the period in the history of our race when one man could assume and exercise the power to determine, independently of the legislative department, what should be, even in part, the laws of the Government. The framers of the Constitution stood nearer by a hundred years than we do to the time when a king sought to dictate what laws should be enacted by Parliament. The great and wise men who framed our fundamental law stood in the century next removed from that which had witnessed the culmination of that great struggle from the events of which they gathered the lesson that the power to make laws for the government of a people is safest when not controlled by one man, but when lodged exclusively with their elected representatives.

They had learned from it that one man invested with such powers was prone to follow the bent of his own will rather than be guided by the wisdom of his counsellors. They were taught by that history to fear that one so girt with power would grow great in his own conceit; that he would attempt to draw to

himself all the authority of government, and that not only one born to the kingly office, but also one who held but temporarily the office of President might come to think himself compassed by

"the divinity that doth hedge a king."

While they hoped that only good and wise men would be chosen to that high office, they forgot not the frailties of the weak nor the grasping ambitions of the strong. They guarded against the worst. They designed that in the hands of a weak Executive the Government should not fail, and that in the hands of one strong, self-willed and ambitious, there should not be imperiled the free institutions which they sought to establish. Therefore, while they created a great and noble office, one within its legitimate sphere the greatest and noblest of all the earth, they designed and provided that, while he should execute the laws, those laws should be made, not by him, but exclusively by the Congress.

The greatness of the presidential office does not consist in his will being the law to 80,000,000 people, but in the fact that the President in himself personifies the will of a great and free people, as that will is expressed by them thru the Congress. While they invested the President with all the great dignity and power of the Executive office, every power confided to him was most carefully restricted and guarded.

While they gave him the power of the veto, they gave the Congress the power to override his veto by a two-thirds vote.

While they gave him the power to make treaties with foreign nations, by and with the advice of the Senate, they refused to him the power to make such treaties without its participation.

They gave him power to pardon those convicted of crime, but denied the power to pardon in cases of impeachment.

They gave him the power to appoint all civil officers, but the appointment is only perfected when confirmed by the Senate.

They made him Commander in Chief of the Army and Navy, but they left it to Congress to determine what should be the size and constitution of the army and navy, and whether there should be any army and navy. They denied him the power to appoint a civil officer, or an officer of either the army or the navy,

from the commanding officer to the lowest subaltern, unless each of such appointments should receive the confirmation of the Senate. They gave him no power to equip and maintain either army or navy for a day. They gave him no power to make war, nor can he of himself conclude peace. The power to make rules for the government and regulation of the army and navy is denied to him and is expressly conferred upon Congress. It is evident that as Commander in Chief of the Army and Navy he is still but the executive arm, and that in that capacity he is himself, in every detail and particular, subject to the commands of the lawmaking power.

Finally, they made the Chief Executive, as well as every other civil officer, from the head of the Cabinet to the most obscure civil official, subject to trial and removal from office, without appeal, upon impeachment by the House and conviction by the Senate—a power, in much conservatism and wisdom, but seldom exercised, but nevertheless a power resting as it does without defined limits as to what shall be deemed a high crime or misdemeanor almost exclusively in the discretion of the House and Senate, which is the great safeguard against encroachment and official misconduct.

These limitations thus set by the Constitution on the powers of the President are not quoted here in depreciation of the Executive office. As already said it is as designed by the Constitution a great and a noble office—the greatest and the noblest of all the earth. But it is an *executive* office, and to no one who has filled or shall hereafter fill it is given any constitutional warrant to exercise directly or indirectly the legislative function.

There can be no condition more dangerous to the maintenance of free government than is found in the concentration in the hands of one man at the same time of both the executive power and practically the power to make the laws he is to execute. Whatever may be the form of Government, when these two powers are thus concentrated in the hands of one man, the Government is an autocracy pure and simple. It makes no difference in practical effect whether that one man himself decrees the laws, or whether they are enacted in obedience to his dictation.

WASHINGTON, D. C.

# Shaw Contra Mundum

BY CARROLL BRENT CHILTON

[The author of the following very lively article has written and lectured considerably on literary and musical topics. We were so impressed with the opportunity it afforded for a reply that we sent it to Mr. Shaw himself, feeling sure he could not resist the temptation to notice it. But all we could get out of him was the criticism published at the end of this article, which came to us last week on a postal card.—EDITOR.]

"A bee upon a briar-rose hung  
And wild with pleasure sucked and kissed;  
A flesh-fly near, with snout in dung,  
Sneered, 'What a Transcendentalist.'"

THE fool in a rowboat, animated by an insane desire to rock the boat from side to side, cannot be ignored.

Sidney Smith said that he and his brother, Bobus (a distinguished jurist), had inverted the laws of nature. "He rose by his gravity, I sunk by my levity."

Our Irish cynic, paradoxical to the last, likewise presents the poles in a family union, assuring us that he has "achieved eminence by sheer gravitation." The metaphor is just. The law of gravitation seems to have carried his head to the nadir and his feet to the zenith! Inasmuch as this is precisely the process to which he has subjected most of the propositions of simple good sense, the punishment may be said to fit the crime. Give either the man or his thought a reverse twist (or wait for the turning of the sun)—all is righted and our mystification ceases.

In Shawnee-land—what? only a newer and cruder "transvaluation of all values"—gravitation goes upward, away from the center of things, moral questions are immoral, the devil himself the father of morality, which again is not morality but immorality; the prurient is the chaste, which again is not chastity but pruriency; law and order a stupid system of violence and robbery; the woman courts the man; economics is theology and poetry, the latter being extinguished altogether as vaporous and sophomorical buncombe—and so all things are mixed.

Said a clever girl in my hearing: "At the Shaw plays the public laughs at what would be a joke in other theatres, but is there intended to be the most serious part of the play." \* \* \*

## II

No one who is at all human can fail to be impressed with Shaw's power as an entertainer—his indubitable wit and almost diabolical cleverness. Nor can it be denied that he expresses much truth, if not *the truth*. "The worst book is like a leaky boat in a sea of wisdom; some of the wisdom will get in anyhow." Doubtless a strong case could be made out for him on this score. My feeling is, however, that this side of him is sufficiently known already. My present object is to show the obverse of the Shaw medal.

M. Filon, the distinguished French critic, has devoted a long article to him, Mr. Royal Cortissoz another. Mr. Chesterton—himself a kind of Shaw—another, and there are others. M. Filon finds that all the productions of Mr. Shaw are so saturated with his personality that practically they are but the expressions of his individual ideas, sentiments and notions. "This perverse individuality," he says, "pervades even his criticism, in which he exhibits equal hostility to all ideals, true and false, because the very word 'ideal'—including some of its constituents, such as heroism, love, duty and the like—is to him a pet aversion. In summing up he says that the Shaw plays are one long attack upon all old institutions, and the principle on which they are based, against marriage, the family, individual property, against morality and the very idea of duty."

Mr. Cortissoz's article is brilliant and suggestive, while Mr. Chesterton's criticism is light but entertaining. In the latter we read:

"Mr. Shaw, not being easily pleased, decides to throw over humanity, with all its limitations, and go in for progress for its own sake. If man, as we know him, is incapable of the philosophy of progress, Mr. Shaw asks, not for a new kind of philosophy, but for a new kind of man. It is rather as if a

nurse had tried a rather bitter food for some years on a baby, and on discovering that it was not suitable, should not throw away the food and ask for a new food, but throw the baby out of the window and ask for a new baby."

### III

Probably the most universal feeling produced by Shaw and the cause of his entertaining power is—puzzlement. "You never can tell" is the real name of every play of his that I have seen. People like riddles, an air of mystery and gay plumage, while truth, in her plain drab skirts, passes unheeded. Yes; mystification is something to conjure with. If the *Journal* asks "How old is Ann?" the question will be discussed in ten thousand homes that night at dinner. Shaw's paradoxes take hold of truth, perhaps, but by the wrong handle, usually. His entire method reminds one of one scene in the cinematograph. You see men and women run out in diving suits and plunge with a great splash from a spring board into the water. Presently, however, the splash appears first, and out of the water, backward and feet first, the same people are shot into the air, smiling all the while, landing again on the spring board and running backward to the point from which they started. How this is done you never can tell—but you know that it is all a trick of the shadowgraph entertainer.

What makes him really important is the fact that there are thousands of him in our midst. One can throw a stone anywhere in America and hit a Shaw. Not only the theater, but every profession is full of scorers of the "living truth of things."

There are musical Shaws a-plenty; even poetical Shaws can be found. He is, in fact, the self-constituted pope of a whole school of modern writers—the Mother Hubbard school, bare as her cupboard of any wholesome views of the world, having no settled view of anything, but "turning to mirth all things of earth," as only cynics can; each a sort of huge perpendicular pronoun, slowly curving itself into an interrogation point. The transit from the straight upright of Shaw's pismirine self-assertion to the charming "humpback" of self-query is the spectacle we are witnessing. Our authors, meanwhile, stalk the street with

th: air of their own statues erected by national subscription.

The Mother Hubbard school, priding itself upon its frankness, transposes ideal things into the animal scale *upon the plea of exhibiting their real aspect!* Real for whom? Always the view characterizes the man seeing and not the thing seen. "When a head and a book carom together and you hear a hollow sound, it isn't always the fault of the book." Of course, it is only substituting the liminary, small and bounded ego for the unconditioned whole.

Would it be fair to say that what each man means by wisdom is the wisdom that belongs to his peculiar temperament?

Shaw is the denier of the Imagination! His negations, however, are purely personal. Except as illusions, he denies the existence of things which can be defined or rightly understood only in the degree that they are already possessed by those who attempt to understand them, such as religious (Christian) faith (an "*experimental*" science), and the transfiguration of life by love. If any man affirms that he has nothing in his experience which gives reality to such ideas or emotions, his opinion must be respected, but he must admit the possibility of these views being honestly held by others. "A drunken bargeman," says Patmore, "has exactly the same right to deny the reality of the asserted experience of a Petrarch or a Wordsworth as these would have to deny those of the saint or apostle, viz., that neither his own experience nor that of his pot-companions contains anything which gives the least clew to their meaning. 'One fool will deny more truth in half an hour than a wise man can prove in seven years'."

### IV

This lesser Nietzsche worships the God of things as they are—*underneath*. He reverses all things, so that we now have a new plant of the well known genus "manypeopia upsidedownia." First the New Woman, then the New Man! If Everyman, then Everywoman. "The contrary of everything is its postulate." As the contrary of everything is its postulate, and the "multitude of false religions accredits the true," the joustings of Shaw against the verities are in reality

the triumphant vindication of their strength.

Ophelia's madness made her forget "the relation of things." Not so with Shaw. His flippancies are conscious, intentional.

"Thought, affection, passion, *hell* itself.  
He turns to favor and to prettiness."

Does he come as a holy iconoclast, with his touchstone, testing all things in the land, so that even the statues of the gods crumble beneath its touch? Not at all. He boldly negatives the entire sum and order of the poetic or imaginative value of things and thus reduces life to a horrible scale of commercial values. His mind, therefore, is the perfect type of the vulgar cynic, "knowing," as Wilde so wittily says, "the price of everything and the value of nothing." Where is the difference, it might be asked, between the rejection of all standards and the pure savagery of never having had any?

Using the Muses for a-musement, Shaw is often entertaining and witty and stimulating. From the standpoint of intellect and sense, "his incongruities are like the last delirium." Perhaps it is because folly is never new, but inveterate in nature, that it so often attracts attention.

With poets and idealists and theologians working for ages to upbuild the lovely ideals "which conquer death" and so hold the savage powers of man in check, comes now this jocose profaner and mocks at all, as if all were a miserable hypocrisy.

This is all old, old. Ever since the dawn of the world it has been easy for the "fact grinding" profligates of literature to make merry sport of revered things. Does he not well know that it is merely by utilizing the weight of respect for things worth while that he can raise himself to public notice?

Every one knows the power of this blight upon the uninstructed—destroying, like a marasmus, more in a day than our great idealistic teachers can build in a decade. For the idealistic tendency in the young is a tender shoot, which shrivels at the touch of the literalist—the flouter who debauches the minds of the young, while drawing his force from the

frivolous dandling of high themes which have earned the respect of men.

Could anything but the ascendant, levitating power of these ideals and the necessity of examining the gigantic egotism of self-assertion with which they are attacked give him the prominence he has attained?

That he should have attained this position goes to show the terrific power of expression to warp people clean out of their orbits.

## V.

It needs no ghost to come from the grave of shallow cynicism (in which, for very shallowness, it won't stay buried) to tell us that the literalist view of the great imaginative ideals of man seems to reduce them to base mendicants. Where is the harm then? It is the instilling the poison of contempt into the minds of the unwary, not yet taught to respect the intellectual and moral heritage of the world, and having no armor against the blandishments of wit and cleverness, posing for omniscience. It is proved that there is no sanctity of respect which is proof against the invasions of the so-called "realist," if he gets in, like a flea in our clothing, and succeeds even for a moment in discomposing us, for the realist does not understand that in all divine things "shadows are substances."

What the uninitiated do not know is that a higher grade of the same wares may be obtained at the other mills. See Nietzsche, Ibsen, Wilde and others.

Was the world more sensible when Oscar Wilde was producing his vagrant fancies?

Already, before 1682, in England, we find this beautiful and ordered statement of the cynic position, in Sir Thomas Browne's "Letter to a Friend," drawing a circle of light around the little and mean opinings of latterday cynics.

"He has wisely seen the world at home and abroad, and thereby observed under what variety men are deluded in the pursuit of that which is not here to be found. And altho he had no opinion of reputed felicities below and apprehended men widely out in their estimate of such happiness, yet his sober contempt of the world wrought no demeritism or cynicism, no laughing or snarling at it, as well understanding there are not felicities in this world to satisfy a serious mind; and therefore to soften the streams of our lives we are fain to take in the reputed contentions of this

world, to unite with the crowd in their beatitudes, and to make ourselves happy by consortion, opinion, or co-existimation; for strictly to separate from received and customary felicities, and to confine into the rigor of realities, were to contract the consolation of our being into too uncomfortable circumscriptions."

Yet this man, whose audacity compels us to examine his whimsical claim that he can write plays as good as Shakespeare's, openly flouts his readers for taking him seriously:

"The world shown in books, whether the books be confessed epic or professed gospels in codes, or in political orations, or in philosophical systems, is not the main world at all; it is only the self-consciousness of certain abnormal people who have the specific artistic talent and temperament." (This, by the way, is an excellent definition of Shaw himself.)

"Why, even I, as I force myself, pen in hand, into recognition and civility, find all the force of my onslaught destroyed by a simple policy of non-resistance. In vain do I double the violence of the language in which I proclaim my heterodoxies. I rail at the theistic credulity of Voltaire, the amoristic superstitions of Shelley, the revival of tribal soothsaying and idolatrous rites which Huxley called science and mistook for an advance on the Pentateuch, no less than at the welter of ecclesiastical and professional humbug which saves the face of the stupid system of violence and robbery we call law and industry. Even atheists reproach me with infidelity, and anarchists with nihilism, because I cannot endure their moral tirades. And yet, instead of exclaiming, 'Send this inconceivable Satanist to the stake,' the respectable newspapers are with me by announcing, 'Another book by the brilliant and thoughtful writer,' and the ordinary citizen, knowing that an author who is well spoken of by a respectable newspaper must be all right, reads me as he reads Micah, with undisturbed edification from his own point of view," ("Man and Superman," Epistle Dedicatory.) But he adds, thoughtfully, "All the assertions get disproved sooner or later!"

And thus in page after page does our "brilliant and thoughtful writer" throw overboard the entire weight of tradition, until finally he becomes so light that the air outweighs him and he ascends into the heaven of our astonished gaze. Yet he lacks, it seems to me, the melancholy of

the born satirist, Heine, for instance. "The satirist is sadder than the wit," says Richter, "for the same reason that the ourang-outang is of a graver disposition than the ape—namely, because his nature is more noble."

## VI.

It would be idle to go thru the Shaw books and consider them in detail. Let us examine one staggering statement.

Ineffably the greatest boon, and one for which a man can never truly pay, is life—a sound constitution and protection during the period of immaturity. Yet in Shaw's mind the sublimely altruistic desire on the part of women to bestow life is a kind of vulgar snake-charming, by which they sacrifice men to the "Life Force."

Not satisfied with botanizing on family graves, this "thankless child" of the time, turns even "his mother's benefits and pains to laughter and contempt." Hear him: "The world is strewn with snares, traps, gins and pitfalls for the capture of men by women. Woman must marry because the race must perish without her travails. (If the risk of death and the certainty of pain, danger and unutterable discomforts cannot deter her, slavery and shackled ankles will not. . . .)

"It is assumed that the woman must wait, motionless, until she is wooed. Nay, she often does wait motionless. *That is how the spider waits for the fly. But the spider spins her web. And if the fly, like my hero, shows a strength that promises to extricate him, how swiftly does she abandon her pretense of passiveness, and openly fling coil after coil about him until he is secured forever.*"

## VII.

What is the answer, for answer there must be, to this professed profaner of man, who so cleverly employs the "hydrostatic paradox of controversy," to make his drop of acid rise to an even height with the waters of life, and so balance temporarily the sea of sound thought?

There is no gravity of character or manners that cannot be overturned for the moment by the demon of cleverness. The cynic will sacrifice his religion, his politics, his friends, his family relations, the chastity of woman ("man's noblest invention") and his own integrity and peace

of mind—all for a miserable paradox. Here is a glimpse of the Shaw spirit—a fair sample of his manner. "This ass," says the Devil of Dante, in "Man and Superman," "when he was not lying about me, was *maundering about some woman whom he once saw in the street*!"

Could anything be easier than to upset a company by insultingly invading the privacy of self-respecting persons? This is what Shaw does in literature. It is no great feat, after all, and in the actual society of the world would earn him summary ejection, as indeed he has already earned from the select company of literature.

If we think that Poetry is an Art, and remember that Art depends upon sympathy for its very existence, where, let us ask, does the poetry of life go to, if *unsympathetically* and *anti-poetically* (*i. e.*, *analytically*) conceived—as by the Shaws? To "the charnel house of science," the real Shaw hell, into which, in the second act of "Man and Superman," we are precipitated without warning—a double descent—into hell and into the bottomless pit of balderdash.

Is it not an old truth that the scientific or analytical spirit has been the sworn foe of the artistic spirit since time began?

What is love to the "scientific" mind? "The contact of two epiderms." What is life—to science? "A permanent possibility of sensation."

(Stevenson said he found it difficult to get up a family interest in "a permanent possibility of sensation.")

What is anything truly but the rank it takes in the scale of the imagination?

Who would take any interest in the abstract ideals of the imagination that did not know them to be at least as real as nuts and bolts? Are they not, indeed, the steel bolts and nuts which rivet the world together?

#### VIII.

"The vulgar cynic"—I am quoting Patmore—"blessing when he only means to bray, declares that love between the sexes is all imagination. What can be truer? What baser thing is there than such love when it is not of imagination all compact, or what more nearly divine when it is? Why? Because the imagination deals with the spiritual realities to which the material realities correspond, and of

which they are only, as it were, the ultimate or sensible expression. And here it may be noted, by the way" (the quotation is too delicious to break off), "that Nature supplies the ultimate analogue of every divine mystery with some vulgar use or circumstance, in order, as it would seem, to enable the stupid and the gross to deny the divine without actual blasphemy!"

"Would you possess what is, shun what seems. Believe and cling to nothing but your dreams."

"Love itself," he says elsewhere, "is in—the strictest sense absurd"—*i. e.*, *irrational*—since "that which is the root of all things must be itself without root."

Thus taking the scale of the imagination as our standard of value, we find that, if the world is no hero to this literary valet, it is not because the hero is no hero, but because the valet is a valet. "If an ape looks into a mirror, no prophet can look out," says the German proverb. Shaw finds the world so, and so it is for the Shaw temperaments. Does not this proverb wittily express the essence of all artistic criticism?

I suppose no one really imagines that his idle, Quixotic joustings against the "Titanian erections" of the spirit of man will have any serious or permanent results. The world of realities remains unscathed.

"But he is so stimulating!" Yes; so is a murder. The question is, does he stimulate us to any purpose, or are we only making our ideation more and more fugitive and eccentric? Effective? Yes; so is a blow in the face. Effectiveness and overstimulation are the curses of the modern world, in the theater, in art, in literature, down to our very garments.

"So very original," we say. In reality, nothing could better show the vast gap between originality and oddity. That nothing is farther from originality than eccentricity will be seen by any one who considers the etymological meanings of the words.

"Only mediocrity is ever wholly original."

#### IX.

If I were asked to summarize my quarrel with Shaw I should say first that I find superficialness to be the real Shaw distemper. Then, in order, irreverence for imaginative ideals, and, the adop-

tion of the sensual scale of life rather than the spiritual one (you feel that he will value all persons and things in strict relation to their utility—*i. e.*, to him—and not according to the greatness of their hearts and aspirations).

Third, the rejection of past standards, which is barbarism, pure and simple.

In short, to give the thing a purely personal bias, I acknowledge my irritation at his attempt to discredit everything which, as far as I can see, makes life worth while. His moral atmosphere is almost the most disagreeable that can be imagined. It is a spirit which denudes life of every charm, and so little novel that it is the constant state of every third man in the street, and certainly does not need Shaw's encouragement.

Half the force of Shaw and his kind is gone if we remember that they are performing the cheap and ancient trick known as the *confounding of planes*. "This," says Emerson, "is to carry the law of surface into the plane of substance, to carry individualism and its fopperies into the realm of essences and generals, which is dislocation and chaos."

Of course, in this principle, the literalist and cynic "discovers carrion where purity would discover a goddess," and at every step tramples under hoof the marvelous superstructure of the ideal world which the poets and seers of humanity have reared to the unknown God of things. Which of these points of view is the reality let each man judge according to his taste.

The high spirit of literature, the fine breath of culture, is a region, a platform, an atmosphere. It is the Shaw *tone* that debauches (no one cares anything for his opinions); the literalist view which affronts the respectabilities of life with its impudent insinuations. And here again we have the clue to the characteristic Shaw vices—his "careless quintessence," viz., insincerity and irreverence—both raised to the ninth power; two of the most powerful weapons in the armory of the trifler. As sensitive children infallibly absorb the intellectual and moral tone of their elders, so do the vicious and ignorant children of the world become saturated with the Shaw irreverence, which poisons the very roots of life.

Contempt for the society of artists and

literary people of London, whom he claims to have known intimately (on the terms of playing accompaniments on the piano!) is another of Shaw's poses. But *how* did he know the literary and artistic folk? On what terms did he know them? By sympathy and insight, as artistic things and people alone can be known? And did he thus become familiar with the best ideals out of which he was to make capital by mocking them? Who are the Shawites or Shawmites? Are they our intellectual leaders? Our George Merediths or Swinburnes, our Lord Roseberrys or Sir Oliver Lodges? Yet, since "Madame Bovary" has been called a Sunday school tract, it would seem that Shaw has his mission. He points a great moral. His mind, the arch-type of the unimaginative man, shows us the ghastly results of trying to be too scientific—*i. e.*, too direct and definite in dealing with the problems of life.

A great thinker once remarked: "The only perfectly definite things in the universe are the conceptions of a fool who would deny the sun he lives by if he could not see its disc."

#### X.

Finally remains the explanation from temperament. Shaw is simply expressing his temperament. He is standing by his own order, as every true knight should. His temperament happens to have a tongue, and the vivid lightnings of his wit serve to obscure temporarily the deeper views, then for the moment unexpressed. The best answer of the ideal temperament, by which alone the world lives, and without which we are no more than clods, is perhaps the remark of the yokel, after a learned lecture in the town lyceum, "'Tain't so."

Why does each man mistake his own temperament for the rule of three, instead of the oligarchy of one? Shall we say, then: *Of course*—given a Shaw—his opinions must follow as the night the day.

From another point of view, Shaw's delirations are nothing but breaches of intellectual manners. Let an ordinarily clever man go into any community and pose questions in the form of audacious and brutal insinuations of hypocrisy. Is not he who answers lost?

The actual, we say, always makes the ideal ridiculous, but only for the moment, and vulgar insincerity in life and art can seldom twice get a hearing. That man must have a great belief in his thought if he is willing to risk all at a single throw.

What will be the end of Shaw? Will he sink, like his intellectual godfather, Oscar Wilde, beneath a cloud of shame, or be quietly consumed by the slow contempt of mankind? Who cares?

"A bucket of water," says Tyndall, "can be whipped up into a cloud that will shut out a range of mountains, but a little sun will dissipate it, and the mountain range will still be there."

"Have you read my 'Descent into Hell,'" said the poet Montgomery to Douglas Jerrold. "No," said Jerrold, "but I should like to see it." Perhaps he will "die in his own too much," and thus contains within himself his own antidote.

## A Criticism

BY G. BERNARD SHAW

10 ADELPHI TERRACE, LONDON, W. C., February 20th, 1906.

At your request I have read Mr. Chilton's article. It is certainly a very bad one; but it was hardly fair to set him a subject manifestly too difficult for him. Why not ask him for an article on Oliver Wendell Holmes? He would probably do it quite creditably.

G. BERNARD SHAW.

## Père Duprée

BY ELLEN HAINE HULING

GAUNT firs gleam black against the dying day,  
Low in the north wan blue fires hiss and glow,  
The stinging northland wind piles high the snow  
Where, 'neath that moss-grown cross, lies Père Duprée.

The land he left behind is far away,  
The race he taught is gone long years ago;  
The very name is all of him we know;  
All else is silence and the snow-gloom gray.

Fruitless thy life and vain? Yet, all unknown,  
Dying, as living, friendless and alone,  
Of all life gives us hast thou not the best?  
Thou toil'dst, and of thy toil the fruit did see,  
In far St. Gabrielle one thinks of thee,  
And, after life's hard labor, thou hast rest.

CAMBRIDGE, MASS.

## Stuyvesant Fish

[The following character sketch of the "Man of the Week" is written by a well known newspaper correspondent in Wall Street, who knows Mr. Fish and Mr. Fish's more intimate friends.—EDITOR.]

EVERY great occasion develops men to meet it. The man who is to lead the policy-holders in their fight for their rights against the financiers of the life insurance companies seems to be Stuyvesant Fish.

Mr. Fish is not a new figure in the financial world. He has been preparing

himself for thirty-five years, and has risen so steadily that the public at large has not accorded him much attention. There was a time when the Wall Street astronomers affected to take Stuyvesant Fish none too seriously. "He shines by reflected light," they said. "It was lucky for him that his father was born before

him," they allowed. Reference was constantly made to him as the son of his father. In this the Wall Street wiseacres were literally right. He *was* the son of his father more emphatically than they had reckoned. Away back in 1871, when he was but twenty-one years of age, young Fish left Columbia College to go to work as clerk in a railroad office. He didn't have to do this for his daily bread. It was merely the beginning of the career which he had mapped out for himself. Within a year he had qualified as secretary to the president of the Illinois Central. In this position he learned the arduous duties that the chief of the road was expected to perform. These, he saw, comprehended commerce and finance, and he presently entered the firm of Morton, Bliss & Co. for the purpose of picking up the financial department of railroad work. As early as 1876 Mr. Fish was elected a director of the Illinois Central. Three years later he joined the Stock Exchange, and there learned of the relations of that familiarly called "den of iniquity" to railroad construction and management. Subsequently he became secretary of the Chicago, St. Louis & New Orleans Railroad. After serving for a considerable period as second vice president of the Illinois Central he was elected to the presidency of the company in 1887, and has held the position ever since. In addition, Mr. Fish is vice president of the National Park Bank, president of the Yazoo and Mississippi Valley Railroad, a director of the Railroad Securities Company, and up to a few days ago a trustee of the Mutual Life. These are not many affiliations as compared with those of many Wall Street men, but Mr. Fish is almost over-conscientious as a director, having no sympathy with "ornamental" functionaries and refusing either to pay or accept money that isn't earned.

Mr. Fish was born June 24, 1851, was married in 1876, and has one daughter and two sons, Stuyvesant, who was graduated from Yale and went West to do railroad work, and Sidney, now in Harvard.

Physically, he is a striking man, unusually tall—some 6 feet 2 inches—and if he were to stand straight he would probably take on a couple more inches. He has a way, however, of stooping

slightly, apparently from the habit of inclining his ear to catch the words of men less favored than himself. Altho an educated and well read man, he is not a graceful talker. His speech, however, is remarkably effective from the simple fact that he speaks from conviction. It might be said of Mr. Fish that his very presence is convincing. In his intercourse with the men of the press he has a most cordial way of saying nothing, yet he holds the esteem of these gentlemen because he talks confidentially to them for their personal information, tho not for publication.

Above all things Stuyvesant Fish is most noted for conservatism. Wall Street puts him in a class against that of Morgan and Hill, and ascribes to him an ability of the broadsword order rather than the brilliancy of Hill or the awful splendor of Morgan. Mr. Fish is invariably accorded the leadership in every enterprise he engages in. He is aggressive, yet his aggressiveness is so obviously disinterested as to disarm resentment. In other words, it has never been his ambition to lead. He does so simply in pursuit of some well defined purpose, or thru a sense of duty. He hesitated for some time before he consented to serve on the Mutual Life investigating committee, from which he has now resigned, because the investigation was not thoro enough. His one ambition is the Illinois Central, his sole amusement the beautifying of the old Hamilton Fish homestead, at Garrison on the Hudson. He doesn't give a snap of his finger for horses, billiards, yachting, or that sort of thing, and social functions are not popular with him. He is, however, very fond of entertaining friends at dinner, and will, when he gets started, discourse for two or three hours at a stretch on some subject that has engaged his interest. Science delights him and the dryest statistics excite his enthusiasm. Economics is a hobby with him. In an address delivered in January last before the Louisville Board of Trade he says, among other things, regarding what he terms the "Higher Economy":

"As to the household, no one will question that our people are spendthrifts, earning money freely and wasting it to such an extent as to make it proverbial that what is thrown out of our kitchens would support a frugal people in

almost any country of Europe. . . . During the bad times which followed 1893 I had occasion more than once to draw attention to the fact that we were then getting rich rapidly, because our people had then recently learnt frugality in the hard school of adversity, and

to state exactly how much is at any given time being wasted or saved, it is to my mind just as clear that as a people we are to-day wasting, as it was in 1894, '95 and '96 that we were saving. This is the first fact which I desire to emphasize, leaving it to the future,

Mr. Fish's New York Residence, 25 East Seventy-eighth Street.

were at that time saving. . . . Whether our 85,000,000 of fellow countrymen save or waste, it is hardly imaginable that they can save or waste less than five cents per capita per day. This would amount to \$4,250,000 daily and \$1,551,250,000 yearly. While it is impossible

and the reasonably near future, to point the moral. . . . No one can examine the appropriations made by Congress, by the State Legislatures and by our municipal governments without appreciating that there is in each a conspicuous and growing lack of

economy. There is not only waste and extravagance in administration, and what is now commonly called 'graft,' which is a combination of bribery and larceny, but, what is economically worse, the laws are so framed as not to get the best use out of the taxes paid by the people. What we have to fear is not so much the magnitude of the appropriations as that our laws require that an uneconomical and therefore bad use be made of them. . . . We hold not only the largest stock of gold of any country in the world and are, with the possible exception of South Africa, the largest producer thereof, but our supply per capita, though somewhat smaller than that of France, is larger than that of Germany and very much larger than that of Great Britain. And yet we have within a month seen money lending in New York at 100 per cent. per annum. It is obvious that we make a very poor use of abundant means."

Mr. Fish's attitude toward Wall Street is thus expressed:

"Much is being said in the press, not only in the West, but in conservative Boston, which reminds us of the old fable of a quarrel which the various members of the human body had with the stomach, for, after all, it is in Wall Street that securities are 'digested.' With most of what has been said in violent denunciation of anything and everything in Wall Street, you and I can have no sympathy, altho on the other hand we must admit that much is wrong there."

Regarding the economy of corporations, Mr. Fish says:

"There is wrong in the management of many corporations, and it should be removed, cost what it may, for the benefit alike of the patient and of the community. I think that the root of the evil lies in too few men having undertaken to manage too many corporations; that in so doing they have perverted the powers granted under corporate charters, and in their hurry to do a vast business have in many cases done ill."

It is interesting to note the consensus of opinion of the financial world regarding Stuyvesant Fish. Here are some expressions gleaned from a number:

"Mr. Fish's conservatism is deep rooted in what might be termed the family rock. It is traditional with them—for generations managers of men. One would hardly expect Governor, Secretary and Senator Fish to bring forth other than a conservative offspring. Stuyvesant drank in diplomacy, statecraft and politics with his mother's milk."

"Fish is one of those sturdy New York families that believe they own America. They stand for big things. When the nation needs men they will always be on hand."

"He has a rigid sense of the ethics of business."

"He won't lie or evade a question."

"What's his ambition?—the Illinois Central. If they get him out of that it will break his heart."

"He's always a gentleman; treats everybody alike, servants and all."

"He's an influence for stability and conservatism."

"He occupies the same position in the human family that the whale does in the submarine world—he's neither a shark nor a sucker."

"He's an interesting talker and has a keen sense of his own humor."

"The most striking thing about Mr. Fish is his tenacity of purpose and his sense of justice."

"Altogether Stuyvesant Fish is a giant among men, morally and physically."

"He's one of the most faithful watchdogs of our institutions."

During a canvass of a considerable number of banking houses, not one opinion unfriendly to Mr. Fish was heard. The keynote of all was confidence in the man and what he stands for.

NEW YORK CITY.

## The Right Way to Help the Filipinos

BY FRANCIS G. NEWLANDS

[Senator Newlands of Nevada, was a member of the Taft Party, which visited Japan and the Philippines last summer, and on this account as well as because of his special study of Philippine affairs, he is an authority in Congress and the country on the Islands.—EDITOR.]

IT is easy enough to theorize and criticize, but before we can practically and impartially discuss the Philippine situation and develop the right way to help the Filipinos, two primal questions must be answered without partisan preju-

dice, to wit: What do we want of the Philippines? and, What do the Filipinos want?

In one word, the Filipinos want independence. This is true of the Filipinos almost without exception, from the high-

est to the lowest, from the richest to the poorest, from the most intelligent to the most ignorant.

What we want of the Philippines is harder to answer, because, in the past, at least, according to our conditions, we have wanted various conflicting things; but a process of elimination has been going on as our eyes have been opened by time and experience.

Some were controlled by commercial

ple, under the guidance of the Roman Catholic Church.

Some have been controlled by military spirit. Conquest and expansion has been their cry. Now they realize that there is no glory in conquering the Philippines, and that the military expense connected with the retention of the islands has been and will continue to be enormous.

Some claimed that we had acquired a commercial base in the Orient and that

Senator Francis G. Newlands.

sentiment. They wanted to make money out of the Philippines, but they are now realizing that no money is to be made. This is the class that is now clamorous for Chinese labor and for an American tariff subsidy to Filipino production, to be guided and controlled by American exploiters.

The convictions of some have been guided by religious sentiment, but they have discovered that the Filipinos are already at least a nominally Christian peo-

ple. The Philippines would be a connecting link in our trade with China and Japan. They now realize that this trade, via the Philippines, must take two sides of a triangle instead of one, and that the idea of making the Philippines a base of trade with China and Japan is as absurd as for England to make Jamaica the base of her trade with the United States.

But the controlling factor in our sentiment toward the islands has undoubtedly been that the Filipinos were unable to

take care of the Philippines, and that we owed a duty both to the people there and to civilization which compelled us, for a time at least, to exercise sovereignty. This conviction is not lost, but the prevailing feeling of the American people corresponds with the prevailing feeling of the Taft party—regret that we are there and longing to get out creditably. We have no wish to hold them as a subject dependency. We have no desire to exploit them. On the contrary, we all—or almost all—honestly wish to train and educate them as speedily as possible in a common language and the principles of self-government, for either qualified or absolute independence.

The Filipinos desire independence and the Americans wish them to have it. The only difference between us, or among ourselves, is as to time. When the treaty with Spain was ratified, two resolutions were introduced in the Senate to this end. The Bacon resolution had the support of most of the Democrats and a few of the Republicans. The McEnery resolution had the support of most of the Republicans and a few Democrats. The two resolutions agreed in this—that the Philippines were not to be held as an integral part of the country. The difference was that the Bacon resolution was for speedy withdrawal and recognition of independence, while the McEnery resolution declared for their future disposal according to the best interests of the people of the United States and the people of the Philippine Islands. It was, therefore, a unanimous declaration of the Senate that the islands were not to be held as an integral part of the United States.

The danger of the course which we are at present attempting is that it will surely result in making them an integral part of this country by legislation, instead of holding them as a separate political body, having all the attributes of autonomy except the central Government, which we have created—the Philippine Commission. It is proposed to extend our coast navigation laws to them, so as to give our ship owners the monopoly of their business, and to withdraw the tariff barriers between the two countries in such a way as to practically destroy their tariff system and to seriously affect our own by complicating the tariff policy of both

countries. The fiscal and tariff interests of the two countries will be so interwoven as to prevent us from cutting the Philippines loose from connection with this country when it becomes desirable to do so.

The alleged purpose of this legislation regarding the tariff is to give Philippine products unrestricted access to our markets, where the price of sugar and tobacco, and some other products, is raised high above the international level by our protective tariff. But it means much more to us than simply extending to the Filipino producer the same high rates which protection affords our own producers. It means more to the country, more to every American.

The result of this legislation, so far as sugar is concerned, is to double the price which the Filipino could obtain anywhere outside of America. It will undoubtedly encourage him in the production of sugar, but the price will be paid by the *American consumer*, who is compelled to stand the burden of nearly one hundred million dollars annually on sugar, under a tariff the purpose of which was to encourage home production and raise a large revenue from the foreign product. It will render abortive the very purpose of the tariff, and will accustom the Filipino to a price for his sugar which is double what he can get from the rest of the world, thus preventing any political action in the future which would sever the two countries. So, also, the extension of our navigation laws will build up a great shipping interest, whose profits will depend upon the monopoly of Philippine transportation. This interest will also seek to block any legislation in the future looking to the disposition of the islands.

If our purpose is, as we have declared, to fit the Filipinos for self-government and to give them their independence, shall we not defeat our purpose by building up powerful interests which, in the very nature of things, must block such legislation? If we pursue this system of subsidy to the Filipino, shall we really benefit him in the end? Will not the withdrawal of it, in case we finally conclude to follow our original purpose and give the Filipinos the independence which they want and we want them to have, plunge them into a condition of suffering and

distress such as they have never realized?

The real difficulty with the Philippines is that the people do not know how to work to advantage and how to produce in large and profitable quantities. The islands are agricultural, and never will be anything else, but the methods of production are primitive beyond description—a forked stick for a plow, the soil stirred to a depth of 3 inches, a buffalo for the motive power of the sugar mill, and hand labor everywhere instead of machinery. Subsidizing the products with fictitious prices is one way to stimulate them, but artificial aid cannot be suspended without unnecessary suffering.

The right way to help the Filipinos is to train them in self-sustaining methods. The declared purpose of this whole movement in the Philippines is philanthropic. Philanthropy always costs the philanthropist something, and whatever form our philanthropy takes, we must be prepared for certain expense; but this proposed scheme of philanthropy, through subsidized inflation of prices to be obtained in America, not only threatens grave danger in the future; it also creates dishonest bookkeeping. It can easily be shown that through this system the islands will cost America, in subsidies alone, in the next twenty years, from \$300,000,000 to \$500,000,000, which our accounts with the Philippines will not show a penny of.

A much wiser way is that the aid should take two forms—one for education, one for improved methods in agriculture.

In the Philippines there are 2,000,000 children of school age. Only 500,000 are now at school. If we wish to train them in a common language as a means to self-government, it should be done at once. Delay will only add to the cost. The school system is established. The \$2,000,000 per annum which the Filipino Government, out of its scanty revenue, applies to this purpose, is insufficient. It will require much more, particularly if the needed agricultural and manual training schools are started. If we are bent upon real philanthropy we should appropriate the additional amount necessary and let the books show the loss.

Improved methods of agriculture

should be accomplished, not by direct appropriation, but by the organization of an agricultural bank, such as has proved so advantageous to the Egyptian peasants. This Government should furnish the capital. Private enterprise cannot be relied upon for this kind of banking. The only banks in the Orient are commercial corporations, mainly engaged in exchange, not in loaning money. They make large profits out of the inequalities in the value of money in the various countries, and have nothing to loan upon farming securities. It is the farmer, in the Philippines, who must receive aid. Direct and artificial aid will simply demoralize him or encourage foreigners to crowd him off the soil as long as it lasts. Loans by an agricultural bank, secured by the land he must improve and by the modern machinery required for its best development, would tend to promote both independence and self-respect. A Government bank could be so conducted as to effect the agricultural regeneration of the Philippine Islands, if the islands are worth anything at all—if they are worth regenerating. If they are not worth anything, the sooner we find it out the better—and we shall find it out quicker and at less cost in this way than in any other.

If we should properly develop the field of action of an agricultural bank, taxable property would be created in the Philippines that would relieve us of the expense of education, and enabling the islands to assume the burden without knowing it.

Thus the desired end would be accomplished, with the maintenance in the Philippines of an absolutely separate autonomy, at a cost which is nothing compared with the three to five hundred millions which we shall actually pay, if the subsidy system is followed for the same length of time, and with the infinitely better result that, instead of being tangled in tariff and navigation complications impossible to sever without causing untold distress, the islands will be self-sustaining, self-supporting, self-governing, only connected to this country by the appointed Philippine Commission, acting as the higher House—the Governor-General as chief executive.

By this means we shall have established, in twenty years, a complete, autonomous government in the Philippine Isl-

ands; a government absolutely uncomplicated with our own; with its own fiscal system, its own revenue system and all the attributes—judicial, legislative and executive—that are essential to national

life. Then, when the time comes to cut the knot, it will be a safe and easy matter, after reserving a naval and coaling station, to permit the Filipino to cast off and sail away into the ocean of Independence.

WASHINGTON, D. C.

## Physical Education for College Women

BY JOHN F. GOUCHER, D.D., LL.D.

[The Woman's College at Baltimore of which Dr. Goucher is president, has observed a plan of physical education for women which differs radically from that of any other American institution. It was the first college for women to have its physical department represented by a member of the faculty, and one of the very few that today regard this department of such importance. It is noted for the high percentage of graduates in proportion to the attendance, also the high standard of health of its student body.—EDITOR.]

TO appreciate clearly the importance of physical education to woman we must remember that it enters into a work which is tripartite. We should build up the body, bearing always in mind its connection with the intellectual and the spiritual development, so that these faculties will not be neglected. We do not wish to have society composed of magnificent animals, but the value of an adequate physique is of vital importance in the creation of the higher womanhood, and the educator must closely study individual characteristics if he or she would accomplish the best results.

My own theory of the solution of this problem is perhaps best explained in the system followed at our Woman's College. Hence, I may be permitted to go into some detail relative to it. In the belief that education should be as intensive as possible, the attendance is limited to a number which is small when contrasted with some other institutions for women. Every girl who enters is subjected not only to a mental, but a physical examination, the latter by the supervisor of the physical department—a graduate physician, a woman who is thoroly qualified by a special course of study accurately to determine what defects, if any, may exist. A minute record is made, which includes measurements of the body, and irregularity in proportion, any peculiar trait of tem-

perament, such as nervousness or despondency, any chronic or temporary ailment. Even the physical characteristics of the parents are obtained, if possible. In brief, we endeavor to ascertain what is lacking to complete the perfect physique just as we determine in what studies the pupil is backward. The next step is to remedy the deficiency, and here we bring the gymnasium to our aid—not by giving all or a portion of the students a certain series of exercises, but by selecting for each individual what, in the judgment of the supervisor, seems best suited to her particular case. There are, of course, certain calisthenics which are beneficial to the girl of ordinary health, and we have classes in them. Swimming is not only an agreeable pastime, but healthful. We encourage it if the girl is in suitable condition to be benefited by it, care, of course, being taken to have the water at a proper temperature and that the period of immersion is not too long. Separate dressing rooms are provided as well as suitable costumes, so that no one's delicacy will be in the least offended. Those who are sufficiently robust, in our judgment, are permitted to play such games as basket ball and tennis, and to use the ordinary gymnastic equipment, such as bars, trapezes and flying rings, first donning dresses which will permit the free play of the muscles, but at all times

they are under the eye of one of the physical instructors. Should the latter detect signs indicating too much fatigue the girl must relinquish further exertion at once. Nor can she indulge in exercises of any kind unless her condition is such that she will suffer no ill effects. No matter what may be her power of endurance ordinarily, she can not enter into games or other forms of activity if a medical examination shows she may be affected for the worse by such indulgence.

I have alluded to the examination made of each student upon entering and its object. It may be needless to say that the girl who is physically perfect is indeed a rarity. While some defect may be inherited, dress and mode of life are often responsible for the narrow chest, the inequality of the shoulders, the hanging of the head or other abnormal features. Curvature of the spine—sometimes slight, sometimes pronounced—is a condition which we are frequently called upon to overcome. Some of the defects cited may be the real cause of the lack of appetite, headache or nervous exhaustion from which the pupil suffers. Others are the victims of ailments affecting various organs produced by weak muscles. Here is a class of girls to whom individual care is an imperative necessity—if they are to leave the study hall and enter upon their life work with health to properly perform the functions of wifehood and motherhood. They may not be called invalids in the ordinary sense of the term, but they would soon break down if they applied themselves to the course of study ordinarily pursued by their stronger companions. But the young woman must be far advanced in disability if she cannot be benefited by the course of physical culture prescribed for her. As an auxiliary to the ordinary apparatus of the modern gymnasium, we have a series of Swedish mechanical movements, intended to develop those parts of the body which have become weak and deficient thru disuse. We will say that a girl does not carry her head properly poised, as it tires her to hold it erect. A machine has been designed to strengthen the neck muscles. Another strengthens the muscles of the fingers. To broaden the chest and correct the stooping shoulders she exercises

with a third. Even the muscular system, so closely related to the internal organs, is developed by exercise with suitable apparatus, but in every instance the movements are exerted only for the length of time prescribed for her by the director on the blank she receives, while the resistance to be overcome in raising the mechanism is nicely adjusted to her power of exertion. As the girl becomes stronger the period of exercise is increased, but only in proportion to her improvement. In referring to this system, I may add that we have been able, in not a few cases, completely to restore the spinal column to its normal position.

After a few weeks of application, the girl is again measured and the figures obtained compared with those recorded at her entry. Later on another measurement is made and notes compared, but her condition is also closely observed, to ascertain if her health is improving, as shown by increase in appetite, disappearance of nervousness and other symptoms. Briefly, an effort is made to give her thought and attention, as if she were the sole pupil of the institution, but it is worth while, for the records of the college prove beyond question that in nearly every instance the physical prescription applied has resulted in radical benefit, and in many cases to the attainment of health, perhaps never before possessed. With the muscular system properly developed and the form restored to its proper symmetry, ailments peculiar to the sex disappear. The girl forgets she has a back and stomach, and enters into the school life with the spirit and enthusiasm of her associates.

The term physical culture may be appropriately applied to the development of the body by the methods I have outlined. In thus endeavoring to build up our students, we instruct them as to its benefits by a course in anatomy and hygiene, so that they have a clear perception of the object of this or that movement, and can appreciate the possible results for themselves. Needless is it to say that, as they estimate its benefits intelligently, they earnestly co-operate with us in following out the course prescribed.

It may be of interest to those who are studying the importance of physical education for women to learn that it has been

elevated in our institution to the dignity of representation in the faculty. We consider that it is such an essential part of the course of instruction that it should be placed on a plane with other branches. The chair of physiology and hygiene means much more than the term ordinarily implies, for, associated with these studies are the activities of which the gymnasium is the center. All calisthenics and exercise with mechanical appliances are under the supervision of the professor of physiology and hygiene, who is assisted by a corps of physical instructors. The department is so centralized that lectures and recitations on topics relating to the body are given in the building utilized for physical culture, while laboratory work is also done under the same roof.

The terms *physical culture* and *physical education* are perhaps most appropriate in treating of this subject. If it is to be considered as a division of study it should be pursued as such. Tho some of the exercises are in the nature of pastimes, affording recreation and amusement, in my opinion the instructor must regard them only as a part of the educational routine, to be followed rigidly. To apply the word "training" to work in the gymnasium or out of doors gives the wrong impression. It implies preparation, possibly for some trial of skill. It introduces the question of competitive athletics, which should not be associated with the study and normal development of the physique.

In considering the subject of physical culture, I think it will be generally admitted that the proper methods to be pursued by girls or young women should differ radically from those followed by boys or young men, tho I fear that condi-

tions arise when athletics become a dissipation rather than a benefit—and to students of both sexes. The feeling of rivalry between classes of an institution or between institutions may run so high that interest in the respective team or club prevents that attention to other features of the school life which is so essential. Too much time is given to discussing the approaching contest, to the neglect of study. The routine of the institution is disturbed and the general influence on the student body is harmful. This is particularly true of young women, for they are at an age when so-called hero worship appeals to them. Enthusiastic in their temperament, sentiment can be carried to the extreme in the manifestations of the college or class spirit. By nature more delicate than the other sex, undue excitement, such as may be caused by rivalry in pastime, often results seriously.

Such are some of the reasons why the physical education of the girl is a work which involves no little responsibility, even where the sexes are not associated. I must admit that the difficulties confronting the faculty where the system is co-educational are far greater, since there is the continual incentive to the females to over exertion. As they equal if not excel their associates in mental development, they may be tempted to undue effort in the gymnasium hall and on the field. In my opinion, competition in higher education which is the result of association of the sexes is often productive of much harm. Discussing the subject from the purely physical point of view, I believe that by far the best results can be accomplished where the student body is exclusively of one sex, while in the training of the young woman, the value of individual effort cannot be questioned.

## The Japan of 1905

BY J. H. DeFOREST, D. D.

MISSIONARY OF THE AMERICAN BOARD IN JAPAN.

A PART from the brilliant and decisive battles on land and sea, all that needs to be said can be grouped under the three great events—the Portsmouth Treaty; *Gaisen*, or the return of the victorious army and navy; and the famine in the northern provinces.

The terms of the treaty were not only a surprise to the entire nation, but they were bitterly disappointing. The press was almost a unit in its denunciation of the terms, which, it affirmed, not only brought shame to the whole nation, but also made of none effect the vast sacrifices of life and treasure. The people had set their hearts on an indemnity, and to find that Witte's "not a kopeck" was a hard fact brought amazement to everybody. But the high Samurai traditions of Japan, among which is the light estimate placed on money, soon led to the remark: "We didn't fight for money, but for the international principles of righteousness and humanity." This saying was the end of the indemnity business in the minds of the Japanese.

But Saghalin! The island that by nature belongs to Japan, and out of which she had been ousted in the days of her weakness, the island that they had won back in open war—that a rod of this land should be left in Russian possession was the hardest cut of all, and is to this day. The restoration of the northern half of this comparatively worthless island that Japanese never would think of colonizing caused more resentment than anything else.

The army, however, took the terms of peace quietly, and, on the whole, were inclined to look at the moral side of the situation. One illustration is sufficient. When peace was proclaimed, the two

huge armies were confronting each other ready for a battle which for sanguinary effects would put in the shade those of Liaoyang, Shaho and Mukden. A colonel on the battle line afterward said: "President Roosevelt's action in securing peace in the wide interests of humanity shortened our sabers three inches. I had always known the word humanity, but never before realized its world-wide significance. To be the means of stopping that impending battle of frightful dimensions has given to us a new meaning for the word humanity."

Not so with the nation at home. The people broke out with protests against this treaty of shame, and sent repeated petitions to the Emperor and to the army not to ratify this treaty, and to discredit his advisers who had betrayed the nation. Then came the Tokyo riots, where the usually all-powerful police were swept out of sight in a moment by the irresistible popular indignation. Excesses always follow such outbursts in any land, and so it is not surprising that street cars and police stations were burned, but it was somewhat disturbing that Christian churches were looted and burned; that one portion of the mob should have trampled under foot the pictures of President Roosevelt as the instigator of this shameful treaty; and that a guard was temporarily placed around the American Legation. Had the terms of the renewed alliance with England been known earlier, I think there would have been much less discontent and probably no riots.

The end is not yet. Several prominent men have been arrested. Among them, one of the most popular leaders of the people, a man who in early Meiji days

was seven years in prison for his agitation on behalf of representative government, and who afterward became president of the House of Representatives—this Kono Hironaka is now under trial as an instigator of these riots. The people, however, have cooled off and settled down to the solution of *post bellum* problems, of which there is an abundance, Korea being the largest and worst of them all.

Then came the return of the warriors. Naturally the victorious navy arrived first and was reviewed with the captured ships by the Emperor off Yokohama harbor. That job, and Togo's reception in Tokyo, were quickly disposed of. But it takes long months to return an army of 800,000 across the seas. The beautiful harbor of Ujina, where the troops land, is alive with transports. From there five or more trains take the soldiers north and south to their divisional headquarters. Crowds of patriotic people meet the trains at every station with flags, banners, lanterns, drums, and refreshments. Every regiment, every company, every village conscription must have a special welcome. The whole land is covered with the characters at the head of this article—"Welcome, Victorious Army." Millionaires subscribe their 10,000 or 20,000 yen, and triumphal arches of all sizes and descriptions, brilliantly illuminated, are on every street thru which returning soldiers must pass.

No army was ever so carefully instructed as this with reference to the spirit with which victorious troops should go home. "Let there be no boasting or proud bearing. Go home quietly and waste no time nor money in riotous living. Bring new honor to your homes and to the nation by fidelity to the duties of peace." Words like these are not merely a parting proclamation by the generals, but clear down to the lieutenants and sergeants, the officers during the entire war were inculcating a lofty moral spirit among the men. A lieutenant wrote me last July thus: "I educate my company with the composite soul of Christ and Bushido. The men are in good health and are faithful in their soldier duties." This letter was simply a spontaneous expression of the lieutenant's mind; I had asked him no questions of any kind.

When such soldiers return they have very little of the swelled head. There is joy all thru the land in spite of no indemnity and only half of Saghalin. There is gratitude also to the powers above, whether conceived of as ancestors of the Ruling Line or as the Grace of Heaven or as the Help of God. There is no doubt that this war has brought out in a marked manner the religious spirit of the people, and he who would understand present Japan must take this into account. It takes shape especially in memorial services, private and public, and in thanksgiving pilgrimages by the Emperor and his great generals to the Ise Shrine. Some foreigners seem to think that this shows a revival of Shintoism, but I think it is only one sign of a larger spiritual movement, a new awakening of the religious sense of the nation. In this movement we shall see a mixture of old and new in a unique manner. Here is a translation of a portion of an address delivered in the Tokyo Y. M. C. A. Hall by Dr. Maeda Keiun before the relatives of those who had fallen in the war:

"You will comfort yourselves in the thought that your relatives gave their lives for Japan and for the Emperor, and that His Majesty has attended the festival in honor of the dead at Yasukuni. There the dead have all been worshipped, and hence have become gods. I think that originally the spirit of courage and of loyalty is God. . . . It is a manifestation of God. For what is God? Put in easy language, it is the One Power that saves men and protects country, that delivers men and saves the world. Christians call it God, Buddhists call it Hotoke. . . . Regarding the spirit of these men who are being worshipped today, it is God. And we must say that the relatives of these men are relatives of God, the brothers of God, the children of God, the grandchildren of God. The children of the dead, the parents and wives of the dead, have thus become the companions of God, the parents of God, the children of God. Comfort yourselves with this thought."

One can see how considerably the Christian idea of God has entered into the thought of this non-Christian scholar. Say what one will of its pantheistic leanings, it is a large and sympathetic advance on the thought of ten years ago. The fact is, here is a nation of ancestor worshippers, forced by world contact to revise its narrow views, yet devoutly feeling that the dead are an unspeakably precious part of the family and national life and power. I, myself.

fully believe that ancestor worship is, in the providence of God, one of the best preparations for the Christian teaching of One Universal Ancestor, the Father of all men. The editor of *The* (Japanese) *Christian World* says:

"Ancestor worship and Christian faith may go together. I believe that the spirit of ancestor worship and the faith that worships the one God are not necessarily contradictory. How can Christianity satisfy the instinct of

Anezaki, of the Imperial University, says in the *Hibbert Journal*, October, 1905:

"Christianity is certainly the absolute religion, . . . but this will never abolish the difference of tastes or modes of expression. . . . There may grow up in Japan a form of Christianity, but Buddhism will nevertheless hold its footing therein forever. In short, we Buddhists are ready to accept Christianity; nay, more, our faith in Buddha is faith in Christ. *We see Christ because we see Buddha.* . . .

The Welcome Arch in front of the Sendai Station. There are a dozen more in Sendai. The three characters that head this article—"Welcome, Victorious Warriors"—are on every arch thruout Japan.

ancestral worship? And what is the effect upon the nation of ancestral worship?"

The head of the Iyeyasu Shrine at Nikko, Baron Nakayama, recently said to me:

"There is no objection whatever to a Shintoist becoming a Christian."

Thinkers here are speaking with confidence not only to their own people, but to the peoples of the West, as Professor

As to "so called ancestor worship" this same Christian-Buddhist says:

"We observe strictly the anniversaries of the deaths of relations, and these rituals are connected with the idea of family unity. . . . But these family rituals are not observed in order to invoke the spirits of the dead, but rather to offer our homage toward them and to communicate our faith and merit to them.

This is due to Buddhism and shows how a religion of universal salvation could sanctify, universalize, and spiritualize ancestor

worship. . . . Our primitive faith has been much elevated by Buddhism, and still has room enough to be purified by a more decidedly monotheistic religion such as Christianity. . . . Where there is faith in Buddha, there may grow faith in Christ. The two religions may preserve their respective traits, but they must share in the deep root of religious faith. Japan may remain Buddhistic, or be converted to Christianity, but she will in either way keep her own tone of national spirit and civilization, and in this way play a part in the grand concert of humanity."

These quotations, out of hundreds, are sufficient to show that whatever revival there may be of Shintoism or Buddhism, it is not antagonistic, but rather sympathetic, and paves the way for a wider reception of the religious truths we love. Perhaps the most significant fact in this line is the wholly new departure of the Imperial Family toward Christian institutions. There have been four large gifts from this source, two of 10,000 yen each to the Y. M. C. A. and the Okayama Orphan Asylum, two of lesser sums to the Tokyo Reform School and to the Home for Discharged Criminals.

There is a "missionary problem" here which this new religious consciousness of the people is seeking to solve. If we allow that a nation capable of such progress and so open minded toward whatever is best in the whole world can work out its own salvation, then rather than do as some missionary bodies have voted to attempt—"to double their forces in Japan"—it were better to look forward to a gradual closing of missionary work. If, on the other hand, it seems best to urge the rapid Christianization of Japan with foreign aid, then the readjustment of mission bodies to the independent churches here seems imperative in a manner that recognizes the right and responsibility of Japanese Christians to direct all forms of missionary work. Extra-territorial Christianity is necessary in the early stages of missionary work, but it is a question whether it can gain many more victories in a land like Japan.

But the famine. Undoubtedly Japan was becoming exhausted financially when peace was proclaimed. Added to two years of heavy sacrifices, comes a wretched harvest of rice, the loss on which, when compared with an average crop, is over 80,000,000 yen. Of this about one-half falls upon the three northern provinces, of which Sendai is the

center. That is, in a population of about 3,000,000 there is a loss of 40,000,000 yen in food, and this, too, in a region comparatively poor. The alarming result is that about 700,000 people are suddenly in distress, and thousands of these in absolute destitution.

A committee of foreigners in Sendai has visited these regions. Within one mile of where I am writing is the border of a country with a population of 90,674, where usually 1,500,000 bushels of rice are produced, but this year's yield is only 36,000. The actual number of men, women and children in distress is 18,155. The worst village of this county has a population of 3,384, where their average crop is 20,000 bushels of rice, but this year only 200. The wretched stuff called food, on which thousands are now living, is made of acorns, grape leaves, radish leaves, rice-straw and coarse radishes, mixed in some fortunate cases with a sprinkling of poor rice. We left \$7.50 in one village of over 300 starving families, and the next day received a letter saying that it had sent joy into sixty families in the shape of four quarts of poor rice each.

The provincial governments are grappling with the problem of feeding this army of poor until next summer's crops. Large public works will be carried on for which bonds will be issued. But this leaves more than half of them—children, the aged and sick—for whom prolonged aid is necessary. Foreigners in Japan have begun their subscriptions, not because Japan cannot care for her own unfortunates, but because of sympathy with a brave and high spirited people, to whom a famine, after a severe war, is indeed a great calamity. This discouraging famine affords another opportunity to show a friendly spirit between nations.

For the soldiers who are returning to these wrecked homes, the new year opens with anything but happiness. The sight of wife and children, whose clothes and furniture have been sold, with only starvation confronting them is indeed a lamentable ending to a series of unparalleled victories. But Japan will rise over this disaster, conquering here, as on the battle fields, with wounds, sufferings and deaths.

SENDAI, JAPAN.

# Literature

## LeRoy's Book on the Philippines

So many articles and books on the Philippines have appeared since 1898 that must be classed as mediocre, misleading, or down right erroneous, that one experiences a feeling of relief on reading Mr. LeRoy's book!\* From its title (so given because it forms part of a series) one might imagine its contents to be the popular, light, and picturesque description of the Philippines and their peoples, and almost expects to be met on every page with "impressions" of a superficial nature. It is quite otherwise, for the reader finds the books teeming with suggestions and correct information; and its author shows a grasp of the situation that must commend him to the student of the American Orient. The work is thruout sincere in tone and treatment, and abounds in philosophic touches which show that the material has not simply been worked over, but thought over maturely.

\* PHILIPPINE LIFE IN TOWN AND COUNTRY. By James A. LeRoy. G. P. Putnam's Sons. \$1.20 net.

Mr. LeRoy, many of whose articles have appeared in our columns, writes from the standpoint of one in full sympathy with the Filipino, but his sympathy has not eclipsed his judgment, and he is as ready to condemn faults as to praise virtues. The same holds true of Americans and American rule in the islands, where those themes are mentioned. It is this honesty of purpose and treatment that is the most striking characteristic of the book, and stamps its author as having no other interest to subserve than that of truth. In setting forth the manifold relations that enter into a race-life he has evidently felt the restrictions of the limits of space imposed upon him. The words of the book itself explain its purpose and scope better than any review:

"In this book we are concerned only with the general facts which lie at the basis of Philippine society, and the general movements which make up that society today."

The term "Filipino people" is restricted to the Christian tribes; and all Pagans (both Negrito and Malayan)

From LeRoy's "Philippine Life in Town and Country." (Putnam's.)

and Moros (Malayan Mahometans) are excluded; altho the fact of the homogeneity of the peoples of the Philippines (except the Negritos) is insisted upon. The vigorous protests against critics who dogmatize from book knowledge and comparison with other Oriental colonies and countries are timely. Those critics fail often to see that the Philippines are unique among Oriental tropical dependencies or colonies in the fact that they have been (nominally at least) Christian for over three centuries, and that their ideals for that period have been in a sense those of the Occident. Stress is laid upon the good that Spain did to the Filipinos in introducing the softening influences of the Christian religion, for the Philippines were essentially a spiritual colony; while condemnation is also passed upon the Spaniards for their inability, because of their own limitations, to lead the Filipinos farther along the road of progress.

The life of the humble Filipino of the provinces and of Manila in the various phases of his domestic, public, industrial, religious, and educational relations, is described in broad lines; while over against this is shown the generally deadening influence of the cacique or aristocratic class—a class, on the whole, fostered by Spain, and still wielding force.

The most valuable facts educed in the book are: The present transitional stage of the Filipino in intelligence, education and culture; the beginnings of a real middle class in Manila and even in the provinces; the gradual formation of a "public opinion"; the unique position of woman in the Philippines as compared with other Oriental countries; growth of true race unity, with the feelings of patriotism and nationality; the danger to the Filipinos from Filipino demagogues; the chief problem, one of education. The book would have been better proportioned had its author inserted a special chapter on "Various influences toward union," to properly offset the chapter on "Tribal and geographical influences toward disunion." The chapters on religion, education and industry are not entirely satisfactory, a fault due mainly to space limitation. The statement that Mindanao would not be partly Mahometan today if Spain had set about its spiritual conquest as energetic-

ally as it did that of Luzon, is too strong. Mahometanism was found in 1521 in Borneo by Magellan's men, and had secured a foothold in the Moluccas fifty years previous to that date, and it is quite probable that it was established in parts of Mindanao at least as early as the beginning of the sixteenth century (see "Studies in Moro History, Law and Religion," *Ethnological Survey, Pub., Manila, 1905, pp. 52-54*). Surely the efficient aid of troops would have been necessary at any time in the history of the islands to have completely stamped out the worship, and it is doubtful whether the attempt would have been successful even then. Also the statement that the early Filipinos were not so addicted to intemperance as is reported is somewhat extreme. Such good observers as Miguel Loarca (*ca. 1580*) and Antonio de Morga (*before 1607*), both laymen, and many of the earliest writers, mention the prevalence of intoxication, and it is also mentioned by almost all the friar chronicles. Christianity has here produced a great effect, coupled, perhaps, with initiation of the abstemious habits of the Spaniards, for today the Filipinos are an abstemious race. Several other minor faults are seen. "Remontados" is too literally explained as "remounted." It is rather those "frightened away" or "fugitives." The term "*Cedula* of registration" (an official document identifying the bearer, and carried by all Filipinos) should have been explained. The index is most unworthy a volume like this, and is not in any way indicative of the nuggets contained therein. There are some good illustrations, and the map is excellent and is so bound that it can be spread open before the reader, thus making it easy of consultation.

### The Father of Pre-Raphaelitism

There are two distinct sources of interest in these memoirs of the first (and last) of the Pre-Raphaelites.\* Mr. Hunt, both in England and in the Orient, where he pursued his studies for a number of years, saw enough of life to make an entertaining book of the ordinary

\* PRE-RAPHAELITISM AND THE PRE-RAPHAELITE BROTHERHOOD. By *W. Holman Hunt*. Two vols., with 40 photogravure plates and other illustrations. New York: The Macmillan Co. \$10.00.

anecdotal kind, and, added to this, he has given a full and authoritative exposition of the principles which led a little band of art students, in the year 1848, to organize a brotherhood of artistic revolt under the mystic initials P. R. B.

He was himself born in 1827, the son of a London merchant, and went thru all the hardships incident to an art career in the stronghold of Philistinism. But courage and perseverance, whatever one may say of his genius, were abundantly present. In the end he won recognition and moved familiarly among the great and notable of the land. A certain vivacity and pictorial power in his reminiscences of these personages makes one almost think that his true vocation was with words rather than with colors. Carlyle, near whom, at Chelsea, he lived for a time, is one of those most vividly portrayed, and we can almost hear him uttering his denunciations, to Hunt's face, against the false religion in Hunt's painting of "The Light of the World." A walking tour with Tennyson and Francis Turner Palgrave, in Devonshire, shows the naïve vanity and irascibility of the Poet Laureate in a delightful, humorous setting. Thackeray chats with him at the Cosmopolitan Club over the 5,500 guineas paid to Hunt for his picture of "The Temple," and we get another glimpse of the novelist shutting himself up from a pleasure party to work and then blushing to show only a few lines of writing as the product of a whole evening. Browning, now the dandy of the London drawing rooms, flashes into a rage because Rossetti no longer admires his poems; and other famous personages—royalties, authors, painters, travelers—move thru the pages.

But the real value of the book, if not its entertainment, lies in its history of the founding and career of the P. R. B., about which there have hitherto been many erroneous notions current. The salient points in the work of the Pre-Raphaelites are the sensuous mysticism of Rossetti and the archaic form of Hunt's figures, and as a consequence it is generally assumed that the original intention was to introduce into modern England the methods of the primitive Italians. This Hunt emphatically denies, as he denies that any disrespect was in-

tended to Raphael. It was the followers of Raphael, the decadent Italians, whose influence he deplored. As a matter of fact both the contemporary schools of England and France were founded on this overblown style of art against which he protested, and for years all the vigorous young blood of France also was arrayed against this tradition. It is a curious instance of Hunt's egotism as an Englishman, as well as an individual, that he barely mentions the work of the Barbizon and impressionist artists, and only alludes to the whole Romantic movement across the Channel. Yet their aim was his—a more faithful rendering of nature, simplicity of effect, sounder methods of painting, and an effort to represent light, either direct or diffused sunlight.

Hunt insists, with painful iteration, that the return to nature was the great, almost the sole, aim of the Brotherhood. "The work that we were bent on producing [was] to be more persistently derived from nature than any having a dramatic significance yet done in the world." He wished to imitate the Primitive Italians only in so far as a return to nature was likewise a restoration of their "naïve innocence." All painting was to be done out of doors, and the thing seen was to be copied exactly and in its minutest details, without choice or reservation.

Hunt really was the Brotherhood. He drew Millais along with him. Rossetti begged to become Hunt's pupil. Woolner, the sculptor, was admitted, and also Collinson. W. M. Rossetti was set to drawing, that he might be added to the working members, and F. G. Stephens formed a seventh. But of all the seven, Hunt tolerated only Millais, for whom he had a personal affection. To Rossetti he grew distinctly hostile, and the real animus of the present book is to prove that his own crude theories, and not Rossetti's sensuous lyricism, was the true secret of the P. R. B. The motto of the two volumes should be: "Among the faithless, faithful only he."

In practice, Millais had talent and a genuine aptitude for drawing and painting; Rossetti never became a good draftsman, but had genius and a Latin sense for beauty.\* Hunt possessed neither talent nor genius. He had a theory, a mission

to regenerate English art and to make it national. He was industrious, persistent, conscientious; what he really cared for was the subject and moral teaching of a picture. There is sometimes a certain charm in his rendering of inanimate nature, but his figures are generally hard and unpleasant.

### Mental Influence in Disease

BOTH of these books\* illustrate very well the present state of progressive medical science with regard to the influence of the mind over disease or supposedly diseased states. Both of them insist very much on the value of suggestion, yet neither of them has practically anything to say with regard to hypnotism. Only a few years ago this would have been very different. It is suggestion in the waking state that has now been found to be of value and not in the semi-conscious condition from which unfortunately patients often draw still further weakening of will and dominance of fixed ideas even than before. Dr. Dubois particularly demonstrated how much can be accomplished for what are apparently organic diseases by the mere force of reasoning with the patient so as to enable him or more often her to get rid of fixed ideas on which the occurrence or recurrence of their symptoms depend. He does not make any exaggerated claims, and he is known as a thoroly conservative observer and an absolutely trustworthy scientific physician. Some of his cases, however, if they had been treated by mental science of any kind or by the suggestion of osteopaths would have been heralded as wonderful cures, demonstrating beyond all doubt the effectiveness and truth of the particular kind of ism on which they were treated.

Dr. Schofield, as in his previous books, has insisted very much on the necessity

for improving the physical condition if the mental condition is to be bettered. He says, for instance, that weight is not everything, but weight and good physical conditions are the bodily requisites for a healthy nervous organization. He has a very striking way of putting one of his therapeutic suggestions. One-twenty-fourth of the body weight is lost every day. There would be, therefore, a new body in about twenty-four days only for certain errors in elimination which probably makes the renewal take twice as long. On the other hand, Dr. Schofield emphasizes the necessity for suggestive influences and sympathy. "I believe," he says, "that many go mad, more relapse into melancholia and multitudes get confirmed in evil of all sorts for want of an outlet for their hidden thoughts and troubles. Merely to have some one listen to them will do many of them good."

**The Appreciation of Pictures.** A Handbook. By Russell Sturgis. New York: The Baker & Taylor Company. \$1.50.

Mr. Russell Sturgis, who is an architect we believe, has gathered together a collection of photographs of seventy-five more or less famous pictures, has reproduced them in half-tone, and has written a descriptive and discursive catalogue of the lot—and this he calls *The Appreciation of Pictures*. His purpose in this *Handbook*, Mr. Sturgis tells us, is that common to the others of the series to which it belongs; to show the great arts of design "from the same standpoint" of the enthusiastic and devoted lover of graphic and plastic art for its own sake, and not from the point of view of the nature lover, or of the lover of poetic thought and expression or of the moralist. Judging the book strictly on the standards thus set up by its author it is found to be of very uneven merit. Mr. Sturgis has long studied pictures, at home and abroad. He boasts a catholicity of taste, which is indisputably a great desideratum in the appreciation of any art work. Yet he does not always adhere to his own aesthetic criteria of excellence in discussing the illustrations he provides; and he seldom makes a clear and succinct statement of the specific quality possessed by any given example

\* *THE PSYCHIC TREATMENT OF NERVOUS DISORDERS* (The Psycho-neuroses and their Moral Treatment). By Dr. Paul Dubois, Professor of Neuropathology at the University of Berne. Translated and Edited by Smith Ely Jelliffe, M.D., Visiting Neurologist, New York City Hospital, and William A. White, M.D., Professor of Nervous and Mental Diseases, Georgetown University, D. C. New York and London: Funk & Wagnalls Co., 1905.

\* *THE MANAGEMENT OF A NERVE PATIENT.* By Alfred T. Schofield, M.D. Author of "The Unconscious Mind," "The Force of Mind," etc. London: J. and A. Churchill, 1906.

that satisfies universal aesthetic standards. He is enamored of color, has much to say of the great colorists, defines painting as "mainly a matter of beautiful colored light investing natural objects." The book will serve a noble purpose if

**Ferns, and How to Grow Them.** By G. A. Woolson. Illustrated. 12mo. Pp. x, 156. New York: Doubleday, Page & Co. \$1.00.

This is not a botanical book, but a cultural book, altho the author is a competent botanist and has done some excellent

A Waterfall by Ruisdael. From "The Appreciation of Pictures" (Sturgis). (Baker & Taylor Co.).

it enhances a love of good pictures in any heretofore indifferent soul. We should like it better if the author had taken more pains with his verbal style, which is, barring the occasional technical jargon, a very ordinary journalese.

work in Vermont local botany. It is especially interesting to one who loves ferns and has ever tried to cultivate them. There is nothing more fascinating than fern study and fern culture. All are beautiful, and they run from the regal

Goldie's fern and the ostrich fern to the most delicate *Pellaea gracilis* or the inconspicuous adder's tongue—but these last one would hardly try to cultivate. There are certain ferns which the ordinary master of a level lot can hope to grow with success. Such are the three grand Osmundas, the lady fern, marginal fern, the ostrich fern, Goldie's fern and the spinulose fern. The sensitive fern and the common brake should be avoided, unless one has plenty of room, as they crowd out other things. This might be true also of the Dicksonia, but it is too lovely a fern to omit. We would make more of Braun's holly fern than does our author. It is most satisfactory, with its rather low broad crown, and its very regular fronds, and its chaffy stipes. But one can, with a little pains, gather thirty or forty species and varieties, large and small, if he can add damp shade and a proper rockery. To know how let him read this excellent volume, so attractively illustrated, which gives good instruction by a practiced enthusiast for cultivation in the garden or in the house. We notice some printer's errors, and the unfortunate transposition of titles to the pictures of *Asplenium platyneuron* and *A. ebenoides*.

### Literary Notes

It is announced by Messrs. Houghton, Mifflin & Co. that the author of those two anonymous novels, *Sturmsee* and *Calmire*, is Mr. Henry Holt, the publisher.

....Those who appreciate fine printing will be interested in the books turned out by Fred and Bertha Goudy at The Village Press at Hingham, Mass. The last publication of The Village Press was entitled *Emerson as Seer. The Nounne Preestes Tale of the Cok and Hen* is now in preparation.

....With all the fac-simile reprints of rare and important old books it is remarkable that the *Bay Psalm Book*, the first book printed in the United States, of which only four perfect copies are known, and six imperfect ones, has never been reprinted. Dodd, Mead & Co. announce a reprint, at \$4, edited by Wilberforce Eames, of the Lenox Library.

....One of our religious journals, the *Christian Herald*, makes a specialty of famines and other disasters and inducing its subscribers to send money for the relief of the sufferers. It has thus provided a great deal of benevolent service in India, Russia and elsewhere, and has now sent, thru its publisher, Mr. Klopsch, \$20,000 to the victims of the famine in Japan.

....*In the Maine Woods* is the title of a very attractive annual issued by the Bangor & Aroostook Railroad Company at Bangor, Me. The edition of 1906 is crowded with carefully chosen illustrations that portray many of the charms that belong to the Maine woods. The hills and mountains, the streams, brooks and larger waterways, the game animals and fishes, the joys of camp life, all these and dozens of other things make its pages fairly "bristle" with vacation notes. *In the Maine Woods* is an inspiration to get away from the city and into the woodlands of Maine that is well nigh irresistible. Picturesque stretches of road and railroad are numbered among the illustrations. Louis Akin has designed the cover, frontispiece and one other plate, all of which are printed in full color.

### Pebbles

"WILL you grant me one last favor before I go?" asked the rejected suitor.

"Yes, George, I will," she said, dropping her eyelashes and getting her lips into shape. "What is the favor I can grant you?"

"Only a little song at the piano, please. I am afraid there is a dog outside waiting for me, and I want you to scare him away."—*Tit-Bits*.

THE American truth teller was in form. "Talking of ants," he said, "we've got 'em as big as crabs out West. I've seen 'em fight with long thorns, which they use as lances, charging each other like savages."

"They don't compare with the ants I saw in the East," said an inoffensive individual near by. "The natives have trained them as beasts of burden. One of 'em could trail a ton load for miles with ease. They worked willingly, but occasionally they turned on their attendants and killed them."

But this was drawing the long bow a little too far.

"I say, old chap," said a shocked voice from the corner, "what sort of ants were they?"

"Elephants," said the quiet man.—*London Tit-Bits*.

Maw's callin' from the milkhouse,

Callin' stern:

"Jim, yer lazy good fer nuthin',  
Come an' churn."

Paw's callin' from the cornpatch,

Callin' loud:

"James, yer hulkin', stupid loafer,  
Time yer plowed."

Nature's callin' from the trout-brook,

Callin' wish:

"Son, yer poor, tired, lazy feller,  
Come and fish."

Stranger, if we just swapped places,

Put it clear,

Which of all the three a-callin'

Would you hear?

## The Independent on the Isthmus

EVER since our publication of Poultney Bigelow's article, "Our Mismanagement in Panama," and the fervid denial of his charges by the Administration at Washington, we have felt it a duty to the country, our readers and ourselves to make a thoro and unbiased investigation of conditions on the Isthmus. Our first thought was to send a special representative to Panama—a man of the highest integrity, trained in the journalistic profession, and thus familiar with the leading men and measures of the day. But Mr. Bigelow was such a man, and any professional correspondent we might send would be simply another witness of the same sort, no matter whether his report confirmed Secretary Taft, Mr. Bigelow, both or neither. But we took a better course. As long as we must be publishing articles on the canal for the next ten years, to say nothing of passing frequent editorial judgments on the work done there, why not go down our very selves and see with our own eyes what the situation is? Accordingly, on the 14th of February, three weeks ago, we left New York by steamer for Panama, and are there now engaged in an investigation, the results of which we shall publish in a week or two. Our readers must not think that when we say *we* we are using the editorial singular pronoun. In this case *we* is dual. And if it were not for the mere trifle of getting out the weekly issues of THE INDEPENDENT, in all probability the whole editorial staff would now be on the Isthmus, watching the dirt fly, dodging the mosquitoes, or reclining under the bamboo trees. Our two editors who are making this investigation are Edwin E. Slosson, Ph. D., and Gardner Richardson. It is hardly necessary, we hope, to say that they will report exactly what they find. Nothing will be colored, nothing will be held back. It will gratify us, of course, if their report shall show that Mr. Bigelow was mistaken, and that our Government has done everything that an American Government should. But if Mr. Bigelow is con-

firmed, in whole or in part, we shall not hesitate to say so.

Still, we do not want our readers to get the impression for an instant that we have sent this expedition to Panama merely to ascertain the truth as to the points at issue between Mr. Bigelow and Secretary Taft. The scope of our investigation will reach far beyond any question of personal difference. It is our aim to have such a direct and actual knowledge of the conditions involved in the greatest engineering project the world has ever seen, in the difficulties and the advantages to be expected, that we can speak with confidence and intelligence.

A personal word, further. Dr. Slosson is a Western man, brought up in the country where the great irrigation systems prevail. He is a graduate of the University of Kansas and Chicago University, and before he accepted a call to the staff of THE INDEPENDENT, in 1903, was for ten years State Chemist of Wyoming and Professor of Chemistry in the University of Wyoming. Many of the best articles, book reviews and editorials that appear in our columns are from his pen. Mr. Richardson, who goes as Dr. Slosson's associate, is a grandson of the founder of THE INDEPENDENT and is a recent graduate of Yale, where he was managing editor of the *Yale Daily News*. He spent most of his boyhood in Greece, has traveled extensively in Europe and Latin America, and speaks half a dozen languages.

Our readers can depend upon the report of these two men.

## Will They Not Unite?

SOUTH WEYMOUTH, a village in the town of Weymouth, Mass., is the text. In its population are about 1,700 Protestant people. To supply their religious wants there are three churches, two of them of the same denomination. About 400 go to church every Sunday. Not over 850 people could attend on any one Sunday, if all wanted to go. Sickness, old age, childhood and necessary duties would keep 45 per cent. at home. One

church would abundantly supply the need, where now three rival churches exist, each of which must have its pastor, its building, and must try to keep up the forms of worship and needed religious service.

One of the pastors, the Rev. Harry W. Kimball, actually does not like this present condition, and is frank enough to say it is bad and should be changed. We hear of half a dozen rival churches in the new West, but here is an old community, in Eastern Massachusetts, on the Old Colony Railroad, fifteen miles south of Boston, that is in this condition; and what is true of South Weymouth is true of every village and town of the size in Massachusetts or in the country. It is a general evil condition that ought to be remedied, and it is a sign of hope that people begin to see the evil.

In South Weymouth, says Mr. Kimball, the three churches have about 300 communicants, and nearly all the families are more or less attached. The people are of one sort, one language, one temperament. A stranger entering the three churches could not tell them apart. There is no special difference of doctrine. The three churches are one in the great essentials of Christian faith. What, then, is there to keep them apart? Nothing of any serious account.

What might be done if they were to come together? Mr. Kimball says that, in the first place, there would be economy. Why have three budgets instead of one? The one large church could be conducted for less expense, and thus leave more for philanthropy and missions. Such a large church could have a wise and experienced pastor in charge of the pulpit and worship, and who would do special pastoral work among the sick and where needed. There would be an assistant pastor, probably a young man, in charge of the Sunday school, the young people's work and the boys' club. There would be a parish visitor, properly trained, a woman, whose duty it would be to get close to the people at their homes, give wise advice, and gather the children into the Sunday school. Here would be a church council, a complete working force.

Think how much better the church work could thus be done. The united

Sunday school could be properly graded and taught. One strong choir would combine the musical talent of the three churches, and children could be trained to sing. The pulpit could call a man of high talents, whose influence would be marked in the community. Such a church could take on new and needed work. Mr. Kimball suggests a few lines of it. A sick-room equipment league, to provide for the comfort of the sick; a kindergarten for little children, till the town shall adopt it; a Sunday morning kindergarten, so that the parents can go to church; a church parish house and neighborhood house; a gymnasium and public baths; Sunday schools in the more distant parts for the younger children; neighborhood guilds for mutual improvement; a community nurse; a course of lectures; a local dramatic club; and co-operative undertakings to lighten the burdens and the expense of housekeeping.

What a new power such a church would become in South Weymouth, or in any other such town! The young would grow up to love and respect the church to which they all went together, as they do the public school; and the old would discover the beauty and power that go with unity and service. Why cannot this be done there, and in many another town?

This is the day of union. The Churches are coming together. Where it is not corporate union it is federation. But we do not ask for the imperfect federation there, but for full union. Federation is good only where we cannot get something better. We believe the grace is coming, if it has not yet come, when these divisive nothings or prejudices, like the totems of savage tribes, will be cast aside, and churches will so feel the burden of their work for the world about them and beyond them that they will no longer stand in each other's way. Will not South Weymouth set us an example?

## The General Strike

WHAT is called in Europe the "general strike" is virtually unknown in America. But in Europe it has both a history and a considerable literature. There the

subject is one of vital importance, and it is constantly discussed in books and periodicals and in meetings of workmen and social reformers. The term is a comprehensive one, embracing a number of somewhat different collective actions. But in all cases it is limited to stoppages of work prompted by a political or politico-economic motive. Trade strikes—that is, strikes for purely economic purposes—no matter how general, come under a different category.

As projected by the Anarchists and so-called Anarcho-Socialists, it is either a total stoppage of work by all the toilers within a particular state, or a stoppage of work by a sufficient number in each of the vital industries to bring about a paralysis of the existing industrial régime. In either case its aim is a political revolution, an overthrow of the prevailing system, and the installation of a system of “free” organization. This sort of general strike has been for years the favorite project of the Anarchists.

The Socialists, however, who, in Europe, represent the overwhelming mass of organized working class sentiment, ridicule this Anarchist ideal. To their view it is chimerical and utopian. It involves, they say, in the one case, an assumption of completeness of organization and unity of purpose so compelling as to render a strike unnecessary, since a working class so powerful and united must gain its point without the trouble of conflict. In the other case, it involves the assumption of a potency in minorities which, it has been proved over and over again, minorities do not possess, at least in the economic field. A *coup d'état* is possible in the realm of politics, but not in the realm of industry.

But the Socialists do not disdain the weapon of the political strike. Under the name, *massenstreik* (mass strike), as it is known in Germany, the united action of a considerable part of the workers in behalf of a political project or in defense of a political right, comes to an increasing favor thruout the Socialist party. The mass-strike differs from the Anarchist general strike in that it does not contemplate for its immediate object so revolutionary an aim, nor does it assume so complete a unity of working-class action. It contemplates only a de-

mand for some one reform, or circumscribed group of reforms, or a defense of some one right, or limited set of rights, upon the importance and attainability of which the workers are generally agreed. The methods of the strike may vary. It may be a simultaneous withdrawal of every organized workman that can be reached, or a series of blows against each of the vital industries in turn, thus allowing the workers the opportunity of recuperation by relays.

This is the sort of strike that Germany may see in the near future, should the Conservative parties attempt to restrict the suffrage. The threat was openly and emphatically made by Bebel and others in the recent National Socialist Congress at Jena. Germany is now at a critical stage in her history. The marvelous growth of the Socialist party excites the utmost apprehensions of the propertied classes. The Socialists, with their 3,008,000 votes, are now the strongest single party in the empire. They poll, it is true, but about one-third of the total vote; but by another decade, should the present rate of increase continue, they will have a clear majority. Will the propertied classes permit this? There would seem to be but one way to prevent it, and that is by restricting the suffrage. But then the restriction of the suffrage would entail so stupendous a catastrophe in the form of a mass-strike that the leaders of the Conservatives hesitate to go ahead with their program. The dilemma is thus, on the one hand, Socialism; on the other, a political strike of unexampled and unimaginable magnitude.

The mass-strike has had a checkered history. Probably its first employment is to be seen in some of the futile efforts of the English Chartists in 1837 and 1842. But in 1893, in Belgium, a signal success was gained. The workers struck in overwhelming numbers, demanding manhood suffrage. So complete was the collapse of industry and commerce, entailing also the momentary paralysis of the government, that the suffrage was granted, tho the grant was seriously qualified by the proviso of plural voting for the favored classes. In 1902 the workers struck again for a one-man-one-vote franchise, but were defeated. A

similar strike by the Swedish Socialists, in 1903, was only partially successful. The railway workers of Holland won a clear victory in their political strike of January of the same year; but the "general" strike of the following April ended in disaster. The Italian strike in 1904 against the too ready use of the military by the government was a brilliant success, and so was the Russian strike of October, 1905, which forced from the Czar many radical concessions. But the December strike was a miserable failure, ending its days in a futile revolution. The workers were wholly unprepared for it, while the Government, which forced their hands, was fully prepared.

What the result may be in Germany, in case of a restriction of the suffrage, no man can foretell. On one side would be an organization impelled by a definiteness of aim, a fervor of conviction and devotion to a common cause. On the other side would be a ruling class, exasperated to the last degree by the constant menace to its material interests, and in its hands—the army, perhaps the most powerful army on the face of the globe.

## The Old Fashioned Farmer

WE heard a middle-aged man, not long since, describing himself as "just one of the old-fashioned farmers." He had come by trolley to the club, and he gets his mail by rural free mail delivery. He keeps Jersey cows; eats oatmeal; uses a disk harrow and a steel plow; sleeps on a spring mattress and an iron bedstead; brags about his success with alfalfa; and his wife belongs to a woman's club. He has a piano and a revolving hay rake; fills a silo every autumn; has a telephone in his house and a gold watch in his pocket. His boy plays football and his daughter plays rag-time music; he goes to the Episcopal church; and he votes for a Philippine tariff—or would, if he got a chance.

We suspect that what he meant by old-fashioned farmer was that he was conscious of not being quite up to date with the Department of Agriculture bulletins—for the modern farmer must be a scholar as well as a doer. He has never taken a term at Cornell, and he is a little off on some of the phraseology that is

used by the professors. There is no good sense in his being ashamed of this, for, on the whole, he has kept a fairly good pace with the age. A farmer has nowadays little to be ashamed of, if he does not waste what Nature provides for him, and does not try to perform the part of a brakeman on the wheels of progress.

But this old-fashioned farmer of ours has not eaten a dish of old-fashioned samp in forty years; he imports his flour from Minneapolis, made by the most modern patent processes. He could not get an old-fashioned buffalo robe for the value of the best acre of his orchard land. There is not a single old-fashioned spinning wheel or reel in his house; and his boy does not know how to swing an old-fashioned scythe nor his girl to knit a stocking. His folk say hearth, and not the old-fashioned "harth," and asparagus instead of "sparrow grass." He grows Concord grapes instead of Sweetwater, and Burbank plums instead of damsons and horse plums. He reads a daily morning paper, instead of the old-fashioned weekly *Observer* or *Recorder*. He sends his boys to a union school, and pays as much taxes in a year as his father paid in all his life. It is very probable that he could not tell you who Old Hickory was; and he has only a faint notion of the leading politicians and statesmen of the Civil War.

But he talks of beans as legumes, and buys bacteria with which to inoculate his soil. He reads bulletins more than he reads his Bible, and has more faith in spraying than in praying for a good apple crop. He takes his milk to a condensary, and he eats beef put up in a Chicago packing house. He prefers Florida oranges to those from California, and is a little particular about the bananas that he eats with his bowl of milk. Shades of Thomas Jefferson and Ben Franklin and George Washington! Still this man calls himself an "old-fashioned farmer."

Instead of a "lilac bush," a "cinnamon rose" and a "piny," his wife has a big flower garden, and they talk about their lawns. He has Austrian pines, and Kentucky coffee trees, and tulip trees from the West, and German lindens, growing along with his basswoods and his elms and his maples. His wife talks fluently

of her beds of *Dianthus laciniatus* and *Gladiolus gandavensis*. His mother just raised grass-pinks and morning glories and damask roses. You may look all around his place for old-fashioned things, and look mostly in vain. There is no old-fashioned pork barrel in his cellar, and when they kill lambs or calves the neighbors do not "swap quarters." The only old-fashioned crockery about the house is a blue pitcher and a few blue plates, set up as bric-a-brac; while they dine off from stone china. Oatmeal has come in, with Force and Life and Grape Nuts and Wheat Flakes, to crowd out the old-fashioned Indian meal, and it is a sorry breakfast that does not have some new patented breakfast cereal. The children do not dare to eat with their knives, nor can they wipe their fingers on their aprons.

It has been no small matter to readjust farming to modern science, since science means no special thing or thought, but just continual progress. It is not quite possible to keep up with the pace of our Agricultural Department, agricultural colleges, agricultural experiment stations and our agricultural clubs. The old-fashioned farmer likes to excuse himself for being put to it in his paces. He is at least three-quarters new-fashioned. We have very few really back-looking land-tillers left on our farms. The change has not gone on as fast as it might have done, but the speed is greatly accelerated.

The farmer and farming have gone thru a most remarkable revolution within the last seventy-five years; they are going thru a greater in the seventy-five that are to come. Land tillage is naturally becoming more popular, and town life is getting to be less attractive. The country has about all the advantages of the city, and it has, what even the new city cannot get, freedom from contact. The old-fashioned farmer, who survives into new conditions, must do it by showing a wonderful power of readjustment (what the old-fashioned farmer called horse-sense—that is, common sense in the field—sense common to folk and beasts), but above all things he should not boast of being old-fashioned, nor new-fashioned, but simply a man willing to be fashioned by

exigencies and changing conditions. When electricity gets a full hold of the times the farmer will not fight the automobile, but will own one or two himself. He will plow with an automobile, and he will go to market with a vehicle of that sort. The coming automobile will be no more like the lumbering monster that scares our old-fashioned horses than a Morgan is like a cart horse. The charm of it is, not that the farmer will beat the auto, but that he will take possession of it—will use it, and it will be, as everything else has become, a servant of agriculture. Old-fashioned farmer, try to comprehend the situation! Feel your oats and straighten your spine! It is a long road, from the sickle to the reaper, and it will be a longer one from the wheelbarrow to the automobile, but you will surely make it.

### The Trouble at Algeciras

THE French Government and the German Government have each a strong case at the Algeciras Conference. Beyond all question the French have predominant interests in Morocco, as their own Algerian territory adjoins it, and there is danger of raids and other disturbances. Their commercial interests are also greater than those of other nations, and Morocco faces France and Spain across the Mediterranean. Against these predominant interests Germany has nothing comparable which she can offer. It is natural that France should claim predominant rights, therefore, to see that order is maintained and international rights are secured.

On the other hand, Germany says that because one nation has predominant interests it does not follow that she has predominant rights of interference. Other nations have their interests, even if they are less. If a troublesome nation needs to be controlled, Germany says, let all the nations take a part in it, as in the late case of Crete, so that no nation shall take advantage of the others. The interests of Germany are not insignificant, and her commerce with Morocco is likely to grow. Germany has her world ambition, and does not care generously to give up any part of her rights. If France

shall be allowed to police, and so control Morocco in the nominal name of the Powers, it will be but a step to the absorption of the country, just as Algeria has been absorbed, or as Egypt has been taken by Great Britain; and then what will become of the open door and of the equal rights of German commerce? We may learn from what has taken place in Algeria and Madagascar, where French commerce is so protected that foreign commerce is practically excluded.

Further, Germany can say that the principle of predominant interests giving predominant rights would have very wide applications. Has not Germany predominant rights in Holland? Does not the commerce of the German Rhine have to find its outlet by Rotterdam and Dordrecht? Has not Germany a wistful eye on the Netherlands, and would she not be quick to claim predominant rights in that little kingdom? That is a pretty serious matter, and there is in it the powder for a general European war.

Of course France protests that she has no intention of annexing Morocco, nor has Germany of annexing Holland; but that is the ultimate logic of predominant rights, and such would in the end be the result. It will be seen that there is much more involved in this conflict that appears on the face of it.

But the trouble is that we have as yet no tribunal of the nations. That is what we need. It will come, a legislative tribunal, as well as a Hague Court of the nations. Then no one Power could by its superior strength dictate to a weaker, for the weaker, equally with the strongest, would have all the nations of the world at its back. Then it would be safe to give any one nation the police power over a recusant state, with no fear that it would take advantage of it. Then the open door could be enforced. The incapacity of this conference at Algeciras illustrates the desirability of an effective congress of the world.

### The Mob at Springfield, Ohio

SPRINGFIELD is a city of about forty thousand inhabitants, forty-five miles west of Columbus, and is a railroad center, where three important lines cross. It

has had a dark record for a previous lynching, so that the unruly and vagrant element knew how to flout the law when the occasion arose. The crime was one to stir the passions of lawless men—the stabbing and probable murder of a railroad man by two negroes. The angry crowd were ready to lynch the criminals, and would have speedily done it if they had got the chance; but the sheriff took the men out of town, and the mob then wreaked their vengeance on perfectly innocent people. It is a way mobs have of doing. They cannot reason or distinguish. They are mad with passion, which must be vented on somebody. So, in this case, not being able to hang, or shoot, or burn the men they wanted, they attacked the negro quarter of the city, the drinking holes and the congested slums, and set fire to them, driving out the inhabitants. The accompanying photograph shows the result. Then the authorities got the upper hand. The Governor called out the militia, and the attempt on the second night to repeat the outrages of the first night was a failure. The assailants were driven back and scattered wherever they tried to gather, and arrests were made, and those who resisted the police were fined and punished. Then the usual order reigned, and the sound, worthy citizens protested, somewhat too late, that mobs ought not to murder, and that it was wrong to do wrong; a tardy and ineffective conclusion, to be sure, but about all they could then do after the event.

That such a murderous mob could be gathered in the town that boasts of churches and Heidelberg College, that has public schools and a public library, is very sad and strange. It shows what a large number of our people, of men who vote and make our laws, have no respect for law, or no faith in law. They were ready, hundreds of them, to overturn law, and take the execution of punishment in their own hands. When thwarted by the officers of law, they were ready to strike and burn and kill where they could. They are—or were for the time—simply a band of savages, who had left civilization behind them. But we rejoice greatly that the authorities were too strong for the mob. They protected the prisoners, and they restored order

vigorously as soon as possible, and have begun to punish the leaders. That is, so far, a credit to the city of Springfield and the State of Ohio, and especially its Governor. It is to the credit of their firmness that, when next New Year the lynchings are tabulated, Ohio will bear a clean record. There are States in which law is less honored, and where the sheriffs often fail to protect their arrested criminals; but Ohio, as yet, stands with a pure record for the year.

civilization and of liberty. There is no excuse for us if we lynch any man, white or black, for our laws will serve out justice to him.

We must hope and believe that it is a crank of a member who has introduced into the Mississippi Legislature a bill to make lynching easy and safe. To be sure, he is the brother of a United States Senator from Mississippi, but a good man may have a bad brother. The bill provides that lynching shall not be

A View in Burned District in Springfield, Ohio, Across from Saloon on East Columbia Street, Known as the "Jungles." Shows Ruin of Six Houses Burned by Rioters.

We hardly need to say that, while lynching is bad everywhere, it is most to be condemned in these Northern States. Here public sentiment is most against it. Here we pretend to try to give at least his equal legal rights to the negro. We do not forbid him to vote, or to ride in the public conveyances, or to enjoy the ordinary rights of human beings. We claim to believe in liberty, fraternity and equality. We condemn the race-spirit and the race-discrimination in the Southern States. This is a part of our idea of

classed as murder or manslaughter, and that it shall be left to the jury, in case a man is convicted for lynching, to fix the punishment. That would usually liberate any one accused, as the jury could be depended upon not to agree upon anything radical or disagreeable. The jury would represent the community that did the lynching. But we are slow to believe that such a bill could become a law, notwithstanding Vardaman. The law must be held straight to the standard of right, even if not well enforced. Mobs may

arise in any city—we have had murderous mobs in New York; but laws and courts must be the protection of the State.

#### Matter and Substance

In an interesting article in the *Athenæum* M. Poincaré, one of the most distinguished French physicists, raises the question whether matter has any substance, basing it on some late experiments. The essential attribute of matter is its mass, its inertia. This mass remains constant under whatever transformations. If it can be shown that the mass, the inertia, does not belong to matter in reality, but is something attached to it, of which it can be deprived, or which can be altered, then the matter itself does not exist, but only its inertia or mass. The investigation depends on the velocity of corpuscles, the movements of which produce the cathodic or radium rays. These radiations are due to a veritable molecular bombardment, the projectiles of which are charged with negative electricity. The velocity of these particles is enormous, a thousand times that of the planets, and from a third to a tenth of that of light. Their electric charge is very considerable as compared with their mass. Every corpuscle in movement thus represents an electric current. Now, electric currents possess a special kind of inertia called self-induction. A current once established tends to maintain itself, and if broken makes a spark. A current thus tends to maintain its intensity, just as a body in movement maintains its velocity. A cathodic corpuscle will then resist the causes which would alter its velocity for two reasons, namely, its proper inertia and its self-induction. The corpuscle, called *electron*, thus has two inertias, one its mechanical inertia and the other its electro-magnetic. Now, Messrs. Abraham and Kaufmann have tried to calculate the relative amount of these inertias. They assumed that these negative electrons were identical and equally charged with electricity, and that they differed only in their velocities; that when the velocity varies, the real mechanical mass remains the same; but the electro-magnetic inertia increases with the velocity. Now, by observing the amount of deviation of the current in passing thru a magnetic

field they were able to determine the relative amounts of these two kinds of inertia, and they came to the astonishing result that the real inertia was nothing at all; it was all in the self-induction. It would follow that these negative electrons have no real mass. Their apparent inertia does not belong to them, but is an attribute of the ether. It was impossible to make the same study as to positive electrons, because of their much slower velocities. All this seems in the line of those conclusions which make atoms of matter simply currents or waves in the universal ether.

#### Philippine Independence

Secretary Taft says that the large majority of the more intelligent Filipinos desire entire independence of the United States as the ultimate and not very distant goal, but under United States protection. Doubtless, and we are not surprised. Why should any self-respecting persons wish to be forever in tutelage? They ought not to be. If the people of the United States are, and will be, determined that the relation of the Philippines or of Porto Rico shall be always that of colonies, to be governed by the United States, of which country they are not to be citizens, that condition must be humiliating. THE INDEPENDENT certainly does not wish to play the schoolmaster to any body of people except with the expectation that in a reasonable time they may have all the rights and privileges in our Government that we have. Porto Rico ought immediately to be made a Territory, with the promise that before long it shall be one of our co-equal States. That should be the anticipation also, finally, for the Philippines, or we should be getting ready, as Mr. Taft seems to be, to cut the cord that ties the child. But this is not our desire. Manila is nearer to us than New Orleans was to Washington when Louisiana became a State. Distance in miles does not count, but distance in time. English will be the language of the islands before long, and their ideas and civilization will be Americanized in a generation, if we do our duty. But we send soldiers and civil officers to the Philippines, as Mrs. Parsons and a hundred other witnesses have told us, who treat the Filipinos as

an inferior class not fit to associate with as equals, no matter what their culture or wealth; and of course they want to be rid of such supercilious rulers. All this is discouraging to those who wish altruistic relations, and it is therefore not strange that Secretary Taft anticipates final separation. If it comes it will be because we are too cowardly and selfish to do right by the people who first welcomed us.

### The Kongo Atrocities

It is no longer of any use to deny the terrible atrocities that have been made a part of the personal rule of King Leopold in the Kongo Free State, perpetrated by the commercial companies which collect the rubber, and employ soldiers to enforce the collection. We now have word that fifty-two missionaries of various American, Canadian, British, Danish, Norwegian and Swedish societies, at work in the Kongo, have met in conference at Kinchasa, Stanley Pool, and signed their protest at conditions there. Two years ago they met and expressed the hope that there would be a marked improvement, but now they say that "in many parts of the land this condition is still unaltered." They are "greatly disappointed that the memorial presented to the Sovereign of the State thru the Governor-General March 1st, 1894, has elicited no reply"; and that "the report of the Commission of Enquiry, as published, does not convey to the general public an adequate impression of what has occurred." The trouble is that the system employed is wholly bad, and the reforms suggested are only palliative. They say:

"This system wherever applied robs the native of his right to the free use of the land and its products, and it compels him to labor as a serf under the name of taxation; while for the most part practically nothing is being done for the good of the native thus taxed. We are convinced that the atrocities which have been abundantly proven, and which will continue to be perpetrated, no less than the general oppression resulting from this so-called taxation, are the natural outcome of the system adopted, of the radical alteration of which we see no sign."

Here we see one of the subsidiary advantages of having missionaries in a country. They are the only residents

whose business it is to consider the welfare of the natives and expose oppression. It is to them that the present exposure is wholly due.

### Joseph Medill Patterson

Because he found himself a Socialist, the young millionaire, Mr. Joseph Medill Patterson resigned as Commissioner of Public Works of Chicago, where he had already made a reputation for himself as the one highly meritorious appointee of Mayor Dunne. A "come-outer" generally makes a mistake. Even if Mr. Patterson found municipal ownership would not abolish poverty or inaugurate the millennium, he could have done more good for the cause he now espouses by holding his job than by resigning it. Still, the interesting thing about his action is the general astonishment that a young millionaire should leave the ease and pleasure of a rich man's life to toil in the narrow circle of political socialism. We venture to prophesy, however, that from now on the country will witness a great many other rich young men going into out and out socialism or social reform, both movements of the time which are enlisting the support or opposition of most thinking men. Whether a man who is not a confirmed conservative should be an idealist or an opportunist depends, after all, on his temperament. Each has a necessary place in any great movement and each does work that the other cannot.

### Mosquitoes

It is time now to begin the fight against the mosquito pest. Why should we drain the marshes about Colon and Panama, and not those about New York and New Orleans? There are more people here than on the Isthmus, and malarial diseases and even yellow fever have to be fought in our own country. In New Jersey, just over the North River from New York, is an immense breeding place for mosquitoes, covering many square miles, too marshy to be inhabited, a wet fen of marsh-grass and marsh-mallows and tide-soaked peat and ditches. The mosquitoes breed by the billions, and every window and door for twenty miles

inland has to be screened to secure a measure of comfort and protection. They inflict suffering and disease on a third of the territory of the State of New Jersey and nearly two million people. It is ridiculous that the rich commonwealth allows all that land to remain valueless, unproductive and a breeder of pestilence. And New Jersey was settled by the people who rescued Holland from the sea. We commend the anti-mosquito crusade to public-spirited citizens in a thousand towns. It is a first hygienic duty.

### "A Dirty Rag"

We never take Bishop Turner, the senior bishop of the African Methodist Episcopal Church, seriously, nor do his brother bishops. He is an old man, and eccentric, possessed of much untrained native ability, who has been much flattered, and who has indulged frequently in language and urged action which have much troubled his associates. He was a slave before the Civil War, and in his old age his words get the better of his judgment. Such was the case when, at a meeting of Georgia negroes some days ago, he recounted the indignities which negroes suffer unprotected and called the American flag "a dirty rag." Knowing him, we thought the incident not worth discussing, but it has been made much of in certain quarters, as evidence that his race is disloyal. It is enough to say that the race papers have generally rebuked and condemned him. One of the curious side-lights on the matter is that when Hoke Smith was Secretary of the Interior under President Cleveland he was very sweet on Bishop Turner, and gave a number of minor positions to the Bishop's relatives. In those days, we believe, he said nothing about "a dirty rag."

Our readers will remember that a case under what is called "university freedom" occurred some months ago in Japan and excited immense interest. One of the professors in the Tokio University, Dr. Tomizu, had, with six others, made sharp criticisms on the course of the Government, both previous to the war with Russia and at its close. He was punished by being removed from his

position. Then the whole faculty protested and would have resigned if he had not bidden them consider how such action would be a wrong to the students. The new Government has reinstated him, and a very embarrassing situation is relieved.

This is a lucid statement taken from a late presumably popular book on "The Finality of the Christian Religion":

"The ideal of naturalism is the mathematico-mechanical calculability of all natural connections and sequences, the remainderless rationalization of reality, the transparency and explicability to the intellect of all that is and takes place."

We know a certain divinity teacher who says he has never been hauled up for heresy because he writes only in German periodicals which the heresy hammerers never see nor could read. One would think the author of the above sentence ought to be free from danger, but we regret to say that even his device of perlongiverbalism has not saved him. He is now on the newspaper theological rack.

We would call the attention of those whose business it is to preserve decency and purity that in our cities there have recently sprung up numerous "one cent vaudeilles," where for a penny moving picture machines may be gazed into. The subjects of many of these pictures are indecent, if not forbidden by law. And yet children are attracted to them and stools provided that they may stand on. These kinetoscope pictures are as vulgar as those picture cards which the postal authorities suppressed some months ago, and similar action is required.

It was a wooden schoolhouse, and there was a high wind, and there were six hundred children in the building in Canarsie, N. Y., when it was discovered that it was on fire and could not be saved. But there was no panic, for the children had been practised in the fire-drill. The fire gongs were rung, each teacher and each pupil took their lines in the fifteen rooms, and all escaped safely, only two children breaking ranks. Every school should be familiar with the fire-drill.

# Insurance

## The Equitable and Mutualization

THE publication of the forty-sixth annual statement of the Equitable Life Assurance Society last week was quickly followed by a statement from President Paul Morton to the effect that the Equitable board and the society's lawyers were considering ways and means whereby the organization could be "mutualized." Certain difficulties in the way of accomplishing this yet remain to be overcome, and it will be impossible to take any final action in this regard until after the Legislature has reached some decision and taken definite action on the Armstrong Committee's report. The uncertainty as to when all this can be accomplished renders it impossible to know just when the contemplated change can be brought about. The mutualization of the company was an idea of the late Mr. Henry B. Hyde, its founder. When the control of the Equitable passed from James H. Hyde into the hands of Thomas F. Ryan, it was with the agreement on his part to resell his stock control to the society whenever the directors should decide upon turning the organization into a mutual company. The Armstrong report favors a new law enabling stock

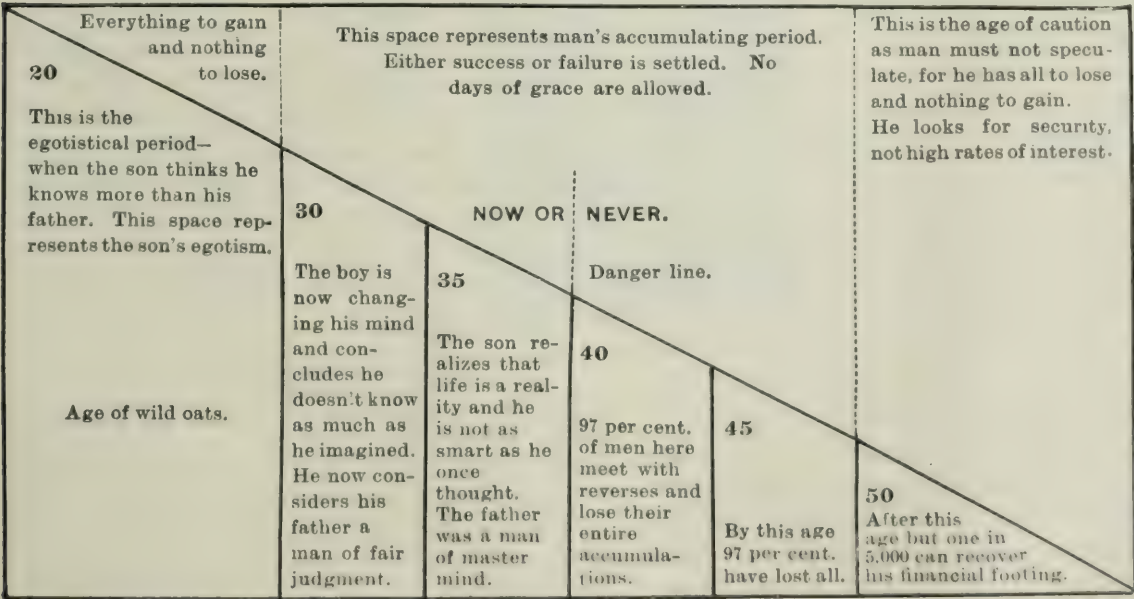

insurance companies to "mutualize" themselves, as contemplated by the Equitable. Should the Equitable's plan of mutualization prevail and the stock control pass from Mr. Ryan's hands, he will receive for his holdings the sum of \$2,500,000, or exactly what he paid Mr. Hyde for it. Interest charges at the rate of 4 per cent. per annum from the time he secured the stock last June will follow. This mutualization plan, which we have previously advocated, is exceedingly desirable, and should be brought about at the earliest possible moment.

## A Striking Card

A WELL known Boston insurance broker recently issued an advertising card bearing a diagram which is herewith reproduced and which is well calculated to inspire serious thought on the part of the average man. The data appearing upon this card is an eloquent if silent appeal in favor of the frugality signified by certain forms of endowment insurance. The habit of saving, once formed by means of an insurance policy or otherwise, cannot fail of being exceedingly valuable to every young man.

Diagram Showing That the Habit of Saving Must be Formed and Exercised Early in Life.

At sixty, 95 per cent. of men are dependent upon their daily earnings or their children for support.

If you do not securely lay up during the harvest, the drouth of old age will catch you without provender at sixty.

# Financial

## Government Finances

ON the last day of February, the accounts of the Government showed a surplus of receipts over expenditures for the fiscal year. Since the beginning of the year (eight months ago) and up to the end of February, there had been a deficit. The disappearance of the deficit was due mainly to a considerable increase of receipts, both from customs and from internal taxes. Receipts for the eight months have been \$30,000,000 in excess of those of the corresponding eight months of the preceding year, but the increase of expenditures has been less than \$4,000,000. On the 2d inst. Secretary Shaw gave notice that he would at once, upon the receipt of satisfactory security, place \$10,000,000 of Government funds in depository banks, because about that sum had been withdrawn from circulation in February by the excess of receipts over expenditures, and by the excess of deposits of lawful money for redemption of bank notes over the notes actually redeemed. The withdrawal has been due in part to large imports, for the customs receipts go at once into the Treasury. They should be deposited in the banks and thus be kept in circulation. The law which prevents such a disposition of them should be repealed.

## This Tax Should Be Repealed

RARELY has the New York Legislature been addressed by so competent and earnest a delegation; or by one so justly representative of public interests, as the one which asked the Joint Committee on Taxation, last week, to recommend the repeal of the new annual tax of half of one per cent. on mortgages. All the leading Chambers of Commerce, taxpayers' associations and real estate associations, and many other civic organizations shared in this movement. The tax should be repealed. Nothing more than a recording tax should be substituted for it. The authors of the tax may have believed that the demand of the law, that the lender should pay, would be obeyed. It ought to have been foreseen that, in spite of any such provi-

sion, the borrower would inevitably pay the tax. There is abundant evidence that the interest rate has been increased by not less than the amount of the tax, and this is clear proof that the tax is eventually paid by the borrower. In this city, a vast majority of the borrowers shift the burden of the tax to tenants, who pay it in increase of rent, and the burden is especially heavy upon the poor.

AN official report shows that the liabilities of a stock brokerage firm that failed recently in Boston are \$539,000, that the assets are only \$5,818, and that the liabilities include \$504,037 due to customers for stocks carried on margin.

....The United Railways Investment Company of San Francisco has acquired control of the street railways and the gas supply, both natural and artificial, of Pittsburg, the transaction involving about \$40,000,000.

....It is reported in Wall Street that the German Steel Kartel, a combination of steel manufacturers, owns 900,000 shares of the common stock of the United States Steel Corporation, which were bought at less than half the present market price.

....In his recent annual report, Superintendent Kilburn, of the New York Banking Department, pointed out that interest on deposits was  $71\frac{1}{2}$  per cent. of the whole expense account of the New York trust companies. "The price so paid for interest," said he, "is too great, and the companies ought to institute a reform." Official statements of a score of the leading companies show that the average rate of interest paid on their deposits ranges between 2.62 and 2.99 per cent., and that interest is paid on about 95 per cent. of their deposits, which exceed \$600,000,000.

....Dividends announced:

U. S. Leather Co. (Preferred), \$1.50 per share, payable April 2d.

Internat'l Paper Co. (Preferred),  $1\frac{1}{2}$  per cent., payable April 2d.

Chicago, Rock Is. & Pac. R'way,  $1\frac{1}{2}$  per cent., payable April 2d.

Am. Can. Co. Preferred (quarterly),  $1\frac{1}{4}$  per cent., payable April 2d.

Tezuitlan Copper Co. (quarterly),  $1\frac{1}{2}$  per cent., payable April 2d.

No. 2989

## The Independent's Report on Panama

BY EDWIN E. SLOSSON AND GARDNER RICHARDSON

[Our readers will be glad to get the following report of our editors which we promised them last week. As Dr. Slosson and Mr. Richardson arrived in New York after the first half of THE INDEPENDENT had gone to press there was no practicable way of getting their report into this issue except by substituting it in the place reserved for "Survey of the World." This is the first time since the department was started that the "Survey of the World" has ever been omitted, but we feel our readers will have no reason to think we acted unwisely in giving the space to this preliminary abstract of their investigations.—EDITOR.]

AS was stated in our last issue, the primary reason for sending two members of the editorial staff to the Isthmus of Panama was for our own satisfaction. We had no wish merely to add a few more pages to the already voluminous Canal literature, and no desire to prove that affairs are badly managed in Panama, but we wanted to become personally acquainted with the place and the problem which will be a center of interest to the American people for many years.

We arrived in Colon on the steamship "Advance" February 21st and left there on the steamship "Panama" March 5th, thus spending over 12 days on the Isthmus; too short a time for a study of the methods of engineering, sanitation and bookkeeping, but quite long enough for our purpose, since, by working separately, we were able to see a good deal of the Canal Zone and the terminal cities, and to talk there and on the boats with 200 or 300 people, from the President of the Republic of Panama to Jamaican negroes. To Secretary Taft we are indebted for letters of introduction to the prominent officials of the Panamanian Government

and the Canal Zone, and we gratefully acknowledge, also, the uniform courtesy and many kindnesses we received from them and their subordinates.

We did not spend much time in the offices of the Commission, but preferred rather to tramp up and down the Canal route, catching rides on passenger and freight trains for the drier, and on launches and cayugas for the damper portions of the Canal; taking pot luck at palm-thatched huts or I. C. C. messes whenever we got hungry; sitting in the evening on a mosquito-barred veranda talking to a canvas-backed official, or lying on the ground under the floor of an old French house where a Barbadian was cooking his yams.

We got in this way a very definite impression upon a very important but intangible point, namely, the *morale* of the men, what sort of men they are and what they think of themselves, and their work. Much of what

we heard was mere gossip, but even that is often worth listening to, not for the indeterminate amount of truth it may contain, but because of its revelation of the mental attitude of the gossip. To take the opinion of the

John F. Stevens, Chief Engineer of the Panama Canal. The Man of the Hour.

ditch diggers is as important as to take their temperature, for a rise of a few degrees in prejudice against their official superiors, however microscopic the cause, may incapacitate them for efficient labor on the Canal as much as an attack of the malarial germ.

It takes all sorts of people to make a world, and most of them are represented upon the Isthmus. But what pleased and encouraged us more than anything else we found there, was the manifest development of a unified body of efficient

and confident men out of the heterogeneous individuals who have been sent or have gone to Panama. That very essential element, in all such undertakings, *esprit de corps*, is undeniably forming. The incapables are being pretty rapidly weeded out all the time. The men who are staying in Panama are more and more those who know how to work, and they are learning how to work together. They are men who stand necessary hardships without grumbling and make a strong

The First Ninety-five Ton Steam Shovel Loading Rock at Bas Obispo, the Atlantic End of the Culebra Cut.

kick when they are imposed upon. Natural selection works rapidly in the tropics and it is fortunate that it does, for there does not seem to be any artificial selection at the Washington end of the line to assist it. They say that the lady stenographers in Washington selected the track foremen, and one is inclined to believe this or anything else, when one sees the incapacity and inexperience of some of the men being sent down to take the positions of skilled workmen. They may have passed the Civil Service examinations, but no contractor, who wanted to have his work done, would give them a day's job, still less a long engagement with a substantial advance payment. A few of this class, manifestly incapable, even to our inexperienced eyes, were upon the steamer with us on the way down, and we did not like to think that they were being fed and lodged and voyaged at the public expense, besides getting 50 or 75 cents an hour for walking the deck. But we felt somewhat better about it when we found that some of them lost the positions they were supposed to fill before we left the Isthmus. A union card or a Congressman's letter in the pocket is not a prophylactic against fever or homesickness or the somewhat severe initiary *regime* which the men on the ground delight to impose upon the tenderfoot suspected of incapacity or nepotism.

Still not all the men who have come to the Isthmus with misfit jobs are failures. Some drifted from department to department until they found their proper places. Some could qualify themselves for anything in sight before any one discovered how much they did not know. The American boy may come out as a rodman, secretly feeling a little shaky as to his qualifications for that, but when the engineer gives him a transit and a gang of negroes and sends him out by himself he does not flinch. He tackles the job manfully, holds on to it, and in the meantime crams up on the mathematics evenings by the aid of a correspondence course. Almost any young man of capability and adaptability can find some work in Panama, with good pay and rapid promotion, at least up to a certain level.

But, besides our national reliance upon

the theory that the American can do anything when he has to, we get frequently reminded that we are no longer to be classed as amateurs in the business of tropical colonization. Everywhere in Panama one finds men who have seen service in the Philippines, Cuba or Porto Rico, and it is evident, tho we have not seen it mentioned, that they are acting as a nucleus in the formation of this new body of efficient public servants in Panama.

Human derelicts and habitual adventurers are numerous on the Isthmus. The percentage of chronic grumblers is abnormally large. The cynical remark of the frontier, "Nobody is here for his health," still passes current as an unchallengeable axiom. But there is a saving minority who are not in a hurry to get rich and get home, who do not regard their sojourn on the Isthmus as an adventure or a speculation, but who are really living there, doing good work and proud of it. They are acquiring faith, faith in their superior officers, faith in their machinery, faith in themselves, the kind of faith that will enable them lit-

Negro Laborers from Barbados and Grenada, Who Have Just Landed and Embarked in Fourth Class Car for Culebra.

erally to remove mountains and cast them into the sea.

We are really just beginning to get ready to dig the canal. The first Walker Commission estimated that two years would be required for the preparatory work. On May 4 next the two years will have gone since the Canal Zone passed into American hands, and the end of the period of preparation is not yet in sight. It looks as tho at least another year must elapse before definite and effective work on the canal proper can begin. For the fundamental question of the type of the canal is now before Congress, and nobody knows how long it will be before it decides between the sea level and the locked lakes. Only after that indeterminate period of deliberation can the new route for the Panama Railroad be run, and the yards laid for the rapid handling of the dirt from the Culebra Cut across the watershed, and the tracks constructed for conveying it to the dams at each end. New harbors must be made and new towns built.

In the meantime the most that can be done on the canal work is to keep pegging away on the Culebra divide, which must be cut down whatever is to be the level of the canal, and consequently is the controlling factor in the time of construction. It is, therefore, very disheartening to see this dry season go by without more work being done there. There are altogether thirteen steam shovels on the canal prism in this section, but they are working inefficiently, for there are not enough cars to carry away their dirt, there are

not enough tracks to handle the cars, there are not enough men to lay new track, and there are not enough buildings to house the men. The official figures will doubtless be published eventually, but in the meantime, so far as we could learn from observation and inquiry, the steam shovels are now working at less than half, not of their theoretical, but of their practical, capacity, under ordinary working conditions elsewhere. The eight hour day is compulsory by the laws of the United States, and if a shovel gets in from two and one-half to three hours of actual work, it is considered to be doing very well. In watching several shovels on different days we found it took about an hour to load a train of twenty cars, and then the shovel had to remain idle for an hour or an hour and a half until another train of empties could be switched in.

This difficulty is due to the delay in obtaining American cars and track material. The cars, both flat and dump, ordered by Mr. Wallace, the former Chief Engineer, for work in the cut are only now being turned over for use in excavating. They have been on the Isthmus for some time, but were being used by the Panama Railroad for hauling dirt, paving brick for the city of Panama and similar purposes. Track laying material, which was ordered in November, 1904, was not obtained until July, 1905, altho it could have been bought in New York in twenty-four hours.

The despised French machinery, for which we would not pay a cent when

they wanted to sell it to us, comes in very handy now, and we could not have done what digging we have without it. The work at Culebra up to the present has been mostly done with French cars and equipment, except the steam shovels. Our engineers found that a car in the bush is worth two in the States, and if a train of them went over the dump they only helped to fill up. It was easier to go into the jungle and find some more and fix them up than to get the others out. The woods are full of them.

In spite of inadequate and incongruous machinery, the cost of excavation has been steadily reduced. Mr. Dauchy, who was in charge of the Culebra Division until the first of the present month, told us that the cost was \$1.50 per cubic yard last August, 72 cents in January, and 62 cents in February. This last, figured on a ten-hour basis, is less than the preliminary estimate of 50 cents per cubic yard which Mr. Wallace calculated from the work he undertook when he first assumed control of the engineering. The excavation done in February, 186,000 cubic yards, broke the record, altho there were only twenty-two working days in the month. In the course of a year or two the sixty steam shovels now ordered should be at work in the cut and the dirt will fly in earnest.

But a chain of men is no quicker than its slowest link, and the steam shovel, like everything else on the Isthmus, is at the mercy of the West Indian negro. It is exasperating to see a \$7 a day engineer and a \$6 cranesman standing in idleness on account of the dilatory tactics of an

80 cent Jamaican. Their nominal wages is 80 cents, but if we include all that is paid out for them they cost about \$5 a day, and they cannot be considered a bargain at that price. Their efficiency is only about a quarter of that of the common laborer in the United States. It was hoped that Gallegos from the North of Spain would solve the labor problem, but the first experience with a shipload of them from Cuba, where they had been used in railroad work, is not encouraging. They did work two or three times as well as the negroes, but promptly at the end of the twelve days required for the incubation of the malarial germ they began to come to the hospital by dozens and scores, and within a month 47 per cent. of them were laid up. But the labor question, like many of the other topics here mentioned, we must discuss more in detail in later articles.

A few words may be necessary in regard to Poultney Bigelow's article, for the publication of which THE INDEPENDENT has been so sharply criticised by Secretary Taft and the press. We accepted it simply as an interesting article from a reputable author and traveler without intending in the least to endorse it, for THE INDEPENDENT aims to publish all sides of current questions, and rather prides itself on the inconsistency of its department of contributions. But since so many magazines pursue the opposite course of publishing only what they editorially approve, it was perhaps a natural mistake on the part of the public to regard it as an attack by THE INDEPEND-

Paving the Street on the Plaza Sant' Ana, Panama.

Drainage Ditch Being Put Thru Colon.

ENT upon the Administration. Why it should have called out a Presidential message of such length and argumentative vigor it is hard to see, since Mr. Alvord's articles in the *Herald* and Mr. Lyle's in the *World's Work* and others were quite as severe and specific in their criticism.

We made no special effort while in Panama to search for proof or disproof of Mr. Bigelow's statements, but our

have laughed over it would make, but is of not so much importance as to know whether an excavating machine of some sort did or did not tip over in Culebra thru careless handling, and whether similar accidents are common.

In regard to the sanitary condition of the terminal cities, we shall have a good deal to say later. It is sufficient to state here that we found the streets of Panama being rapidly paved with vitrified

Panama at Low Tide.

readers will naturally expect us to express our opinion of it after we have been over the ground. That the article was based upon superficial examination and contained numerous inaccuracies has been made quite apparent by the exhaustive criticism of it by Mr. Taft, Mr. Stevens, Mr. Shonts, Governor Magoon and other competent authorities. But, in our opinion, his blunders in technicalities, so amusing when officially pointed out, have been given a prominence that has quite obscured the main charges. To call a steam shovel a "dredge" is an absurd mistake, which, presumably, none of those who

brick and the hydrants on the street corners in use, and of both these we here present photographic evidence. Colon we found still a very dirty and ill-smelling city, notwithstanding that was the dry season and energetic efforts were being made to put it in presentable condition. The dredge which is digging a drainage ditch across the city has made considerable progress in the last two months, as is shown by the accompanying photograph, and when it reaches the sea the tides will aid in keeping the city clean. At present the ditch is filled with stagnant water covered with green slime and is anything but a sanitary canal. The

vacant land is being cleared of jungle in order that it may keep drier. In the back streets are heaps of rubbish and decaying vegetable matter which neither look well nor smell well, but may be regarded as monuments of progress toward eventual cleanliness. Governor Magoon in his report of November 16th said: "The present condition of the streets of Colon is intolerable," and Mr. Bigelow made a similar criticism, altho in not quite such extreme terms. Neither criticism is so much deserved just at present, thanks to the weather and the work, altho the reality is bad enough still to justify strong language. Like all the other periodicals which have published criticisms of conditions at Colon, THE INDEPENDENT takes the credit for the stimulation of the sanitary force there to unwonted activity.

keep them in sanitary condition, the United States would have little interest in the affairs of these cities. The administration offices are being moved from Panama to high inland points on the Canal Zone. The mouth of the canal on the Atlantic, if the plans recommended by the President to Congress are approved, will open directly into Limon Bay, and old Colon will be left high and dry on one side. "High and dry" are here used in the figurative sense of the phrase. A new American town will be built on the Canal Zone near Mindi.

So the Commission takes no interest in Panama and Colon except in so far as is necessary to keep them from becoming centers of epidemic diseases, and in preventing this the chief reliance is placed upon the disinfection and frequent in-

Old French Cars in the Brush Near the Atlantic End of the Canal.

We are at a loss to know what Governor Magoon meant when, in his reply to the Bigelow article, he said that there was no scarcity of water in Colon. There certainly was a scarcity when we arrived. Water was being hauled from Frijoles on cars and sold at 2 cents a gallon. Before we left, however, distributing hydrants had been opened in two places on the streets, altho the hotel still continued to get the Frijoles water. The supply is, however, still inadequate and the pipes not yet brought into the houses. The native population get their water, except for drinking, from the old shallow wells. The construction of a sewer system for Colon is indefinitely postponed.

As a matter of fact, except for our treaty obligations to provide water and sewer systems in Panama and Colon, and

specification of houses by which cases of yellow fever, smallpox, plague, etc., can be quickly detected and isolated. The cleaning and draining of the streets, the doing away with bad smells and dirt is, as Colonel Gorgas said to us, "more for esthetic than sanitary reasons," and rather "to please you newspaper correspondents" than because it is necessary to keep down disease.

Mr. Bigelow was undeniably right in finding fault with the location of the hotel at Corozal, altho his language was exaggerated and he was mistaken in calling it deserted. That a mistake was made in placing it on such low ground is sufficiently proved by the facts that the buildings now being constructed are placed on much higher levels and that the extensions proposed by the architect

were abandoned even after the plans were made and the work of construction begun.

Colonel Gorgas told us that altho the hospital records showed no unusual sick rate there, yet it was located in an unsanitary locality, on ground so low that it would require about fifty men to keep it drained in the rainy season, and that he had recommended the abandonment of the extensions.

We have no desire to review the discussion in regard to the Martinique women, since we are unable to present any evidence to controvert the statements of the Zone officials in regard to the aims and results of their action. But since we are resolved to be frank with our readers, we feel obliged to say that the many persons we talked with on the subject, except a few of the higher officials, stated freely, frankly and emphatically their belief that the women were imported by the Canal Commission to satisfy the demands of the negro laborers, that they were distributed along the railroad without much regard to the location of their supposed husbands and relatives or the opportunities of domestic service, and that a considerable proportion of them are leading immoral lives. Many of them are, however, in the service of the Government or private families, and are faithful and well behaved. One of these will tell her own story to INDEPENDENT readers before long.

In conclusion it may be of interest to give the general unofficial verdict of those we talked with on the Isthmus in regard to the Bigelow article, and we will express it in the vernacular as we most often heard it: "Well, Bigelow made some bad breaks, but he told a lot of true things, and publication has helped us a good deal down here."

We can only present here briefly and baldly some of the general conclusions which we have reached.

We hope to avoid the mistake of the man in the street who does not think any progress is being made on a building until he sees its walls rise above the sidewalk. In spite of errors and confusion and delays there has been an immense amount of good solid foundation work done. Order has been brought out of the initiatory chaos, and system and discipline established. The lay of the land is

known and what is under it. Shops, lodgings and offices have been built, and the railroad is being double tracked. The men are pretty well fed, tolerably well housed and reasonably contented. The Zone is well policed, and the order and conduct of the employees, both black and white is remarkably good in comparison with similar men on railroad work and mining camps in the United States. Chief Engineer Stevens, by his democratic manner and businesslike ways, has done wonders in heartening up the men after the general demoralization of last spring. He is regarded almost universally with great confidence and affection by the employees. Even the devoted adherents of Mr. Wallace, who bitterly resent "the deep damnation of his taking off," are frank in their admiration for the efficiency of his successor. A like popular confidence in Mr. Shonts and Secretary Taft is not observable.

The division of administration and responsibility between Washington and Panama, undeniably causes a great loss in power and dispatch, and it is necessary that some change should be made that will unify the management and concentrate it to a greater extent upon the Isthmus. The sanitary work under Colonel Gorgas is a triumph of applied science, of which we may all be proud. The sanitary engineers have been given a free hand and all the money they wanted. They have spent it freely, but they have accomplished their aim. Yellow fever is at present extinct, and as much is probably being done as can be to keep down other diseases and to care for the men who get them.

The history of the two years of Panama under American control may be summed up in three words—Precipitation, Demoralization, Preparation. The first period was one of hurry and confusion, in which much time and money and effort were wasted, resulting in a general disheartenment. The work went wrong, yellow fever broke out, many were scared and some deserted. Since last summer more thoro and cautious work has been done, and there is a good chance for steady progress in the future if politics can be kept out and the red tape slackened. The labor problem and the engineering and sanitary difficulties are quite enough without artificial hindrances.

**I**N 1871, Karl Marx wrote a history of the Paris Commune. It was filled with bitterness against the governing class and boundless admiration for the heroism of the "Proletariat." But it was impossible for Marx to hide his discouragement. Before the Commune he had been first of all a revolutionist. Soon after the Commune he turned into the path of economic fatalism. Revolutionists and the working classes the world over had been reaching the same conclusion, and were ready to follow the lead of Marx. The revolutionary hopes of the working people to dominate society had been drowned out by the middle classes in a sea of blood.

The revolutionary tendencies in all modern countries have been molded and determined by this great event. Believers in the principles of equality and radical democracy have everywhere turned against the little bourgeois and joined themselves to the working classes. The aspirations of great masses of the community for a better and higher social state have been directed into peaceable political channels. Revolution has lost itself in socialism and socialism has turned into politics and social reform. The whole movement has been dominated by German ideas—the economic fatalism of Marx, the blind confidence in universal suffrage of Engels, and the general belief in the absolute invincibility of the military machine which has dominated the whole German people since the Franco-Prussian war.

And now came the Moscow barricades, as little expected by "revolutionary" Socialists the world over as by the rest of non-revolutionary mankind! But coming events cast their shadows before. For several years a strong current of

European socialism has begun to turn its energies away from the political game for which the "ruling classes," the "capitalists" and the "bourgeoisie" have made rules. Already the whole European movement, with its six or eight million followers, has endorsed the "general strike"—that half-way house to insurrection.

I attended the Congress of the German Socialists at Jena, where almost the last of the great European Socialist parties, the German Social Democracy, took this momentous step. Until the "referant," August Bebel, made his weighty report on the question there was much doubt among the members of the Convention itself as to the position the party would take. The "Revisionists," von Volmar, Heine, and others, had been laying stress on this very fact that the general strike must inevitably lead to insurrection, and that the German army and the ruthless German bourgeoisie, would put down an insurrection with blood and iron. Other "Revisionists," equally peaceful in their proclivities, among them Eduard Bernstein, were equally in favor of the general strike as a last resort; but in his writings and speeches, as well as in private conversations I had with him, Bernstein made it clear that he feared a general strike would lead to violence, especially if undertaken before the time was ripe. It was impossible to seize the prevailing temper of the Convention till Rosa Luxembourg rose to speak. Then the lurid light of the Russian Revolution was immediately reflected on the gathering. Every sentence of Frau Luxembourg was received with applause. When she said again and again that the German Socialists would not hesitate, if neces-

sary, to pay the price of blood any more than their Russian "comrades," the deafening applause lasted much longer than any received by Bebel himself.

Frau Luxembourg is a magnetic young woman of thirty and a real orator. She is a Warsaw Jewess, who from her childhood has been filled with hatred and scorn toward arbitrary government. Her parents made great sacrifices to send her to the French and German universities, and while still a student she astonished the "intelligence" of Poland by a remarkably deep and able thesis on the economic relations of Poland and Russia. I have heard the highest tributes paid to this work by the most conservative economists as well as by enthusiastic Socialist admirers. In spite of her feeling against the Russian state, she has adopted, and one might also say proven, the thesis of the necessary economic independence of Russia and Poland, a conclusion equally fraught with serious consequences for Poland and for the German Fatherland, which she had adopted as her own. If Bebel defined in his statesman-like report the intellectual attitude of the German movement toward the momentous and weighty question of the general strike, it was Frau Luxembourg who gave the emotional tone to the new movement, and who is doing it yet. As the most trenchant editor of *Vorwärts*, her influence on German politics is only second to that of Bebel himself, in his masterly attacks on the Government in the Reichstag.

My talk with Rosa Luxembourg, in Jena, was almost enough in itself to show the reversal of the current of the European democratic movement, and to indicate the vast significance of the great Russian revolutionary experiment. Altho Frau Luxembourg is smarting under the aggressive attacks of the German ruling classes on the suffrage, which has not yet had time to do much for the German workingman, she is largely absorbed in Russian events. She was under no illusions about the general strike. Our talk passed immediately to the possibilities of insurrection.

"It is impossible," she insisted, in this conversation of some four months past, "to predict with any accuracy the form the insurrection will take, but it will be

an armed insurrection. It will develop by degrees and there is nothing whatever the Government can do to keep it down. Gradually the army will come over and gradually the people will learn how to arm themselves and to crush the Government."

Since this conversation four eventful months have gone by and already Frau Luxembourg's predictions are half realized. The general strikes have paralyzed the Government, but they have not overthrown it. The principal result has been that a very large proportion of the population are already preparing for armed insurrection. The significance of the Moscow barricades is that they form the first drawn battle of a revolutionary people in modern times. The French Commune was the revolt of the masses of a single city practically against a nation already in arms. The Moscow Commune is the first important conflict between the masses of the Russian people and a Government which, at the best, is relying only on the support of a part of its army and a few of the upper strata of Russian society. It marks the beginning of a social revolution, long prepared and long talked of, but now existing in fact. It is precisely because the revolution is rather a social than a political one that the Moscow barricades have driven political and economic questions into the background and brought forward the real issue. The question is: Shall Russia, under whatever political form, remain practically in the hands of the existing *régime* of autocrats, bureaucrats, police, landlords, and the capitalistic hangers-on of these classes, or shall it pass into the control of the peasants, the working people, the professional classes, and business men, who ask not Government favors, but to be let alone?

Ever since the first day of the barricades the Government agencies, financial, official, semi-official, journalistic, telegraphic and so forth, have been busy belittling the significance of this great historical drama. They have proven, to their own satisfaction, that the outbreak was an accident; that if there had been more troops in Moscow it would not have happened; that the Government had been too lenient in allowing the conspiracy to be planned; that the arming of the

people was due to official carelessness; that the outbreak itself could be attributed in the first instance to sudden and over zealous "loyalty" on the part of the troops; that the population was terrorized into supporting the revolutionists; that the mass of the population did not join the revolutionists anyway, etc., etc. To express the real state of affairs it would be necessary to rehearse at length the whole story of the insurrection. To call attention to the opposite standpoint from that of the Government, namely, that of the revolutionists themselves, a few words are enough.

Both the workmen's committee and the Union of Unions claim that the insurrection was not prepared. The arming of the population can be traced to two sources—the preparation of the ordinary citizens and workmen for defense in case of emergency, and the regular organization and preparation of a body of some 1,500 to 2,500 revolutionary militia for some future conflict. I have the most direct and reliable information that these latter were not ready at the moment the conflict arrived. Very soon after the general strike had been declared the aggressive measures taken by the troops and police made an immediate and violent reply unavoidable, if the revolution was not to lose its prestige among the masses of the people, and if the city was not to pass quietly into a period of reaction, the end of which no man could foresee. A large part of the population were aroused at the same moment to a pitch of extreme terror and anger against the Government. In summing up the lessons of the barricades, then, it must be held in mind that the revolutionists were not definitely prepared.

The revolutionary organization and a large portion of people that assisted them in building the barricades had entirely miscalculated the attitude of the army. They now boast of having obtained at least the "armed neutrality" of the infantry, but they had expected its active support. The cavalry they knew to be fairly loyal, tho there had been some defection, and the desertion of individuals and groups was confidently expected. The artillery, it was known, was entirely loyal, but the revolutionists had not reckoned on the use of rapid fire guns. Ma-

chine guns they were prepared for, and were able to meet with the barricades. The cavalry also they were able to render more or less ineffective in the same way. But the use of cannon, practically of siege guns on a small scale, had never entered into their calculations. Most important of all, they had expected either that the rest of the army would be busy elsewhere or would not be able to reach Moscow on account of the railroad strike. If the revolution had really been planned sufficiently in advance and set for this date it seems highly probable that they might not have been disappointed in either expectation. As it was, this was merely the hope of these feverish days, and not the calm expectation of a week or two before. All that was done in Moscow, then, was done under the black shadow of bitter disappointment at the behavior of the troops, and the failure of the rest of revolutionary Russia to rise.

It may also be confessed that the revolutionists at the present moment in Moscow are under the influence of the most extreme depression as to the result. Tho very many leaders have escaped, some have been arrested. Tho Moscow is still to a considerable extent armed, very many of the arms have been lost, and every form of organization is scattered to the four winds. This depression may be justified, but it is also accounted for by the St. Petersburg revolutionists in two ways. They say that this depression is a natural psychological reaction from the extreme exaltation of the last two weeks, and the inevitable result of the heavy price paid by Moscow for "this glorious contribution to revolutionary experience." "All Russia has gained the reward and Moscow has paid the price." It is asserted that the revolutionary organizations elsewhere have not been very seriously damaged by the mass arrests of tens of thousands of suspected persons all over the Empire. Some months ago the revolution had become too widespread and deep-rooted to be seriously hampered by the arrest of its leaders. This is proved by the fact that the general strike of October took place before and not after the great amnesty, when there were one thousand people either in prison or in exile.

I believe that I have stated fairly the strength developed by the Government during this first battle of the civil war. What have the revolutionists to show for the considerable price they have paid, and what is the price? There is no question that the Government losses were much greater than those of the revolutionary militia, altho the Government has carefully hidden the number of soldiers, gendarmes and policemen killed and wounded. In one skirmish while thirty-seven Cossacks attacking the Prokoroff factory were carried away on stretchers not one of the militiamen defending the barricades was wounded. It is also certain that all but a handful of the five hundred armed men in the Prokoroff factory on the last days of the bombardment escaped and that a large proportion eluded later capture. It is equally sure that a very large part of the wounded in the hospitals were either neutral or those who assisted in the defensive work of building barricades and so on. Relatively few belong to the armed revolutionaries. The first result to be noted then is that the Government's losses exceeded those of the revolutionists.

The revolutionaries succeeded with a body of armed men considerably smaller than that of the army to which they were opposed in holding for several days large portions of Moscow. They were without cavalry, without artillery, and the great majority were without discipline. The organization of the trained *drujeenicks* formed a very small part of the whole. Their success was, of course, due to their able tactics in not defending the barricades and in using the houses in every possible way for defense; in their avoidance of concentration in any particular spot, and in their use of the long winter nights to carry on their constructive work.

But all these were secondary considerations. The great historical lesson, which may overturn the balance of power in all existing modern states, was the success of guerrilla tactics in a modern city against the most recent and highly organized military attack. It was because the population could safely aid the *drujeenicks* without being caught; because the arms could be passed from

hand to hand, so that one gun did the service of three and the military were exhausted. It was because of the impossibility of the Government's deciding which house-owner was terrorized into aiding the revolutionists and which one was glad to do so; because of the possibility of the sudden conversion of a peaceful citizen into a revolutionist and a revolutionist into a peaceful citizen at a moment's notice without the least chance of detection, that the revolutionists had their astounding success. In a week were belied the theories of the whole generation of European Socialists that has just gone by, and the century of military dogmas on the matter of insurrections since the French Revolution.

It is not the crooked streets of Moscow, for they are not all crooked; not the unpreparedness of Admiral Dubassoff, for he had not only foreseen serious disturbances, but had greatly overestimated the number of revolutionists armed; it was not the disloyalty of the army, for three-fourths of it remained loyal; but it was the spontaneous and universal use of guerrilla tactics by the revolutionaries under the pressure of the moment that came so near placing the second city of a great empire in the revolutionists' hands.

These guerrilla tactics are not new in the present revolution, but they are new in the great cities of central Russia. For the last year similar tactics on a smaller scale and without barricades have prevailed thruout Poland, and for the past six years the Baltic Provinces have been in the grip of a guerrilla war, but in both these regions the revolution is more a national rebellion which can rely on support from nearly all classes, than a social revolution directed by the masses below against the classes at the top. The Moscow barricades, then, have brought great Russia, as well as the outlying provinces, not only to a guerrilla civil war but also to a social revolution.

Let there be no question that the revolution has now become social. This momentous fact is shown in several ways. The confessedly revolutionary working classes have appealed successfully not only to the soldiers and the peasantry, as had been the case already in the October strike, but now also to the artisans, to the

clerks and to the professional classes. If the revolutionary militia consisted of working men with a certain proportion of students and professional socialistic leaders, the barricades were built by servants and workers, clerks, engineers, lawyers and members of the professional class. So far had the movement gone that the conservative Duma of Moscow refused to endorse the proposal to arm the League of Russian Men, realizing that a militia hastily organized at that moment could consist only of the lowest elements of the population—"The Black Hundreds." A similar failure met the attempt to prepare a "patriotic" demonstration after the putting down of the insurrection. Even if the official reports of a crowd of 2,000 men are correct, this is a very small demonstration at such a moment in a city of a million and a half inhabitants.

The promised reaction failed to materialize and one of the results of the Moscow rebellion of the most far-reaching consequence to Russia seems to be the passing of the power of the "Black Hundreds." These hastily armed and organized bands of paid patriots, inspired by the anti-Semitic, religious, or imperialistic proclamations of the moment, have apparently had their day. The Government must now look for support in one of two directions; either upon its highly organized, disciplined and paid professional fighters of the army and the police, or upon those social classes which are themselves in danger. For example, the landlords and their servants, the higher and middle class bureaucrats, the wealthy concessionaires and other privileged classes, and the shopkeepers and professional element which rely directly upon them.

From one end of the country to the other the landlords are already armed and are allowed by the law to pay and arm what retainers they can secure. The bureaucrats are doubtless already armed. Most of the wealthy concessionaires and privileged element have either left the country or are concentrating in

St. Petersburg. The shopkeepers are either terrorized or have by this time decided pretty clearly what they will do. The peasant seems to be joining definitely in the revolt. Whether he can be turned later against the workmen or the "intellectuals" remains to be seen.

The Government is not securing the support of the unprivileged middle classes and the smaller property owners represented by the Constitutional Democratic Party of the zemstvos, by Editor Struve and Professor Melukoff. The latter has definitely taken his stand against the socialistic doctrine and the violent means of obtaining its execution. He stands for a revolution, but a political revolution to be obtained by peaceful means. He does not, however, fail to recognize the fact that the revolutionary violence has so far been the only factor which has really influenced the Government. Mr. Struve has also said as much and Professor Melukoff admits with equanimity that the Government will not be able to carry out the elections on the very modest basis of popular participation it now proposes.

Moreover, the revolutionists themselves recognize their dependence on the passive or active support of certain elements of the middle class.

The complete return of the Government under the leadership of Dournovo, Plehve's chief assistant, to all the most hated forms of oppression practiced under the latter's rule, has rid the people of all illusions as to the proposed governmental "reforms."

The heavy blows the revolutionists have been able to strike at the prestige of the Russian army, together with their successful attack on the Government's financial position, have further encouraged the tendency of public opinion to cease to look to the Government for anything and to begin to hope for the complete overthrow of the whole existing *régime*—autocracy, aristocracy, bureaucrats and landlords—and the substitution of a thoroughly modern state.

MOSCOW, RUSSIA.

# An American Family

BY REBECCA HARDING DAVIS

THIS account of an ordinary American family, its fortunes and its growth was given to me by one of its members. It is more significant because it is so commonplace. The story is true, except in two points. The name of the family is not Lawrence and they do not live in New Jersey. \* \* \*

My family! I don't see that there is much to tell about them. I'm a Lawrence. There are hordes of Lawrences in Delaware and Pennsylvania and the upper South—all kin in the beginning. I belong to the Jersey branch. They came over here in Charles the Second's time. Decent folk, but poor. All Quakers. They got tired of being whipped and tied to cart wheels in England. So they came over and squatted right down in Monmouth County. They were all working men, plowmen and blacksmiths and the like. Tho there was always one in each family who loafed and read books and had to be drove to earn his living. They took up land along the great tidal rivers. Some of them, as you can see in the old deeds, could sign their names, but most of them made their mark. My grandfather was one of them. Lazy Joe, he was called, bein' chief of the Do-Nothings.

He had a big tract on Tom's River and raised potatoes and wheat and pigs. In July and August parties of folks used to come down from Philadelphia to the seashore in wagons. There were no railroads then. They would bring their own provisions and cook for themselves. Grandfather always hired them the use of two chambers and his kitchen. They hunted and fished all day, and at night got up big suppers of sea trout and clams and sometimes venison. There's an old book at home—Grandfather's accounts—in which there are some of their names. Many of them were great lawyers and doctors. Binneys, McKears and Duanes and other leading folk of that time. And that was the way they took their summer outings then. Things were humbler then than now, I tell you, and country and town folk didn't mix

much. After a while some big taverns were built along the shore on Long Island and upper Jersey and these city folk then went to them and we were left to ourselves. When my father was a boy nothing ever happened at the farm, except a big wreck now and then on the coast. Emigrant ships sometimes came ashore on the bar and broke up. Hundreds of dead bodies would be washed in and lots of plunder. Boxes of lemons and pottery and chests full of clothes. But it was a lonesome kind of life on the farms. Boys didn't have ambition to study. My father could read and sign his name, but if a letter had to be written it was always my mother that did it. It was but a dull life then—as I said; there was no big town nearer than thirty miles; the pigs and wheat were sent up twice a year. Outside of that we had no traffic with folks outside. My oldest brother, Bill, he drove the pigs up to town, and he once saw a pretty girl that was cook in a road tavern and he married her. We thought nothing of that then. A cook, if she was decent and honest and could really cook well, was as good as we counted ourselves—*then*. Afterward, it was different.

The first thing that made it different was that one summer some boarders came to our house. They were two artists, young fellows tramping along the coast, and they stopped at our inlet and declared the views were as fine as any in Italy or Switzerland. They asked for board and then went about sketching and raving about the old cedars and the beaches and tides and hunting for "effects"; quite mad. We thought—I think even now, they weren't altogether sane. I never yet could find the effects they talked of, tho more artists came the next summer, and raved, and sketched, and were just as flighty as the others. I heard some of them had big reputations in town, and that the picture one of them made of a sunset on our beach with Tom Brown sittin' fishin' in his dory outside had been sold in Paris for thousands of dollars. Of course, I know

now all about "Art," and the ridiculous prices pictures bring. But them Frenchmen never did seem quite sane folk to me. I don't deny Tom was a big-muscled fellow, but he had no good looks. I never saw the day when I would have given 10 cents for his tin-type, let alone a color sketch of him.

Well, the artists kept on coming and bringing their friends. I must say they were nice folk, good mannered and easy pleased, telling stories, sitting in the evening around the kitchen fire, with Pop and us boys, and always praising mother's buckwheat cakes and fried chicken. The same families came year after year and they brought their friends, and they came, too, steady. They used to talk of our house and beach as being "a great find" that mustn't get into the papers. We younger children took to them and their ways naturally. But Bill and his wife Liza never did. Bill said "the house was gettin' too fashionable for him—with these fine town folks," so he went lower down the coast and bought a patch and took seriously to pig raising and butchering. He's done well, Bill has, as to making both ends meet; he and Liza and their young ones have always had plenty to eat. They're as fat as their own pigs, but they haven't much more education.

Jane come next to Bill, and she never took to the new folks. She married Pratt, the tailor, down in the village, and they soon had a houseful of children.

I come next to Jane as to age. I was keen enough to see very soon that boarders were a more profitable crop for us than potatoes or wheat. I soon took the charge of the summer people from Pop, and tried to make them comfortable, and to get things they liked. It was I that insisted on napkins on the table and spring mattresses on the beds. But I kept up the humly farm house look of things. They liked that. I may say, without boasting, I had pretty sharp eyes and wit, and knew how to make things pay.

The coming of the boarders year after year made a bigger difference to Joe than to any of the boys. He was always a queer, ugly little fellow, but with a bold, manly way of his own.

"I mean to be a soldier," he used to

say from the time he first learned to speak, and he never gave it up. Old Judge Fisher, who came here for years, was very fond of Joe. "Go to school, and let us see what you can do," he used to say. Joe went to school and worked hard and pleased the old man. So when he was the right age the old Judge got him an appointment to West Point. He did well, I must say. He is the Captain Lawrence who was stationed so long on the frontier in Oklahoma. You must have heard of him? He married a Miss Duryea, a great belle and heiress in New Orleans. You often see notices of their balls and gay doings down there in the papers.

Then, there was my sister Fan. The coming of the boarders made a great change in her life.

She was a pretty girl, prettier than any picture or living thing that I ever saw. I've seen strangers driving on the road stop to look after her when she was a child. The artists used to bring down their friends from New York, and when she would come in they would nod and say, "That's the girl. Wasn't I right?"

The women gave her finery to wear and the men painted her in all kinds of characters. She visited them all, too, up in town. She caught onto things quick enough. She picked up a little French and a little music, enough to accompany herself when she sang. She had a voice that would wring your heart. It was so sweet and pitiful.

Well, Fan married Sam Gibbs, the son of a millionaire in Cincinnati, when she was eighteen. Sam was a dull fellow, but he loved the ground she walked on. I went to see them once. They lived in fine style. But the next thing I knew Sam complained that she was flighty and divorced her. In a month she married the great Iron King Pusey, of New York. You see now every day the account of Mrs. Pusey's doings, her great marble palace near the Park, her dinners and gowns. Yes, that's our Fan.

I called on her once. While I was waiting for the big footman, in red and gold livery, to take up my name I saw the picture of a tree hanging in the hall. If you'll believe me, it was the Lawrence genealogy. There was Fan on the top-most bough. I was the Honorable John,

father was a Judge; there was a big line of Congressmen and D. D.'s running straight back to Lord John Lawrence in India, and then came baronets and earls clear back to King John!

Fan sent word that she was not at home. I never went back to the house again. It seemed to me that it and her whole life were built on lies.

But she was a pretty, gentle creature! You had to love Fan, even when she was lying to you.

That's all of us, except my brother George. He was the one in this generation who took to books. There always was one. He worked his way thru college and went into the Methodist ministry. Then he turned Episcopalian. He never married. He works in the slums in New York and fasts savagely. He comes down regularly to see us and the old people. They and my children dote on him.

Once he persuaded us all to have a reunion. He coaxed Fan to leave her big, white palace, and the Captain to bring his delicate wife up from Orleans, and Bill to give up his pigs for a day or two, and Jane to fetch her little tailor. "Let us all come back to the old hearth again," he said, "and break bread together."

Well, they did. It was a difficult day—a sort of grinning farce with a black tragedy back of it. When it was nigh over George said:

"We are all children of one blood. We may never meet again. Let us ask God to help us before we part."

I will say I never heard a prayer like that. None of us ever forgot it. We never did meet again. Even George saw it wouldn't do.

Each of us is now going on his own road. But there's nothing queer in that. That is like most American families.

PHILADELPHIA, PA.

## In the Far Meadows

BY JESSIE WALLACE HUGHAN

In the meadows of asphodel,  
'Mid the Paradise flowers that spring un-  
sown,  
Where once the smile of an angel shone  
Or the thought of an angel fell;

By the stream as you wander, sweet,  
If the little blue flower we know so well,  
With its burden of earth-born love to  
tell,  
In the shadow should kiss your feet;

If the sheen of a single tear  
Should soften the gladness that naught can  
mar,  
At the breath of a memory, faint and far,  
From the lowly love-days here;

I would rise to you at last,  
As the ocean follows the spirit moon,  
Though the earth, all warm with the fire of  
noon,  
Is clinging to hold him fast.

I would fare to the gates of space,—  
But the Paradise flowers are gleaming bright,  
As she wanders wide in the fields of light,  
And I in the old sad place!

BROOKLYN, N. Y.

# England's New Parliament

BY JUSTIN McCARTHY

THE new and bewildering chapter of England's parliamentary history has opened. It may well be called bewildering for the reason that it can hardly be said to have had any precedents for its conditions, any at least since the great Reform Act which first established in these countries the principle of a really representative Parliament. For nearly ten years England has been governed by a Parliament having in its representative chamber a large majority of Conservative members, and now so great has been the change that in our new House of Commons we have a far larger majority, an overwhelming majority, of Liberals.

As a result of this sudden change there presents itself, to begin with, the practical difficulty of making any satisfactory arrangement for the accommodation of the members who are entitled to have seats in the House. England is supposed to be, above all things else, a practical country, but, nevertheless, it did not put itself to the pains of ascertaining before setting to work at the construction of its House of Commons how many Commonsers were entitled to obtain the right of sitting there. As a matter of fact, the duly elected members of the representative chamber never can all have seats there at the same time, for the good reason that the House was not built large enough to hold them. When some important debate crowded the chamber many of the members had to spend long intervals in the galleries or the dining rooms or the smoking rooms and wait there until some especially dull and untiring speaker should help to clear the House and thus allow the waiting members to have their term of occupation. The old familiar difficulty is, however, much complicated by the new conditions. The members of the two great opposing parties occupy, as few of my American readers need to be told, the opposite sides of the chamber, and the difference in the number of Liberals and Tories had not in former days been large enough to create any especial complication. Now,

however, the Liberals outnumber the Opposition by more than two hundred members, and the result of this is that if the Opposition side of the House were left entirely to the Opposition the whole of the party could find accommodation there, while on the other side there would be at least two Liberals claiming and striving to obtain each of the seats on that side of the House.

There are, however, mitigating conditions in this embarrassing state of affairs. The Irish National Party, who number now nearly ninety members, always make it a rule to sit in Opposition, and these therefore will dispose themselves as best they can on the benches where the followers of Mr. Balfour and the followers of Mr. Chamberlain take their seats. Thus far the division in the Conservative ranks has not come to any settlement. No leader has yet been chosen, and Mr. Balfour is, as I write, not a member of the House of Commons, having been defeated during the struggle in his old constituency at the late General Election. [He has since been elected from a vacancy generously made for him by a member chosen at the late election.] No matter how severely men may be inclined to criticise Arthur Balfour's political life, yet I think the severest of his critics must admit that he is a man of remarkable intellect and culture, an admirable parliamentary debater, with many of the genuine qualities of statesmanship in him. I feel by no means sure that if he had withdrawn altogether from public life he might not have made for himself a higher and more lasting name in some field of merely intellectual productiveness than he could ever make in political and parliamentary work.

The Conservative party seems for the present to be utterly broken up. Assuming Mr. Balfour to find a seat again in the House of Commons it seems hardly possible to suppose that the Conservative party could be brought together again under his leadership. Mr. Chamberlain has indeed publicly declared that he does not desire to be made leader of

Keir Hardie.

the party; that he will not accept the leadership should it be offered to him, and that he desires to remain as before, under the leadership of his dear friend Arthur Balfour. The two friends have even had a private dinner together—a private dinner publicly announced and much commented on in all the newspapers—for the purpose of endeavoring to come to an agreement as to the best course to be adopted by them and their followers. But we all know well enough that Joseph Chamberlain is not the man to submit himself placidly and persistently to the leadership of one with whom he has been for so long on terms of evident and unquestioned rivalry. Mr. Chamberlain is much the stronger man of the two in the political and parliamentary sense, and his whole career shows him to be inspired by personal ambition. He has never yet worked with loyal devotion under any leader, and neither Arthur Balfour nor anybody else can possibly foretell what may be the next turn in Chamberlain's career. Arthur Balfour is not an ambitious man, and there is not indeed much left for him which could stir him to ambition. He belongs to a noble family—to become a peer would add nothing to his position except by giving

him on the occasion of state ceremonials a formal right of precedence over some of his friends and acquaintances, and every enjoyment of life congenial with his refined tastes and intellect will be within his reach whether he be in or out of Parliament.

It seems to me, therefore, that if Arthur Balfour should consent to be the leader and Joseph Chamberlain should consent to be merely his follower in the new and much diminished Conservative party, the influence of Joseph would soon begin to be felt in the councils of that

James William Lowther.

party, and the leader would soon begin to have an uncomfortable time of it. I venture to think that, despite all these passing troubles, Mr. Chamberlain is now one of the happiest men in the country. Unless I am greatly mistaken he has always found much delight in being talked about everywhere, in being looked up to or at least looked upon as a great political influence and power and in knowing himself a subject of constant discussion in the newspapers. On the other hand, I feel well assured that Arthur Balfour cares for none of these

things, and that he could find much more happiness in reading books, looking at pictures, studying speculative philosophy and mingling in congenial companionships, than in any struggles with Mr. Chamberlain, even tho these were to bring about—a result which seems to me very unlikely—some passing victories.

One of the most important and as it seems to certain alarmists the most revolutionary changes brought about by the General Elections is the creation of a distinct and a powerful Labor party. The Labor party now numbers more than thirty members, and it is placed under the direction of a leader formally elected to that place, James Keir Hardie. Keir Hardie has been a working miner for the greater part of his life and was for a time secretary to the Miners' Union. For a long time the representatives of labor in the House of Commons numbered only four, and I can well remember the days when even these four, day laborers by occupation and proclaiming themselves representatives of labor, were looked upon by many steady-going old Conservative members and even by some Liberal members of the House as an ominous presence in the parliamentary assem-

bly. Now the Labor party has come into the House more than thirty strong, and it has for the first time proclaimed itself a distinct and independent party, with a chairman or leader and with secretaries and "Whips" just like the other organized and recognized parliamentary parties.

For a long time and down to a period well within my own recollection the House of Commons had only three proclaimed and recognized political divisions. It had the Tories or Conservatives, the Liberals, and the Irish Nationalists. Now and for some time back the Conservatives have been divided into Protectionists or Tariff Reform Conservatives and Free Trade Conservatives, while on the ministerial side of the House there are Liberals and there are also Liberal Unionists—in other words, Liberals who will follow the leader of their Government in any policy except that of Home Rule for Ireland. The Irish Nationalist party, which has even added some members to its representation at the late elections and now indeed owns almost all the seats there are to own in Ireland, has ever held its position of absolute independence so far as the great English political parties are concerned and is of course acting on the same principle still.

The Labor party, I feel well assured, will usually be found to act in thoro accord with the Irish National party, so far as the question of Home Rule for Ireland is concerned. No agreement has been made, or is likely to be made, between the two parties, but the Irish Nationalists are and have always been in thoro sympathy with the claims and rights of the English workingmen, and the Labor party fully recognizes the justice of Ireland's claim for Home Rule. Indeed, I find it hard to understand how any intelligent and fair-minded Englishman can, if he takes the trouble to consider the question at all, deny for a moment that if parliamentary representation means anything it has now proved that the voice of the Irish people has proclaimed that Ireland as a nation is unanimous in its demand for self-government. Even in the province of Ulster, where alone the Orange party has any influence, the Home Rulers have always held some

H. de Vere Stacpoole.

seats, and have at these late elections added to the number of their Ulster representatives. There is, in fact, no other public question whatever, no question having to deal with political and constitutional affairs on which the same overwhelming representative agreement could be found in these countries as that which exists in Ireland on the subject of Home Rule. Of course I know that among the members of the new Government there are some who have never yet given their adhesion to the principle of Home Rule for Ireland and there are even some who have not long since spoken openly against it. But, on the other hand, there are many leading men in the new Government who have ever proclaimed themselves as resolute advocates of Home Rule for Ireland, and I have a strong conviction of my own that when the question comes up again the Prime Minister himself, Sir Henry Campbell-Bannermann, will recognize the justice of Ireland's demand.

In the meantime the House of Commons is going thru the formal work which belongs to the opening of a new Parliament. It has re-elected its former Speaker, James William Lowther, and is engaged in the work of having the members of the new House sworn in day after day, and this article of mine will, I trust, be crossing the Atlantic before the time comes for King Edward to deliver his speech from the throne which will invite the new Parliament to do the best it can for the long mismanaged business of the country. The new Government begins its work under the brightest auspices, and it may well be said

to have its political destiny in its own hands.

I have had so much to write of in the world of politics since Christmas that I have not been able to say much of the new novels that have come out lately, but I now want to write a few lines about two that have interested me. One came out soon after Christmas and the other has just been published. The first is "Dan the Dollar," by Shan F. Bullock, published by Messrs. Maunsel & Co., of Dublin. I feel sure the novels of Shan Bullock, one of the cleverest of our Irish writers, are well known to my readers, and this story is one of his best. It is full of clever character drawing, and has all his wonderful skill in conveying the charm of Irish scenery and Irish atmosphere—an atmosphere like no other.

The other is "Fanny Lambert," by H. de Vere Stacpoole, published by Mr. Fisher Unwin. It is one of the most delightful and amusing stories I have read for some time; it is full of life and humor. The heroine, Fanny Lambert, is a most charming girl, and one is not surprised that every man who meets her falls hopelessly in love with her. The story ends happily for her and for the man she is in love with, but one cannot help feeling sorry for the others. All the other characters, even those that are merely sketches, are real and alive; one feels as if one had met them all. One of the best is Fanny's father—a well drawn, but not over drawn type of an irresponsible Irishman. Tho witty and immensely amusing, it is never farcical or unreal. I feel sorry to have finished it!

LONDON, ENGLAND.

# The Famine In Japan

Photographs and Text  
By J. H. DeFOREST, D. D.

Special Representative of THE INDEPENDENT in Japan.

The father and his four children live in this 6 by 6 hut, through which go winds and snow freely. The two horrible words, *Gashi* and *Toshi*, starved-to-death, and frozen-to-death, are common everywhere. The Government is moving now and will give work to all able bodied men and women. The Emperor and his rich subjects are contributing a few hundred thousand yen. We foreigners have sent a ray of hope into 10,000 families by 10,000 yen. But in spite of all aid the famine is on too large a scale to save all. Money from sympathetic America and England has begun to come. It will bind together yet closer the Anglo-Saxons and the Japanese.

An unexpected New Year visit. This mother of seven children is doing her best to make a New Year cake out of black roots and a sprinkling of coarse rice flour. All the form of entering the New Year must be followed even in the wretchedness of poverty. She raised this little bag (four quarts of rice) to her forehead and said: "Now I shall have a happy New Year. Thanks. Thanks."

At my suggestion, the *Kahoku Shimpo* sent out a photographer to take some famine scenes. The head man of the village accompanied the correspondent and photographer. They found this blind old woman, 71 years old, in starving conditions. A package of rice and a small sum of money are being given to her, with all the politeness and courtesy for which the Japanese are noted.

The Japanese are a spirited, hard-working people. But the famine has thrown tens of thousands out of employment, and has brought ruin to their homes. Thousands of men have fled from the famine region, leaving wife and children, and in these once fairly happy homes there is now no food, no clothing, no kind of furniture that can be sold. There are multitudes who have eaten nothing for two or three days, and are driven to leaves and bark. Seven people live here, with but one thin ragged quilt for this unprecedented cold winter. The mother is pounding up leaves and straw and roots for their one meal.

The great famine region extends over three provinces and involves a million people, the majority of whom is in dire distress. Sendai City is the center of this region. This house is five miles from Sendai, and is one of many visited by the Emperor's special representative, Viscount Hojo. Here live an aged couple. The old man is picking out kernel by kernel, the few half-formed grains of rice from the straw. The winter winds and snows have ruined this hut and starvation is all he can see now.

# The Causes of Unrest in Cuba and Porto Rico

BY ALBERT GARDNER ROBINSON

[Our readers need no introduction to Mr. Robinson, whose articles on Cuba, Porto Rico and the Philippines in *THE INDEPENDENT* and elsewhere have made him one of the authorities in America on these countries.—EDITOR.]

THE tales which come from our political nurslings, Cuba and Porto Rico, lead thoughtful men to a conclusion that the affairs of those islands are in less satisfactory condition than they might and perhaps should be. Reports from both are conflicting. The jubilant tale of the optimist comes today, only to be followed tomorrow by the wail of the pessimist or the warning of the alarmist. No two observers see any large situation from precisely the same point of view, and an individual bias too frequently blinds the student or the traveler to facts of deep importance.

For the welfare of the people of Porto Rico the United States is directly responsible. For the welfare of the Cubans we are under a distinct though somewhat indirect responsibility. The political status of Cuba is fairly but not sharply defined. The status of Porto Rico is indefinite in that the island belongs to, but is not in full legal and political sense a part of, the United States. It is in a way a political derelict without right of anchorage in any departmental haven in Washington. The Interior Department cares for Alaska; the War Department cares for the Philippines; and the State Department maintains relations with Cuba. Porto Rico's administrative guardian is a national Executive with an overabundance of demand on his time and attention.

Porto Rico had no voice in her transfer from Spain to the United States. Our assumption of ownership and political control was voluntary. That fact imposes upon us a special responsibility for the establishment in the island of better conditions than those prevailing in the days of Spanish rule. The case of Porto Rico may be summarized in a

question whether the conditions of today are better than those which prevailed prior to 1898. It has been customary to assume that the Porto Rico of earlier days was a land heavily burdened and oppressed by Spain and by governors appointed at Madrid. In this connection it is of interest to note that with the exception of a movement for independence when the influence of Simon Bolivar swept Spanish-America, eighty-five years ago, the history of Porto Rico shows no revolt against Spanish domination.

The test of successful government is the contentment of the governed. Comparison of states of contentment is quite impossible, but the fact is to be faced that the Porto Ricans of to-day are not, as a mass, disposed to regard their present lot as an improvement upon that of earlier days. Political unrest and industrial distress are widespread. Inasmuch as economic well-being is the prime factor in political order and contentment, the industrial situation commands the first attention.

Superficial observers turn to statistics in which they find that our sales to Porto Rico were \$2,000,000 in 1897 and \$14,000,000 in 1905. From this they argue an increased purchasing power based on increased prosperity. But this argument will not hold. Under the present fiscal system the island now buys in this country—in many cases at much higher prices—that which it formerly obtained from Europe. Porto Rico's total imports for the three years 1894-5-6 averaged \$18,000,000 a year.\* The average for the last three years is less than \$15,000,000. For the same three

\*The figures here quoted are taken from the Statistical Abstract of the United States for 1904 (p. 643).

years of Spanish rule its exports averaged \$16,500,000. For the last three years the average has been a little in excess of \$14,000,000. Weighed in the scales of her total commerce, arguments of Porto Rican prosperity which are based on trade between the island and the United States are found wanting.

The new political and fiscal systems wrecked the coffee industry upon which, in Spanish days, the great mass of the people depended either wholly or in part. The advantage of a free market for sugar is only a partial compensation. A better market for tobacco, cotton and fruit does not make up for the loss of the coffee trade. Indigence and destitution are undeniable facts in the experience of the island today, and in their prevalence there lies much of the provoking cause of that political unrest with which the island is afflicted.

In theory, and also in fact, the Porto Ricans now enjoy a larger measure of self-government than they did under Spanish rule. Another cause of unrest and discontent appears in the fact that they have less control over their affairs than they expected to have under the American flag, and less than they think themselves capable of exercising. We have established a system of wider scope than anything they had known prior to the autonomous government instituted by Spain only a few months before the American occupation. But behind it all there stands with full veto power a Governor appointed in Washington as the Spanish Governors were appointed in Madrid. The Executive Council is a survival of the Spanish Council. Their Assembly may legislate, but an alien in race and in habit of thought holds the veto power. To many, the new system is a distinction without a difference when compared with the old institution.

As a people, we expect the Porto Ricans to adapt themselves to American ideas, and we are quite too much disposed to be impatient with and intolerant of the Porto Rican point of view. Our national attitude was illustrated in the early days of the occupation in the issuance of an order which obliged the parents of the brown-skinned cherubs who made mud pies by the roadside, and played with doll babies on the doorsteps, to conceal the innocent and comfortable

nakedness of their offspring with one or more of the garments of an alleged civilization. Naked babies and ungarbed children may be said to belt the globe thruout some fifty degrees of tropical and sub-tropical latitude. The unfamiliar spectacle offended a few Americans and, being therefore immoral, a law was issued for the promotion of prudery.

In this instance there lies the key to much in our Porto Rican experience. "In Porto Rico," says Prof. L. S. Rowe in his book on the government of the island, "we have come into the midst of a people foreign to us in manner of thought and distinctly European in their institutional life." This comment finds a supplement in a recent article in *Harper's Weekly*, in which it is said that "we were not content to throw the doors wide open and let the Porto Ricans come out by degrees and of themselves; we started in to drag them out neck and crop." The weak spots in our Porto Rican policy are our over-haste in Americanizing a people whom we even yet little understand, and our failure to establish those economic conditions on which the American structure rests. We have increased their taxes without increasing their ability to pay taxes. We have taken from them their best market without giving a substitute for it. We have expected an impossible acceptance of American ideas, habits and systems, forgetting or disregarding their strangeness to those upon whom they were imposed.

The prominent feature in our work in Porto Rico has been the school system. For its maintenance and extension we have dipped deeply into the insular treasury. There are many who believe that we have overestimated the importance of education as a factor in Porto Rican progress. Man's first need is food. Education comes in later to enable him to obtain more food and better food. The value of an education to a Porto Rican child of today depends in large degree upon the amount of nutritious food which goes along with the a-b abs.

There are those who believe that paid employment, which will enable Porto Rican parents to give their children wholesome food and proper clothing, is of greater immediate importance than

the elementary education of the children. The question is essentially controversial in character and its determination rests in individual opinion. It is, however, obvious that a child can get along better without book-learning than it can without food. It is also obvious that if the parent has no income, he can neither feed his children nor pay school taxes.

I ask my readers to keep in mind the special object of this article. It is not written for the purpose of criticising either what has been done in Porto Rico or the way in which it has been done. Its object is solely to point out and call attention to certain phases of the situation in which there lie causes of unrest and discontent. The basic cause of both will be found, I believe, in the severity of economic conditions. The principle involved is illustrated in the history of all lands. Commercial and industrial stagnation breeds unrest and political discontent. The sapient gentleman who said

"The turnpike road to people's hearts, I find, Lies thru their mouths, or I mistake mankind," voiced a sentiment which finds indorsement in all the history of the human race and its systems of government.

While poverty is in all probability the underlying cause of Porto Rican ills and evils, it is perhaps within bounds to say that Cuba's troubles come largely from the opposite source—an over-abundant prosperity. When Cuba, in May, 1902, first essayed the work of self-government, the price of sugar was so low that little or no margin of profit was left for the planter. The crop of the season then closing had been marketed at prices which were only about one-half those received three years later for a larger crop. Industrially, Cuba has been greatly prosperous, and her industrial prosperity has brought its fruitage of political extravagance and public indifference to a burden of taxation greater than that imposed by Spain when the huge budget became one of the chief causes of Cuban revolt. A system of taxation devised to meet the needs of the Government during a time of comparative depression became, in a day of general prosperity, the source of a large surplus revenue. A treasury surplus and the promise of even greater revenues stimulated ambition for the creation of a political machine which

would have control of the national purse-strings. A Cuban republic forced to economize in its appropriations gave larger promise of political peace than does a Cuba with a large treasury surplus.

Prior to the revolt of 1895, Cuba was a producing machine controlled by Spaniards and operated in the interest of Spaniards. The Cubans objected to the system, and took up arms to drive it out and to establish in its place a government of, by and for the Cuban people. The key to Cuba's present troubles may be found in the question of the success or the failure of the present administration to realize the political ideals for which Cuban patriots gave money and life. In a republic the "administration" is not individual. It is composite. The nominal head may be the actual head, an autocrat of the benevolent type, like Porfirio Diaz, or of the Cipriano Castro brand, a less commendable figure. Cuba's President belongs in neither of these classes.

Carlos Manuel Cespedes was the father of the Cuban revolt of 1868-1878, as José Marti was the father of the revolt of 1895. In the history of both of these struggles for national independence four names appear written in larger and bolder letters than any others excepting those of the two leaders. They are Maximo Gomez, Bartolome Maso, Salvador Cisneros and Tomas Estrada Palma, leaders and patriots, who gave themselves heart and soul to the liberation of Cuba and to the establishment of a free and independent government in which the political system of Spain should have neither place nor part. Estrada Palma became Cuba's first real President. Cisneros is a member of the Cuban Senate; Maso remains on his plantation, and Gomez died last June. The opinion of such men as Gomez, Maso and Cisneros concerning the government whose existence is in large part due to their personal work is of value in connection with the troubles now perplexing the island.

Writing, last March, to a personal friend, Gen. Maximo Gomez said:

"I should fail in my duty if I should hide from the Cubans the fears which now assail me, and which make me fulfill a command of my conscience, when I tell them without hesitation that the Republic is the victim of the

errors of some of its sons who do not know or who have forgotten its glorious history, or, what is still worse, who try to convert its august temple into a mean field for exploitation for their own personal advantage, or for that of certain groups, to the detriment of the rest and of the national good name."

To Maximó Gómez, more than to any other influence, President Palma owes his election in 1902. Had Gómez lived, there is almost no doubt that his opposition would have led to the defeat of the present administration at the recent election. He saw his old companion-in-arms surrounded and dominated by those whose methods he could not approve, and giving countenance to measures which he could only condemn. Salvador Cisneros was a President of the Revolutionary Government of the Ten Years' War (1868-1878), as he was of that of the revolt of 1895. Last October, declining an invitation to attend a banquet given in celebration of the beginning of the Ten Years' War, he wrote: "Our country is terrorized, the people silent, crushed by tyranny more insupportable than that whose destruction was formally commenced on this glorious day." In a less exaggerated strain, General Maso has voiced a similar view.

This does not mean that Cuba is on the verge of revolt. It does mean that these old veterans, and many of their kind, see that the Government has turned from the high ideals which led to its establishment, and that it is imitating the Spanish system of a centralized power in which the various departments of the administration are its forces and its implements. During a visit to Cuba, last June, one of the most effective participants in the revolt of 1895 said to me, "I did not risk my life, nor did I give my time and money, to establish in Cuba a despotism, which differs from that of Spain only in that it is Cuban instead of Spanish."

I do not say that these statements and charges present an accurate picture of conditions in Cuba. I submit them only as the opinions of known men for the clue which they may give to those conditions. That the effort and the tendency of the Palma administration is the establishment of a strong centralized government is entirely clear. Yet I well remember the persistent aim of the members

of the Constitutional Convention so to frame their work that there could be no recrudescence of the Spanish system of power in the hands of a few men. So strong was the effort toward a firmly rooted decentralization system that consideration was given to proposals for a federation of States, the Provinces to constitute the States. This was defeated, and very wisely, but throughout the Constitution there runs the purpose of decentralization of power.

There are probably many to whom such statements seem strange and puzzling. It may be asked how it is possible to establish in a republic so excellent an imitation of Spanish colonial methods. The solution is entirely simple. The laws of Cuba are the codes promulgated by Spain at different times from fifteen to twenty-five years ago. Under the Cuban Government, few laws of any importance have been enacted, and no organic law has been adopted by which there can be put into effect those principles, expressed in Cuba's Constitution, for which her patriots fought, suffered and died. In both letter and spirit the laws and the Constitution conflict, and it is possible to do, under the law, that which violates the Constitution and its principles.

For instance, there have been no municipal elections since 1901. The island was then under American control. The Constitution provides for municipal autonomy, but there is no organic law providing for municipal elections. Under the laws, as they stand, the Executive has power to remove municipal officials and to fill the vacancies thus created, in spite of the fact that such officials were elected by the people under the authority of the Government of Intervention. This power has been freely exercised during recent months. Cuba is a republic in name, but until her laws are brought into harmony with the principles and provisions of her Constitution, her Government may be easily converted into a political despotism. There are many in Cuba who do not hesitate to assert that this has been done.

Out of the evils which I have here indicated, rather than defined, there springs much of the unrest and discontent now discernible in Cuba and in Porto Rico.

# Industrial Education in Africa

BY BOOKER T. WASHINGTON, LL.D.

PRINCIPAL OF THE TUSKEGEE NORMAL AND INDUSTRIAL INSTITUTE.

SOME months ago there was printed in one of the more prominent magazines an appeal addressed to the civilized world by a young African prince, Monolu Massaquoi, of Gallinas, in the British Protectorate of Sierra Leone, West Africa. This brilliant and

fluence of Western and Christian civilization.

In order to accomplish this purpose he had established at Ghendiman, the capital of his country, an industrial school, where he is teaching his people, among other things, the arts and trades

Booker T. Washington.

enlightened young negro, altho he was born in Africa, was educated at the Central Tennessee College at Nashville. In 1893 he represented Africa at the World's Parliament of Religions at Chicago. At present he is the hereditary ruler of a small African tribe in the hinterland of Sierra Leone, which he is earnestly seeking to bring under the in-

of civilized life. He became deeply impressed, during his visit to the World's Fair, with the achievements of the Western peoples, and was inspired with an ambition to give his people the benefit of sciences and arts of which his observation had taught him the importance and value.

Much as he desired for his people the

benefits of a larger knowledge of, and closer intercourse with, Christian peoples, he had not failed to recognize that contact with the white race often brought with it more of evil than of good. In his appeal, to which I have referred, he urges the calling together in an international council, "the friends of Africa."

One of the purposes of this international council would be the formation of a permanent society, which should stand, in its relation to the civilized world, as a sort of guardian of the native peoples of Africa, a friendly power, an influence with the public and in the councils where so often, without their presence or knowledge, the destinies of the African peoples and of their territories are discussed and decided.

There is more than one reason why I am disposed at this time to support the appeal of this young African prince. It has often seemed to me a sad and mistaken policy that in making their disposition of Africa the Powers have not given more attention to the permanent interests of the native peoples. It has been unfortunate that at the councils which settled the fate of vast territories, and of millions of peoples, neither these people themselves nor any one who could adequately represent them has been present.

In framing the policies which involve the permanent happiness and welfare of native peoples I believe that the missionary, whose relations with the natives is more intimate and more disinterested than most others, is often a wiser counselor than the trader, or the soldier, and that, in the long run, the policy which seems to protect and educate the native will pay better than that which, in seeking to subjugate and exploit, has so often destroyed him.

There is, perhaps, no place where we need wisdom more than on the frontiers of civilization. It has always been so, but it is particularly true today. A wide view of the world's economy demands that we protect from destruction not only the forests, and the beasts that live in them, but the indigenous races to whom they by all human right belong. In the final organization of the world's work, I believe all the peoples of the earth may hope to find their task and place. They

should be preserved, if for no other reason, for the special service they are able to perform. Particularly is this true of West and Central Africa, where as yet the white man has never been a laborer or settler, but merely a sojourner, and where the future development of the country is wholly dependent upon the labor of black men.

A permanent international society, which should number among its members scientists, explorers, missionaries and all those who are engaged, directly or indirectly, in constructive work in Africa, could exercise a wise and liberal influence upon the colonial policy of the European nations. By its influence upon international opinion, which has often been the only power in which the natives have found protection, it could powerfully aid in securing the success of those policies which aim at the permanent interests of Africa and its people.

My own experience has led me to doubt the value of criticism which does not proceed from some positive and constructive notion as to how the evils of which complaint is made can be remedied.

I have discovered that it is often more profitable to encourage those you come in contact with in the direction in which they are right than it is to oppose them in the direction in which they seem to be wrong. It often happens that in the end more will be accomplished by doing some positive good than by opposing many actual or seeming evils.

It has seemed to me, therefore, that at the present moment, when the atrocities in the French Kongo have apparently aroused the people of France, and an active agitation is being carried on in Europe and America for the intervention of the Powers in the Kongo Free State, and it would perhaps aid in bringing about a change in conditions if the "friends of Africa," those who have the permanent interests of the people and their country most sincerely at heart, would unite to promote some definite measure of positive improvement for the people.

My own knowledge of the needs of native African people is, I confess, not extensive. It has largely been gathered from reports of missionaries and travel-

ers, from the experiments of Tuskegee students in Togo and other parts of Africa in cotton culture, and their experience in teaching the natives American methods. Recently I have had an opportunity to hear indirectly in regard to the present situation from a large number of missionaries on the West Coast. From all that I am able to learn from these sources and others I am disposed to believe that no single measure would do more to improve the character and condition of the native peoples and prepare the way for the permanent establishment of Christian religion and Christian civilization than the introduction and wide extension of industrial schools.

It should be remembered that the industrial school is no new thing in Africa. Long before Hampton Institute was founded there was a flourishing industrial school at Lovedale, in South Africa. In the whole history of what is known in Africa as the "native question," I doubt if there is any more interesting or more encouraging incident than those related in the story of this institution and of the other industrial schools in Africa that have grown out of this original experiment. At the present time there seems to be a very general conviction among the missionaries in Africa that an industrial education is a necessary part of their work.

The demand for industrial teachers, in connection with mission work is, as I have reason to know, beyond the ability of our schools to supply.

This is in part due to the keen demand for industrial teachers in the colored schools in our own country. A teacher who has industrial training, I have been informed, can frequently obtain almost twice the salary that is paid a colored teacher trained in the best Northern university. While industrial teachers are in such request at home it will always be difficult to obtain them for the foreign mission schools. Another fact that enters into the situation is the constantly increasing demand for trained men and teachers of the negro race from colonial governments and from great private enterprises like the British Cotton Growing Association and others, which are seeking to fit the native peoples to meet the new demands of the world's industry and

and commerce. All of these things indicate, I am inclined to believe, a growing impression among practical administrators of colonial affairs, as well as among students and missionaries, that the problem of dealing with the weaker races is fundamentally one of industrial education.

The surest way of preserving these more primitive people from the evils which the higher civilization invariably brings in its train, is to develop in them talents which will make them useful and inculcate those habits of life which will cause them to be respected.

I believe that an international council of the "Friends of Africa" could do much to encourage the work already begun in this direction and greatly aid in overcoming the obstacles to its further extension.

While I have no definite suggestions as to what measures should or could be taken by such an international council, either for the protection of the natives from the evils that now threaten them or for encouragement of the work of their betterment, there are certain things which I believe my experience justifies me in laying down as fundamental to any effort in these directions.

I have very little faith in the success of any effort to educate or to increase the economic value of the native Africans that is not conducted by those who have confidence in and a disinterested desire to improve the condition of the people intrusted to their care. Any experiment which seeks to encourage native industry by force or merely by an appeal to his "enlightened self-interest" will fail. An enlightened self interest which divorces itself from all social and sentimental interests and is not stimulated either by religious feelings or a sense of personal pride is one of the latest products of civilization. With the African people, as I have known them, feeling, and particularly religious and social feelings, enter more or less into everything that they do. Experience in the Southern States has proved that experiments that do not reckon with this fact will not succeed.

For this reason, if for no other, I am disposed to believe that no attempt to educate the native peoples of Africa or to lift them to a higher plane of indus-

trial efficiency, will have any permanent success that does not go hand in hand with the teaching of the Christian religion, or at least with a devotion and desire to help the people similar to that which has inspired the work of the missionaries in Africa.

I believe it is a wise policy which induced the English Government in South Africa and in India to give substantial aid without reference to the sect or creed they represented, to those mission schools where industrial training was taught.

But without reference to any specific

measures that could or should be taken for the betterment of the native peoples of Africa, it seems to me it is a seasonable time for the friends of Africa to come together. An international council, should it do no more than outline, in opposition to the policy of forced labor and ruthless commercial exploitation, some plan for the encouragement and further extension of industrial education in Africa, would have done much to secure the future of what is, whatever its faults, one of the most useful races the world has ever known.

TUSKEGEE, ALABAMA.

# The Authorship of the Monroe Doctrine

BY JAMES SCHOULER, LL. D.

[Dr. Schouler is the author of many well-known works on American Law and American History. Perhaps his best known work is his "History of the United States," in six volumes.—EDITOR.]

WITHIN the last two or three years several of our newspapers whose scholarly standards are recognized have attributed the authorship of the Monroe Doctrine, literally and exclusively, to John Quincy Adams, President Monroe's Secretary of State. The climax of disparagement to Monroe himself in that connection was reached last July, in an oration delivered before Harvard's Phi Beta Kappa at Cambridge by President James B. Angell, of the University of Michigan, whom I respect and venerate, but from whose tribute on that occasion, quite too flattering to Harvard University and Massachusetts, I, as a Harvard man and Massachusetts born, am constrained to differ. In this address he praises John Quincy Adams as "that great Harvard statesman to whose matchless courage and farsighted wisdom we owe the Declaration which we call the Monroe Doctrine, but which might more justly be called the Adams Doctrine." He pictures Monroe's Secretary of State as inspiring "the slow-moving and lethargic President" to fling out his challenge of 1823 to the allied sovereigns of Continental Europe, and asserts that "James

Monroe held the trumpet, but John Quincy Adams blew the blast."

John Quincy Adams stands secure enough in the hall of fame, and the most unique and heroic record he made as a public man began after Monroe was in his grave. And any one who carefully reads Adams' published Diary for those eight eventful years while he served Monroe as Secretary and served him faithfully, will see how greatly he admired and revered the character of that President to whom he owed high station and a training for the highest; and this, too, in Memoirs which were by no means given to praising contemporaries, as posterity is well aware.

No President, in fact, ever bore office at the gift of our people who was more constant, more conscientious, more intent to serve them ably and faithfully, than James Monroe; nor has any President of eight years ever yet succeeded more positively in doing so. All the great measures of his long administration—and they were many—bore the stamp of his practical initiative and capable fulfillment. We see this in the political wisdom expressed in his correspondence, which assuaged all

sectional bitterness from the war of 1812 and ushered in, as he planned it, an era of good feeling, while keeping the old opposition leaders from reorganizing; in his patient financial lead from national collapse and depression to high prosperity and credit; in his admirable conduct of those negotiations with Spain which secured us peacefully the Floridas to add to our Louisiana purchase; in the executive influence which he exerted for composing

finally, near the close, in his bold stand of 1823 against the Holy Alliance of European despots. In these and all other acts of his eight years' official term, as Adams' Diary plainly indicates, this President consulted his Cabinet advisers and the whole of them; and, while he weighed carefully and diligently their several counsels, he led and directed his administration from first to last, sensitively ambitious, in his high career, for the just ap-

James Schouler.

the first great anti-slavery strife of our politics, which merged into the Missouri Compromise, for whose aid in pacifying the North he caused the sacrifice of Texas in our Florida treaty; in the friendly recognition, earliest among the world's powers, of the independence of Spanish-American republics in North and South America; in checking by his veto message the dangerous passion developing in Congress for internal improvements and road building under national auspices; and

plause of posterity, magnanimous and considerate at all times, but the compliant tool of no one.

This misapprehension, as I must call it, of the annals of 1823 seems to have begun with a paper read by Mr. Worthington C. Ford in 1901 before the Massachusetts Historical Society and entitled "Genesis of the Monroe Doctrine." A few written drafts from among the still unpublished papers of John Quincy Adams were here produced as the basis

of a new theory. Mr. Ford is far too accurate a scholar in manuscripts to leave out of sight the other written data which bear upon such a controversy; but he has, I think, read into the Adams papers, and especially into Adams's Diary, conclusions which they by no means justify when candidly verified. He starts with a postulate that the statement in Monroe's Message that America is no longer open to colonization by any European powers came "admittedly and undoubtedly" from John Quincy Adams; and this postulate should be qualified. John Quincy Adams's Diary, December 6th, 1845, asserts (and so does Monroe's 1823 message) that this statement was transferred from the text of a diplomatic despatch sent shortly before, as announcing a principle duly authorized by the President. Adams here claims further that he himself framed the sentence; but he does not claim, nor is it probable that the idea expressed in that sentence was exclusively his own.

Mr. Ford claims that the authorship of the other material statement of the 1823 message, which runs into two long paragraphs, is shown by the new testimony he adduces to have come from the same source; but to me that testimony shows nothing conclusive, except that the President while in general harmony with his Secretary of State controlled and revised carefully, with his own corrections, all important despatches of this date, anxious to avoid irritating Russia or her allies separately. This does not look like lethargy on his part in the conduct of his own administration.

Even were it proved that Monroe borrowed for his momentous message a phrase, an idea or an inspiration from any one of his capable cabinet officers, why should he not have historical credit for his courageous pronouncement before Congress and all Europe, upon his own solemn responsibility as Chief Magistrate? There were many who in 1862 urged President Lincoln to proclaim emancipation before he did so, and various words and phrases contained in his famous document are known to have been supplied by members of his cabinet. President Washington had his Hamilton; and it is well known that he composed his "Farewell Address"—the real

historical precursor of our Monroe Doctrine—from drafts furnished him by statesmen whom he had consulted long before that address was published. Yet no one seeks to deprive either Washington or Lincoln of the authorship of an immortal instrument upon which our whole national destiny has turned.

Both President Angell and Mr. Ford write disrespectfully and even contemptuously of James Monroe. But no estimate of Monroe can do him justice which fails to consider the broadening effect of a long and varied public experience upon one singularly just and open-minded in public endeavor, attached and attaching in his friendships, amiable at heart and of pure and unsullied honor. The public example he left was a noble one, tho somewhat lost sight of when political passion surged presently about the rude person of Andrew Jackson. The same impulsive Monroe, who left college to join the Northern fight for independence, fought gallantly and received a wound in action; who later came into public life under Patrick Henry's auspices as a Virginian Anti-Federalist, opposed to the adoption of the Constitution; who, sent by Washington on the well known mission to Revolutionary France, as a counterpoise to Jay at Great Britain, yielded to the fraternal embrace and other enthusiastic follies of the French Directory, and after his recall antagonized Washington petulantly and nearly fought a duel with Hamilton—this same man was characterized, when President, by painstaking, deliberate and comprehensive wisdom and gravity, manifesting traits not unlike those of Washington's own peerless administration. For meanwhile, he had grown slowly but surely into wisdom; first as Governor of Virginia, next as Jefferson's special envoy to France to conclude with Livingston the Louisiana Purchase, and again as Minister to England, where he framed a treaty which, had not Jefferson suppressed it altogether, might have prevented the war which ensued. Still later, after a new lapse of discouragement and vexation, he had joined President Madison's administration as Secretary of State, strenuously conducting our foreign relations into and thru the whole War of 1812, and carrying on his

shoulders, at the darkest episode of that struggle, the burden of the War Department besides. It was these later services to his country in his prime that commended him pre-eminently for the Presidency in 1816, which our electors accorded; and so popular was his first term's administration upon the Washington pattern that he received from the people, like Washington himself, a unanimous re-election by right for a second term. And tho one of our State electors, with an independent disregard of his constituency which in our day would have been thought infamous, threw away his ballot spitefully to prevent such a parallel, the fact remains in history that of all Presidents hitherto chosen, since this Union went into operation, none have gained nor even approached the plane of unanimous approval to which Washington and Monroe attained. Monroe, tho slow-moving in conclusions, was at all times alert, deliberate, dispassionate, true to his once-formed convictions. John Quincy Adams has eulogized him as one who studied alone far into the night the great problems which confronted his administration; while Calhoun, his ardent Secretary of War, said of his highly accurate judgment, after viewing a subject patiently on all sides, "I have known many much more rapid in reaching their conclusions, but very few with a certainty so unerring."

Monroe's chief counsellors, especially in foreign affairs, during his Presidency, were his two great predecessors; and it should be said that this trio of successive Presidents, Jefferson, Madison and Monroe, all congenial and disposed to mutual conference, knew European politics more intimately at this particular period and exerted together more influence in European circles than any other contemporaries. For in those first twenty-four fruitful years of the nineteenth century, we should remember, Virginia was steadily at the helm of our young Union; and the spectacle of three Presidents from a single State, all living thru such a period, all fraternal in politics and personally, and each watchful of current events, we are never like to witness here again.

Few, probably, who enter into a question of authorship like the present, have taken

the trouble to explore diligently President Monroe's own correspondence. This correspondence has recently been published as a complete work of seven printed volumes, well edited by Mr. Stanislaus Murray Hamilton, of the State Department. I commend to historical scholars the careful perusal of the sixth volume of this collection, together with Mr. Hamilton's exhaustive note at the end on "The Genesis of the Monroe Doctrine." Monroe's whole correspondence of 1823 with the Virginian ex-Presidents shows him watchful of foreign affairs and fully cognizant of their progress, months before Rush's momentous dispatches came to hand. There is one highly significant letter of 1823, as far back as June 23, which reviews the European situation as opposed to aiding the cause of human rights. He says to Jefferson:

"Our relation to Europe is pretty much the same as it was at the commencement of the French Revolution. Can we in any form take a bolder attitude in regard to it in favor of liberty than we did then? Can we afford greater aid to that cause by assuming any such attitude than we do now, by the force of our example?"

Thus cogitating upon some new stand for liberty under our auspices, Monroe received the two startling dispatches from Minister Rush. Taking them to his Virginia home, he promptly submitted a copy for advice to the ex-Presidents, at the same time indicating, tho calmly, in his letter to Jefferson, October 17th, the drift of his own purpose. If ever we could justly entangle ourselves with the affairs of Europe, now appeared to him the time. He says:

"My own impression is that we ought to meet the proposal of the British Government, and to make it known that we would view an interference on the part of the European powers, and especially an attack on the Spanish-American colonies by them, as an attack on ourselves."

Jefferson's reply of October 24th, long since accessible in his own writings, has often been pertinently quoted. It is one of the grandest letters he ever wrote, and he so considered it. We are not to ignore that letter nor pass it carelessly by. In its flaming sentences we see illumined like a beacon light the whole long pathway of the doctrine, in its noblest development, which Monroe presently uttered and meant to apply—as a doctrine which

should add to non-intervention in European affairs, already imbedded in our policy, the prohibition of all European intervention in affairs cis-Atlantic, so that this whole New World might be held sacred henceforth to systems among congenial republics and dedicated under our lead to liberty and the rights of man. Jefferson advised co-operation with Great Britain in the present crisis, confident that a joint prohibition, such as Canning seemed to invite, would, instead of bringing a European invasion of America, effectually prevent it. Madison, tho wary and distrustful of Canning's overtures, advised a similar course.

In this joint consultation of Virginians, then, originated historically the Monroe Doctrine, so far as that fundamental of our policy was not rather the gradual and legitimate outgrowth of sentiments repeatedly expressed earlier by several American statesmen, to be on this prime occasion positively proclaimed for enforcement.

Turn now to John Quincy Adams's Diary, studying carefully its whole record, from Monroe's return to Washington in November to the assembling of Congress in early December, and we shall find that our President arrived at the seat of government already confirmed in a purpose to initiate resistance to the reactionary plans here of the Holy Alliance, tho long deliberative as to methods, and inviting, in fact, the free counsel of his whole Cabinet upon these and the later Rush despatches. The Diary shows that Monroe promptly stated to his counselors that the United States ought to take no subordinate part to Great Britain in this business, and that he kept much in mind the idea that if England with her fleet were left alone to prohibit the Alliance from these shores, she might, when successful, compel the Southern republics to become her own commercial dependents. It also shows that, in an interview with the President, November 15th, by special appointment, the Secretary of State was shown the two letters of Jefferson and Madison, and was duly impressed by their contents; and this date precedes that of the more important of Adams's diplomatic drafts which Mr. Ford has lately brought to light.

It is true that, according to the Diary,

the President appeared at one stage of deliberation dejected and despondent; nor would this be strange, considering the tremendous responsibility which rested upon him personally, and the dread he entertained that the allies would really carry out their threat; in which case, as these Southern republics were still juvenile, the brunt of repelling a foreign invasion must have fallen upon their avowed champion. Moreover, Great Britain would not at this time follow us in recognizing Spanish-American independence, and Rush's later despatches showed Canning more dubious in his overtures. Perhaps, too, Monroe's dejection was partly due to his own private distress, for it is well known that he left office presently so harassed with debt that he had to sell out his Virginia estate and pass his old age in pecuniary dependence; he had served his country's fortunes these many years to the detriment of his own. But the Diary does not impute to Monroe the thought of retreat from his courageous purpose, and if it did so I, for one, should think that Adams misapprehended.

The President's Message to Congress was the great document which should evince a predetermined defiance of Europe. Adams's Diary shows that Monroe prepared his own statement and then submitted it to his whole assembled Cabinet; that in the exordium of its first draft it sounded an alarm of war, like a thunderclap, so that the President was persuaded to make an utterance more subdued; that in another draft which he submitted the message met their united approval. And thus, December 2d, 1823, when Congress assembled, that famous manifesto went forth for which London had waited with extraordinary interest; and, as Rush presently wrote home, the most decisive blow was given thereby to all despotic interference with the new republics of our continent.

To read finally Monroe's own authentic statements in this connection. Two letters which he wrote to Jefferson, this same December, shortly after the message had been read in the two Houses of Congress and published broadcast, reveal the explanation of his course. In the first of these, December 4th, which accompanied a copy of the

document, he says: "I have concurred thoroly with the sentiments expressed in your late letter"; and he adds of independent Spanish-America, with the same turn of expression which he had used to Jefferson in October: "I consider the cause of that country as essentially our own." Monroe's second letter, still more explicit, shows Jefferson that, in order to give our action here the greatest effect, and at the same time for conciliating better Russia and the other Powers of the Holy Alliance than if we had joined Great Britain at London in a joint remonstrance, our administration had taken its own opposing stand, its separate initiative. It would thus seem that the master stroke at this juncture,

of warning off European aggression in an opening message to Congress rather than by a joint protest with Great Britain, was Monroe's own idea.

In short, as history may in fairness conclude, the United States at this time had a President who held up no trumpet for his Secretary of State or any other member of his cabinet to blow into, but sounded his own sufficient blast and flung out his challenge, as a self-poised and self-respecting head of this nation, whose simple word carried the weight of a world-wide reputation, and who, in talents, public experience and nobility of character, was the peer of any crowned monarch of his times in all Europe.

## The Influence of Education on Marriage and Maternity

BY L. CLARK SEELYE, D.D., LL.D.

PRESIDENT OF SMITH COLLEGE.

THE ever recurring question, whether a higher education unfits a woman for marriage and maternity has been agitated again in consequence of the publication of a work by an eminent educator in which that question is answered affirmatively. He presents statistics to show the percentage of married women among the graduates of a few leading colleges and the percentage of their children, and he holds the colleges responsible for the relatively low ratio which he discovers. He fails to recognize the fact that three-fourths of the alumnae have been out of college less than ten years, and as the maximum number of marriages is in the oldest and the minimum in the youngest classes, the rapid increase in the latter will make any percentage drawn from the whole body of graduates appear abnormally low.

A much more serious defect in the learned author's reasoning is his failure to recognize the prime importance of

social and economic conditions in determining the rate of marriages and births. No notice is taken of the fact that before any colleges were founded for women, marriages and births had been decreasing in all civilized countries, and that the decrease is greatest in those countries where the higher education of women has made the least progress. To determine, therefore, how marriages and births are affected by a collegiate education there should be an extensive comparison between collegiate and non-collegiate women in corresponding social and physical conditions. The data are as yet too incomplete and fragmentary to make such comparisons with accuracy, and, as far as they have been made, they do not justify the author's conclusions.

What is still more important is to take into account the different social and physical condition of those thus educated. One must know from what classes they come, and whether they are physically sound at their entrance to college. With-

out such a knowledge of individual cases, percentages drawn from general averages must be more or less misleading in such an investigation. Due credit should also be given to the abundant testimony that the majority of women improve physically as well as mentally during their college course. By educated women the social evils justly deplored can be most effectually prevented, and much has been done by them in recent years to improve the condition of their sex.

It is easy to find defects in women's colleges. None appreciate more than those engaged in their administration how far they are from realizing the highest ideal of a woman's education. They are all young and lack educational experience and established traditions. They take as pupils those who have suffered from hereditary ailments, from the requirements of fashion, and from a low estimate of the dignity and capacity of womanhood. In spite of these drawbacks they have clearly demonstrated women's physical and intellectual capacity for a collegiate education and the worth of that education to her in practical life. Their graduates are better qualified both for wifehood and motherhood. They are as ready to wed as other women when the right man woos them, but many causes now lead men in active life to postpone marriage, and the longer it is postponed the less inclined they are to assume its responsibilities. Women cannot take the initiative and seek a husband, and daughters, in this country, at least, are no longer contracted in marriage by their parents.

Marriages of convenience are not made as often by college graduates, for they do not feel obliged to marry in order to escape poverty or dependence, and they marry more frequently educated men who desire congenial companionship. There are accordingly fewer divorces among them. Their children are limited by the same causes which are

dominant in the society to which they belong. Excessive mentality may interfere with fecundity, but the fact is there is very little excessive mentality at present, either in colleges for men or for women. The author of the work in question himself admits that "sterility is not a specific disease, but is the intricate product of causes as complex as modern civilization." He neglects, however, to give this intricate product due recognition, nor are his statistics comprehensive and discriminating enough to justify the conclusions he has reached.

Nor is his charge true that the colleges for women are merely aping colleges for men. In many customs and requirements they are duly mindful of the difference in sex and are giving women advantages for perfecting womanhood which it would be difficult for her to find elsewhere.

Language, literature, science, philosophy, history, art, are the same for women that they are for men. The leading studies of a college course cannot be considered either as masculine or as feminine, but as intellectual, and must be regulated by those principles which determine the growth of all intellectual life.

The sexual differentiation desired should be secured by different modes of life rather than by different studies. A man does not become feminine by writing poetry, nor a woman masculine by studying mathematics, and it would prove a serious defect in the higher education of woman if it were shaped merely with reference to a particular vocation. An undue prominence to marriage and maternity may prove as pernicious as if they were neglected. A morbid sensitiveness to disease is to be avoided no less than indifference. The general culture which produces sound judgment is a good preparation for any vocation to which a woman may be called.

# Literature

## Lord Randolph Churchill

There are now four great biographies of English statesmen of the Victorian era; works that are based upon letters and papers, and carry all the weight and finality that biography so written commands. These four biographies, in the order of their publication, are Charles Stuart Parker's "Life of Sir Robert Peel," Morley's "Life of Gladstone," Lord Edmund Fitzmaurice's "Life of Lord Granville," and Winston Spencer Churchill's newly published "Lord Randolph Churchill."\* There are other lives of statesmen of the Victorian era — notably Evelyn Ashley's "Life of Lord Palmerston" and Spencer Walpole's "Life of Lord John Russell."

Palmerston and Russell have a much larger part in the political history of England in the reign of the late Queen than either Granville or Lord Randolph Churchill. But this fact notwithstanding, neither of these biographies is in the class in which the biographies of Peel, Gladstone, Granville and Churchill now stand; and neither Ashley's nor Walpole's volume will continue to be read as will the four books which have been named. Even these four biographies are not of even merit, largely owing to the varying power of the biographers. Peel's "Life" must be read for what it contains — for the light it throws on English political history from the Peace after Waterloo until the repeal of the Corn Laws in 1846. But as a biographer

Parker is neither a Morley nor a Winston Churchill; and in grouping these four biographies according to both their literary merit and their value as contributions to English political history, Morley's "Life of Gladstone" must come first, Winston Churchill's "Lord Randolph Churchill" second, Fitzmaurice's "Life of Earl Granville" third, while Parker's "Life of Peel," great as is its value from

the point of view of political history, drops into the fourth place.

Lord Randolph Churchill was not a statesman in the sense that Peel, Russell, Palmerston, Gladstone or Granville was. Lord Randolph originated and carried into effect no great policies. Unlike Russell, he piloted no great measure thru the House of Commons. He was only twice in office — first as Secretary of State for India in the short-lived Salisbury Cabinet of 1884-85 (the caretaker Government which held office from soon after the enactment

of the Reform Bills of 1884-85 until the General Election in the latter year), and again as Chancellor of the Exchequer in the Unionist Administration of 1886-92.

Even as Chancellor of the Exchequer Lord Randolph was not long in office. He has the singular distinction of having been a Chancellor of the Exchequer who never submitted a Budget to the House of Commons; for when preparing what was to have been his first Budget, he came sharply at issue with Lord Salisbury and his colleagues — with the "old gang," as he called them — not only over the principles and details of his Budget

Lord Randolph Churchill.  
1886.

\* LORD RANDOLPH CHURCHILL. By Winston Spencer Churchill, M.P. Two vols., pp. xvi, 564, viii, 532. New York: The Macmillan Co. \$9.00.

and his scheme for retrenchment, but as regards the general policy of the Unionist Government, and particularly as to domestic legislation.

Salisbury, Hicks-Beach, W. H. Smith and the other members of the Administration of 1886-92 were not prepared to make the pace in constitutional and social reform that Lord Randolph Churchill demanded, and just before Christmas, 1886, England was astonished by the news that Lord Randolph had resigned, and that there was a serious breach between him and Lord Salisbury.

The breach was never healed, and altho Lord Randolph was of the House of Commons until his death in 1894, he was never again of a Salisbury Administration; never again of the inner councils of the Tory and Unionist party. The term of his official life, including both his tenure of the office of Secretary for India and of the Chancellorship of the Exchequer, was not more than a year. His place in English political history is, however, not to be measured by the length of his official service. His power and his influence in English politics accrued to him and were exercised by him chiefly, if not entirely, while he was an unofficial and independent member of the Tory and Unionist party. His power and influence were great, and it is beyond question that his influence was lasting. His only great Parliamentary achievement which can be traced in the Statute Book was the dislodgment of the old and corrupt Metropolitan Board of Works. Lord Randolph Churchill was mainly instrumental in uprooting the conglomeration of parochialism and vestrydom that administered local government in London as the Metropolitan Board of Works, and following the end which Churchill made of this nondescript and untrustworthy organization for metropolitan local government, there came into being the London County Council, and the reform in London government which in the last eighteen years the Council has brought about.

It is not necessary to approve of all that Churchill did—not necessary to feel that he was always sincere in every move he made—to welcome the great biography which his son has given to the world. Lord Randolph Churchill as a power in

English politics and as an outstanding personality in English political history was worthy of all the care that has been bestowed on his biography; and a number of reasons are to hand for grouping it among the great biographies of English statesmen of the Victorian era.

It is splendidly written. It places Winston Churchill alongside John Morley among the literary men of the House of Commons which has just been elected; and it is written with a detachment that is admirable and surprising, when one remembers that Winston Churchill was writing the life of his father. Its place is alongside John Morley's "Life of Gladstone" because of its value from the point of view of students of English politics in the reign of Queen Victoria—especially in that part of the reign which begins with the incoming of the Tory administration under Disraeli in 1874 and ends with the beginning of Gladstone's last administration in 1895. It must go alongside the "Life of Gladstone" for another reason. Morley's great work shows what Whiggism and Liberalism were in the long years when Gladstone was of the House of Commons, and Winston Churchill's life of Lord Randolph Churchill brings out how the old Toryism was constituted; what it stood for; and how it came about that in the six years between 1886 and 1892—and for those years only—the Tory party abandoned its Bourbonism and moved forward on to camping ground that the Liberals had long been persuading themselves that they had pre-empted. There is no good history of the Tory party in the nineteenth century. For the matter of that, a history of Liberalism is equally lacking; but Winston Churchill's life of his father embodies more new material concerning the Tory party and its inner working than any book that has yet come from the press; and it may easily be made to serve as a history of Toryism from the Reform Act of 1867 to the opening years of the reactionary Tory régime which began in 1895. More than this, and as another reason for our placing of this biography, it touches vividly on many phases of English life—political, official, and social—which hitherto have had scant attention in political memoirs and history.

## English Furniture \*

An Arabic proverb says: "The man who knows and knows he knows is wise; follow him." Frederick S. Robinson evidently knows and knows he knows his subject, and students of English furniture will be glad to own this volume of "The Connoisseur's Library." It is an encyclopedia of knowledge concerning English furniture. There are 160 plates, an index of names and leading subjects, and also a valuable list of books of reference for further study of English furniture. This volume is full of references to English buildings, museums and collections. Careful descriptions are given, and peculiar styles of ornament belonging to different periods of English history are pointed out. The bunching of all the illustrations at the end of the book gives the reader much more work, but as many of them are referred to more than once, they could not always be run along with the text. The plates of chests, cabinets, tables, chairs, clocks, etc., are all carefully described. Three chapters are given to Chippendale, one to Manwaring, Ince, Mayhew and Adams, one to Shearer and Heppelwhite, another to Heppelwhite alone, and three chapters to Sheraton. Mr. Robinson speaks of Sheraton as educated and refined, and questions whether the tradesman or artist was uppermost with Chippendale. From his own showing Chippendale made and sold more furniture, while Sheraton was more a writer and designer. It is not strange that the sympathy of the connoisseur is more with the writer than with the tradesman, altho an artist. Yet Mr. Robinson says that Chippendale's book of designs is the best of its class, and "he took the main shapes as he found them, somewhat plain and severe; he left them decidedly better proportioned, lighter, more decorative, yet not less useful than they were." Mr. Robinson says the mistake of Heppelwhite lay in calling in the aid of the coach painter to produce naturalistic flowers and birds upon the beautiful surface of the wood. Heppelwhite is called "limited," Sheraton "versatile." Heppelwhite's tendency is toward an-

gularity and straightness. Sheraton shows far more love of contrasting curves and flat fronts. Sheraton he considers a much better artist than Heppelwhite.

One of the most valuable chapters is that on "The Renaissance House and the Patterns of Old Oak Furniture." Mr. Robinson shows that the decoration used on buildings is repeated on furniture of the same period. The date of a building thus fixes the date of furniture having the same designs. The Gothic period of the thirteenth and fourteenth centuries used the pointed arch on both buildings and furniture. The Renaissance followed the Gothic. Hampton Court was decorated by Italians in 1515. Henry VII's chapel was decorated by Torrigiano in 1512. Holbein (1526-1543) is responsible for the graceful carving and inlay scroll work on the paneling of the room from Exeter in the Victoria and Albert Museum. Holbein was more Italian than German as an artist. Classical architecture is the mainspring of ornament, whether we receive it from Italy or Germany. Many patterns called English are really Italian. The guilloche is common to Byzantine, Renaissance and Assyrian art. The acanthus leaf, the S and C curves, the reed, flute, and dart border are all Italian. The Feathers Inn at Ludlow has the circle pattern, the planted arch and the S curve. The semi-circular or fan shape is found at Burford Priory, Oxfordshire, 1634. These fans are in a house dated 1586 at Lower Walterstone, Dorsetshire. From 1586 to 1634 this ornament was used. The fan changes to the shell over porches, corner cupboards or "beaufads," due to the Dutch, in William III's reign, and lasted into the Chippendale period. This ornament is probably Italian. The S and C curves are found in Hardwick Hall, 1590. The strap work, cut or solid, is due to North European influence of this date. The Germans and Flemings are responsible for the superimposed diamond shapes, applied moldings and turned work glued on to panels, applied buttons and drop ornaments. The Scandinavian influence is found in the northern part of England, and is noticeable in the Yorkshire chair with open back. Apthorp, Northamptonshire, 1623,

\* ENGLISH FURNITURE. By Frederick S. Robinson. The Connoisseur's Library, 8vo, pp. xl, 365. G. P. Putnam's Sons, New York.

Kirby Hall, 1572-1575, both have flutings with rounded tops or with dart and lance shape added. This became a common furniture ornament. Since the designs used in buildings were repeated in the furnishing of these same houses we have here the key to the study of English furniture.

This book has two charming chapters on old chests with twenty-six illustrations. These are most useful for wood carvers. Furniture collectors and dealers will find helpful and valuable information in this book.

**Life of General Sir Andrew Clarke, G. C. M. G., C. B., C. I. E.** Edited by Col. R. H. Vetch, C. B. New York: E. P. Dutton & Co. Pp. xxv, 353. \$4.00.

Sir Andrew Clarke, altho he died not four years ago, must be reckoned among the makers of the British Empire. His active years in the service of Queen Victoria and the British nation began when he arrived, after a sail of three months and a half, at Hobart Town, in Tasmania, and while in foreign service he had an active share in the history and development of Tasmania, New Zealand, and Victoria, in Australasia; the Gold Coast and Egypt, in Africa, and Singapore, Siam, the Malay States and India in Asia. America Sir Andrew Clarke only visited in 1899, after his retirement from active service. He then spent some weeks in the United States as one of the Australian representatives at the International Commercial Congress in Philadelphia. After thirty-three years of almost continuous service abroad Sir Andrew Clarke returned to England in 1880, and for six years worked arduously to improve the fortifications and naval defenses of Great Britain. In 1886 he retired from army service under the age limit, on arriving at the age of sixty-two. For six years he worked steadily to get into Parliament, but was defeated at two general elections and relinquished the ambition. It was then necessary for this veteran, who had been retired on account of old age, to find new outlets for his energies, and in 1891 he became Agent General for Victoria, besides being actively interested in several Asiatic railway enterprises; and in

these and many other directions he contrived to find sufficient to interest and occupy him until his death in 1902—sixteen years after his retirement. The full and busy life of Sir Andrew Clarke is an excellent illustration of the uses to which England puts many of her army officers. Altho devoted to his profession, Sir Andrew Clarke never saw active service. Developing railroads and democratic forms of government in the colonies; pacifying turbulent native kingdoms on the Malay Peninsula, and quietly and to their entire content absorbing them into the then rapidly growing British Empire; endeavoring to overcome the inertia of the Home Government and to push improvements in public works—roads, railways and telegraphs—such was the work of this empire builder; and a study of his life is a glimpse into the secret of the grandeur and power of the British Empire.

**The Spanish Settlements Within the Present Limits of the United States, Florida (1562-1574).** By Woodbury Lowery. New York: G. P. Putnam's Sons. \$2.50.

There is hardly an American school-boy who does not remember with horror the story of Pedro Menendez and his cold blooded massacre of the Huguenot settlers at Fort Caroline, in Florida. He remembers also with some degree of satisfaction the subsequent revenge taken upon the Spaniards by the French soldier, Dominique de Gourgues. It would surprise him to learn that the two brief and inaccurate paragraphs in his school history from which his knowledge came could be expanded into a book of 500 pages, with over 300 words on a page. It would still more surprise him to learn how false was his impression of Menendez, and that the massacre was but a small episode, first, in the history of a gigantic struggle for supremacy between the Catholic and Protestant religions; and second, in the conflict between European nations for the possession of America. Mr. Lowery's book is the most accurate and scientific account yet written upon this subject. The best previous account in English was that of Francis Parkman, in his "Pioneers of France in the New World," where this incident

takes about a third of the book. So much new and valuable material has appeared since Parkman's time that not only have the proportions of the story been changed, but new interpretations must be placed upon the events. The Spanish side of the story was quite unknown and untold in Parkman's charming narrative. All these omissions are now supplied by Mr. Lowery, who has had the benefit of two scholarly Spanish works of recent publication, in addition to his own search in the archives of Seville, Madrid, Paris and London, where he has found many unpublished documents of much value. All of this research brings out the truth that the Spaniards were not such monsters as they have been pictured. Menendez appears as a loyal soldier, fighting with indomitable energy and courage beyond reproach the relentless enemies of his country. He was a soldier imbued with all that hatred of heresy peculiar to his age and race. In the massacre of the French Huguenots he was not impelled by rage or violence, or even blind fanaticism, but was conscientiously doing what he believed to be his duty toward his King and his faith. When we know all the facts intimately, we shudder not so much at the man as at the age whose distorted logic could calmly justify such a crime. Altho Mr. Lowery's book contains all the scholarly paraphernalia, notes and references, and extended documents and proofs in the appendices, with an elaborate introductory discussion of the sources used, yet the book is so well written that it must hold the attention of even the "average reader," who is often appalled by footnotes and other scientific excrescences.

**Louisiana, a Record of Expansion.** By Albert Phelps. Boston: Houghton, Mifflin & Co. \$1.10.

The latest volume of the "American Commonwealth" series rises fully to the level of literary merit reached by any previous volume. In accurate scholarship and depth of research it ranks well also, but the last third of the book—concerning the Civil War, its cause and results—is unfortunately written in a controversial vein with strong Southern

sympathies. We are far from wishing all American history written by men of Northern sympathies; in fact, one of the charms of this history of Louisiana is its Southern character and tone, but the sarcasm and invective with which Abolition and Reconstruction are treated are unworthy of a history distinguished otherwise by dignity and charm. We do not object to the frank statement of Southern opinion that, granting the "abstract moral wrong" of slavery, "this method of humane control was practically better, both for white and black, than the reconstruction method of attempting to raise the negro to a position of superiority, and better for the black at least, than the present plan of forcing the negro, both North and South, by a legal equality into a competition with the superior white, which he cannot survive." In this there is no lack of dignity, but talk about "the vaporings of Mrs. Stowe, and the incendiary verses of the Quaker poet," with much more of like invective, is sure to destroy confidence in or sympathy with the historian. Far the larger part of the story is told without this blemish. Louisiana's history abounds in dramatic and picturesque incidents and conditions. The story opens with the stirring times of Spanish and French explorations, and the strange life in the early French settlements. John Law and the Mississippi Bubble furnishes an interesting episode, as does the revolution of 1768, and Spanish reconstruction after Louisiana was ceded to them. The diplomatic combats about Louisiana and its final cession to the United States; the Burr Conspiracy and the Battle of New Orleans are subjects full of dramatic possibilities which the author has not failed to seize. In fact, the last chapters on secession, war, reconstruction, military and "carpet-bag rule," are none the less fascinating because marred by the faults we have noted. Much of the work seems based upon close study of the original sources and the best monographic work, but the chapter on "Louisiana in International Diplomacy" suffers greatly from the author's ignorance of Professor Turner's remarkable articles on that subject in the *Atlantic Monthly* for May and June of 1904.

**The Work of Preaching.** By Arthur S. Hoyt, D. D. New York: The Macmillan Co. \$1.50.

Among Presbyterian institutions for the training of ministers the Auburn Theological Seminary has long borne an excellent reputation for turning out practical men, well trained as preachers. A treatise on preaching, therefore, from the Professor of Homiletics in that institution, is of some interest. Dr. Hoyt claims no original and certain method for the making of pulpit orators, but his remarks on the preparation and delivery of sermons are sane and practical. He has had especially in mind the problem and position of the preacher of today, and his book might well be read by those who are familiar with the older homiletical literature. However, it would seem that Dr. Hoyt overestimates the authoritativeness of a scripture text with a present-day congregation in a progressive community, and thereby fails to appreciate some of the largeness and difficulty of the work of preaching in the present generation.

### Literary Notes

FOX, DUFFIELD & Co. announce that they have purchased the business of Herbert S. Stone & Co., publishers, Chicago. The Stone publications will hereafter issue from this city.

....Laird & Lee, of Chicago, Ill., are issuing a convenient edition of Webster entitled "*The Standard Webster Pocket Dictionary*." It contains thirty thousand words, which is a fair vocabulary. The volume has been compiled by Alfred B. Chambers, A. M. The illustrations include sixteen copyrighted full page colored maps.

....The growing tendency to study birds as friends rather than enemies will be fostered and encouraged by Chester A. Reed in his *Bird Guide* (Part 2), that describes the land birds east of the Rockies. The book is the direct result of a long and careful study of bird life, and is just the right size to slip into the pocket and take into the field. With it at hand the study of birds can be undertaken just as their spring migrations begin. The book will appeal particularly to beginners in bird study. Cloth, 50 cents; leather, 75 cents. (Charles K. Reed, Worcester, Mass.)

....The J. B. Lippincott Co. announce the early publication of a new series of books by distinguished critical writers of the day, to be known as the "French Men of Letters" series. These volumes are intended to do for French Literature what John Morley's "English Men of Letters" series has so well done for English literature. "Montaigne," by Edward Dowden; "Balzac," by Ferdinand

Brunetière; "Rabelais," by Arthur Tilley, and "Sand," by William P. Trent, constitute the first four in the series. The price has been fixed at \$1.50 net per volume. The series will be edited by Alexander Jessup, Litt. D.

### Pebbles

SOMEHOW it is hard to weep with a woman who talks of the departed as being on the Other Shore.—*Atchison Globe*.

LAST year I knew a Freshman who lived in an attic room. What do you think he is now? Rheumatic?

No; a Sophomore.—*Pelican*.

THE COLLEGE.

THE college is a coy maid—

She has a habit quaint

Of making eyes at millionaires

And winking at the taint.—*Judge*.

"REMOVE your arm from about my waist!" the young lady ordered, and fled from his side.

Andrew gazed vacantly into space. Why this sudden change in Laura's affection? With bated breath and heart a-beating, he walked toward the door. So it was to end thus.

She drew aside the portières and stood before him—radiant, sublime.

"I fixed the pin," she murmured.—*Pelican*.

"I HUMBLY beg your pardon, sir;

I fear that I have mashed your toe.

Such accidents will oft occur

In gatherings like this, you know."

"And I have been," was the reply,

"More hasty than was rightly due,

I fear I have contused your eye—

And does this ear belong to you?"

"Believe me, sir, I meant no harm.

It happened by the merest chance.

I trust that you will take my arm

In getting to the ambulance."

'Tis now fulfilled, our fondest dream,

These college rudenesses are past.

Kind courtesy doth reign supreme

And football is reformed at last.

—*Washington Star*.

ONCE there were two lads, Paul and William, who entered the employ of a great manufacturer at the same time. Paul devoted himself assiduously to his work, and so did William; and in time they were familiar with all the operations of the concern by which they were employed. Paul had the interests of his employer at heart, and after many years of thought and experiment he devised a plan for bettering the product without increasing the cost. William also devoted several years of time and thought to the product, and at last he invented a process by which it could be made 40 per cent. cheaper to the manufacturer by means of undiscoverable adulteration, and the price to the consumer could be kept at the same figure. Ten guesses will be allowed each contestant, and the question is, Which of the boys is now a partner in the concern?—*Judge*.

## Why the Cost of Living Is Rising

THE crops of the United States last year were worth over \$6,400,000,000. According to Secretary Wilson, four crops made new high records as to value—corn, wheat, hay and rice. The corn crop was the largest in the history of the country, the wheat crop second only to that of 1902. In spite of the common belief two years ago, that the United States had fallen to a self-supporting basis as a wheat producer, the farmer has again grown 200,000,000 bushels for export. The yield of corn was over 2,700,000,000 bushels, a gain of 42,000,000 over the next lowest year, 1899.

These bumper crops led Secretary Wilson last fall to predict lower prices for the primary articles of food this winter. So far there has been little to verify his prediction. At best the few downward fluctuations in prices have been temporary or local. The general high cost of living shows no definite tendency toward a decline. Since 1896, as former Commissioner of Labor Carroll D. Wright has been forced to concede, it has increased faster than wages, altho wages in many classes of skilled and unskilled labor have risen rapidly during the same period, owing largely to the activity of the unions. Production is only the beginning of price making. Transportation and distribution are the determining factors in regulating the cost of living.

The bulging granaries of the Dakotas, Iowa, Missouri, Nebraska and Kansas signify more traffic for the railroads, a fresh stimulus to foreign and domestic trade, fuller employment for labor and a new incentive to capital to extend its enterprises. Indirectly the farmer's prosperity filters outward and benefits all parts of the population. Directly it cheapens the cost of food little or not at all to the average consumer. It may multiply the number of his days of work without in any measure adding to the purchasing power of his day's wages.

The production of wheat in 1905 averaged  $8\frac{3}{4}$  bushels per capita instead of  $6\frac{1}{2}$  bushels in 1904. The farmer had over 30 per cent. more to sell out of last year's harvest than the year before and has received much less for every bushel of it. But if the milling combination's agent scales the price of a barrel of flour to the local baker of New York, or Philadelphia, or Pittsburg, his loaf of bread is neither larger nor cheaper to the laborer or the clerk. Cheaper wheat does not mean cheaper bread.

Secretary Wilson has frequently declared of late years that the days of cheap beef are past, altho a few weeks ago he stated that heavy crops would have a direct influence on beef, pork, dairy products and poultry. J. Ogden Armour, the leading figure among the Chicago packers, says that the high prices of meats must inevitably tend higher. It is a fact that the great ranches west of the Missouri have disappeared, with their immense herds of cheap grass-fed cattle. But the stock the farmers raise now is larger and heavier. Even in the days of free ranges in the arid region, corn, not Government grass, governed the price of beef cattle. There is no shortage of corn, and in his last annual report Secretary Wilson stated that the number both of milch cows and beef cattle has been steadily increasing for several years. The truth of the matter is that the stock growers are as much at the mercy of the great beef packers as are the retail butchers and the small consumers. With their control of almost all the large stock yards, their ownership of private refrigerator car lines, the economies of consolidated plants and the secret rebates so long exacted from the railroads, the big packers have practically driven their smaller competitors out of business. The local slaughter houses so common in the towns and cities of twenty-five years ago are today as rare or idle as the old water-power flour mills of the country districts. In spite of the advice of well-meaning economists and dietarians, the American

consumer will accept no substitute for beef.

We are offered refrigerator beef and fish and poultry and eggs, California fruit and Georgia vegetables at all seasons. The common standard of diet has been raised and greater variety made possible, but it cannot be said that the wider gap between farm and kitchen and improved methods of carriage mean cheaper living to that unnumbered class having the lowest increase and the largest percentage of expenditure for mere subsistence.

In their fight against President Roosevelt's policy of rate regulation the railroad interests have exhibited figures to prove that if they carried the chief commodities free "the man who buys for his own consumption" would receive no benefit. They demonstrated, for instance, by tables of freight rates, that it cost 11 4-10 cents in 1905 to haul \$1.08 wheat 1,000 miles from Chicago to New York, as against 12 $\frac{3}{4}$  cents for 75-cent wheat in 1897. By the comparison of other schedules they showed that railway freight rates do not rise and fall with wholesale and retail selling prices. During this period, however, a number of railroads have admitted that they made a practice of granting secret rates to favored shippers. There can be no question that the greatest increase in the cost of food in the last ten years is represented by the charges of the middlemen, whether they be the various food trusts or the commission houses. Altho the compulsion has been put on the American public to pay interest and dividends on thirteen billions of railway capitalization, partly water, the bare cost of transportation along the main lines of traffic as a whole may be said to be not oppressive where uniformly levied. Discriminating rates, by one device and another, have worked more injustice than excessive rates.

To the cost of food must be added that of shelter and clothing. Rents are affected by land values, which naturally rise wherever population grows denser. They bear lightly on the farmer as compared with the city dweller. In the most congested tenement districts of New York rents have frequently increased 50 per cent. within five years. To move to

the outlying quarters of the city or to the suburbs entails the added cost of traveling to work. The wage earner in all the larger communities finds it more and more difficult to get housing near his place of employment. The steadily mounting receipts of city and suburban railroads represent in a large measure the equivalent of higher rents paid in daily nickels to transportation companies instead of monthly instalments to landlords. By way of compensation, however, there are often better and more healthful surroundings, if not actually improved lodgings.

The sharp advance in the cost of building has been chiefly due to trust and labor union influences. Workers in the building trades in the last eight years have demanded and secured rapid increases in pay—in some trades 25 per cent., in others as high as 40 per cent. Lumber is higher. Bricks, sash, door and "trim" and window glass cost almost double what they did fifteen years ago. All hardware has kept pace. The man who pays rent or board bills pays indirect tribute to the Steel Trust and the brick and lumber combines, and contributes his share of higher wages for mason, carpenter and plasterer.

Since 1897 there has been a persistent advance in the price of furniture, for which the demand is logically heaviest in times of prosperity. The diminishing supply of native woods and the Dingley duties conspire against a reduction.

The coal bill of the manufacturer, the landlord and the tenant—in the end it is always the average consumer who pays it in one form or another—was raised 50 cents a ton by the coal-mining railroads after the 1902 strike. Of this the operator turned over about 15 cents a ton to the mine workers, and for his enforced generosity mulcted the consumer of the balance.

It is more difficult to determine the cost of clothing. The mere price of materials is deceptive in these days of ready-made apparel. The Federal Department of Commerce and Labor, in its 1904 report, showed that, on the general wholesale cost of cloth and clothing for the fourteen years beginning with 1890, there had been a decline of 4 $\frac{1}{2}$  per cent. A high tariff has made wool dearer, but

it has not induced the sheep growers to increase their flocks. For every six pounds of wool grown in the United States in the fiscal year 1904-05 five pounds had to be imported to meet the demand for all purposes. Cotton varies in price to the spinner according to the crop, but cotton goods vary less over the retail counter, except as fashion decrees. The National Association of Shoe Manufacturers within a month has declared for free hides, and intimate very plainly as an alternative that the price of shoes must be raised.

According to the Massachusetts Bureau of Statistics of Labor, the family whose wage earner averages \$1.50 a day spends only about 10 per cent. of its income on clothing during the year. This item of expenditure, however, rises rapidly as the annual income increases, as do sundry expenses for education, comfort and recreation. As a rule, where incomes range from \$450 to \$1,200, mere subsistence, principally food, represents about 55 per cent. of the total family expenses, and the price of food today more than ever is artificially regulated without regard to the actual supply.

Every wage earner, every housewife, knows that the increase in the cost of living during the last eight years has been greater than the increase in wages. The proof lies in the butcher's bill, the grocer's bill and the landlord's bill. According to commodity prices on March 1st, Dun reports that the cost of living is higher today than at any time within the thirty years covered by its records.

Unquestionably it is costing more to live, but no less certainly the conditions of life in the main have been made more comfortable, more varied and more elastic. Dearer food, clothing and rent appear tolerable, not because the worker's unit of wages is larger, but because he receives more units in the course of a month or a year in busy times. There is bound to be another story, when the lean years come as they do periodically. As steadiness and certainty of employment diminish popular resentment is certain to become keener against a system of retail prices which bears less and less relation to the fundamental laws of supply and demand.

## A Spelling Reform

DOUBTLESS many of our readers are mildly offended by our use of a few of the simplified spellings that are coming into use. Others they do not even notice. If they get an English book in which *honor* is spelled "honour," or *story* is given an extra *storey*, they notice it and smile. The short Webster spellings they have become used to and like them. The British spelling they call provincial. In the case of some other words, such as *leveled* (or *levelled*), *buffeted* (or *buffetted*) they may not notice which spelling is used. When they come to *program* it looks all right, but *prolog* is noticeable, and *tho* makes pause, but is approved, while *thru* is questioned perhaps with disfavor. But so were *labor* and *labeled* in the days when Walker was the world's authority. We have passed that stage, and are approaching the next. Reform moves onward, tho sometimes slowly.

We would like to hasten it a bit. Not too much, for we would not so greatly offend on what is not, at first sight, a directly moral issue. And this is the purpose of the Simplified Spelling Board, which Mr. Carnegie has financed with an annual appropriation for its work. It is a board of some thirty members, scholars, writers, educators and publishers, who heartily believe that the reform of the English spelling is very important, whether we consider the relief it offers children in learning to read and write, or whether it concerns the extension of English as a world language. The Emperor William insists on keeping the peculiar German black letter, but German scholars insist on the roman type, for world use. Russian books are inaccessible to the world of learning because of the strange letters, more than because of the difference of tongue. In a similar way the peculiar, lawless spelling of the English language shuts it out, to a considerable degree, from world use. We ought to make it easy to acquire; and still more is it a cruelty to make reading so difficult to our children.

The Simplified Spelling Board, of which Prof. Brander Matthews is chairman, will attempt nothing radical or offensive. It will simply try to lead will-

ing followers, not to force reluctant ones. It is not now trying to urge *tuf* for *tough*, or *tung* for *tongue*. It will, for the present, at least, consider those words where a simplified spelling has a certain currency, and urge business men, writers and publishers to adopt them. Our institutions of learning, and our educational associations are a good field for this propaganda. A scientific spelling, purely phonographic, however desirable, is at present impracticable; we must wait for it. Our grandchildren will do that task, which must come in that day when the automobile begins to seem antiquated and the flying car carries us thru the air.

The Simplified Spelling Board will appoint a permanent secretary, who will give his whole time to its work. There will be headquarters in this city, and, with sufficient funds, the campaign will be carried on. Mr. Carnegie has seldom done a more useful work with his money. We ask our readers to let their reason control their sentiments in this matter, and before long old sentiment will be reformed with the spelling.

## Mr. Taft and the Supreme Court

JUSTICE HENRY B. BROWN, of the Supreme Court, who is now seventy years old, has resigned, and will retire in May. The place soon to be made vacant has been offered by the President to Senator Knox, and he, for the third time, has declined a seat in this great tribunal. It has since been offered to Secretary Taft. For him also this is the third time. It is well known that the Secretary's honorable ambition has been to hold a seat in this court.

He has declined the place twice because he was, on each occasion, engaged in work at Manila, which he felt that he ought not to lay aside. And he hesitates now for similar reasons. The Philippines and the Filipinos are still in his care; it is a critical time in the history of the beginning of the Panama Canal; and he is deeply interested in plans for the good of the army. And so he prefers to remain at the head of the War Department, altho it is said that he will accept the judicial appointment if the President shall insist upon giving it to him.

His motives are commendable, and it is difficult to see what he ought to do. We believe that Secretary Taft is well fitted and qualified for useful service on the bench of the Supreme Court. He is needed where he is now, especially for service in the interest of the Filipinos, whose confidence he has and whom he so well understands. If his work for them must end, they and our own people as well will suffer a very considerable loss. The President's offer is a very inviting one, for if the Secretary should take Justice Brown's place, he would undoubtedly be promoted to the highest judicial office in the world if Chief Justice Fuller, now seventy-three years old, should retire before the end of President Roosevelt's term. And the Secretary is only forty-eight years old.

Gossip touches certain political questions that are involved. If the Secretary does not take a seat on the bench, nothing but his own declination will prevent him from being a formidable candidate for the presidential nomination in 1908, a candidate whom a host of Republicans would be glad to support. For this reason, his action with respect to the President's offer will be quite interesting to Secretary Root, Secretary Shaw, Vice President Fairbanks and some other gentlemen, each of whom will have friends in the nominating convention. But factional differences might deprive the Secretary of the solid support of his own State's delegates.

Men of the Secretary's kind are needed in the upper rank of each of the three branches of the Government. It may be that in no other place will they find work of a more important character than in the Supreme Court, which in the near future must be engaged with great questions relating to the control of railway and other corporations.

## Must Wives Obey?

THREE or four Lutheran and Episcopal clergymen have taken sharp umbrage at our editorial of three weeks ago on the requirement in certain marriage services that the woman shall "serve" and "obey" her husband. Very severely they tell us that the Bible says "He shall rule over thee"; and that St. Paul and St. Peter command wives to obey their

husbands. We know all that, and a great deal more of the same sort, and we have the very greatest honor for the Bible, and St. Paul has our highest admiration; but, nevertheless, it was in obedience to the Bible, to its spirit rather than its letter, that we condemned the requirement of the promise by ministers—the State does not require it in any country—and the acceptance of the vow on the part of brides when they have no intention of keeping it.

The trouble with our critics is that they have a false theory of the Bible, the old rabbinic theory or worse. They do not understand the progressive revelation of truth, perfectly plain in the Bible itself, and continuous since the canon was closed. They do not understand that the Bible teaches permanent principles, and, with them, temporary edicts. The former last, the latter pass away. Our Lord taught that lesson: "Ye have heard"; "but I say unto you." The literalists of his day accused him of destroying the law and the prophets, just as these clergymen accuse us; but he replied, as we do, that he was giving them greater fulfillment.

If one takes the Bible as literally as do our critics, then he must let all social conditions remain as they were accepted when Paul lived. Slavery is right; for did not the Mosaic law provide for it, and did not Paul again and again command slaves to obey their masters, and did he not return a runaway slave? Is not polygamy allowed and provided for in the Old Testament, and not forbidden in the New except to bishops and deacons? Is not usury, the taking of interest on money loaned, utterly forbidden? Will these ministers preach on one of those texts? Are we not forbidden by James, John, Peter and Paul, and the whole council at Jerusalem—and "it seemed good to the Holy Ghost" also—to eat "things strangled and blood"? Who minds that now?

These things pass away. Principles remain fixed, while their application changes. We have the right to drop all we will as to the obsolete applications, no matter how definitely required for the times, if we will only make the needed new applications of the underlying principles. So Jesus taught us. That was

the essence of his preaching, the underlying principles of love to God and man. The letter killeth; the spirit giveth life. So Paul taught us, that even faith and hope may pass, but never love. Within ten years after the Holy Ghost and all the Apostles had forbidden the Gentile disciples to eat things offered to idols, St. Paul told them they might, if nobody objected. Why? Because the occasion of a most formal prohibition was passing away.

But we are told that in the primal nature of the case the woman is subject to the man, that she was taken a rib out of his side, and that the Lord said to the woman: "He shall rule over thee." O foolish Galatians, who hath bewitched you? Have ye received the Spirit by the works of the law or by the hearing of faith? Take it as literally as you please, as a veritable historical account, scientifically correct, rib and all, and not as a parable, a story, a poem, fitted for the comprehension of the times. Throw away, if you will, all that science has taught us as to the age of the world, and the development of life upon it, and go back to the twilight of the gods, and even so the literalist must be held to his literalness. It was Eve who was made out of Adam's rib, not the bride of to-day out of her husband's rib. It was Eve who ate the apple and to whom God walking in the Garden said: "He shall rule over thee"; not the girl who stands before the minister at the altar. And, taking it as literally as you please, and letting Eve represent her daughters—which she does not—what God first said was "Let us make a help meet for him." A helpmeet, an equal, not a slave. This was the ideal. It was in the act of their disobedience and fall that God said: "He shall rule over thee." But what, dear literalist, are we now doing? What is the business of the Church? Is it not to reverse the effects of the fall? Is it not to bring back Eden? Does not Christian marriage provide for a "holy seed"? We are making a new Eden, recovering the Eden lost; and one of the things we recover just as fast as we can is the idea that woman is a companion, a help, different and equal in mutual service and love; not a slave to be ruled over by a man. Are we not making this

the kingdom of heaven as fast as we can?

So we bid our critics go back to their Bibles, and not rest till they have learned the elemental principles which our Lord taught, and which he has left us to apply. Then they will cease to make slaves of women and masters of husbands.

### The Moro Battle

IT is impossible to feel any elation over the complete victory of the American troops against the rebellious Moros on the island of Jolo. It was too bloody, too complete. One does not like to hear of a battle in which every one on one side was killed, here six hundred at least, and none escaped, none wounded or prisoners. There is something uncanny about such a victory. There is only one acceptable explanation for it that can redeem the horror, and that is that these Moros were such fanatics that they preferred to die rather than surrender, that their fight was utterly ineffective, and that in their madness and disregard of their own life they chose to rush into the very jaws of death rather than to live.

Now that is what we seem to be told; and we hope it is true. We should be very sorry to believe that these troublesome and rebellious Moros were carefully rounded up, driven backward into their den, there penned up, and remorselessly slaughtered. That would be the only other plausible explanation of the completeness of the extermination of these rebels against our government of the islands.

We do not question that an expedition against the Moros was a necessity. They were not merely blind patriots and Moslem fanatics, of the class that have no regard for their own life or that of their neighbors, the kind that run amuck, that submit to no government, native or foreign, and they were doubtless resisting the government that was best for the people generally. They had that free and ignorant daring and deviltry that we read of and half admire, in the stories of the Scotch raids in the lowlands some centuries ago, before peace was settled with the sword. Such buccaneers of the sea or lawless troopers on land have to be put down, to be brought under law; and so we make no question that General

Wood did just what was right when he determined to suppress these disturbers of the peace. But at this distance it is impossible to see why they should have all been slaughtered in a heap. Why were they not starved out? Why were they not given a chance to surrender? Could they not have been captured and set to work under prison guards, building roads, or in some way made useful, or at least harmless, in life? These are questions one naturally asks. There ought to be civilizing ways of reducing the island of Jolo. These Moros cannot be so very different, in their nature, from other men. Give them work to do, and a kindly but firm government, and one would expect them to yield to it. Such has been the result elsewhere. The case needs investigation; the slaughter is too horrible to be passed by. We ought to know whether this was really a case of suicide, men choosing death rather than surrender, for it was not, on the face of it, wholly "a glorious victory." We think better of our army than to suppose that they would desire officers honored and rewarded for such an exploit, unless it was absolutely necessary to exterminate these rebels against our authority. Doubtless it was a magnificent display of force and skill and courage, in penning and then assaulting the enemy, but we want to know if it was necessary to kill every last man of them.

### Away Down South

LET the shivering reader imagine himself, if he can, sitting under the pine trees, where the long rolling bluffs, nearly all covered with pines that stand forty feet to the first limbs, overhang a lake of clear, sweet water, a mile across. White herons stand in the shallows or fly over the reeds. The sun is just dipping down, a little before six o'clock, into a great ocean of gold, over beyond the silver lake. Everything says peace on earth, goodwill to man. The brilliant red cardinal bird sings joyfully out of the orange grove to the right of you. The mocking bird flits down out of the cherry trees, close to your feet, and looks at you with the eye of an old friendship. He has no fear, because he has learned that almost all human beings admire his

song. Song and speech are not very far apart, in the way of making acquaintanceship. His mate calls out of the bushes, for there is home building going on just over your head. Soon they are whistling all sorts of rag-time music and imitating every sound that fills the world. It is not sweet music that these mocking birds give us, not near so charming as the notes of our Northern catbirds, but it is very wonderful for all that. They can almost articulate. But you soon lose all interest in the house builders, because a flock of red-winged blackbirds have suddenly begun a grand oratorio in the top of the pines. This certainly is the most astonishing expression of musical and critical art in the bird world that the editor has ever heard. He lies over in his hammock, and shuts his eyes—so as to become for a time all ears. It is like a great choral symphony, and no two of the great flock are using the same instrument.

Florida is a strange land, big as all New England, or nearly so, and with wealth untold. Nature has accumulated here those marvelous legumes, which she has devised for the renovation and exaltation of soil. It takes a good farmer to know his business here, and make wise use of the providences under his feet; but there is no lack of stuff for soil-making. What would a Northern farmer give for a legume three or four times as good as his alfalfa, both for making hay and for humus? Yet the Florida farmer has a half dozen such. The velvet bean needs a sharp-paced team to keep up with its growth. It will make 50 feet of good hay in a single season, and then leave a plenty of fodder for the cows and a cover crop for winter. When you come to plow it under in the spring, you have not only a big mass of humus, but a large storage of nitrogen added to the soil. The beggar weed is anything but a beggar; but is a grass, of superb quality, yielding an immense amount of hay and then forage, and after that adding nearly as much to the soil as your velvet bean. This only begins the story of Florida farming. It does not, however, undertake to deny that many of the Florida farmers import their hay from the North.

These beautiful lakes, what a marvel they are! They lie around everywhere,

in the lap of low, rolling hills—if not quite hills, at least something very nearly akin. The water is clean, clear, and the ripples, under the light breezes that come from the gulf and the ocean, are like the lines that are being written by some poet. Here the editor can have a lake all to himself, and he can be as much out of the reach of evolution and the rush of progress as if there were not a newspaper in the world. Think of it! Not a news-boy heard from one end of the year to the other. Not even a rural mail carrier ever intrudes on the horizon. Uncle Sam dumps our mail at a station of his own selection—not ours—and two miles away. When you get a mail of this sort and after this manner it amounts to something.

It is going back to our fathers, and yet not so. For here are wire fences, and orange orchards, palm trees blending with the pine, and huge bunches of grape fruit hanging down to the ground. Do you know a loquat when you see one? It has the shape of a pear, but the flavor of a cherry. It is good for pies and puddings and marmalades, and for pretty nearly everything else that that marvelous fruit, the cherry, is used for. Our New England mothers would have gone wild over it. The kumquat is a sort of compromise between an orange and a stick of candy—we do not mean in flavor, but in shape and size. The tree, when loaded with fruit, is as beautiful as a rose bush. The editor does not feel himself compelled to restrict his appetite, in March, to even this list of temptations. He would be ashamed to ask for an orange, but instead would show his appreciation of the fruit, by asking for a Ruby or a Homosassa.

Just twenty miles, right thru the pines, and here and there coming on an orange grove, we come to Winter Park, and a college—a real college, as brimful of life and progress as any in New England and New York. Better yet, Rollins College is not hampered by old traditions. It is industrial, but it is also classical—it is curious how the whole frontage of education is industrial, but also classical, thruout the South. Here, on the bank of lakes that Wordsworth would have loved, this college sits, like a big-hearted homestead. We smelled no cigarets

while we were there, but jessamines and orange flowers, while bignonias climbed to the tops of the buildings and the trees, swinging great arms full of orange red flowers, while zero was marked in New York. Every boy looked full of life, health and wholesomeness, and every girl—for co-education is the rule—looked not only healthy, but happy. Our Northern folk, not only ought to spend their winters down here, but they ought to educate their young folk a part of the time up there with the maples, and then again down here with the palms.

There is not much to create enthusiasm about a Southern city. They are all of them more or less tawdry, and have a slackness in their ways of doing business. A cabbage palm, brought out of its native habitat with congenial companions, and set in a dusty dooryard, is about the meanest thing we ever saw. What can one say of guava bushes and camphor trees fenced in with wire? But the country in this State of flowers—well named Florida—is about as rollicking and utterly natural a bit of the world as can be conceived. Just here, in the highlands of the central part of the State, the palm and the pine meet together. It is the North and the South in perfect harmony. It is the garden of the world. The new farmer is coming in to take possession. The old orange growers were mostly city folk, and Nature did not hesitate to shoo them out of the State. Those who are now finding their way into these regions are bee-keepers, truck-growers and very practical sort of people, who go well under the name of home-builders.

### Real Education for All

THE active fight that is going on in New York city and elsewhere over "fads" in the public school curriculum will clear the intellectual air.

It is natural for men and women whose ideas are just big enough to surround the three "R's" to look upon school courses in cooking, sewing, carpentry and what not as a monstrous perversion of educational effort. It is natural also for parents who see that their children are not being well grounded in such fundamentals as a good hand writing, a correct speech and accuracy in the

use of figures, to become indignant over that multiplication and padding of courses which fritters away time and destroys the pupil's power of concentrated attention. We have not hesitated to render our full share of criticism of this evil.

It does not follow, however, that because no one pupil should be permitted to potter over a miscellaneous lot of subjects at one given time, the public school should offer only the meager program of the little red schoolhouse of the American country town two or three generations ago. The district school was only one of the educational agencies brought to bear upon the American boy in former days. He was subjected also to the varied industrial discipline of the farm, the shop and the country store. In the household the girl was taught a dozen industries—of cooking, sewing, cleaning, laundering, and so on, that now to a great extent have followed spinning and weaving into the great world of organized shop and factory trades. The city boy and girl of today have no opportunity to acquire an all around industrial discipline unless it is extended to them by the schools.

And there has never been a time when "book knowledge" was the best education for everybody. There are thousands of children whose minds and characters cannot be developed by the printed page. They can be taught to read, to write, and to cipher, and they should be taught these elementary things. But if they are to be saved from lives of vagabondage and crime they must be taught also habits of industrious application in occupations that interest them, awakening their latent powers, and calling forth whatever creative ability they may possess.

In our city streets and tenement houses there are thousands of children who today are with frightful rapidity learning the lessons of wrong-doing that lead to careers of juvenile crime. The most shocking fact of our civilization is the enormous extent and rapid increase of juvenile criminality. And from the ranks of juvenile offenders are recruited the ranks of our large class of adult professional criminals.

When the juvenile offender is apprehended and convicted he is placed for the

first time in his life under the educational discipline that is really adapted to his type of mind. In the reformatory he is taught to work with tools and machines. The results of this discipline are amazingly good when we remember that it is begun only after the course of wrong-doing has been entered upon and the brand of criminality has been stamped. Most of the juvenile offenders could have been saved if they had been taught the right things, in the right way, at the right time.

In nearly every child the creative instinct is strong. Give him tools and materials, or drawing pencils and paper, and a little guidance by a wide-awake teacher, and he is happy. Mischievous, in nine cases out of ten, is only the undirected, or the misdirected, expression of the innate passion to create. The fact is a fortunate one for the human race. After all, most men and women must spend their lives in doing things. And it is a strange inversion of ideas which concentrates educational effort upon the cultivation of a passive receptivity of the contents of books rather than upon the training of the active powers.

It is a great mistake also to assume that the primary purpose of a public educational system is to train the intellectual faculties only, and to train them only thru the printed or the spoken word. Of immeasurably greater importance is the training of character, thru the formation of right habits. Children whose characters cannot be so trained by ordinary school methods must be trained by other methods. The real perversion of educational effort and of public money is the attempt to discipline all children by the same means, and those means certainly not the most fit for a majority of young minds.

Let us be careful, then, not to denounce the men who are trying to broaden out our educational system so as to make it more useful to the great multitude of modern children by introducing practical courses. These attempts are not fads. The real fads are to be found in highly artificial combinations of studies, which, the more elaborate they are, are proportionately unfit for any large number of pupils, and in the elaboration of pedagogic methods, which too often hamper

the freedom of the true teacher. The born teacher does not achieve his results by following out systems, but by knowing his pupils, winning their confidence, and awakening their interest.

Our public school system must offer a larger and larger range of subjects and opportunities, but it must not expect every pupil to dabble with every subject and obtain a smattering of all knowledge. It must build up a corps of selected teachers, of varied interests and gifts, and competent to advise their pupils what work to choose. Each boy and each girl should find in the public school those things that are best for him or for her. Let us encourage true experiment, and let us not boast of our educational success until our public schools not only provide instruction in books for those children that have an appetite for book knowledge, but also attract interest, and in the best sense educate, those thousands of waifs of the streets that detest books but would be happy and wide awake in the pursuit of practical knowledge and the expression of their creative instincts.

#### Railways and the People

So widespread is the movement for the restraint of railroad companies, and so many are the disclosures of violations of the railway law, that it is difficult to keep a fairly complete record of what legislators and prosecutors are doing in this field. In obedience to the Tillman-Gillespie resolution, an official inquiry as to the relation between railway companies and the coal and oil industries has been begun by the Commission. This may duplicate in part an investigation, just completed, of the oil business by the Bureau of Corporations, an investigation which is said to have been the subject of an interview, last week, at the White House, between Mr. Roosevelt and two prominent officers of the Standard Oil Company. At a hearing before the Commission last week, in Cincinnati, the officers of the Cleveland, Cincinnati, Chicago & Indianapolis Railroad admitted that they had been paying rebates in cash to certain shippers, including those for whom they carried steel from Pittsburg. Owing to the recent decision of the Supreme Court as

to coal rates on the Chesapeake & Ohio road, the memorable case of William R. Hearst against the anthracite coal roads has been reopened. The Department of Justice has undertaken to use evidence furnished by Mr. Hearst tending to show that all the trunk lines having terminals at New York have for four years paid rebates to the Sugar Trust and have also unlawfully pooled the Trust's freight business. In this case it is alleged that the rebating was sometimes designed to be used for the injury of the Western producers of beet sugar. The attitude of the people is shown by the passage in Ohio of a drastic commission bill (as well as a two-cent passenger rate bill), by the decision of the Pennsylvania State authorities to ask for an injunction to restrain the Pennsylvania road from exacting a deposit of 50 per cent. on mileage books, and by the passage in the New Jersey Senate of a bill permitting trolley roads to carry freight. Fresh discoveries of unlawful rebating, due as they are only to the confessions of guilty parties (who thereby gain immunity), indicate that much remains undiscovered, and emphasize the necessity of enacting that part of the Hepburn bill which provides for the detection of such offenses by searching examinations of the railway companies' books. It is curious that those who control the railways are not moved by the many signs of increasing popular disapproval.

#### **The Statehood Controversy**

In declining to join the House in compelling a union of Arizona and New Mexico the Senate has done well. It is also to be commended for going further and cutting away from the House bill all provisions for the admission of these two Territories. The House ought now to concur with the Senate in making a State out of Oklahoma and Indian Territory, and in leaving Arizona and New Mexico to be considered hereafter. The question of admitting them, either separately or in combination, should stand alone and upon its own merits. Oklahoma, with Indian Territory, should have been taken into the union of States last year. Their population is nearly 1,250,000, and the growth of Oklahoma,

where about two-thirds of these people live, has been rapid. The industries of that Territory are of a permanent character, its institutions are excellent, its inhabitants are intelligent and progressive. In 1900, Arizona's population was only 122,000; it is now probably about 150,000. New Mexico had only 195,000 in 1900, and may have 230,000 now. Census reports of the last fifty years show that the growth of this Territory has been very slow. In our judgment, neither of the two is qualified for Statehood. Neither of them should now have two seats and votes in the Senate, with the weight in the Electoral College which Statehood would give to their small population. Nor do we think that they should now be admitted as one State, even if a large majority of the people in one of them were not—as they are—opposed to such a union. It was a blunder for the House to insist upon this union, and a greater blunder for it to make the admission of Oklahoma, already unwarrantably delayed, in a certain sense contingent upon the success of this project. The decision of the Senate was not made upon partisan lines; 18 Republicans voted with the 27 Democrats (against 29 Republicans) for the referendum amendment designed to prevent a compulsory union, and 12 Republicans voted with the Democrats for leaving the two border Territories out of the bill. We hope we shall hear, next week, that the House has yielded to the Senate, and that Oklahoma is no longer to be kept knocking at the door.

#### **The Coal Miners**

All the propositions addressed by the coal miners' union to the anthracite operators have been emphatically rejected. There has been no change of conditions, the operators say, to call for a reduction of the hours to eight; wages are already high, and an increase of 10 per cent. would largely increase the price of coal; no agreement will be made with the union, because the operators "stand unalterably by the open shop," and the union is controlled by a rival [the bituminous] industry; a uniform scale is impracticable; the charge that the Board of Conciliation has not acted promptly is denied; and it would be unlawful and unjust for the op-

erators to withhold union dues from the miners' pay and hand the same to union officers. A counter proposition is made, that the awards and decisions of the Commission in 1902 be continued in force for three years. It is argued that the settlement then reached was designed to be permanent, and that "arbitration would be empty" if the questions should now be reopened for further controversy. This proposition leaves the door open for negotiation, but there seems to be no prospect of an agreement. The situation in the bituminous districts also is unsatisfactory. A large number of operators in Ohio, Indiana and Illinois are determined to grant no increase of pay, and the reported intervention of the Steel Corporation seems to have done more harm than good. At the approaching conventions some progress toward an agreement in both branches of the industry ought to be made. If both parties maintain their present positions at those meetings, a great strike can be prevented only by arbitration.

#### Municipal Railway Questions

Seattle, a city ordinarily Republican by 3,500 majority, has elected to be its Mayor, by a majority of 15 in a total vote of about 17,000, the candidate of a Municipal Ownership party, Judge William Hickman Moore. His opponent was the candidate of the Republicans. Judge Moore proposes a reasonable program. He and his associates are to make a thoro investigation as to the street railways, and ascertain whether a feasible plan for municipal construction and operation can be devised. If one can be worked out, they will estimate the cost and then submit the question to the people. A charter amendment was adopted, requiring that railway franchises granted hereafter shall provide that the city may use the tracks on payment of half the cost of construction and maintenance, and may purchase the entire road at any time for a price to be determined by arbitration. At Albany, the Elsberg bill, which provides that contracts for the construction and for the operation of future subways in New York shall be let separately, has been rejected in the Senate committee by a vote of 8 to 4, owing chiefly to the influence of Senators repre-

senting the interests of the existing street railway monopoly in the city, whose aim is to obtain control of all the projected additional subways. These will call for an expenditure of about \$150,000,000. The decisive votes against this measure were cast in committee by men who defeated in the Senate, last year, a bill reducing the price of gas in New York city to 80 cents. But public opinion continued to be an active force, and a bill for gas at 80 cents was passed in the Senate last week by a vote of 44 to 3. In this instance, Standard Oil influence was overcome, after some delay. So, in the case of the subways, a temporary victory for the Belmont-Ryan combination of surface, elevated and underground street railways will be followed by the defeat of the combination or of the party that surrenders to it.

#### \$25 for a Vacation Picture

We hope our readers do not fail to look among our advertising pages every week to see if we have a page of especial interest to them. We are sorry we haven't room for that page this week—the Panama report has completely turned this week's make-up" topsy turvy—so we are obliged to repeat again right here, as we already said in our issue of February 1st, that we hope our readers will send us vacation photographs for the \$25 prize. Since snapshotting is one of the chief amusements of the good old summer time, our readers must have a good many photographs hidden away in albums which deserve to be printed. For the most satisfactory one we offer a prize of \$25, and we will pay for the others that please us most \$2 apiece. Novelty, special interest and artistic value will all be considered, and there is no restriction on the number sent in by one person, or on the subject, as long as they are appropriate for a summer vacation number. Landscapes, picnic fun, travel scenes, wild animals and birds, sports and games, are among the pictures desired. Each photograph should have written on its back the name and address of the owner and a few lines descriptive of the scene, and calling attention to any points of special interest. We do not hold ourselves responsible for the photographs sent us, but we will endeavor to

return all those which have the postage enclosed. No photograph will be considered unless received before May 1st, 1906, and no photograph will be eligible unless taken by persons whose names are on our subscription list or members of their immediate families. Please address "Vacation Pictures," THE INDEPENDENT, 130 Fulton street, New York.

**The Old First Church** The old First Presbyterian Church in this city, in the lower part of Fifth avenue, is threatened with destruction and removal, because its supporters have moved away, and big business buildings are crowding it out. But the edifice is one of the chief architectural monuments of the city, and the church has a remarkable history. It was founded in 1716; out of it have gone the other Presbyterian churches; at the outbreak of the Revolution it was three of its members that led to the call for a Continental Congress; and after the Revolution it was the first religious corporation organized by the first Legislature of the State, and its seal is inscribed: "First Church in the State of New York." Both the organization and the building ought to be saved, and the cost of endowment would be much less than half a million dollars. We hope Presbyterians, who have money enough, will have grace enough to save it, or the appeal should go to a wider circle; to those who love history and civic beauty, if not the ecclesiastical interests involved. The church is now in a neighborhood of boarding houses and shops; and altho it has a large membership they are without wealth. The pastor, Dr. Howard Duffield, has taken on himself the task of awakening interest in this matter, and almost every distinguished man in the city has added his earnest desire that the church be maintained. Bishop Potter says that "to destroy such a monument would be iconoclasm of the most malignant type," and we add our hope, for the religious work the church can yet do, as well as on account of the noble beauty of its cathedral-like building.

Under the decisions announced by the Supreme Court on Monday last, the books, contracts or agreements of Trusts or interstate railroad companies must be

produced in court or before grand juries when called for by the Government in proceedings for the enforcement of the laws. Officers of such organizations must testify. They may claim immunity for themselves, but neither the corporation nor any other officer affected by their testimony is entitled to any protection. "It would be a strange anomaly," says the Court, "to hold that the State, having chartered a corporation to make use of certain franchises, could not, in the exercise of its sovereignty, inquire how those franchises had been employed and whether they had been abused, and demand the production of the corporate books and papers for that purpose." The decisions relate directly to the refusal of the officers of the Paper Trust and the Tobacco Trust to produce the books of those combinations. They will greatly facilitate the prosecution of all such combinations formally accused of violating the law.

We wish it were possible to announce that the Algeciras Conference, which has dragged so long, had reached a conclusion, but we may hope for some end this week. Germany has yielded a little and so has France, and the proposition for the joint policing of Morocco by France and Spain seems likely to carry. But whatever may be the conclusion, and even if Germany is forced to yield, the Emperor William will be able to make his defeat an urgent reason why new taxes should be imposed to create a bigger navy, which shall not be afraid of the superior strength of France on the sea.

It is very pleasant to learn that many Filipinos attended the banquet in honor of Gen. James H. Smith when he received his appointment as Governor of the Philippines, which is to take effect in September. It looks as if he may take a more courteous attitude toward the native people.

The British House of Commons will be no more a gentlemen's club, when its members receive salaries, as they have now voted, by an overwhelming majority, that they should. Then they will meet at reasonable hours, to do business, and will be expected to attend to business during the term.

# Insurance

## Insurance Men at Albany

THERE was a notable gathering of the insurance companies at Albany last week. Representatives of the great insurance interests of the country foregathered at New York's capital city to make personal appeals to the joint committee on insurance of the Legislature for the modification of the recommendations of the Armstrong Investigating Committee. The companies do not wish to have expenses cut, as they claim that if this is done their agency forces, which are their business getters, cannot live. The death knell of the deferred dividend was doubtless sounded, and even the company with which this plan of insurance originated joined in singing its swan song. One company, the Mutual Life, thru its representative, Actuary Emory McClintock, placed itself on record as favoring the annual limit of new business to the sum of \$150,000,000, as set forth in the Armstrong report. Many of the speakers also objected strongly to the application of the penal code to the insurance law. Mr. McClintock, of the Mutual, voiced a general sentiment when at one point in his speech he said:

"I have been made a trustee and vice president and put in charge of the agency force, and what bothers me is how I am going to run this and keep out of jail if the business doesn't happen to come up to my anticipations and therefore cannot be made to pay for itself."

In this connection the following letters, the first from Sylvester C. Dunham, president of the Travelers' Insurance Company, of Hartford, Conn., and the second from Joseph Ashbrook, vice president and manager of Insurance Department of the Provident Life and Trust Company, of Philadelphia, will be found illuminating, as showing the sentiments of two prominent insurance officers toward the Armstrong report.

### *To the Editor of the Independent:*

The proposed insurance law places definite restrictions and prescribes definite methods, not only for New York companies, but for all others doing business in New York. Companies of other States must invest their resources, compensate their officers and agents, use policy forms, distribute their surplus and otherwise conduct their domestic affairs according to New York's standards or leave the State. Moreover, the New York department must once in three years examine outside com-

panies at their expense (Sec. 10 amending Sec. 39), while other States must accept New York certificates of New York companies under penalty of excommunication (Sec. 8 amending Sec. 33). This is not in conformity with comity between States, and if enacted it will inflict the severest blow yet given to the worthy cause of uniform legislation upon questions in which all the States are concerned. If Congress had power to legislate concerning insurance for all the States it could not well make its provisions more comprehensive. The law as it stands is a challenge to other States to exclude New York companies from their borders, and it is calculated to provoke all kinds of retaliation. The defect can be remedied by enacting the restrictions mentioned for New York companies, leaving the legislatures and departments of other States at liberty to charter their own companies and regulate their affairs. If they are solvent and honest and certified by reputable departments, New York should admit them as New York companies are admitted to other States.

Except as stated, I find little that merits other comment than commendation. I believe in reasonable limitations of magnitude and the withdrawal of inducements and temptations to achieve that result by extravagant outlays and unfair competition. I believe also in the utmost publicity, and if I were to criticise the report of the committee in this respect it would be because it had limited its recommendation to insurance companies, and has not prescribed expulsion from the State for all other corporations transacting business therein that do not make like detailed publication of their affairs. It may be said that this was not within the province of the committee, but having recommended severe penalties for bribe givers and bribe takers with reference to all classes of corporations, the committee might with equal propriety have extended the requirement of publicity to all.

S. C. DUNHAM, President.

### *To the Editor of The Independent:*

The report in many respects is admirable, but many of its recommendations are very unwise and could only result in disaster. It seems to have been overlooked that there is a very large section of life insurance which has been managed with great skill and fidelity. It would be a great misfortune to inflict an injury upon the entire business in an effort to apply checks to the limited number of companies that have brought about the trouble. I assume that the deferred dividend system is doomed. If business hereafter is done on the annual dividend plan, the wayfaring man tho a fool can know whether his company is properly managed. The annual dividend is an infallible indicator. The companies would compete with each other mainly in reference to the lowest possible net cost of insurance. In this way, more certainly than by crude, ill-advised legislation, would a check be put upon extravagance. Had the deferred dividend system never been introduced, there would have been no need for an Armstrong Committee.

JOSEPH ASHBROOK, Vice-President.

NEW YORK, THURSDAY, MARCH 22, 1906

No. 2990

## Survey of the World

### Washington Topics

At a conference of the Republican members of the House, on the 15th, a motion to concur with the Senate in cutting out all the provisions of the Statehood bill relating to Arizona and New Mexico was lost by a vote of 43 to 135. Speaker Cannon, who was annoyed by the mutilation of the House bill in the Senate, desired that the action of the majority in the conference should be regarded as binding upon all who attended, but it was not so ordered, and the insurgents will be free to vote with the Democrats in approval of the Senate's course. Some predict that in the end the House will accept the Foraker amendment (permitting a separate vote upon the question of consolidation in each of the two border Territories), if the Senate shall not insist upon excluding these Territories; also, that if the Senate shall stand by its action on this point, the House will not refuse to admit Oklahoma and Indian Territory alone.—The bill for reorganizing the consular service has been finally passed. It provides for a classification of the consulates-general and the consulates, directs that all fees be turned into the Treasury, says that all consuls receiving \$1,000 or more must be American citizens, and establishes a corps of inspectors.—Charles S. Francis, of Troy, N. Y., has been appointed to succeed Bellamy Storer as Ambassador at Vienna. Mr. Francis is the editor and owner of the *Troy Times*, and was Minister to Greece a few years ago. His father was Minister to Greece and he afterward held the more important office to which the son has now been appointed. Much gossip has been published concern-

ing the retirement of Mr. Storer, who has been nine years in the service. It is reported that he has frequently been absent from his post, also that efforts made by him and members of his family to procure the appointment of another Cardinal of the Catholic Church in this country were disapproved at the State Department.—It is persistently asserted in reports from Washington that Chairman Shonts, of the Isthmian Canal Commission, will soon resign, and that his successor will be Chief Engineer Stevens.

### Mr. Parker's Speeches in the South

Mr. Alton B. Parker, the candidate last year of the Democratic party for the presidency, has been making public addresses in the South. Speaking before the Manufacturers' Club, at Charlotte, N. C., on the 16th, he said that the time had come when new duties and responsibilities must be undertaken by Southern Democrats, who had been insisting upon the presentation of candidates for President and Vice-President by the Democrats of the North, and had then voted for them, "when sometimes no other States did so."

"In 1896 you tried Nebraska, and since that day no old Democratic Northern State has accredited one of our party to the United States Senate, and in none has there been a friendly Governor. All the Democratic training schools of the North—elementary, intermediate, and higher—were closed and have remained so. This party paralysis was complete, almost fatal.

"In 1904, hoping to cure or palliate it, you advised returning again to New York for your candidate, only to meet the worst defeat in our party history. It is now nearly twelve years since any man professing devotion to your

party has been chosen by the nation or in any Northern Democratic State to fill an important executive office. At the last election perhaps eight out of ten of the voters then under thirty were ranged with our opponents. To-day the party organizations are lineless, their one-time leaders are dead or have abdicated, or, worse, have become Republicans, while in more than one State the threat hangs over them that they may become the victims of the spoiler or the corruptionist. When such conditions confront you, why should you hesitate any longer?"

No one could know better than he did, he continued, how unpromising the outlook was, unless the party should throw aside isms and grasp the great moral issues so clearly perceived by the people. The really effective Democrats should be recognized and should no longer decline to seek or to accept those honors to which they were entitled. Southern Democratic statesmen had not only demonstrated their ability to take care of the interests of their section, but had also been the only dam against aggression at home and the threat of discredit abroad. In an address before the Mississippi Legislature, on the 13th, he said:

"Above and beyond all things, we must avoid the demagog like the pestilence which walketh in darkness. For the first time in our history we see reflected upon the screen of the future the shadow of this baleful, sinister figure."

Press dispatches say that in Birmingham he expressed a belief that Mr. Roosevelt "has intended all along to ask for the nomination" for a third term in 1908.

#### Railway Rates and Investigations

Mr. Tillman submitted his report on the Railroad Rate bill last week, and debate upon that measure is still in progress. He referred to the peculiar circumstances in which the bill had come into his hands. These proved that the proposed legislation was of a non-partisan character. The bill, he thought, should be amended, but not so as to deprive the Commission of the power designed to be given. The words "fairly remunerative" (applied to the ordered rates) should be stricken out, for they might be used to warrant rates high enough to yield dividends on watered stock. Companies should be forbidden to own commodities which they carry,

such as coal. He warned those who should try to kill the bill or to make it worthless that they must face the wrath of the people, who demanded relief and a regulation of railway charges. If no bill should be passed, or if an inadequate one should be enacted, the issue would become paramount at the next national election, and there would be danger of more radical policies coming to the front. Mr. Newlands, in a separate report, asked for the national incorporation of railways, with provision for old age insurance of employees. The country would drift to government ownership, in his opinion, unless existing abuses of uncontrolled monopoly, over-capitalization, association of production with transportation, and unjust preferences should be ended. Mr. Rayner made a strong speech, in the course of which he criticised railroad lawyers, who must, he said, have written parts of the bill. This brought on a sharp colloquy, in which several Senators took part. Mr. Foraker denied that he was a railroad lawyer. Mr. Knox said that without provision for court review the bill would undoubtedly be unconstitutional. It appears that the Democrats do not agree with respect to amendments to be made. On the other hand, it is said that the Republicans will probably agree to support an amendment (which Mr. Knox and Mr. Spooner are to prepare) concerning review by the courts, this being the only important question remaining to be settled.—The Commission will probably begin in West Virginia its investigation (under the Tillman-Gillespie resolution) of the interest of railways in the coal and oil industries. It has retained as special counsel Edward B. Whitney, of New York, formerly Assistant Attorney-General under Mr. Olney and Mr. Harmon, and William A. Glasgow, Jr., of Philadelphia, who was counsel for independent coal operators in the Chesapeake and Ohio Case (recently decided by the Supreme Court), and in other proceedings.—The important decision of the Supreme Court, requiring Trust and railway officers to testify and produce their books, is regarded with much satisfaction by the Government because it will greatly facilitate the prosecution of corporations that have broken the laws.

### A Decision Affecting Chicago's Railways

A decision of the United States Supreme Court (Justices Brewer, Brown and McKenna dissenting) gives the municipality of Chicago full control of the situation with respect to the city's street railways and removes formidable obstacles that threatened to prevent, for a long time, the municipalization of the railway system. The franchises of certain trunk lines extending from the center of the city to outlying parts were involved. It was held by the companies that the State law of 1865 prolonged the term of these franchises for 99 years. The court decides that the statute did not do this, altho it extended the companies' charters, or corporate lives, for 99 years. The effect of this decision is that, with respect to a large part of their mileage, the companies are left with nothing except their tangible property—the cars and rails, while for the other fragments they depend only upon franchises which are soon to expire. They are at the mercy of the city, and, for large parts of their systems, are at liberty to use the streets only so long as the city shall refrain from purchasing their tangible property and taking possession. The decision reversed that of the Circuit Court (Judge Grosscup) and was unexpectedly favorable to the city. It affects securities having a par value of about \$86,000,000, and leaves some of these almost without support. Since the announcement of it, large sales have greatly depressed the market prices, one stock falling from 47½ to 16, and another losing 60 points. These declines indicate a loss of nearly \$20,000,000. Those who suffer most are capitalists in Philadelphia and New York. About a year ago a syndicate in New York obtained control of one of the systems by the purchase of \$17,000,000 of stock at 200. On April 3d, the city will vote upon the proposition that \$75,000,000 in Mueller law certificates shall be issued for the purchase of the roads or the construction of a municipal system. Mayor Dunne says that the companies should now unite, have their property appraised, improve it under municipal supervision, carry on their service under temporary licenses, pay a small dividend on the appraised value, and give the greater part of the remain-

ing profits to the city for a sinking fund to be used in buying the lines. If the city votes to issue the \$75,000,000 in certificates, there will afterward be some delay, because it will be necessary to have the validity of them determined by the courts.—The Chicago Council has procured from Glasgow, and published, a copy of the report submitted to Mayor Dunne by Mr. Dalrymple, the manager of the Glasgow railways, who came to Chicago at the Mayor's invitation. He advised that the city should reach an agreement with the companies, if possible. If the city should try to operate the roads there would be, he thought, very grave danger, unless there should be made "very radical changes in the methods usually employed in carrying on municipal work by the cities of the United States."—At the recent election in Seattle, where the Mayor chosen was the candidate of a Municipal Ownership party, a charter amendment providing for the "Recall" was adopted by a vote of nearly 8 to 1. Upon the petition of 25 per cent. of the voters, any elected officer of the Government may at any time be required to face the test of a special election, which shall decide whether he is to stay in or go out.

### The Battle at Mt. Dajo

Owing to criticism in the public press concerning the battle, in the Philippines, with the Moros at Mt. Dajo, on the 7th and 8th inst., when more than 600 of the enemy were killed, including a considerable number of women and children, Secretary Taft cabled to General Wood for all the particulars. The reply was received on the 13th and was at once made public. General Wood said that he was present thruout the entire action. At the end of it he inspected the crater in which the final struggle took place. No man, woman or child, he asserted, was killed wantonly. A considerable number of women and children were killed unavoidably in the fierce hand-to-hand fighting. The women wore trousers and were armed much like the men, with whom they charged. In many cases, the children were used by the Moro men as shields while attacking the American troops:

"The Moros, one and all, were fighting not

only as enemies, but also as religious fanatics, believing Paradise would be their immediate reward if they should be killed in action with Christians. Apparently they desired that none should be saved. I do not believe that in this or in any other fight any American soldier wantonly killed a Moro woman or child, or that he ever killed one except unavoidably in close action. The fighting was most desperate, and it was impossible for men fighting literally for their lives in close quarters to distinguish who would be injured by their fire. We have again and again begged Moros to fight as men and to keep women and children out of it. I assume entire responsibility for the action of the troops in every particular."

General Wood ordered, he says, that assistance and medical attendance be furnished to the wounded, some of whom feigned death in order that they might kill the medical men. Several Americans were cut up while attempting to aid the injured. This report was transmitted to the President, who at once replied as follows:

"This answer is, of course, entirely satisfactory. The officers and enlisted men under Gen. Wood's command have performed a most gallant and soldierly feat in a way that confers added credit on the American army. They are entitled to the heartiest admiration and praise of all those of their fellow-citizens who are glad to see the honor of the flag upheld by the courage of the men wearing the American uniform."

In the Senate, on the 15th, the correspondence was called for by resolution, Mr. Bacon saying that the affair was a massacre. On the same day, in the House, General Wood was bitterly denounced by Mr. Jones, of Virginia, who said that these Moros could have been subdued by surrounding them and starving them into submission. Mr. Williams, the Democratic leader, read a parody (called "The Charge of the Wood Brigade") of Tennyson's well known verses. The following stanza is a sample:

"Flashed all the sabres there,  
Flashed as they turned in air,  
Sabring the women there,  
Charging the children, while  
All the world wondered.  
Stifled by cannon's smoke,  
Men, women, children choke;  
Women and children  
Reeled from the bayonet stroke  
In death not sundered;  
Families slaughtered there,  
All of six hundred."

Late dispatches from Manila say that many women and children were saved, and that nearly all of those killed were

cut down at long range by shells. The Sultan and leading chiefs continue to congratulate General Wood because this battle has made it possible for the peaceable Moros to till their fields.

### The Coal Miners

There is to be another conference between the anthracite miners and their employers. At the convention in Indianapolis, last week, President Mitchell strove earnestly and successfully to convince the representatives of the union that the reply of the operators to their propositions should not be regarded as necessarily final. On the 18th he sent a letter to George F. Baer, chairman of the operators' committee. His own committee, Mr. Mitchell said, were keenly disappointed to learn that their demands had been rejected in toto, and that their arguments had practically been ignored. They were not unmindful of the great public interests involved in the controversy, or of the efforts of the Arbitration Commission to establish a relationship that would insure a just and permanent peace. But the Commission itself had been in doubt as to the permanency of its findings. He trusted that a final decision had not been given by the operators. "Neither you nor we can afford to break off negotiations in this abrupt manner." He believed that another conference ought to be held. "We cannot, with any degree of contentment or satisfaction, continue to work under present conditions. But the interests involved are so vast that we are not willing to break off negotiations without first making further efforts to reconcile our differences." Mr. Baer was asked to arrange a date for another conference. Some say that if another meeting be held, the demands of the union will be very considerably reduced.—On the 19th, the bituminous operators of Illinois, Indiana, Ohio and Pennsylvania assembled at Indianapolis, where they are to confer with the miners' union. Representatives of large interests in Pennsylvania are willing to grant a small increase of wages, but a majority of the operators oppose any concession. Their interests are affected by competition from West Virginia, where low wages and long hours reduce the cost of production.

**Cuba** Señor Mendez Capote has withdrawn his resignation of the office of Vice-President, to which he was elected in December. Ex-Governor José Miguel Gomez, who was the candidate of the Liberal party for the Presidency, denies that he is conspiring against the Government, and asserts that all his energies are devoted to the development of a large sugar plantation, which has been committed to his care.—The American corporation which held the concession (recently annulled by the Government) for subways in Havana has complained to the Government at Washington, asserting that it has already expended \$500,000 upon the project.—A. W. Moerke, the American who was arrested for refusing to pay the customary license fee for his business at Columbia, Isle of Pines, on the ground that the island did not belong to Cuba, has been removed from the office of postmaster, which he held at that place. It is expected that the Isle of Pines treaty, now pending at Washington, will be so amended as to provide that the island shall be a separate Cuban province, in which the inhabitants may elect their local officers.—A New York syndicate is about to erect a large hotel in Havana, at a cost of \$1,500,000.

#### The Algeciras Conference

The Conference at Algeciras over the Moroccan question drags its slow length along, with no other apparent result than fluctuating rumors of impending rupture and prospective agreements. In fact, the Conference has been adjourned nearly all the time for the past ten days. The reason of the delay is probably because in both France and England, since the Conference began, there has been a change of Ministry, and it was the desire of Germany to test the temper of her new opponents before making the concessions, which, according to the general belief, she was on the point of granting. But the Liberal party in England is quite as anti-German as the Conservative, and M. Leon Bourgeois, the new French Foreign Minister, has not sent any change of instructions to M. Revoil, the French delegate at the Conference. The question of the control of the State Bank of Morocco was adjusted

by a provisional distribution of the shares among the Powers, but on the police question there is a deadlock. France insists that the maintenance of order in all the eight seaports of Morocco be placed in the hands of a French and Spanish police force, but Germany demands that at least one of the ports—Casablanca—shall be in charge of a neutral Inspector-General, who shall represent the other Powers and exercise authority over the entire police force.

#### French Mine Disaster

An explosion of firedamp in the coal mines of Courrières, near Lens, in the Department of Pas de Calais, on March 10th, caused a greater loss of life than any similar disaster in the history of mining. The explosion occurred at 7 o'clock in the morning, soon after the men had descended to work. Of the 1,795 men who went into the pits, 1,077 are known to have perished. A fire had been burning for a week in one of the pits, which it was impossible to put out, so all the outlets had been closed in the hope that it would smother in its own smoke. During the night coal gas was probably formed in the mine from this smouldering fire, and this caught fire when more air was sent down in the morning. A sheet of flame ran thru all the adjacent pits, for these had been connected for better ventilation. Most of the men were instantly burned to almost indistinguishable charred masses by the terrific blast and the cages and other machinery were blown out of some of the shafts high into the air. Other shafts were so blocked by the debris that it was impossible to rescue the imprisoned miners, who for some hours could be heard tapping the water pipes. A crowd of 25,000, composed of grief stricken women and children and infuriated miners besieged the shaft houses, greatly impeding the work of rescue. The force of 400 soldiers and mounted gendarmes had difficulty in maintaining order as the bodies were brought out of the pits. After the shafts had been ventilated for several hours rescue parties went down, but of these eighteen perished from suffocation. The most efficient service was done by a life saving gang of 25 from Westphalia, said to have been sent by order of Em-

peror William. In pit No. 3 482 men were working, and of these only 15 were saved. The unidentified dead were buried in a common grave with military honors. Subscriptions for widows and orphans are coming in freely. The Chamber of Deputies voted \$100,000. The Miners' Association donated \$40,000. The American Chamber of Commerce, in Paris, subscribed \$1,000. The miners of the district to the number of 30,000 have struck, as a protest against the mine owners, who they claim, were to blame for the accident, because they knew of the dangerous condition of the pits, and yet sent the men down.

### The Russian Elections

An imperial manifesto and ukases, issued March 6th, give the laws and final arrangements for the meeting of the Russian national assembly on May 10th. It will consist of two houses of equal and co-ordinate powers—the Duma and the Council of the Empire. Each house has the right to initiate any legislation and to question the acts of ministers, and the concurrence of both houses is necessary before a bill can be presented to the Czar for approval, altho the council of ministers or cabinet have the right, in an emergency, to ask the Czar for immediate action on some matters not involving changes in the fundamental laws of the Empire or those relating to the Duma, and such action becomes invalid unless approved by the Duma within two months after it is in session. The Council of the Empire, corresponding to the British House of Lords or our Senate, is composed half of members appointed by the Czar and half elected. The latter are eligible for nine years, and a third of the number is re-elected every three years. Each Zemstvo elects one representative to the Council, six are elected by each of the following bodies: The synod of the Orthodox Church, the representatives of the universities and of the Academy of Science, and the landed proprietors of Poland. The commercial and labor exchanges elect twelve and the nobility eighteen. All members of the Council must be forty years old or more and have received a bachelor's degree. They will re-

ceive \$12.50 a day during the session. The President and Vice President will be appointed by the Czar. The sessions of both houses will be public. Neither house has the right to receive delegations or petitions.—Complaints of governmental interference with the elections are heard from many quarters, and on account of the popular distrust of the authorities and fear for the personal safety of the delegates, the elections in some places are practically farces. In the labor elections at Odessa, only 40 out of 2,000 electors voted. At Kadinskood, only 53 ballots were cast out of a possible 14,265, and as most of those who voted were priests, there were 11 priests among the 15 delegates elected. In Yaroslav, of the 600 small landowners and clergy entitled to vote, only 13 met, and they elected 11 of their number to the provincial electoral college. The peasants are taking part more freely than the workmen of the cities, and are electing delegates from their own class, with instructions to vote for the expropriation of the lands belonging to the Emperor, the nobility and the State, and their division among the peasantry.—In the agrarian riots of last year it is calculated that the total losses were more than \$155,000,000. Saratoff and the Volga provinces suffered most. Esthonia, one of the Baltic provinces, shows a loss of \$1,250,000. In putting down the rebellion in these provinces, between December 14th and February 14th the military hanged 18 persons and shot 621. Three hundred and twenty were killed in armed encounters and 251 were flogged. The following buildings were burned by the soldiers: Ninety-seven farmhouses, 22 town dwellings, 4 schools and 2 town halls. The Government has granted the landlords as compensation a time loan, without interest, amounting to one-third of their losses. Lieutenant Schmidt, who led the mutineers in the naval revolt at Odessa, has been shot, together with three of his associates.—Much damaging evidence has been brought forward against General Stoessel in his trial by court martial for the surrender of Port Arthur, and he now demands that Generals Nogi and other Japanese officers be summoned to testify in his behalf as to the heroic character of the defense.

### A New French Ministry

The resistance offered by Catholic mobs to the taking of inventories of the Church property, preparatory to turning it over to the proposed local Cultural Associations has caused the downfall of the Rouvier Ministry. In the debates in the Chamber of Deputies the curious fact was brought out by M. Briand, the author of the Separation Bill, that the clause providing for such inventories was inserted at the request of the Clericals themselves as a protection against loss or confiscation of Church property in the transition. When it came to the application, however, the cry of sacrilege was raised and the devout hastened to the defense of the churches against the Government officials. In Paris the opposition took the form of mere "demonstrations," and the aristocratic ladies and gentlemen who collected in the churches were dispersed by a show of force or a douching from the fire department. But in the provinces the matter was taken more seriously. Finally, in Boeschèpe, in the Department of the Nord, near the Belgian frontier, the resistance to the officers was so strong that the gendarmes used their revolvers and a Catholic butcher boy was killed. When the matter was brought up in the Chamber

M. Briand, Minister of Public Instruction and Worship.

the Government was subjected to a cross-fire from both Right and Left. M. Plichon, on the one side, accused the Government of using the law as an excuse for murder. M. Guieysse, representing the Left, denounced the Government for its weakness in not putting down such open rebellion. The Abbé Lemire declared the Government lacked tact in resorting to armed force, altho he reprobated any attempts to stir up a political agitation under the cloak of religion. M. Ribot, representing the Center, made a temperate speech, defending the Separation Law and criticising the unnecessary harshness of its enforcement. The Chamber voted that this speech be placarded in all the communes of France, an almost unprecedented honor. Afterward it was voted to placard also the speeches of Abbé Lemire and M. Briand. Premier Rouvier claimed a vote of confidence in these words:

"The Government has the duty to apply the law. It will apply it without weakness, but also with the prudence, tact and wisdom consistent with public tranquillity. I ask the adoption of a resolution approving these declarations of the Government."

But the resolution was defeated by a vote of 267 to 234, the majority being

M. Sarrien, Premier and Minister of Justice.

composed of the extremists of the Chamber, Socialists and Radicals on the one side and Clericals and Nationalists on the other. Mr. Rouvier accepted the verdict without a protest and the Cabinet at once resigned. President Fallières invited M. Sarrien to form a new Ministry. Jean Mari Ferdinand Sarrien, the new Premier, takes the portfolio of Justice. He was born in 1840 in Bourbon-Lancy, in the Department of Saone-de-Loire, and became Mayor of his native town when quite a young man. He served in the war with Germany as captain of militia, and was elected to the Chamber

Clemenceau, the veteran radical Socialist, will now, as Minister of the Interior, have a chance to see if he can do as well in constructive statesmanship as he has done in destructive criticism of preceding administrations for so many years. The position of Minister of Foreign Affairs, one of especial difficulty in the present critical state of the Algeiras Conference, is filled by M. Leon Bourgeois, who has been in various Cabinets since 1892, and was, in 1895, Premier. Altogether, the Ministry is composed of unusually able men, altho it is only supposed to last until after the elections. There will be no important change of policy consequent upon the change of administration, as the following announcement to the Chamber indicates:

"The Government intends to carry out the Church and State separation law with inflexible firmness and establish the responsibility for resistance to the taking of inventories.

"Concerning Morocco, we intend to follow the policy of the preceding Ministry, hoping that the equity and dignity of our position will permit an early and satisfactory solution."

The Chamber approved this Ministerial statement by a vote of 305 to 197. Of the 65,000 churches in France, about 50,000 have now been inventoried. But the temper of the peasants in some provinces is so irritable that some violence seems inevitable. A company of soldiers passing along the road near Fougères, with no thought of inventories, were attacked by a mob of several hundred peasants, armed with clubs and forks, who tried to kill the officers. The Pope, on learning that the new Ministry was formed on March 13th, but that the official announcement was postponed to a more lucky day, exclaimed:

"Evidently being a freethinker does not exclude superstition. Bad days are preparing for the dear, dear Catholics in France."

The new cabinet, insofar as it differs from the preceding, is more radical and socialistic, and is likely to be still less conciliatory to the Papacy. The Pope has taken advantage of the dissolution of the Concordat to appoint, at his own pleasure, the bishops whose nomination has been so long held up by disagreement with the French Government. It is the first free appointment of bishops for a hundred years.

M. Clemenceau, Minister of the Interior.

of Deputies in 1875. He has served in several Cabinets, and has been three times Vice President of the Chamber. At the January election he was a candidate for President in opposition to M. Fallières. M. Thomson, Minister of Marine, and M. Etienne, Minister of War, in the Rouvier Cabinet, are retained in the new Ministry in the same positions. Among the new members there are three of especial interest: M. Aristide Briand, a Socialist, who, as the head of the Committee on the Separation of Church and State, drew up and put thru the present law, will now, as Minister of Public Instruction and Worship, have charge of its enforcement. Senator

# Life on the Canal Zone

BY EDWIN E. SLOSSON AND GARDNER RICHARDSON

[This is the second of the series of six articles in which the two members of the editorial staff of THE INDEPENDENT report the results of their observations in Panama.—EDITOR.]

LAST week we stated that the history of the American occupation of the Canal Zone could be divided into three periods, characterized as (1) Precipitation, (2) Demoralization, and (3) Preparation. That is as far as we have got yet, but it is devoutly to be hoped that the next chapter will be (4) Excavation, and not (4) Deliberation.

This division is psychological rather than chronological, but the first period may be regarded as including the year beginning May 4, 1904, when the United States formally assumed control of the Canal Zone. The resulting period of demoralization, or "the great scare," as they call it on the Isthmus, was at its height, or perhaps, more properly, its depth, during the months of May, June and July, when the yellow fever raged. The period of renewed confidence and steadier and more effective work began with Chief Engineer Stevens's arrival on the Isthmus during the last of July, 1905.

The errors of the first period are now patent to every one's aftersight, but to distribute the blame for them equitably between Chief Engineer Wallace, his subordinates, colleagues and superiors is a profitless and impossible task. We are not, however, inclined to join in the chorus of denunciation of Mr. John F. Wallace, which, since Secretary Taft sounded the keynote, has been heard generally from the press of the United States. He was checked and thwarted

in his authority, and yet is held responsible for everything that went wrong. His orders for supplies were held up or misdirected and the blame for resulting delay and confusion laid to him.

The fundamental cause of the undue haste and confusion was undoubtedly the impatient temperament of the American people. We were tired of the mañana diplomacy of the Colombian Government and when we had a clear field we wanted to see "something doing" in Panama. And we saw it. We would not have stood it to have had the Commission and its clerical force spend six months in Washington offices making out a detailed plan of campaign, and if they had it probably would not have worked on the grounds.

So we pitched in after the characteristic American way and hurried a heterogeneous lot of men and material to the Isthmus. The things ordered were not always right, and when

they were they did not arrive in the right order. Without adequate wharfing facilities at either the Atlantic or Pacific ends, without quarters for the men or storage for supplies, with complicated, duplicated and erratic methods of accounting, with men who did not know the extent of their duties and the limitations of their authority, amid all this general confusion and conflict the new Government was started and the great task undertaken. The Panama Railroad, with its single track

Congested Freight at the Royal Mail Wharf at Colon on the Atlantic.

and poor equipment, broke down under this addition to its regular traffic and steamers at Colon and Panama could not get their cargoes. The men were overcrowded and uncomfortable. There was a lack of team play between departments and the employees were hustling, each for himself, for promotion and better pay. Salaries were not in proportion to the work or the ability, and quarters were assigned by chance or favoritism. Competent men were scarce, and different departments bid against each other for them, just as housekeepers steal cooks from their neighbors' kitchens.

The confusion was as bad as at Tampa at the beginning of the Spanish War and at Havana at the end of it. Freight from the States was dumped off along the line with little regard to where it was most needed, and left imperfectly guarded and protected from the weather. In order to get what they wanted for their work, men who were in earnest sometimes had to cut the red tape. They went to the heaps and took what they needed, with or without formal requisition. There was undoubtedly much loss, but there seems to have been surprisingly little stealing.

The chief deficiency was for buildings for lodging and work. The French left for us over 2,000 buildings, but their twenty years' or twenty-five years' exposure to the ravages of a tropical climate and insects had practically ruined many of them. Some were destroyed and more should have been, for when they came to be repaired piece after piece was found to be rotten, until nearly all had to be replaced. Carpenters were scarce and lumber was often either not on hand or it was of the wrong kind. Mr. Wallace claims that the contracts for lumber were all divided and scattered by the authorities in Washington for political purposes, and he could not get what he wanted nor when he wanted it. It was nearly a year before the lumber came in sufficient quantities, and then it came too fast. In March, 1905, 12,000,000 feet of lumber from Seattle arrived at La Boca, the Pacific entrance to the Canal. Now, the wharf at La Boca only accommodates three ships at a time, and even with the ordinary Pacific trade one or two ships have to wait or load from lighters. There were no means for unloading the lumber

and no place to put it. Part of it was carried on the backs of negroes wading thru water up to their bodies, and stacked without order on the muddy banks of the Rio Grande. The rest of it was rafted and anchored. The tide in the Pacific rises and falls 20 feet. The Rio Grande rises also in the rainy season, and nobody can tell how much. Consequently it was hard at times to distinguish the stacked lumber from the rafted lumber. Then the rafts got loose from their moorings and went out to sea, much to the annoyance of the shipping in the narrow, crooked, shallow channel. But most of the rafts were rounded up.

Naturally, the lumber was shipped out along the line of the railroads as rapidly as possible to relieve the congestion; not measured, but loaded on the cars and weighed. Orders were filled from the nearest pile to the track without much regard to what was asked for. Dressed or undressed, it did not matter which, and, where the architect ordered 2 by 4's he was liable to get 6 by 6's. Many of the carpenters were slow moving Jamaicans, and, under the circumstances, building was not a pleasure.

Meantime the engineers had their trials. Mr. Wallace wished to find out if the old French excavators could be utilized and to get some data for estimating the cost of digging. Accordingly, some of them were refurbished up and set to work in the Culebra Cut, but the machines proved to be unprofitable. When the American steam shovels came they could not be kept up to a quarter of their theoretical efficiency owing to the inadequacy of the French engines, cars and rails. Trains derailed, tracks slipped and the dumps softened and sunk in the rains.

Then to add to the difficulty and still more to the discouragement, the landslide in the Culebra Cut began. Surveyors who drove a straight row of stakes along the bank found it curved in the morning. Great cracks like those found by an earthquake appeared on the hill. It was evident that the higher bank of the Cut was giving way and nobody knew how far it might go. If banks at an angle of 45° would not hold, what would? The excavation was only down about 140 feet, and it must go 105 feet lower, even for

a lock canal. It was slow work getting the dirt out the first time, and the thought of taking it out twice was intolerable. But it proved that comparatively little of this had to be done, for there is more rock in Culebra than used to be thought.

As a crowning blow came the yellow fever. It struck at headquarters, the Administration Building in Panama. Well known men in offices of the Governor, auditor and architect were among the first victims, and the employees along

idly by the actual figures of the Sanitary Report:

| Month.         | Cases.    | Deaths.  |
|----------------|-----------|----------|
| April.....     | 9         | 2        |
| May.....       | 33        | 8        |
| June.....      | 62        | 19       |
| July.....      | 42        | 13       |
| August.....    | 27        | 9        |
| September..... | 7         | 4        |
| October.....   | 4         | 2        |
|                | <hr/> 184 | <hr/> 57 |

The last case of yellow fever in the city of Panama was November 11th, and

The Dock of the Panama Railroad and Steamship Line, at Colon.

the line, crowded in ill-made houses and exposed to all weathers and insects, felt that there was no help for them, if officials in mosquito-proof rooms in the city and drinking bottled waters were taken. As it turned out the fatalities from yellow fever were fewer than those from malarial fever, consumption and pneumonia, but it caused much greater dread than these more familiar and slower diseases. The story of the rise and suppression of the epidemic is shown most viv-

idly by the actual figures of the Sanitary Report. Probably the disease will not appear there again until it is introduced by some infected person landing at Colon or Panama.

The combined effect of all these difficulties, discomforts and dangers was the spring panic. Some perfectly well men came to the hospitals in great fright and demanded admittance because they knew they had yellow fever. Fortunately, the imagination is not powerful enough to

create a single one of the minute organisms which are the cause of the disease, and, so with the best of intentions, they were not able to develop a case of yellow fever.

Men crowded the returning ships, paid high premiums for return tickets, or took deck passage to Jamaica and worked their way home. Fear is contagious. Three or four men from the same room or table would be seized with the desire to go home, and would leave on the first train for Colon. Some assumed an attitude of indifference and bravado, and disregarded all sanitary rules. "Well, who's dead this morning?" became a

and went quietly about their work, two men's work, or more. The orders they got were mostly signed by "acting" officials. There were numerous changes of plans, shiftings of departments. Good men were suddenly dropped. Incompetent men promoted without cause. The new men being sent down from Washington were less promising than before. But sometimes they did not land. They would hear when they reached Colon how things were, or be scared by smoking room stories on the voyage down, and they would stay on the ship, paying their own passage back and forfeiting their wages. There was a feeling of dis-

Quarters for Employees at Cristobal, near Colon.

common salutation, and the toast of the officers in India at the time of the plague was heard: "Here's to the dead already, and here's to the next to die."

But there were some who "stuck it out." Neither cowards nor braggarts, they swallowed quinine until they were deaf to the hum of the loaded mosquito

couragement in the air. There were those who argued that the canal would never be finished; that the Washington people were keeping up a show of doing something for the graft they got out of it, and the men in charge at the Isthmus were railroad men sent down on purpose to impede the work.

Gradually in the course of the fall a better feeling prevailed. Conditions had improved somewhat. There were more buildings. The food was better. The yellow fever was checked. Some of the incompetents and grumblers had left and the men were getting used to the conditions. There was a nucleus of veterans

the men or the manager in language that is very forcible and not at all polite. He takes a seat in a common car and permits, even encourages, the man who chances to sit by his side to explain to him how the Canal business should be managed and how all the officials, including the Chief Engineer, are making fools of them-

The New Buildings of the Headquarters of the Engineering Department at Culebra.

on the Isthmus. By a veteran is meant one who had lived there for at least six months. They had earned the right to stuff the green man with big stories and to chaff him when he objected to sleeping four in a room where they had slept twelve.

But to a great extent the inspiring of the men was due to the personal influence of Chief Engineer John F. Stevens. He is not an office engineer, but a "mixer." You never can tell, the men say, when he will bob out from under some flat car. He drops in for an unexpected meal at some mess where the men are grumbling, and afterward expresses his opinion of

selves. What gained for Mr. Stevens the confidence of the men more than anything else was that he voiced their protest against the pernicious Markel contract and helped to secure its annulment. By this contract a practical monopoly of feeding the employees of the Commission during the ten or fifteen years of the construction of the Canal was given to one man at a rate far above what it should cost them for board. It was awarded to Jacob E. Markel, a Union Pacific hotel man, by Mr. Shonts without due advertising and in spite of apparently well founded complaints of unfairness to competitors. It meant an increase in the living ex-

penses of about 50 per cent. to all the employees, and their protest was emphatic and effectual. There would have been a general strike, and with good reason. The Government got out of it very cheaply by paying Mr. Markel an allowance of \$10,000, for expenses and services, to cancel the contract. Chief Engineer Stevens cabled from the Isthmus that the contractor would make a profit of about \$1,000,000 a year out of the men.

The first plan of the Government to have the men buy their food for themselves from the Panamanian merchants was a failure, because the local markets and supplies are altogether inadequate. The second plan, of turning the job over to a railroad hotel man, having come to a disastrous conclusion, there remained a third course, that is, for the Government to take upon itself the boarding of the men. This was adopted and has proved a great success.

It would be too much to say that the men are satisfied with their food. That cannot be expected of any men. The boarders at the Waldorf-Astoria find a great deal of fault with their food. But, in our opinion, the fare is surprisingly good, under the circumstances. The meals served to the men for 30 cents are better than some in the Colon or Panama hotels for 50 or 75 cents. At the I. C. C. hotel at Culebra, for example, we found the following as a day's fare:

Breakfast—Coffee, oatmeal with condensed cream, ham and eggs, fried potatoes, griddle cakes and syrup.

Lunch—Vegetable soup, beans, raw onions and green cucumbers, steak, potatoes, tea, prunes, cooky, orange.

Dinner—Oyster soup, sardines, beef with mushrooms, macaroni, potatoes, meat stew, orange sherbet, iced tea.

This was well cooked and neatly served. If we "had struck it on a chicken day," we were told, we would have fared better. The Culebra hotel was, however, said to be the best on the line and better just then than a few weeks before. But the others that we ate at were not markedly inferior. They fluctuate from week to week, according to manager and cook.

Since the men pay for their meals in coupons they can take one or two meals a day elsewhere if they like. Or they can club together and have a mess of

their own. This is often done, as the experienced men find it pleasanter and cheaper. At Paraiso we found that about eleven of the employees had become dissatisfied with the fare of the hotel of the Commission and had started such a mess. It had been running a month and they had paid for their outfit without exceeding the 30 cents a meal limit. Their expenses were as follows:

|                 |          |
|-----------------|----------|
| Commissary..... | \$154.75 |
| Equipment.....  | 55.00    |
| Cook.....       | 18.00    |
| Waiter.....     | 11.00    |

\$238.75

The quarters and chairs were provided free by the Commission.

The chief deficiency of the food is the meat, which is everywhere tough, for it has to be all eaten or destroyed within twenty-four hours after the animal is killed. A refrigerator line from New York to Panama has been long promised by the Commission, but is not yet in sight. Canned butter and condensed milk for a continued diet are not very satisfactory. A few market gardens and dairies along the Zone would make a great improvement in the cost and quality of the board.

"Armies march on their stomachs" is the old military proverb; and, since a canal force is also to be classed as a gasteropod, the satisfactory solution of the food question removes one of the greatest obstacles. The Government is now more than coming out even at the 30 cents a meal rate, and with improved facilities better food can be given in the future. The employee can now get board and room at \$25 to \$30 a month, which, under the Markel contract, he would have had to pay \$36.

All that is said in this article applies only to the "gold men," by which is meant, not Republicans, but the white men who are paid in gold, while the black laborers are paid in silver at half its value. It is a very confusing phraseology, especially to a Southern man.

The Government Commissary not only supplies food to the homes and messes of employees, but sells clothing, furniture and "all the necessities of life," a term which, fortunately, is still liberally construed in spite of the protest of the merchants of Panama. Prices are not

much above those of New York for the same goods, in fact sometimes less. A check system has been introduced by which an employee can draw forty per

bars, of Panama and Colon at a discount of two to five per cent., and are redeemed thru the banks and the Panama Railroad Company.

View from Ancon Hospital, near the City of Panama, Showing the Reservoir of the New Water Works, and a Hotel Now Being Built by the Commission. The new hotels are all placed like this on the tops of hills kept free from underbrush, to prevent mosquitoes. In the distance is the Bay of Panama and Paitillo Point. In the foreground is one of the royal palms planted by the French.

cent. of his salary in advance by means of books of coupons, which are taken at the commissary in payment for food and other supplies, and which pass current over the counters, or more often the

The proper housing of the employees is not in as satisfactory a state as the food question. Theoretically, each man is entitled to floor space at the rate of one square foot for each dollar of his

monthly salary. His wife is supposed to occupy the same amount of room, and the children get five per cent. of a square foot for each dollar of their father's salary for each year of their own age. It is a pretty little mathematical plan, but in applying it there are numerous practical difficulties. The buildings are not elastic, and so cannot be instantly adjusted to changes in salary or the size of family. Besides, there are not enough buildings to supply the demand, especially for married quarters. Consequently some of the men are uncomfortably crowded and others take their fifteen per cent. allowance for quarters and live in town.

Each man has to furnish his own room, and most of them do not do it, partly because the supply of furniture is insufficient and partly because they think they are only going to stay a few months and "it won't pay to fix up." The rooms in the hotels are, therefore, bare and unattractive. Since the partitions are board, with an open air space at the ceiling and the doors are always open in these phalansteries everybody can hear what his neighbors in the three adjacent rooms are saying.

In fact, no privacy is possible on the Isthmus in the civilized, Temperate Zone sense of the term. Your friends know as much as you do about your income and how you spend it; and they know more than you do about what your income is going to be next month. The Canal Zone is one long whispering gallery. Every man knows every other man's business besides, in most cases, his own. Men, deprived of womankind, have to take upon themselves many feminine functions, and among them that traditional one of gossip. It is greatly to be desired that the number of women on the Zone be increased. It would save the time of the men in various ways, and also keep them from thinking too much about themselves, their health and their comfort. To worry about one's self is likely to bring on enervation leading to chronic

selfishness, of which there are many sad cases to be seen on the Isthmus. Worrying about one's wife and children is bad enough, but does not have so injurious an effect upon a man's disposition and efficiency.

The three things lacking to make life enjoyable on the Isthmus are all feminine—women, cows and hens.

The employees are bringing their wives down faster than quarters can be provided for them. Normal family life is becoming established and society is developing peculiar forms that will provide good material for some novelist of the future. We mention this for the benefit of our short story writers, who are searching for an unworked field of fiction. In some phases it resembles official life in India. At the balls married women reign supreme, with abundance of admirers and no débutante rivals. Mrs. Hauksbee, Mrs. Reiver and all the other colonial dames with whom Kipling has made us acquainted are already on the Canal Zone.

After the novelty of the surroundings wears off, life on the Canal Zone is barren and dull for most of the men. The restraints and comforts of home life are absent and there are few elevating influences or rational amusements. After the eight hours work is over there is nowhere to go and nothing to do. It is more from ennui than from viciousness that many of the employees seek for solace in the cocktail and the jackpot, much to the detriment of their stomachs and pocketbooks. If Mr. Carnegie wants another investment of the kind he is now seeking, he could do no better than to found a circulating library of good books on the Canal Zone. The men would read solid and technical books which in a place of more attractions they would not look at. The morality of the men is surprisingly good under the circumstances, but

"Single men in barracks don't grow into plaster saints."

# The Feminist in Science

BY G. STANLEY HALL, Ph. D., LL. D.

[Two weeks ago we published a striking article entitled "The Past and Future of the Sexes," by Professor Lester F. Ward, of the Smithsonian Institution at Washington. The conclusions of this article, based on sociological, biological and ethnological data were so novel that we have asked President Hall, of Clark University, the author of "Adolescence"; Professor Wilson, of Columbia, and Dr. Wissler, of the American Museum of Natural History, to comment on them from their respective standpoints. We think their criticisms will prove of much interest.—EDITOR.]

PROFESSOR WARD, correctly saying that primarily there was no sex, says further on that the male sex developed late, was detached, and argues that "if the fertile organism was the female sex after the development of the male sex, it was female before there was any male sex," and then draws the extraordinary conclusion that "thru counted ages the female sex alone existed and life was originally, and is, essentially female." Such a statement from a sociologist who assumes to speak with some authority, in the field of biology, is, to say the least, extraordinary. Can Professor Ward name one single case in plant or animal life where a female cell organ or function has been developed without a corresponding male organism? Mottier has lately shown this bifurcation of function as low down as many of the most primitive algæ. Blakeslee has shown it well developed among the mucors or molds. Can Professor Ward have been misled by the term "parthenogenesis," the propriety of which biologists have both limited and challenged? Does he forget that Wilson, Morgan, Loeb, Boveri and others working in this field, have been able to stimulate only the first few stages of growth, even in the low organisms they worked with, without fertilization; or does he ignore Strausberger's distinction between the nutritive stimulus given by the sperm cell and the impartation of hereditary qualities which is a second function; or not remember that among even the lower plants and animals there is growing reason to believe that sex is determined very soon after, if not in some cases even before, fecundation? Sex traces and rudiments are found ever lower and lower down.

After man came, he says, that "for

countless generations woman was supreme," and calls this the great matriarchal stage which ethnologists are just beginning, reluctantly, to realize, survivals of which are being discovered in all human races. Westermack long ago enumerated a long list of primitive people, among whom no trace of matriarchate had ever been found. Moreover, the matriarchate, where it did exist, was only the natural result of a fact that maternity is always more certain than paternity, and that the mother must have most to do with the offspring, both before and after birth. Its traces are often found only in the fact that the child is named from the mother, and there is nowhere, with possibly a very few exceptions, any intimation that the matriarchate involved larger stature or more vigor in women of either mind or body than men, and yet this is implied; and without it there is no point in his argument.

Again, he states that equality is the goal. This is disproven by the fact that with civilization the dimensions of the woman's body, her life and her psychic traits become more different from those of men rather than less so. Hyatt long ago based upon that fact, as so many others have done, the suggestion that men ought to grow more manly and women more womanly; that, as Grant Allen has expressed it, sex distinctions should be pushed to their uttermost. Perhaps even the male should be ever more variable in the sense of Brooks, and the female body and mind ever more conservative, as well as anabolic.

Finally, the "cosmological perspective" here attempted is so speculative, and even if it had verisimilitude it could be realized in a future so far remote that a mind that is scientific in the practical

sense of Kant could find little consolation for the feminists in so far a cry. Fertilization theories concerning animal, and far more so concerning plant life, are just now in a very unsettled state, and at the top of the evolutionary scale stirpiculture is just beginning, so that for one I cannot think the attempt to

introduce the woman question into this field or in any way to argue from one to the other is either happy or timely. The sociological effects of Professor Ward's implications are, I think, sufficiently refuted by the segregation movement now going on in coeducational institutions.

WORCESTER, MASS.

## The Origin of Sex

BY EDMUND B. WILSON, Ph. D., LL. D.

PROFESSOR OF ZOOLOGY IN COLUMBIA UNIVERSITY, AND AUTHOR OF "THE CELL IN DEVELOPMENT," ETC.

THE theory of the origin of sex on which Professor Ward's main argument appears to be based is so widely at variance with fact that had it not been previously advocated by its author in a larger work the biological reader might well ask himself whether it was really meant to be taken seriously. The male sex, we are informed, "was developed first as an organ attached to the fertile organism" (female), and it later "became detached from the fertile organism and existed as a minute separate fertiliz-er," being at first a "shapeless mass" or mere "sperm-sac." We must admit that with such a cosmological perspective the male sex does indeed appear to be a very inferior being, for the appearance of which its progenitor might well have offered the apology that it was "only a little one." This peculiar theory, which sounds like an echo of Huxley's long since abandoned theory of the "individuation of organs," is not likely to be taken *au grand sérieux* by biologists, but it may readily mislead more general readers.

In point of fact we do not know positively what was the origin of sex; but enough is known to demonstrate the extreme improbability of Professor Ward's theory. Were this theory correct, we should expect to find the males becoming smaller and less perfectly developed as we descend the scale of organization, and arising asexually (by budding or a like process), while the lowest metazoa

(multicellular organisms) should either be hermaphrodites or possess only rudimentary males. But all of this is, of course, contrary to fact. If we except the aberrant sponges, the lowest metazoa, such as the hydroids or polyps, are as a rule of separate sexes, the males and females being separate organisms that are produced in the same way and show the same type and degree of organization. Both sexes may, it is true, arise from buds formed upon an "asexual" stock; but this is generally admitted to be a secondary complication, and one that affects both sexes alike. In many of these forms, both males and females, identical in general structure, are produced from eggs, and produced in the same way. Pigmy or rudimentary males occur only in higher groups, such as the barnacles, rotifers and echiurids; and comparative study shows beyond doubt that they are degenerates that represent a very highly modified condition, not a primitive one. Here, too, the males, like the females, are produced from eggs. It is indeed possible, as many naturalists have maintained, that the separate condition of the sexes was preceded by an hermaphrodite one (tho this is not certain), but the whole force of the evidence lies on the side of the view that in this case the appearance of two sexes resulted from a differentiation of the species into two divergent groups, in one of which the male characters, became latent. in the other the female. Whether the

primitive condition was hermaphroditism or a separation of the sexes, the evidence is well nigh conclusive that the two sexes are simply more or less divergent modifications of a common ancestral type and have arisen in essentially the same way.

Professor Ward's conception of the manner in which the males were led along the thorny pathway of ascent to the level of the female organization is sexual selection with a vengeance. Are we really expected to believe that the males, when no more than "shapeless masses" or mere "sperm-sacs" engaged in a "rivalry to be selected," and that the females of animals at so low a stage of development had the wit to "select the best and reject the inferior" from their misbegotten progeny? It is difficult enough, in all conscience, to keep alive our faith in the efficacy of sexual selection in the birds and mammals—not to mention the insects and worms, and maintaining a discreet silence on the inconvenient subject of sexual differences among plants—without subjecting it to such a strain as this. Even as applied to the higher animals the theory of sexual selection has been rejected by so eminent an evolutionist as Alfred Russell

Wallace, while the drastic criticisms of more recent writers have tended still further to cast doubt upon the theory.

The contention that there is no inherent or essential superiority in the male as compared with the female is undoubtedly correct; but the reverse statement would be equally so. Zoologically considered, each sex shows an adaptation, often of wonderful complexity of perfection, to the conditions under which its own specific functions are performed. These conditions differ widely in different groups and even in different species of the same group. It is in some cases the male, in other cases the female, that shows the more highly organized condition. In others neither sex can be said to be the more highly organized, both contributing equally, but in different ways, to the common life of the species. The relative degree of organization of the sexes is therefore not to be determined by an appeal to general principles, or to questionable theories of the origin of sex, but by the study of each individual case. What verdict may be passed upon this question in the case of man I will not here undertake to say.

NEW YORK CITY.

## Professor Ward and Ethnology

BY CLARK WISSLER, Ph. D.

CURATOR OF ETHNOLOGY IN THE AMERICAN MUSEUM OF NATURAL HISTORY.

PASSING over two of the great revolutions in the author's chronicle of creation we come to the period in which female beauty is supposed to have originated. The argument in this case is based on esthetics; since esthetical selection is taken as the determinant of the female type. The weakness in this argument lies in the relativity of man's ideas of female beauty. The Venus of the Fuegian, of the Greek and of the current fashion plate are three types that probably appeal with equal force to their respective male associates. Yet, casting this aside, it must be recognized that it is conventional adorn-

ment that is the chief part of what we call sexual beauty. To untangle the conventional elements from the basic substratum of esthetics is a worthy problem for the future, but it is clear that adornment is subject to convention, and, hence, relative. If female beauty, *per se*, is due to a revolution in sexual selection, the male preference, as shown in the flattening of female heads, compression of calves, etc., should have produced by male sexual selection very great differences in the female figure among the races of the world.

However, the important claim in Professor Ward's article is that this period

of male selection is the one in which the dominion of the female gave way to male dominion. This touches upon a much debated question—the human family. The sociologist generally accounts for the origin and successive forms of the family on logical grounds, assuming promiscuity at one end and strict monogamy at the other. Then he makes it his problem to trace out the logical steps by which the mind of man could have passed from one to the other.

True, he appeals finally to the facts of ethnology, but on this point, and most others of human convention, the great diversity of culture forms over the earth can furnish examples in agreement with any well constructed theory of social evolution. On the other hand, the ethnologist pays little regard to such a theory because the diversity of facts make him keenly conscious of the extreme conventional character of the social aspect of the various family systems. To his mind these stand apart from biological evolution. It is curious that it has always seemed necessary to carry the theory of evolution up thru morphology into the psychic life of animals and men and finally into those human practices that are designated as conventional. While there is doubtless some connection between the fundamental elements of psychic life and physiological function, the direct connection between the details of ideas and such function is not clear. It is a common saying that on the industrial side man has progressed from tools of wood and stone to bronze and then to iron. This is said to be an evolution. It is, however, an evolution, or succession, of ideas and has proceeded in a manner which we are accustomed to speak of as invention. The history of man's material culture is a statement of the accumulation of assumed knowledge or ideas. Such a history has to do with the products of psychic activity as objective facts in their chronological relation. Now, it is not clear as to the justification of this stepping over from psychophysical activity as such to its products and regarding them in turn as the final steps in the evolution that produced morphological types and their psychophysical functions. Sociologists have always been

fond of considering the evolution of institutions such as the family, the clan, the tribe, the church, the school, etc., as a direct part of the process that produced the different types of biological forms now scattered over and thru the earth. Hence, they go away back to a hypothetical biological beginning for the basis of their theoretical reconstruction of the history of social accumulation and, unlike the man in the play, bring it to the fore.

As ethnological research increases our knowledge of the ways of men we find an ever increasing diversity of conventional practices respecting the family, the tribe and the priesthood, all of which point toward the most narrow kind of a dependence between such systems of ideas and the quality of psychophysical activity. All evolutionary theories of industrial or social phenomena presuppose as the starting point a mind that is decidedly human in kind. The family as to its matriarchal and patriarchal forms has been conceived of as two successive steps from promiscuity to monogamy without giving much attention to the fact that the point of view in the matriarchal and patriarchal systems is the inheritance of accumulated property or social right rather than the relations of the sexes. The ideas of right by birth and of property are susceptible of modification by suggestion in the same manner as other ideas, and among some peoples there is a tendency to see no necessary correlation between sexual relations and the social aspect of marriage.

A great deal is made of clan organization and its various features, but there are facts indicating that clans have sometimes grown up on highly developed systems of monogamy. At least one American tribe has been observed in the process of change from a social organization without clans to one with clans. We have here again a succession of ideas respecting the family function. In the psychological phase of activity, which is, after all, the point of view of the ethnologist, what is called evolution is a logical sequence comparable to the life history of any individual mind with respect to ideas. This logical flow of ideas doubtless has laws which it inter-

ests the sociologist and ethnologist to discover, but their formulation must be based upon the products of a mind already formed rather than upon other laws formulated for activities by which the mind itself was brought into being.

Thus the objection to the theory of Professor Ward is a general one in that

it is a carrying over of the principle of natural selection as based upon sexual relations with its assumed inheritance of one kind or another and applying it to facts in the realm of conventionalities. Obviously, conventionalities are not subject to the laws governing the transmission of biological characteristics.

NEW YORK CITY.

## A Significant Boy Experiment

BY JUDGE ALBERT McCLELLAN MATHEWSON

[Judge Mathewson of the City Court of New Haven, is the originator of "The Boys' Good Government Club," which he describes in the following article. It is a very good sign when the judge of a court takes the trouble personally to instruct the boys brought before him in good government, and as his experiment has now been tried a sufficient length of time to prove its success, we commend it to other judges thruout the country and to all those interested in penology.—EDITOR.]

THE early criminal laws sought punishment only, and often with such severity that the accused was driven into a more hardened criminal life. The hardships of the prison have now been gradually relaxed, and for a number of years an attempt has been made to encourage reform. The more recent advance in this line has been the enactment, in most of the States, of the Probation Law with its opportunities to save even a confessed criminal from jail and disgrace.

Every judge who has sat upon the bench in the trial of criminal cases is impressed with the fact that each case has its peculiar characteristics, and must be studied individually. The present flexibility of the Connecticut Probation Law is certainly working for the well being of the State, and is saving many who are on the threshold of a criminal life from becoming a curse to themselves and a continual expense and menace to the State.

In one respect, the New Haven Criminal Court has been quite in advance of many others because its City Court had been allowed by charter from the time criminal jurisdiction was conferred upon it, to suspend judgment in many minor cases, "whenever such Court may deem such forbearance to be advisable by rea-

son of the age of the accused or the circumstances under which the offense was committed."

It is hard to reform a mature man who has fallen into evil ways of living, but every effort should be made to protect the youth, and with the proper exertion many who are beginning a life of crime can be saved.

The present judge of the City Court of New Haven assumed the duties of his office in June, 1905, and after studying the situation with care, decided to devote some of his time and energy to the encouragement and the help of boys who were brought before him. With this purpose in view he originated an entirely novel scheme by organizing boys who were in charge of the probation officer into a "City Government Club."

The opportunity presented itself when seven bright, active boys were brought before the court last August, charged with theft. Two of these boys had previously been arrested on charges of burglary, and under the old administration of the law nothing could have saved them from commitment to the Connecticut School for Boys, with the probability that their spirits would have been broken, and that they would develop into confirmed criminals. These boys, whose ages ranged from twelve to sixteen

years, were placed in the hands of the probation officer, but the judge rather startled the City Court officials by commanding the boys to await the adjournment of the Court in his office. After court the judge explained to them that while they were strictly in the charge of the probation officer, they would report to this officer thru the judge, who would meet them once a week.

The constitution of the club, which is given herewith, will explain its practical purposes:

#### THE BOYS' GOOD GOVERNMENT CLUB OF NEW HAVEN.

This Club is organized for the study of questions connected with the government of the city of New Haven and for a better understanding of the duties of the various city officials; the reason for their existence, their election and powers.

#### MEMBERSHIP.

Boys who are invited by either Judge of the City Court shall be eligible to membership and shall have all the rights and duties of members as long as they may wish to continue in said Club or until expelled by the other members of the Club under such ordinances as shall be established or by order of the Judge of the City Court.

#### OFFICERS.

Regular elections shall be held on the first Wednesday evening of October and on the first Wednesday evening of each second month thereafter, at which time a Mayor, City Clerk, Chief of Police and such other officers as may be established by ordinance shall be elected by ballot from among the members of the Club. At said election a Board of Aldermen of not more than fifteen members shall be elected.

#### POWER OF ALDERMEN.

Said Board of Aldermen may pass ordinances for the government of the Club by vote of the board, signed by the Mayor, which shall become binding and operative if approved by the Judge of the City Court, but if not approved within three days after passage, said ordinances shall be null and void.

#### MEETINGS.

Regular meetings of the Club shall be held on each Wednesday evening at 7:15 o'clock.

The boys very soon wanted some badge or button to show their membership in the club, and a button with the seal of the city of New Haven in the center and the name of the club in the outer circle was adopted and is worn continually by all the members, including the Judge.

The club has proved a success beyond the best hopes of its originator, and has accomplished much in stimulating the boys to realize the reasonableness of

State and City Governments and the necessity of the laws and ordinances under which they live, and to regard them more carefully.

The boys who are under the Probation Law are compelled to attend the meetings regularly, but after their discharge by the court their obligations cease. It has, however, been very gratifying to find that the boys are sufficiently interested in the work which has been undertaken to continue their membership. Of the seven boys with which the club was first organized and who were discharged by the court in October, three have continued in regular attendance, and the others had valid reasons for dropping their membership, but they retain their interest.

During the evening, subjects of interest are discussed at every meeting, either in connection with the City Government or on a topic which is attracting public attention at the time. The work is each week laid out by the Judge, and frequently the boys have expressed a desire to remain beyond the regular hour, in order to continue the instruction. Another indication of the interest of the boys is shown in the request that their friends be allowed to join the club, but this was decided to be impractical, as it would divert the work and purposes from their original channels.

Two distinct objects are accomplished, the first and most important being the influence on the boy himself in showing him that some one has an interest in him, and is willing to help him, and in stimulating in him a pride to do better, and second, thru this boy reaching his friends and discouraging the first steps toward a court record.

Thirty-three boys have become members of the club since the organization in August, and of these, only one has again been brought before the court. In the case of this boy his home life was very discouraging, and the Judge decided that the restraint and constant care of the School for Boys would be best for him.

With this exception, the boys have evidently benefited by the instruction and association of the club, and it is proving an element for good in the city.

NEW HAVEN, CONN.

# Forest Reserves

BY W. B. HEYBURN

UNITED STATES SENATOR FROM IDAHO.

THE present condition of the forestry service of the United States is an outgrowth of an amendment to an act to repeal timber culture laws, enacted on March 3d, 1891, and provides:

That the President of the United States may, from time to time, set apart and reserve, in any State or Territory having public land bearing forests, in any part of the public lands wholly or in part covered with timber or undergrowth, whether of commercial value or not, as public reservations, and the President shall, by public proclamation, declare the establishment of such reservations and the limits thereof.

It was not contemplated at the time of the passage of this act that it would be exercised except to a very limited extent, and that only to include lands that were out of the possibility of home making, or profitable for lumbering; and it was not intended that this original enactment, nor any subsequent enactment on this subject, should be made the basis of the Government engaging in the lumber business, either in wholesale or retail, or that the creation of forest reserves should result in withdrawing any portion of the public domain

adapted to home making, grazing or mining from appropriation or settlement under existing laws. It was expected that the creation of forest reserves would be confined to the class of timber lands unavailable for either settlement or purchase under existing laws. It was not intended to repeal any rights then existing to settle

upon unappropriated or public lands for any purpose under existing laws. Immediately upon the enactment of the above authority to set aside lands for forest reserves the administrative department of the Government entered upon a most rigorous enforcement of the law, going far beyond its intents and purposes, until 1897, when Congress felt called upon to call a halt on the manner in which the law was being administered and in the Act of June 4th, 1897, Congress specifically provided the purpose for which forest reserves might be established and administered in the following language:

No public forest reservation shall be established, except to improve and pro-

W. B. Heyburn.

text the forest within the reservation, or for the purpose of securing favorable conditions of water flows, and to furnish a continuous supply of timber for the use and necessities of citizens of the United States; but it is not the purpose or intent of these provisions, or of the Act providing for such reservations, to authorize the inclusion therein of lands more valuable for the mineral therein, or for agricultural purposes, than for forest purposes.

The purpose of the statute as defined by this provision has been disregarded, and the forestry department, in its zeal to build up a powerful bureau, has entered upon a wholesale creation of forest reserves in disregard of the limitation and purpose contained in the statute. There has been created, and withdrawn for the purpose of creating forest reserves, in the States of Colorado, Wyoming, Idaho, Montana, Washington, Oregon and California, and the Territories of New Mexico and Arizona an area greater in extent than New England and all of the Middle States combined. The forest reserves created, and the land withdrawn for the purpose of creating forest reserves, in Idaho equal 28 4-10 per cent. of the area of the State. In several counties in Idaho the area withdrawn for forest reserves is from 75 to 85 per cent. of the total area of the counties. This results in withdrawing these lands from settlement, and consequently from taxation and contribution to the growth and of established value to the wealth and support of the State and counties. It means a limitation of the growth of the State and of the counties. Under existing conditions vast quantities of land admittedly susceptible of home making are included in these reserves.

The Forestry Bureau is now withdrawing large tracts of land upon which there is no merchantable timber and leasing these lands for grazing purposes under exclusive contracts, admitting only that portion of the public who are fortunate enough to be on the inside of such contracts.

The Commissioner of Immigration in Idaho complains that the field upon which large immigration could be located upon land well adapted to home-making is so absorbed by these withdrawals for forest reserves as to seriously embarrass the Bureau of Immigration in caring for the large number of citizens who are constantly inquiring for

home making lands in Idaho, and that the tide of immigration is being diverted from Idaho.

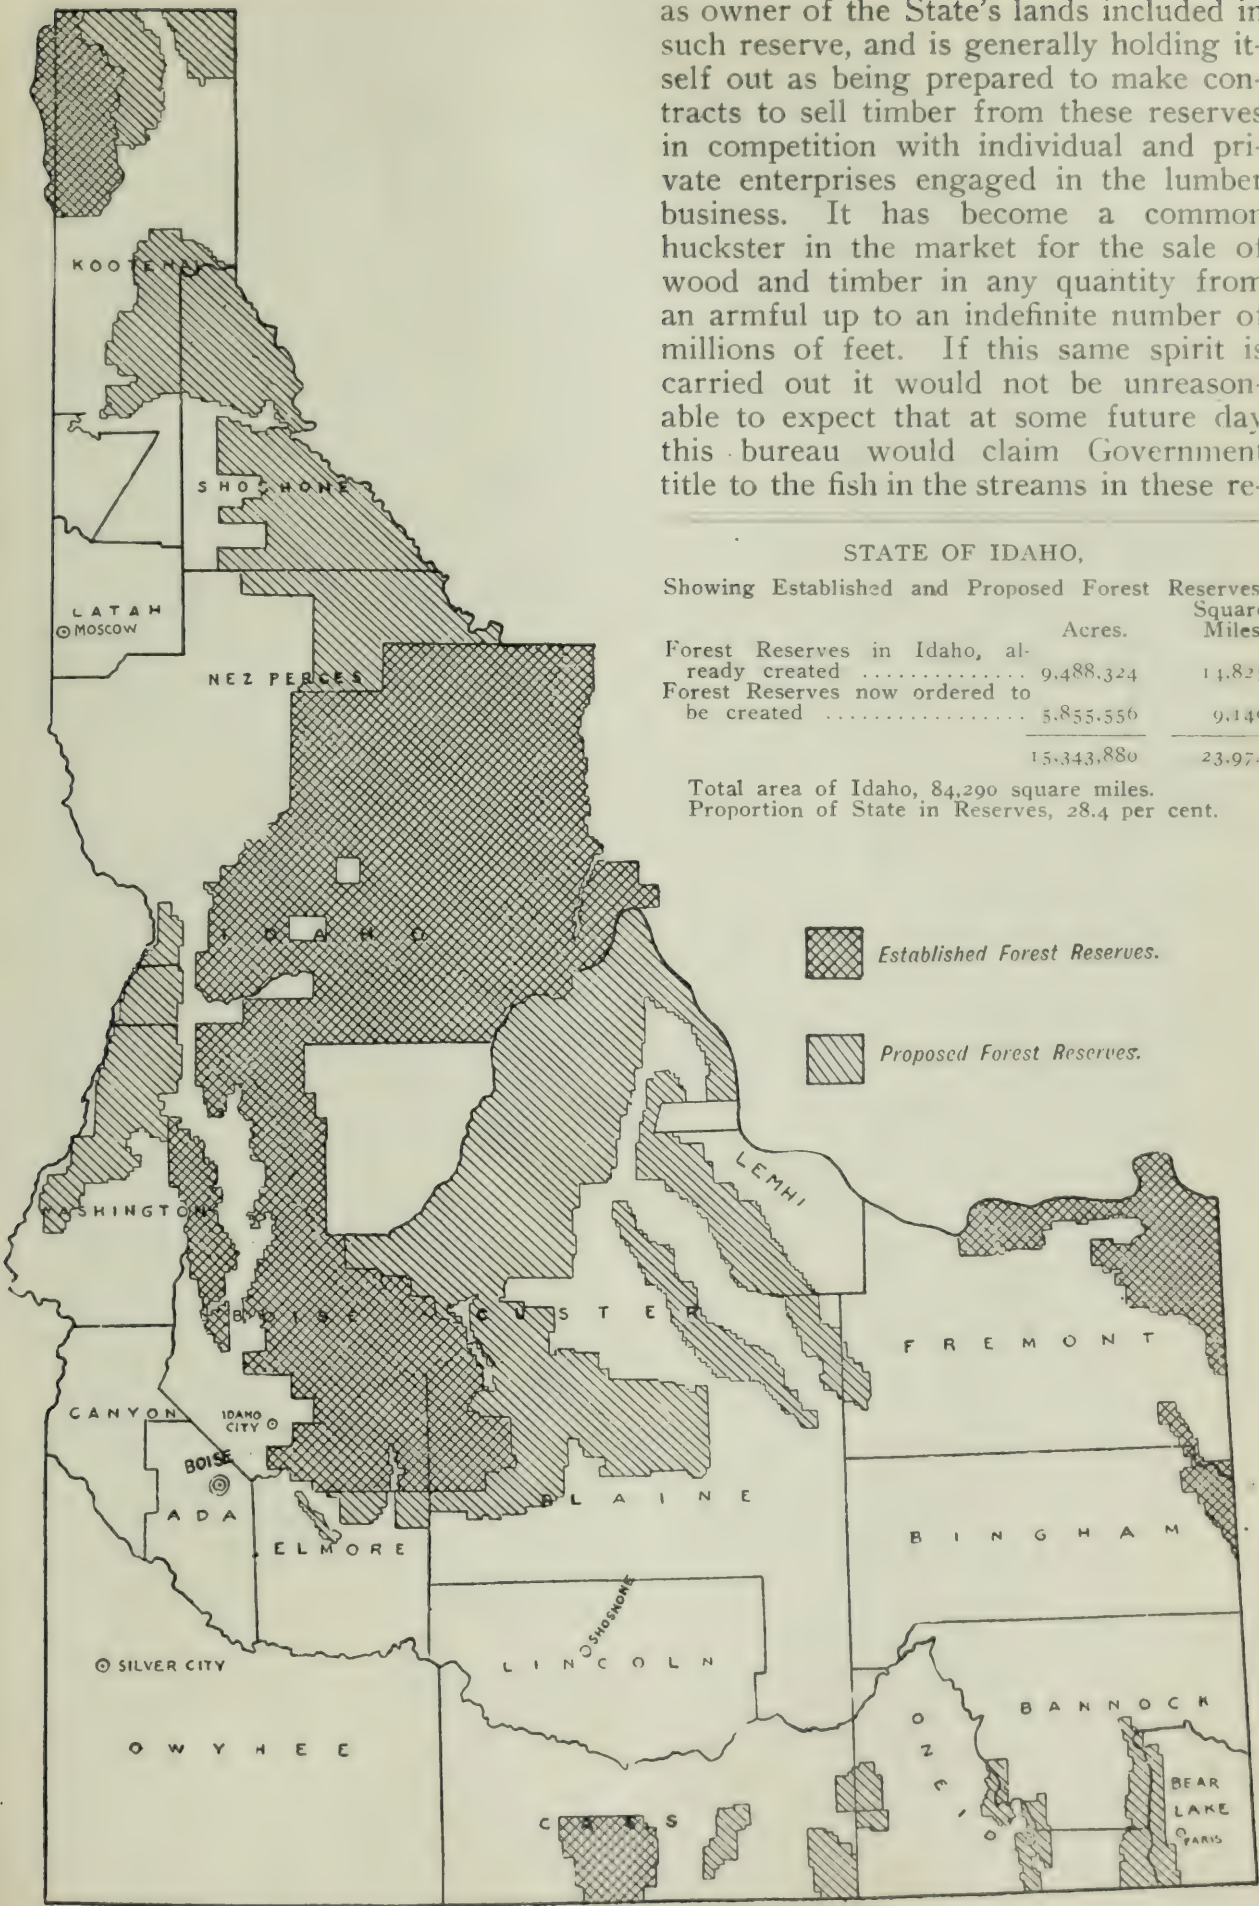

The railroads constructing lines in Idaho complain that the withdrawals of these lands from settlement and development seriously discourage them in the extension of their lines, inasmuch as railroads are built to accommodate existing settlement and development, or to bring about these conditions, and that long stretches of lines thru these reserves which contribute neither tonnage nor passenger traffic represent a dead investment in such roads.

Men engaged in prospecting and mining complain that they are subjected to trivial annoyances and often to serious embarrassment owing to the exercise of power and supervision by the forest officers, rangers and other officers, who, under the regulations, claim a right to pass upon the sufficiency of their discovery, of their rights in connection with their development, and the bona fides of their location when they apply for patents. The result is that prospecting and mining within that portion of Idaho covered by reserves is discouraged and men are diverted to other fields where these annoyances do not exist.

I might enumerate many other serious disadvantages and drawbacks resulting from the withdrawal of these vast areas of land from the usual enterprise and development upon which new countries must depend for growth, but many of the disadvantages will be obvious from an inspection of the rules which have been made by the Forestry Bureau and which they treat with the sanctity of law. In addition to the disadvantages above suggested the Forestry Bureau has assumed to take possession of the school lands of Idaho, given it by absolute grant by Congress in admitting the State, of the minimum value of more than \$10,000,000, and has embraced these lands within the forest reserves and is leasing them under its regulations and thus depriving the State of the income from the use of these lands, to which it is entitled. Even conceding that such leasing is warranted by law, this bureau is assuming and is exercising the right to make contracts for the sale of timber, in disregard of the State's rights

as owner of the State's lands included in such reserve, and is generally holding itself out as being prepared to make contracts to sell timber from these reserves in competition with individual and private enterprises engaged in the lumber business. It has become a common huckster in the market for the sale of wood and timber in any quantity from an armful up to an indefinite number of millions of feet. If this same spirit is carried out it would not be unreasonable to expect that at some future day this bureau would claim Government title to the fish in the streams in these re-

serves, and compete in the fish markets in Idaho with the local industry.

Government within these reserves is by consent of the forester and not by virtue of the law. It follows that more than one-fourth of Idaho is deprived of the rights and benefits of self-government; that the natural resources of this portion of the State are withdrawn from contribution to the growth and development of the wealth of the State. The petty regulations made and the trifling enterprises carried on by the Forestry Bureau with reference to these regulations is ridiculous in the extreme. The pretense that such a system is necessary to protect the Government property in its lands and forests within the State is puerile and groundless. The men comprising the Forestry Bureau have a theoretical interest in these assets which the Government holds in trust for the State, to be used only for its development, growth and enrichment, but the people who have gone to the State and who would go there to make their homes, rear their families, build cities, churches and educational institutions, and develop the resources of the State from a material and political standpoint are possessed of as much unselfish patriotism as the people of any other section of the United States. Your sons, brothers and neighbors from every part of the United States who have carried their traditions, their love of country, and their respect for its laws and for the right of property with them to the State of Idaho and other Western States have the welfare of their adopted country and new homes at heart, and from motives not only of patriotism but of self-interest can be safely entrusted with the protection, preservation and development of the resources within their State, whether personal, State or national. From the manner in which they are being treated in regard to this question you might imagine that they were not citizens of the United States—that they were freebooters and marauders intent only upon the destruction of the country and its resources. A comparison of the conduct of the people of Idaho and other Western States in regard to the protection, preservation, conservation and use of the resources with which nature has endowed their section

of the country with the conduct of those who occupied the same relative position in New England, the Southern, Middle or Central States would not be to the discredit of the people of Idaho and other Western States. These people have done as well, and better, in the way of making the best of natural resources and in the establishment of self government, in the same length of time than was done by their ancestors on the Atlantic coast.

I have used Idaho as a text in discussing this question from the fact that the Forestry Bureau has seemed to select that State as a playground for its fancy and has made it the victim of its un-American policy, to the end that its settlement is being retarded, and the home maker is discouraged from approaching it, and those already settled within its borders are hampered and embarrassed in the exercise of their rights under the law.

The best protectors of the forest against fire and other wasteful devastation are the people living within it, with their home and property at stake. It is the neighbors banding together that will respond most quickly to these dangers and most effectively prevent them.

Humanity has in all ages lived within the timber from choice—made homes there—reared and educated the families—and then produced men that have made history.

The only people within the State who favor the forest reserve policy as administered are those who have not considered the question or those with some selfish purpose to serve. The large timber syndicates, who have secured vast areas of the finest white pine and other timber in the world within Idaho, would like to see the field of future possession of timber lands by individuals closed. They are thus relieved from the competition of the custom mill and the local supply upon the market which would come from the sale of the excess timber on the homesteads and other legal claims which should be made within these reserves.

The Secretary of Agriculture, who is the head of the Forestry Service, together with the Chief Forester of the United States, recently took active part in what was called a Forestry Congress, held at Washington. The newspaper re-

port of this Congress stated that a man, who is perhaps the largest timber and mill owner in the United States and who holds more unlawful timber claims than any man in the United States, and whose holdings in Idaho alone represent a lumber supply for the next half century, was made a vice-president of this association and is associated in that way with the forestry service. This presents a travesty on efficient government the like of which should be impossible.

These reserves in Idaho include more than thirty post-offices. They include or surround some of the oldest settlements in the State, so that the settlers can only reach the live portion of the world by passing over the reserves. Millions of dollars are invested in mines in Idaho that are cut off from the business world by vast stretches of forest reserves, the access to which can only be gained by passing over the reserves—the right is enjoyed only as one of consent and not of right. Limitations are placed upon the right to go over these reserves which render the right so undesirable as to cause its abandonment. You will be told by those that speak for the Forestry Service that they intend to give the people rights to such an extent that they will have no cause for complaint. Mark you, *they intend to give the people these rights!* The American people have not been accustomed to receive their rights as a gift or

concession at the hands of their servants. It is the people of the country who own these lands, and it is the people of the country who are the government. These men holding, for the time being official position, are directed by the people to execute the will of the people as expressed in the law, not to make the laws for them. The American people, of whom the people of Idaho are a part, have a right to the enjoyment of the natural conditions pertaining to their locality. These are inherent rights peculiar to every section of the United States, resulting from the exercise of the individual choice of location, and one section of the country should refrain from **unreasonable** interference with the exercise of these rights by those of other sections.

As an example of the forestry system in Idaho I append hereto a map showing the forest reserves already created and the section of the State withdrawn for the purpose of creating other reserves, which aggregate 15,343,880 acres.

I am admonished by the length of this article that I must not undertake to exhaust the subject herein.

The system as administered is so vicious as to constitute a menace to the growth of our States in which the evil is being worked, and we must ask the people of the country at large to join with us in staying the hand of the spoiler.

WASHINGTON, D. C.

## Behind the Barriers

BY IRENE P. McKEEHAN

We live behind our barrier walls of clay  
Lives that no man may know;  
We worship, wonder, weep and dream and play  
Alone from rose to snow.

I will be wise, nor ever seek to peer  
Beyond your barrier gate;  
Yet—for I love you—still I linger near,  
Lifelong I stand and wait.

And lo, there comes the murmur of a prayer  
Sung in your heart's retreat;  
And lo, a lily petal thru the air  
Floats fragrant to my feet.

EVELETH, MINN.

# "Worldly Amusements"

BY A METHODIST WOMAN

[The approaching General Conferences of the Methodist denominations in the United States give point to the following article.—EDITOR.]

I BELONG to a Church which forbids its members to indulge in "worldly amusements." And to make sure that some do not presume upon this definition, the authorities have listed the following in particular as being "worldly": circuses, card playing, dancing and going to the theater.

I was baptized in infancy, of course, because my father and mother also belonged to this Church. And with us that is the occasion when parents promise to make the child keep their vows until it is old enough to join the Church and assume them of its own accord. This is really a great hardship upon a class of human beings who are too young and too innocent to suffer the bondage of a Church discipline that was primarily designed to keep perverse older people, who have got the habit of "falling from grace," in the straight and narrow way. Infants, in my opinion, are about the only members of the human family who do not stand much in need of baptism. "They come trailing clouds of glory from God who is their home," and it is superfluous therefore to pour out our sad ceremonies upon their heavenly heads. If anybody must be baptized, let it be the parents. If, every time a child was born to them, the father and mother were earnestly exhorted and immersed, it might sanctify them afresh and enable them to set a better example for their young, which is far more important than worrying them with adult Church shackles.

But my own parents were in earnest when they promised the minister, as I lay shrieking in his arms, that they would bring me up in the nurture and admoni-

tion of the Lord. Of course they would have done that if they could anyhow, but what they meant was that they would do it according to the discipline of their Church. And, for one, I have never doubted that they put their conscience in the undertaking. That was where the trouble began. I was too innocent to have a conscience for several years after that. No matter what mistakes I made in living, I continued to feel happy, unoppressed, guiltless. Some may think that this was an evidence of innate depravity, but I do not. I believe that I was still trailing my clouds of glory and did not need the intervention of any church discipline in my affairs. Nevertheless, I had it. At that time we lived near where the circus spread its tent every autumn. I was allowed to see "the parade" because nothing is said in our discipline against the temptation thus generated to see the whole circus. My admiration for the clown was excessive, but I cannot believe that it was immoral. And the largest wish of my life for a long time was to see him perform in the ring. Once, when I begged very hard, I was taken to see the "animals," indeed, but never the clown. And as we walked solemnly from cage to cage I could hear the dearer sounds of worldly delight from the adjoining circus ring, where I imagined the wonderful clown was riding head downward upon his donkey, or skipping thru fiery rings, and I longed to see him more than I did for any kind of salvation. I despised the elephant, I regarded the lions listlessly, and by the time we reached the serpents, I had burst into tears. It was useless to reason with me. My Godfearing Sabbath school teacher

who had me in charge made every possible appeal to my better nature in vain. I had no better nature than God gives a fanciful child and with all the strength of that I desired to see the clown. She assured me that it was sinful even to wish to bring such reproach upon my father and mother, who were church members. I told her I didn't care how sinful it was, God in heaven knew that I wanted to see the clown. But I never saw him. And there are thousands of little vicarious saints all over this country who have suffered the same persecution because their parents belong to this Church.

The prison house began to close upon me for good during my seventh year. One day another little girl whose parents belonged to a Church which does not forbid the playing of cards undertook to teach me the mysteries of a game which she called "seven up." I learned with so much worldly minded inspiration that presently I surpassed my teacher, and returned home to boast of the achievement. Immediately a deep gloom settled upon the family circle. Something awful had happened, and I knew that it was to me, but the exact nature of my misfortune did not dawn upon me until my grandfather called me into the parlor, where the sacred family Bible lay upon the "center table." And there, in the presence of the whole family, he read an oath which he had written out, and the substance of which was that never again so long as I lived would I touch a "play card." Then he caused me to place one hand on the Bible, hold the other above my head and swear solemnly to keep the oath. The whole ceremony was so imposing, and the relaxation was so complete as I fell sobbing and terrified in my mother's arms that I actually felt as if I had been saved by the very skin of my teeth from everlasting destruction. After that for years I thought that people who played cards were monsters of wickedness. And I kept my oath even after I found that many of them average up as well as our Church members in morality. Still, I often think, since our children are all grown and gone, that my husband and I would be less lonely in the evening if we could have a little game of cards to-

gether. We could play checkers or chess or some Bible game, I suppose, but in the perversity of my heart I want to play real cards. All my life I have felt cheated of my moral right to choose in this matter. But we shall never play, because my husband is not only a member of this Church, he is a minister in it. And he would as soon expect to find a rattlesnake as a deck of cards in my work basket.

Sometimes when he has been the pastor of a fashionable church (that is, of a church wher the members do as they please regardless of the discipline), we have come in intimate contact with people who enjoyed many worldly privileges, and they were not bad people. Heaven forgive me, but often I admired them more than I did some of the stricter Church members. They were less severe in their judgments. This may be accounted for by the fact that they lived "in glass houses." But charity is a grand thing, even if one has to live in a "glass house" to learn it.

Occasionally these women gave card parties. They would have liked to ask me; and, it is a terrible thing to say, but I would have enjoyed being there. I would never have played for a prize, of course, and I am conceited enough to think that it would have been omitted if the pastor's wife had been present. This, I think, would have been a step for righteousness, because it would have reclaimed just that far a thing which is innocent in itself, from an evil reputation. All Christian people have much to say about "conquering the world for Christ," but when the issue is made, too often we have surrendered the contested point, something we needed or might have innocently enjoyed, to the powers of darkness. We may be consistent Church members, but I do not think we have enough shrewdness about the *business* of being good. That is why the ungodly get so far ahead of us, sometimes. They are so ingenious, so enterprising, and they put more *wit* in their efforts. They take all that we surrender and make it evilly attractive. Thus card playing has come to be used almost entirely for one form or another of gambling. And we have lost knowledge of the fact that it is still an interesting

pastime, even where there are no "stakes." The trouble is that good people, a certain class of Church members, surrendered the game to evil experiments, so that now it seems tame without them.

A member of our Church is forbidden to dance. Now, many people do not and cannot dance, but it was intended by nature that every one of us should, just as all birds are made with the instinct to fly. And for one, I have distinctly missed the joy, the *need* of dancing. When we have some sensations it seems as cruel not to allow us to dance them out as it does to forbid us to sing.

I like the innocent joy there must be in innocent dancing, and I have often wished that we might give a—well, a "ball"—at the parsonage, invite all the young people of the town and have some fun. I am sure they would enjoy it and that it would do them good to feel that for once they were having a good time beneath the smile rather than the frown of our Church. So often they get the backslidden feeling, not because they have done something actually wrong, but maybe because they have kicked their young heels thru a rule in the discipline.

And we are forbidden to attend theaters. No distinction is made. It is just as bad to see a Shakesperean play or to go to the Grand Opera as it would be to attend the most scandalous vaudeville performance. I have heard ministers in authority among us say that theaters were morally injurious even when the thing dramatized appealed to the highest in us, because we enjoy the emotional impulse of such an appeal without acting upon it. Thus, they claim that some people who weep over the woes of a beggar in the play will not give a penny to home missions. And doubtless this is a fact, but the same point can be made about sermons on Sunday. These are designed especially to awaken the conscience and to appeal to our nobler ideals. But after listening to them we usually return to our week-a-day shortcomings. Some of the hardest hearted people I ever saw have been injured morally in this way—by making no commensurate effort to live up to the gospel they heard from Sunday to Sunday.

In short, as a Church, we have lost

the restraint that we might have exercised over the stage, but the Church has not been able to prevent its members from attending the theaters. Here, again, I think we have failed in common wit, in that shrewdness which is necessary when it comes to dealing with a creature as carnally gifted and as spiritually elusive as the average human being is. Men love liberty and they hate bondage. And the result is easy to foretell when they are obliged to associate the idea of bondage with the Church, and the idea of liberty with the world, the flesh and the devil. By a curious perversity of the instinct of free agency, they will not borrow their morals nor long endure to have virtue thrust upon them by a Church discipline. There is such a thing as being "free in Christ Jesus," and it is founded upon no sacrilegious notion of license with evil forces, but it is the right and the power a man has in himself to choose between right and wrong without being poked at from behind with arbitrary rules and regulations. It is better for the members of a Church to walk more softly before the Lord, and not so much in the fear or defiance of a discipline.

Another result which follows from having such rules as a part of a Church government is, first, the pharisaical attitude of some who keep their vows literally; second, the boldness with which others perjure themselves of them; and, third, the secrecy, not to say deceit, with which still others evade them, in order to gratify innocent desires. All this is bad on the conscience, which is at best a very delicate, easily deranged compass of the moral nature. The long and the short of it is that I wish the government of our Church could be changed so that little children could go to circuses and see the clown without injuring the consciences or reputations of their parents as Church members; so that our young men and maidens could dance to their hearts' content; so that we old people could play cards, and so that we could all go and see a good drama now and then. Some, to be sure, will abuse these privileges, but not so many as abuse them now. And it would give us all a chance to be "free moral agents" in our relations to the Church, just as we claim

to be in our relations to life generally.

And I wish all this, not because I am backslidden or disgruntled with my Church. I am doing the best I can, morally and spiritually. And I accept the fundamental doctrines of this Church cheerfully, but the point is that I do not like to join the ranks of those who openly defy the discipline, and I do not wish to feel sneaky, as I do now, and as I doubt not many another "consistent" member feels—for not long since I took my life in my hands and went to a theatre. I am an old woman with grown children, and I had never looked inside one before, but I was as far from home as the East is from the West, and so my example did not injure any one, neither did what I saw injure me. Now, when I consider that if I confessed to my hus-

band, and declared that I was not sorry, but actually wished to go again, as the pastor of this church it would be his duty to expel me; when I consider this I say it is time something was being done! Of course it would have simplified matters if I had stayed away from the theater, but I did not, and others do not, nor will not.

The question is, Will the controlling body, which is to meet soon, take any notice of our predicament? Most of us are willing that they should go on baptizing the babies, tho for one, I maintain that it would be more intelligible and more effective to baptize the parents. But with the exception of a very small number, we all want the discipline revised so that it will not be so easy, nor so tempting as it is now to "fall from grace."

## The Ice-bound Boats

BY MURIEL E. CHASE

We are the ice-bound boats that go  
To islands leagues away,  
When spring shall melt our icy bands  
And teach the waves to play.  
But ah—the winter is o'er long  
And harbor ice is gray.

The spring is near—we hear her voice  
Low calling to the gulls,  
Whose wings flash silver in the sun  
Above our dusky hulls,  
Or like twin lightnings shoot away  
Whene'er the tempest lulls.

Like lilies quivering on a pond  
Our moorings we will strain,  
When spring shall loose our icy bands  
And free the grumbling main,  
Which rumbles with the wild sea bull's  
Hoarse roars of angry pain.

The burly crew shall man our decks  
And sing and tell wild tales,  
And they shall bring strange cargoes in  
And furl our storm stained sails;  
Then haul the creaking cordage up,  
And give us to the gales.

Alert as is the hunted fawn,  
Our prows will point to sea;  
And swifter than her fleetest flight  
Our wind-spurred course will be;  
Yet graceful as a wind-blown rose  
And strong and sure and free.

And we shall hear the mermaids chant  
Weird legends of the deep;  
And languorous murmurs of sea lyres  
Shall lull our crew to sleep,  
Till raucous curse and whispered prayer  
No more a vigil keep.

Tho winds may whirl the surge on high  
And tempests lash the foam,  
Our beaks shall proudly cut the tide,  
Tho hid the starry dome.  
But if our course shall lead below  
The haven will be home.

What if our broken hulls should float  
To be the wild wind's play,  
And we with sea washed deck should drift  
Into some harbor gray!  
Or what if our weird wrecks should toss  
Upon the sea away!

Far better had we plunged below,  
To bear our cargoes down,  
Bequeathed our broken ribs and spars  
To build a mermaid town,  
And in the annals of the deep  
Acquired some small renown.

Whate'er our fate, we will not stay  
When spring shall melt our bands;  
The rolling ocean is our God,  
We bow to His commands.  
His voice is calling thru the wind,  
"Come, sail to far-off lands."

# Susan B. Anthony

BY IDA HUSTED HARPER

[Mrs. Harper is the author of the "Life and Work of Susan B. Anthony," and, with her, of the fourth volume of the "History of Woman Suffrage."—EDITOR.]

WOMEN in all parts of the world will hear with deepest sorrow of the death of Susan B. Anthony, which occurred last week, Monday. On the roll of America's great women her name must always stand at the head, because there never will be required of any other woman the long and hard pioneer work performed by her. Women of the present and of future generations will labor to bring about reforms and to advance the interests of humanity, but they never will meet such conditions as Miss Anthony and her associates faced when they began their struggle to emancipate woman. That foremost of rights—the right to speak in public—was forbidden by a sentiment stronger than law. A custom equally potent prohibited them from advocating their cause in the newspapers. Wives—and most women were married—had practically no legal existence, could not own property, make a contract, bring suit, give testimony in court or control their wages. Women were not recognized as industrial factors and had almost no employment outside the home. They had no form of organization. Not a high school was open to them, while a college education was hardly dreamed of. Their position in every respect was much inferior to that of men. Their opinions on any question outside of domestic affairs had no weight whatever, and, indeed, the number who had any such opinions was infinitesimal. For the few brave ones who wished to change existing conditions, to carry their case before the public, to make their appeals to legislative bodies, there were only ridicule, contempt and denunciation. Most discouraging of all was the fact that these came from women, as well as men, and that the strongest obstacle they met was the very class they were striving to benefit.

Miss Anthony's father was descended from several generations connected with

the Society of Friends, and after marriage her Baptist mother became thoroly in accord with her husband's religion. The Friends recognize perfect equality between men and women and Miss Anthony had, therefore, the encouragement and support of her family from the very beginning of her work. Their home was a center for the leaders in the efforts for the abolition of slavery, and, as they were also earnest advocates of the equal rights of women, their influence was a strong factor in determining her career.

Susan,\* the second child of Daniel and Lucy Read Anthony, was born February 15, 1820, at Adams, Mass., a lovely spot in the Berkshire Hills. She was one of eight children, six of whom lived to maturity.

In 1826 the family removed to Batentville, N. Y., and Mr. Anthony, in partnership with Judge John McLean, entered into the manufacture of cotton goods on a larger scale and built a handsome home. The story of Susan's working in the cotton mills has no foundation except that when she was about thirteen years old one of the "spoolers" became ill, and as there was no one to take her place Susan clamored to do so, and the father consented in order to gratify her disposition to work. She discharged the light duties faithfully for two weeks, receiving full wages, and then the "spooler" returned. The money was joyfully used to buy her mother a present.

Mr. Anthony was a man of high principles and strong convictions. He believed thoroly in the education and economic independence of woman, established a private school for the education of his children and those of a few other families, and after Susan was fifteen installed her as teacher in the summers, when only young children attended. In

\* She was named for an aunt, Susan Anthony Brownell, and when older added the initial "B," but never adopted or liked the full name.

the winter and summer of 1837 she taught away from home, and in the autumn she entered a Friends' boarding school at Hamilton, a suburb of Philadelphia. The serious business panic of the next year, which almost ruined the cotton manufactures of the country,

ly in the insurance business in Rochester, where the family removed in 1863. Susan went to Canajoharie, N. Y., in 1846, to take charge of the "female department" of the Academy, a position which she filled very acceptably for three years. During this period she became

Ellis, Philadelphia, Photographer.

closed the mills of Mr. Anthony. Susan returned home the following spring, and soon after she was eighteen took up teaching as a profession.

In November, 1845, the family went to Rochester, N. Y., Mr. Anthony having purchased a farm three miles from the city. He retained this until his death in 1862, but soon engaged active-

ly in the insurance business in Rochester, where the family removed in 1863. Susan went to Canajoharie, N. Y., in 1846, to take charge of the "female department" of the Academy, a position which she filled very acceptably for three years. During this period she became deeply interested in the cause of temperance. Women had just begun to form little societies called Daughters' Unions, scarcely recognized annexes to the men's organizations and strongly opposed by women in general as "unladylike and improper." No woman, to Miss Anthony's knowledge, ever had spoken in public on this question, and on March

1, 1849, she made this daring innovation, reading an address at a supper given by the Daughters' Union of Canajoharie, of which she was secretary. This was the first platform utterance of the woman who was destined during the next half century to be known from ocean to ocean for her powers of oratory.

Miss Anthony returned home in the summer of 1849 thoroly tired of the narrow life of the schoolroom and longing for a wider field of labor. She soon became a leader in the temperance movement in Rochester and organized societies in neighboring towns. In May, 1851, she met Elizabeth Cady Stanton, of whom she had often heard, the attraction was mutual, and that strong friendship was begun which ended only with the death of Mrs. Stanton fifty-one years afterward. In the summer she went to Seneca Falls to meet, in Mrs. Stanton's home, for the first time, Lucy Stone and Horace Greeley. There was a gathering

of those interested in founding the People's College of New York, and the women were determined it should be opened to girls as well as boys. It was eventually merged into Cornell University, which is co-educational.

The meeting with Mrs. Stanton and Lucy Stone finished a conversion to woman suffrage which was already nearly complete, and henceforth it was the leading article in her creed. The frequent visits to her home of Garrison, Phillips, Pillsbury, Channing, Stephen and Abby Kelly Foster, Frederick Douglass, and many Quaker families who were strong in anti-slavery sentiments, soon made her an ardent adherent of that cause, and by the time she was thirty-two she was a full fledged reformer, ready and anxious to give a life of service.

In the winter of 1852 Miss Anthony was sent as delegate from the Daughters' Union, of Rochester, to a mass meeting

of the Sons of Temperance in Albany. Her credentials were accepted, but when she rose to speak to a motion she was informed by the presiding officer that "the sisters were not invited there to speak, but to listen and learn." She left the room at once, and three or four of the women delegates accompanied her, but the rest called them "bold and meddlesome" and remained, quite content to "listen and learn." Miss Anthony then took the unprecedented step of forming a State Woman's Temperance Association, the first State organization of women for any purpose. Mrs. Stanton and a number of other able women assisted her, as did several men, including Horace Greeley and her father, and the first convention at Rochester, in April, was a decided success.

Miss Anthony and her assistants canvassed thirty counties and secured 28,000 signatures to a petition for a "Maine Law," which they carried to the Legislature the next winter. The rules were suspended and they were invited to the Speaker's platform—the first time in history that a body of women appeared before a Legislature. Later, Miss Anthony arranged a lecture tour of the State for herself, Amelia Bloomer and Antoinette Brown (Blackwell), and they were respectfully listened to by the audiences, but viciously assailed by the newspapers.

On June 1, 1853, Miss Anthony again

marshaled her forces in State Temperance convention in Rochester, and many eminent speakers, men and women, were present. The address of the president, Mrs. Stanton, asserting the right of a wife to be divorced from a habitual drunkard, had the effect of a tornado, and, finally, a number of men came in, secured control of the convention, and defeated her for re-election. Miss Anthony then resigned the secretaryship, altho begged to retain it, and the two women severed all connection with the association, which soon went to pieces. Altho a total abstainer and an advocate always of the strictest temperance measures, Miss Anthony was never again connected with an organization for this purpose, believing that the first necessity was to secure the ballot.

In 1852 Miss Anthony attended her first Woman's Rights convention, held in Syracuse, and she came away fully convinced that the right of suffrage was the foundation of all others, and that until women possessed this they could deal only with effects and were entirely without influence over causes. In August, 1853, in accordance with a carefully thought out plan, she attended the New York State Teachers' Convention, which she has described so many times to audiences in this and other countries. Altho two-thirds of the teachers present always were women, no woman's voice

ever had been heard in these annual meetings, and when Miss Anthony rose to speak to the question under discussion the men debated for half an hour whether she should have this privilege. She spoke only a moment and to the point, but when she left the hall most of the women teachers drew away from her and declared they were ashamed of their sex! For ten years she followed up these meetings, demanding the right of women to speak, to hold office, to receive equal pay for equal work, and only ceased her attendance when there was an army of women to continue the work.

In the autumn of 1853 Miss Anthony first began arranging for Suffrage Conventions, and in the early winter of 1854, with a few assistants, she secured 6,000 names to a petition that married women should control their wages and have equal guardianship of their children; and 4,000 to one that they should have the suffrage. They found women themselves just as much opposed the first as the second petition. Both were rejected by the Legislature.\* In the winter and spring of 1855 she canvassed fifty-four counties in New York in the interest of the rights of women, especially the suffrage. She traveled alone, making most of the journey in a sleigh and suffering the almost indescribable hardships of those pioneer days.

From this time until the breaking out of the Civil War Miss Anthony was almost continuously engaged in speaking and working for the general advancement of women, making always the acquirement of the franchise the main point, holding that thru this they could obtain all else. Occasionally, for a season she would assist the Anti-Slavery Association in their tremendous efforts to arouse public sentiment, with which she was in fullest sympathy. As this was true of all who were advocating the suffrage for women, they had to share not only the intense opprobrium connected with this question, but also the bitter hatred felt by many toward those who demanded the abolition of slavery. In the winter of 1860 she arranged a series of meetings for that group of speakers known as "Garrisonians," but

in nearly every city and town, from Buffalo to Albany, they were broken up by a mob. Several times when even the men fled from the platform Miss Anthony remained alone and undaunted, facing the half insane audience. Finally, in 1861, the war broke forth and she was most reluctantly obliged to put aside all work for woman suffrage, which had now become the dominating idea of her life.

After President Lincoln issued the Emancipation Proclamation in 1863, it soon became evident that in order to make it effective the National Constitution would have to be amended, and it was necessary to secure a public demand for this action. Miss Anthony, whose ability for organization was already widely recognized, was appealed to by many prominent men to aid in this work. She went to New York, took up her abode in the home of Mrs. Stanton, and the two women issued a call for a meeting on May 14th, when an immense audience assembled in the Church of the Puritans.

The Women's National Loyal League was formed, with Mrs. Stanton as president and Miss Anthony as secretary. Headquarters were opened in Cooper Institute, and patriotic women donated their services for more than a year in gathering petitions. Miss Anthony superintended the work and assumed the entire financial responsibility, the expenses amounting to over \$5,000. She arranged lecture courses, begged from friends, and in many ways exercised her remarkable powers of money getting. By August, 1864, they had secured 400,000 names,, which Senator Sumner presented to Congress. He and Senator Henry Wilson repeatedly said that these petitions were the bulwark of the demand for the Thirteenth Amendment.

To the overwhelming indignation of the women who had rendered this splendid service Congress proposed a year later to submit another amendment to enfranchise the negro men and to put into it the word "male," in order to make sure that no women should be enabled to vote under its provisions. Miss Anthony and Mrs. Stanton sounded the alarm, they called public meetings which protested and petitioned, but all to no

\* In 1860 they secured the equal guardianship law, but in 1862 the Legislature repealed it.

avail, for the Fourteenth Amendment was adopted in 1868.

In November, 1872, acting under legal advice, Miss Anthony decided to make a test case by attempting to vote under this amendment at Rochester, N. Y. Her vote was accepted and afterward she was arrested, tried and fined \$100, which she never paid. Her case constituted one of the greatest judicial outrages in history, for it was tried by

suffrage. At the beginning of 1868 she established in New York a weekly paper called *The Revolution*, with Mrs. Stanton, and afterward Parker Pillsbury, as editors, she herself acting as business manager and lecturing much of the time to secure the necessary funds. It was an able and fearless publication, but the expenses of producing it were large, it did not receive the necessary support, and finally in 1870 she was obliged to

The Attic Workroom Where Miss Anthony's Books Were Written. Miss Anthony and Mrs. Harper at Work.

an Associate Justice of the United States Supreme Court, who refused to let the jury be polled, but ordered a verdict of "guilty." Miss Anthony appealed to Congress to remit the fine because she had been deprived of her constitutional right of trial by jury, and received the answer that Congress had no authority to act.

From 1865 to the close of the century Miss Anthony gave practically every day of her life to the cause of woman

abandon the enterprise, which almost broke her heart. She was left with a heavy debt, every dollar of which she paid, altho it required six years' hard work in the lecture field.

In May, 1869, Miss Anthony, with Mrs. Stanton and others, founded the National Woman Suffrage Association, in New York City, in which she always held official position. From 1892, when Mrs. Stanton retired from the presidency, she filled that office until 1900.

when, at the age of eighty, she also resigned and became honorary president.

In some respects the greatest achievement of Miss Anthony's life was the production of the "History of Woman Suffrage," including woman's progress along all lines. From the beginning of the movement she had carefully saved every scrap, written or printed, which seemed valuable, and in 1876 she set to work to put these into book form. The actual writing was done by Mrs. Stanton and Mrs. Matilda Joslyn Gage, with assistants in all parts of the country; but the gathering of the material, the verifying of statements, all the details of publication and the raising of money were wholly the work of Miss Anthony.

In 1883, while Miss Anthony and Mrs. Stanton were in Europe, they took the initial steps toward forming an international suffrage association. Their effort ultimately culminated in the International Council of Women, held in Washington, D. C., in 1888, the largest gathering of women on record up to that time. This became a permanent organization and now has branches known as National Councils, in over twenty countries, and represents many million women. Its meeting in Chicago in 1893 was the greatest and most important (except one) of the many Congresses held during the Columbian Exposition. At every session Miss Anthony was the central figure. When she appeared the vast audiences rose, cheering and waving hats and handkerchiefs. She was followed from room to room by admiring throngs and during the entire week received a continuous ovation. When the Council met in London in 1899, with women present from all parts of the world, Miss Anthony was still the leader, the one around whom the chief interest centered. By those of all nations she was hailed as the great emancipator of woman. She was entertained by the nobility and the wealthy and cultured men and women of that city.

No one, not Miss Anthony herself, supposed she would be able to attend the

quinquennial meeting of the Council in Berlin in 1904. As the time drew near, however, her longing to go was so intense that no one wished to oppose her. Altho she was eighty-four years old she stood the voyage as well as any of the party, attended the business meetings as delegate, and spoke a number of times in a fine voice easily heard by an audience of several thousand.

Miss Anthony held the gavel at more conventions than any other woman, and as a presiding officer she was not equaled by any. She participated in more State campaigns than any other woman. She lectured from ocean to ocean and in almost every State and Territory, her platform work covering a period of fifty-seven years. She was the only woman, and, indeed, the only person, who gave over half a century of continuous work in the interest of one reform. She was the pioneer in securing for women every right and privilege they enjoy today—in laws, in education, in business opportunities, in suffrage, in almost unlimited personal freedom. She struck the blows which undermined the wall of prejudice and custom that had surrounded women for ages and held them in a condition not far removed from actual bondage. She laid the foundation on which the women of all the future will build. Beyond all others she was made the target of ridicule, scorn, abuse and misrepresentation, because she was the most fearless, persistent and outspoken. Others would try to make converts by soft words, by concessions, by feminine attractions, but she, while always dignified and womanly, hewed to the line, told the unvarnished truth, never temporized, admitted no compromise.

But in proportion as her early experiences were more severe, her later life had richer rewards than ever came to any other woman. Beyond all others she was recognized, honored and loved. Men and women alike paid tribute to herself and her work. She lived to see most that she fought for accomplished, and to know beyond doubt that all she demanded would eventually be secured.

WASHINGTON, D. C.

# Literature

## The Life of Froude

THERE is so much that is charming and exasperating in Mr. Paul's new book\* on Froude that it can be reviewed with equanimity only by one who regards history as merely a branch of polite letters. It is a piquant defense of Froude as an historian and betrays a thinly veiled contempt for the scientific school which maintains that the function of the historian is not the formulation of ethical judgments, but the ascertainment and exposition of truth concerning men and events without betraying partisan tendencies. Tho this is undoubtedly an ideal difficult to realize, surely it is worth upholding in a world where prejudice is too often glorified. Even if truth is a relative matter, it is no justification for this attempt to rehabilitate Froude, whose intense convictions and untamed passions so dominated his materials that his conclusions on the most crucial problems are known to be thoroly untrustworthy by everyone who has taken the pains to examine them carefully. This, however, does not dissipate the interest which Mr. Paul's narrative awakens.

Froude's childhood, his college days at Oxford, and the unfoldment of his intellectual life are described in that entertaining style of which Mr. Paul is undoubted master. Here we have a lucid explanation of the development of those convictions and enthusiasms which the great work on the Reformation was written to proclaim and justify. The biographer frankly admits that Froude "made no claim to be impartial" and "held that reformers alike in England, France, and in Germany were fighting for truth, honesty, and private judgment against priestcraft and ecclesiastical tyranny." Yet we are to accept Froude's history as our text book—we who have read of Calvin at Geneva, Luther and the German peasants, the Anglican Church and non-conformists, and New England Puritans and their dissenters!

In his defense of Mr. Froude, our

biographer makes a severe attack on Freeman as a critic, and undoubtedly convicts him of much bitter feeling in what purported to be a scientific controversy. Mr. Paul found Freeman's personal copy of Froude's works in the library of Owen's College, in Manchester, and evidently relished the discovery of the somewhat brutal comments which the former had written in the margins of the volumes. Mr. Paul prints some of these comments, but he does not inform his readers that they were made with reference to some of Froude's most astounding statements. No apology need be offered for Freeman's rough words, but it must be remembered that they were made in the margins of his own private copy and never intended for the public eye. Moreover, they must be read in connection with the portions of Froude's work to which they refer.

The writer of this review discovered these comments about six years ago, and fortunately procured photographs of many pages containing Freeman's penciled notes. Three of these photographs are printed here, and an examination of them may leave the reader in a different frame of mind regarding Mr. Paul's apparent treatment of the historian of the Norman Conquest. In the first photograph it will be noted that Froude makes the statement: "The punishments under the Act of Supremacy were not wholly frightful," and Freeman has added in the margin, "Brute! What fun to embowel Froude for believing Cromwell's word."

totally awakened, people themselves in armed revolution. In England the readiness of the government spared the need of a popular explosion; the monasteries were not sacked by mobs, or the priests murdered; but the same fierceness, the same hot spirit of anger was abroad, though confined within the restraints of the law. The law itself gave effect, in harsh and sanguinary penalties, to the rage which had been kindled.

not by mobs  
but by  
Hans?

And pushed  
into battle  
from ex-  
tremes.

Brute

The punishments under the Act of Supremacy were not wholly frightful. No governments can permit their subjects to avow an allegiance to an alien and hostile power; and the executions were occasioned, I have observed already, by the same necessity, and must be regarded with the same feelings, as the deaths of brave men in battle,

What fun to embowel Froude for  
believing Cromwell's word!

\* THE LIFE OF FROUDE. By Herbert Paul. Charles Scribner's Sons, New York City. \$4.00 net

Now, the punishments under the Act of Supremacy, including, of course, the act of treason designed to give it force, consisted of execution, embowelling and quartering of those who retained their allegiance to the Pope, with whom Henry had broken because he could not procure the separation from Catherine. I forbear mentioning other nameless and more shocking cruelties inflicted under this Act. According to Froude's own account, an arm of a prior executed under this law was nailed up over the archway of his old house to frighten his followers into submission, tho they were admitted to have been men of blameless lives. I leave the reader to form his own opinion of an author who finds such punishments "not wholly frightful."

The second photograph printed here refers to an indictment of the Abbot of

The fact of the concealment was patent. The letter communicating these discoveries to the government was written on the 28th of September. Another followed on the 2nd of October, stating that, since the dispatch of the last, the visitors 'had come to the knowledge of divers and sundry treasons committed and done by the Abbot of Glastonbury, the certainty whereof would appear in a Book of Depositions,' which they forwarded with the accusers' names attached to their statements, 'very haut and rank treason.' \* I have not discovered this 'Book of Depositions,' but those who desire to elevate the Abbot of Glastonbury to the rank of the martyr, confess, in doing so, their belief that he was more faithful to the Church than to the State, that he was guilty of regarding the old ways as better than the new, and they need not care to question that he may have acted on his convictions, or at least have uttered them in words. After the recent experience of the Pilgrimage of Grace, an ascertained disposition of

Evidence of treason found against the abbot.

*Froude is certainly the vilest brute that ever wrote a book.*

Which need not be called in question.

Glastonbury on charges contained in a certain "Book of Depositions," which Froude says he has not discovered. This is a fine example of the flimsy tissue on which Froude bases sweeping denunciations of those who did not belong to Henry's party. As a matter of fact, the trial of the abbot in question was a ghastly mockery of justice, and Cromwell had determined on the aged ecclesiastic's death before his trial, as we know from an extract from his own memorandum book. Freeman thinks on this account that "Froude is certainly the vilest brute that ever wrote a book." The more charitable will think that he was constitutionally incapable of knowing the truth when

that in any case, he should not be the destruction of others besides himself; 'for look,' Throgmorton said, 'how many thou dost accuse, so many thou dost wilfully murder.'

The previous and opposite nature.

Derick, it seems, was already thinking whether he could not, perhaps, save his own life. None of the party as yet knew how much of their secret had been discovered, or the value, therefore, which the government would place upon a full confession.

'He would do nothing,' Derick answered, 'but that which God had appointed; and if God would that he should do it, there was no remedy.'

When a man has made up his mind that it is God's will that he should be a rogue, he has small chance of recovering himself. Throgmorton

*We Froude*

he saw it. Our third photograph gives Freeman's view of Froude on that point.

The latter part of Mr. Paul's book is devoted to Froude's doings in South Africa, his relations with Carlyle, his miscellaneous undertakings, and the Oxford professorship. The discussion of the Carlyle affair is intensely interesting. In fact, our author's conclusion concerning the charge that Froude was a traitor to Carlyle's memory is one of the most effective pages in the whole book: "Conscious of regarding Carlyle as the greatest moral and intellectual force of his age, he could not have been more astonished if he had been charged with picking a pocket. For criticism of his own judgment he was prepared. He well knew that acute differences of opinion might arise. The dishonesty and malignity imputed to him were outside the habits of his life and the range of his ideas. \* \* \* He had fulfilled, to the best of his ability, Carlyle's own injunctions, and he had faithfully portrayed, as he knew him, the man whom of all others he most revered. He was bewildered, almost dazed at what seemed to him the perverse and unscrupulous recklessness of his accusers."

No reader can finish Mr. Paul's volume on Froude without a vivid impression of the life which it is written to commemorate. Had he contented himself with narration, and omitted the discussion of his hero's merits as an historian, the volume would have been more useful and permanent. Indeed, when we read in Mr. Paul's work a declaration that Stubbs was as prejudiced as Froude, and Green made more mistakes, we are tempted to question the amount of knowledge which our author really has of English history.

His spirit in approaching Froude's works on Ireland is reflected in the statement that the "truest kindness" to an Irishman is "never to let him have his own way."

CHARLES A. BEARD.

COLUMBIA UNIVERSITY, N. Y.

## The Growth of a Temple\*

IN the autumn of 1899 Dr. Haynes found at Nippur a fragmentary clay tablet containing diagrams and inscriptions. In October of that year this was handed over to Mr. Clarence S. Fisher, then architect of the Expedition, to clean and study. Haynes and Fisher were unable to read the inscriptions on the tablet, and so failed at the time to perceive its great importance for the work of excavation. About the beginning of March, 1900, Hilprecht arrived and took charge of the excavations. He noted the ideogram "City of Bel"—that is, Nippur—in the middle of the tablet, and conjectured, therefore, that it was a map of Nippur; but failed to appreciate the real character of the map and its value as a guide to the excavations then in progress. Later, in his volume entitled "Explorations in Bible Lands," republished as an official document of the University of Pennsylvania, under the title "The Excavations in Assyria and Babylonia," he published this fragment as found by himself in a vase on the "library hill," along with about nineteen other "inscribed objects, mostly clay tablets, which constituted a veritable small Babylonian museum." He gave no explanation of the map, and in fact published it, as it now turns out, sideways, so that even to one familiar with the Nippur mounds it conveys no information. This map Fisher has at length explained and utilized most effectively in restoring the topography of ancient Nippur, about 3000 B. C.

The map covers the northern part of the eastern half of the mounds of Nippur, which would appear to have constituted either the entire city of that period or a city within a city, somewhat as at Jerusalem the temple constituted a fortified

city within the city. At the southern corner of this walled space stood the temple proper, consisting of two courts, as was determined also by the excavations. The inner of these bears the legend E-kur, or "house of the mountain," already known as a title of the temple at Nippur; the outer bears a different name, hitherto unknown. At the western end of the walled space are marked two large storehouses, and it is worthy of note that at the place assigned to one of these there was discovered by the excavations of the first expedition a large building apparently intended for purposes of storage. Just behind the temple proper there is indicated on the map a canal, and in fact at this point in the mounds there is a depression which would correspond to the line of the canal on the map. Just outside of the walls to the northwest and north, where at the present time there are the remains of an ancient canal or river bed, there is indicated on the map a large channel, bearing the legend "River of Sippara," that is, Euphrates. In tablets of the sixth century B. C., discovered at Nippur, Euphrates is called "River of Sippara and Nippur." Mr. Fisher argues that at the date of this map and probably at a much later period Nippur lay on the main stream of the Euphrates, whereas at the present time the main stream of that river is some twenty miles away and apparently still moving westward. The map gives further the position of other canals and streams, which make it appear that Nippur must once have been almost, if not quite, surrounded by water. Along the canals were quays, and at one point what Mr. Fisher supposes to have been a ship basin. A number of gates are also indicated in the walls. Altogether, this, the most ancient map yet discovered anywhere, proves to be a fairly accurate and very illuminating document.

Evidently—a fact which even modern explorers are apt to lose sight of—Nippur, thruout the greater part of its history, was amphibious. The region in which it stood was marsh land, very little raised above the level of the sea, and subject to inundations during the annual overflow of the Euphrates. At about 6000 or 7000 B. C., Nippur must have been, as Fisher shows by his maps and

\* PART I: Babylonian Expedition of the University of Pennsylvania. "Excavations at Nippur." Plans, details and photographs of the buildings, with numerous objects found in them during the excavations of 1889, 1890, 1893-1896, 1899-1900, with descriptive text by Clarence S. Fisher. Philadelphia, 1905. \$2.00.

measurements, approximately the central point of the alluvial deposit of the Tigris and Euphrates, which extended from Ur and Eridu on the south to Baghdad on the north, and from the Persian mountains on the east to the Arabian plateau on the west. Now, wherever at Nippur excavations have been conducted to virgin soil, and even below that to water level, there have been found, in the lower strata, beds of black ashes, with occasional fragments of pottery and bones. The point at which the most extensive excavations were conducted to low levels was in front of and about the ancient *ziggurat* or artificial mountain in the inner court of the temple. The abundance of these remains in this section of the mounds led Hilprecht, in the work above referred to, to argue that in pre-Semitic Babylonia the inhabitants burned their dead, and that the temple in Nippur was especially a place at and about which this burning of the dead took place. He seems to have overlooked the fact that excavations in other parts of the mound showed similar layers of ashes, with pottery and bones intermixed. Finding his clue in the conditions of life to be found in the marshy regions of Irak at the present day, Fisher has furnished what seems to be a satisfactory explanation of these ash layers, at the same time tracing the city of Nippur back to its remote beginnings as a reed and mat village of the primitive and simple inhabitants of the country. Then, as now, the people lived by or among the marshes, on ground subject to periodic inundations, in rude huts built of reeds and mats. So combustible are the materials of which these villages are composed that a conflagration—and conflagrations are common occurrences—rarely takes place without some loss of life, a woman or two, an ass or a few sheep and goats. The village becomes a layer of ashes, with bones and pottery fragments intermingled. This is soon covered with sand, blown over it by the wind. The next inundation solidifies it and deposits upon it a layer of mud. Another village springs up on the same site, or close at hand, and shortly, perhaps, undergoes the same fate. These were the conditions to which the excavations at and below plain level testify, and, to judge from the depth of those lower strata, these conditions must have con-

tinued at and about Nippur for a very long period.

At some time and in some way one spot became a place of particular sanctity and interest because of a shrine of some sort which was located there, and hence, as often as the village by the shrine was burned or its site inundated, another village took its place. First thru the natural deposit of *débris* and alluvium, and then, a little later, thru the enterprise of the natives, who tried to raise the shrine above the level of the inundations, this sacred spot became a high place. The terrace on which it stood increased in its proportions, the town about it grew, and mud houses took the place of reed huts. At what period a *ziggurat* or artificial mountain became a portion of this sanctuary, standing on the terrace, one cannot tell. The first building of that description which can be certainly identified belongs, it would seem, to a period preceding 3000 B. C. At about that time a new population seems to have entered the country and to have taken over much of the culture, the civilization and the religion of its predecessors. It is to a period shortly after the Semitizing of the region that the map of Nippur above referred to belongs. From that date onward we have numerous written records, which, for the previous period, are extremely scanty or altogether wanting, and we are able to follow the course of the development of the temple and the city with considerable detail.

In the first part of *Excavations at Nippur*, Mr. Fisher, the architect of the last expedition, has enabled the student to trace this remarkable development of an ancient temple from the rudest beginnings among the barbarous marsh-dwellers onward to the time when it was the greatest and most famous temple and place of pilgrimage in the Asian world. The title page bears the words: "Babylonian Expedition of the University of Pennsylvania," but the work appears to have been published at the expense and risk of Mr. Fisher himself. No name of publisher is attached, and would be subscribers are directed to address Mr. C. S. Fisher, Lock-box 165, Rutledge, Delaware County, Pa. The first part contains sixteen pages of text, with two cuts and sixteen plates, and there are five parts to follow.

**On Ten Plays of Shakespeare.** By Stopford A. Brooke. New York: Henry Holt & Co. \$2.25.

These lectures of Mr. Brooke's are of a rather conventional pattern. They consist mainly of moral and esthetic commonplaces interrupted by occasional flashes of original insight. Not that we would be understood as condemning the good old stock reflections about "the sanity" of Shakespeare's judgment, his "deep-seated joyfulness," and the like—there is probably a good deal of truth in this sort of romantic apotheosis; and now that such a mode of criticism is passing away, it is well perhaps that its lesson should be left ringing in our ears. But after all what is most interesting in these papers are the glimmerings of that new vision which is beginning to recognize in Shakespeare, not so much the interpreter of the human problem, as the most forcible and vivid exhibitor of that problem in all its amazing confusion and intricacy. "That is the glory of Shakespeare," Tennyson is reported to have said, "that he can give you the incongruity of things." And to much the same effect Mr. Brooke's remarks of the close of "Romeo and Juliet." "With that strange apartness of his [Shakespeare's] from any personal share in human trouble, which is like that of a spirit outside humanity—all the more strange because he represented that trouble so visibly and felt it so sharply—he does not attempt to solve or explain the problems. He contents himself with stating the course of events which constitute it, and with representing how human nature, specialized in distinct characters, feels when entangled in it." It is such faint and occasional glimmerings and apprehensions of a new Shakespearean criticism, penetrating more or less obscurely the accumulated fogs of legend and superstition, which form for us the main interest of Mr. Brooke's volume.

**Bossism and Monopoly.** By Thomas Carl Spelling. New York: D. Appleton & Co. \$1.50.

Confessing himself to have been, by early association, by education and by professional environment and interest, inclined to ultra-conservatism, Mr. Spelling declares that an earnest study of po-

litical conditions has swung him about to a conviction of the need of the radical reforms which he advocates in his book. It is a sorry tale of graft, fraud and oppression by Big Business, co-operating with political bosses, which he relates. He has looked over the whole ground and has found chicanery and robbery wherever this unholy alliance has been made. In the face of conditions, the seeming apathy of the people not unnaturally affects him with wonder. But he sees signs of a revolt and he expects remedial action. Municipal, State and Government ownership are the indicated remedies, he maintains, and tho there are, of course, obstacles in the way of the public's assertion of its rights, they are not insurmountable. He is not afraid of the charge of paternalism, nor even that of socialism; interested persons will always be found to fling these terms at all who seek to limit privilege. The prime duty is to divorce ourselves from political parties, thus overthrowing the power of the bosses, and to work with might and main for public ownership. The book covers a wide field of discussion and is full of information. Tho desultory and disjointed in parts, it is well worth the serious consideration of all citizens interested in the welfare of their country.

**Letters and Essays.** By Alfred Ainger. 2 vols. New York: Macmillan & Co. \$5.00.

Those who, in visiting London, have hovered delightedly about Lamb Court, who have come upon Goldsmith's grave in its own quiet corner, or have dropped into the medieval church of the Knights Templar, will easily understand why the late Canon of the Temple should so often have found himself mousing about the haunts of his fascinating neighbor, the gentle Elia. The spirit of Charles Lamb, and Goldsmith, and Dr. Samuel Johnson, more than that of Blackstone and Bacon, has consecrated the neighborhood, which lies between the older London of Ben Jonson and Shakespeare and the new-old of Dickens and the theatrical moderns, elbowing them both at close quarters. Canon Ainger clearly loved the place, a large fragment of these essays and lectures dealing with literary matters and authors centering at the old church, hos-

vering about the ancient gardens, there where "the studious lawyers have their bowers." In a walk of half a mile radius he could tread in the steps of Shakespeare, Jonson, Swift, Addison, Izaak Walton, Milton, Burke, Garrick; sup with Sam Johnson and the radiant Boswell at the old Hummums, or with Wordsworth, Coleridge and Southey on their forced visits to the metropolis. Mild intellectual feasts he takes with most of these great men of England—a safe guest, who neglects the champagne and talks in the genial library vein. One might have found in Boston, in the middle of the last century, wiser and wittier Shakespearean scholars, or in New York Lamb-lovers and Swift-sure critics of deeper insight, but few who would make better neighbors at the feast. He puts aside canonicals to deal gently with Burns; to Coleridge and Swift is less kindly; enthuses over the haunts of Lamb in Hertfordshire; becomes mildly controversial as to the alleged cynicism of Shakespeare in his later days, but in general indulges but little in the purgatorial flashes of the critic or in any lighter fireworks. The two volumes are likely to find contented readers best among those who look for a discussion of style and obvious quality rather than verbal felicities and critical niceties.

**The Philosophy of Religion.** By George Trumbull Ladd, LL. D. New York: Charles Scribner's Sons. 2 vols. \$7.00.

Professor Ladd has been a student and teacher of religion and psychology for forty years, and his writings on psychology and on the nature of the Bible, in themselves almost a small library, are very widely known. The present work presents at considerable length the facts of man's religious experience, the origin and development of religion in various races, and the relation of religion to other departments of human life, and this treatment of the phenomenology of religion is followed by a criticism of the conceptions and tenets of spiritual experience from the point of view of modern science and philosophy. It aims to be a quite free and scientific treatise of the total religious life and religious development of humanity, but its chief interest is to prove philosophically that

theism is entirely tenable and also demonstrable by the instruments in the hands of philosophy. Professor Ladd is an enemy of agnosticism, the religious agnosticism of the Ritschlians as well as the irreligious agnosticism of Haeckel. He writes in an irenic spirit, and always with constructive aim, but he is sometimes more abstruse than is needful and more than a trifle prolix.

### Pebbles

"JONES used to be president of an insurance company."

"Has he reformed?"—*Princeton Tiger*.

OH, FROTH!

A tramp was extremely thirsty,

And longed for some nice wet cheer;

He stood by a brewery window

And got a draught of beer.

—*Columbia Jester*.

**ENGLISH AS SHE IS WROTE.**—M. S. vaz Diaz, director of the Dutch news agency, the "Centraal Correspondentiebureau voor Dagbladen," writing from Raamgracht 12, Amsterdam, invites us to subscribe to his news service, and offers a fortnight's trial gratis. He sends, at the same time, a first instalment of news, from which we extract the following: "Netherland and the Conference in Algericas.—With an eye upon the speedily expected dividing of the attorneys in two parties, after the occasion of the French-German difference, outed the Dutch press the wish, that now is explained which standpoint the Dutch attorneys will take in this. It is desirable that Netherland in the retired position she has to so far kept, still keeps. Closing up by this group of neutral politics, the party which was formed thru Roosevelts declaration that the division at the consult thru the United States itself restrain, to the purest business belongings and the securing of the open door on commerce dominion."—*London Times*.

A KANSAS CITY woman tells a story on her husband to demonstrate the inferiority of the masculine mind. One morning as her husband was sitting down to the breakfast table he glanced at the dining room clock and said: "We must be later than usual this morning."

"Don't place too much confidence in that clock. It stopped at five o'clock this morning, and I just set it going by guess," replied the good wife.

"Were you up at five o'clock?" asked the husband.

"Of course, not."

"What time did you say the clock stopped?"

"At five."

"If you weren't up at five," replied the man, with a puzzled look, "how in thunder do you know when the clock stopped?"

"Why, dear, it stayed stopped," was the reply.

The man did not say another word that morning.—*Kansas City Times*.

## Hamilton and the Insurance Trustees

THERE was nothing more disgraceful, more injurious to public interests, or more criminal, in the varied list of offenses revealed by the Armstrong Insurance Committee than the expenditure of millions of the policy-holders' money for the prevention or the purchase of legislation.

Andrew Hamilton, an intimate friend of the late President McCall, was the agent thru whom expenditures for such purposes were made by the New York Life. At times he was also the agent of other companies. To him the New York Life paid about \$1,350,000. An investigating committee of the trustees held him and the late President responsible for a large part of this sum, and took measures to have both of them sued. Hamilton returned from Paris, angry and determined to show that the trustees were equally responsible, legally and morally, with the President and himself for what was done and for the payments that were required for the foul work. From one end of the country to the other has been read the report of his bitter attack upon them at the hearing in Albany.

Was he telling the truth? If we bear in mind the character of Hamilton and the nature of the business in which he has been engaged, the presumption must be in favor of the men of prominence whom he assails, if their denials or explanations are not controverted by good evidence. For every sum of money received by him he returned a voucher, which was duly audited by a committee composed in part of trustees who were paid for the work. What were this Auditing Committee's duties? The by-laws say that the first of them was:

"To examine all disbursements and pass upon all bills and accounts and the current expenses of the company."

Monthly reports in writing to the full board were required. It should be added here that it was the duty of the Finance Committee "to take and have a direct personal supervision over the funds of the company."

Two members of the Auditing Committee were also members of the investigating or "house-cleaning" committee, whose report against President McCall and himself so excited the indignation of Hamilton. One of them says he never heard of Hamilton until his name came out in the Armstrong inquiry; that it was not possible for the committee to go behind the records and vouchers submitted by the Comptroller; and that the payments to Hamilton were disguised by being charged up to the accounts for legal expenses and real estate. The other says he knew Hamilton was employed by the company and that he enjoyed the confidence of President McCall, but did not know the terms of his employment and never heard of "a legislative bureau." Other trustees assert that they had never heard of Hamilton. We add here the interesting statement of Mr. John Claflin, who has been a member of the Finance Committee:

"Prior to Mr. McCall's testimony, I did not know that Hamilton was disbursing any amounts of money, large or small, for the company in connection with legislation. After Mr. McCall had testified, I expressed to him my astonishment at the facts which he had disclosed, and I asked him why he had not consulted some of his trustees before making the payments to Hamilton. He replied that he considered the matter in the light of a secret service, and that he believed his authority as president justified him in making any payments which he thought beneficial to the company, without consultation with any of the trustees."

These are the essential parts of the explanations which are to be set up against the assertions of Hamilton. If the suits come to trial, we shall know more about the matter than the record now accessible shows.

While we do not question the truthfulness of any trustee's statement to which we have referred, we cannot believe that the nature of Hamilton's business and the purposes for which such large sums were paid to him were unknown to all the trustees or to all the members of the two committees. And it seems to us that those who did not know, but were paid for auditing, did not make sufficiently searching inquiry as to the vouchers that were laid before them. If officers of the

company disguised these payments, as one of the trustees says they did, they should now be prosecuted. The law provides punishment for such offenses.

Hamilton cannot reasonably expect that his mere assertion will be accepted in preference to the denials of prominent trustees. If he has documentary or other convincing evidence, and will produce it, we shall be glad to give it all the weight it deserves.

For what he did he offers no apology. On the contrary, he appears to be proud of his work. He was governed by what he calls "the higher law":

"The insurance world to-day is the greatest business proposition in the United States. And, as great affairs always do, it commands a higher law. In defending its rights and property you cannot stop to kick every cur that comes along and barks; and if you can sweep them out in other, perhaps mysterious, but honest, ways, you are defending and asserting the higher law which great enterprises have a right to command."

By this defense of corruption must the man be measured. And we presume that those who employed him, knowing what he was doing, also looked to a "higher law" to justify or excuse not only their use of him for corrupt purposes, but also the unlawful acts by which they sought to satisfy their own greed.

We say "unlawful," because we believe that the insurance investigation has revealed violations of the criminal laws by prominent officers, who should be brought to justice. Mr. Alton B. Parker, formerly the Chief Judge of New York's highest court, said last week in an address to the Mississippi Legislature:

"There are to-day within the State of New York a few men who, involved in insurance frauds, have furnished evidence, fairly corroborative on the witness stand, of their own venality. After a long judicial experience and some study of this question, I say to you that I do not believe it would be possible, in that great city, to draw a grand jury which would not indict for at least two, and perhaps three, of the most serious crimes known to the law. Still further, it would not be possible, by any change of venue, for any of the men so indicted, if fairly proved guilty, to escape conviction in any one of the other sixty counties of the great State of New York."

Some of the offenses to which we refer are now being considered by a grand jury, which has asked the court for instructions as to indictments for larceny in hypothetical cases that set forth the

action of the companies concerning contributions to political campaign funds. The court's response will soon be made known. There are other cases to be considered, involving charges of forgery, bribery or conspiracy. There has been delay, but we assume that District Attorney Jerome now intends to make a thorough official inquiry as to all these offenses. Some men of prominence are saying to the public that guilty rich men are sure to escape punishment. Neither in New York nor in any other part of the country should there be any evidence to warrant such an assertion. Punishment under the law should be as certain for the guilty millionaire as it was for the needy thief who came out of prison two weeks ago, after having been confined for years for stealing one cent.

## The Literature of Exposure

FIFTY years from now, when the historian of American literature writes of the opening years of the century, he will give one of his most interesting chapters to the literature of exposure, and he will pronounce it a true intellectual force, a vital element in the creative activity of later years.

Like all realities in the mental life of a people, it came unheralded and swiftly. In 1900 it did not exist. Two or three years later, a magazine article here and there betrayed a slight vermilion tint, like maple tree buds in early spring. Then, all at once, the news stands, from Bar Harbor to Los Angeles, from Seattle to St. Augustine, blossomed forth in every hue of rhetorical red, from the aniline cerise of Miss Tarbell's tale of Standard Oil to the Tyrian crimson of Mr. Lawson's story of Amalgamated Copper. It will disappear as quickly as it came. Already the question is heard every day, on the mart and in the library: "Haven't we had enough?"

It will disappear, we mean, as a reigning passion in journalistic literature. Journalistic exposure itself, of public and private wrong-doing, is not in the least novel, and it will not go out of style. But between the matter-of-fact output of steady-going journalism and this sociological *Erscheinung* there is a difference.

Literature is more than a tale of facts,

as architecture is more than a tale of bricks. Literature and architecture are products of the creative imagination. Yet they are more also than the poet's vision and the builder's drawing. They are substantial things, constructed of facts or of bricks. They are art, because they fashion and combine their materials to the magic of esthetic form, because they reveal the creative personality of him who fashions them, and because they have power to move him who reads or beholds them.

Judged by these tests, the recent work of Lincoln Steffens, of Miss Tarbell, of Mr. Lawson, of Sinclair and Phillips, is literature, beyond a peradventure. It has taken the tale of facts from the year books and the official reports, from the statutes and the decisions, and from unwilling witnesses before investigating committees, and has wrought them into narratives that stir the blood. Its writers have seen in these dead materials that which only imaginative insight ever sees—their significance, their relation to life, their potential striking force.

We cannot expect, however, that the literature of exposure, more than other developments of literature in the past, will give to the world an indefinite number of writers of true creative power. Already the masters have imitators, and the quality of the output must inevitably deteriorate. Imaginative grasp of significant relations will give place to sensationalism, and a fine prophetic scorn of iniquity in high places will degenerate into personal abuse.

And even if these inherent tendencies of all true literary evolution had not to be reckoned with, there are laws of human nature that must bring the literature of exposure speedily to a period. The public cannot stand at attention with its eyes fixed on one spot indefinitely. It is bound to get restive, and seek diversion in other interests. When that happens the literature of exposure has done its work, at least for a time. To keep on creating it, even tho its creators waved the wand of the wizard, would be to waste enchantment. Nay, it would be to weary and to irritate, and to make the public out of sheer annoyance lose some of its present fervor of indignation against unrighteousness.

All right thinking men must rejoice that the literature of exposure came into existence when it did, and all sane men will be glad if it gives place to something less fervid, in due time. It has accomplished a great purpose, and the American people will be sounder—more sincere, more fearless in right doing, henceforth because of it. The public conscience has been awakened and wrongdoers have been stricken with wholesome fear. But henceforth the work of exposing evil must be transformed into a steady-going constructive effort to prevent it.

And more and more we shall see that the all-important preventive measure is that matter-of-fact, unsensational, everyday publicity which a democratic people has an absolute right to impose upon all political and corporate transactions that are authorized by the State. The deeds of evil that the literature of exposure has brought to light have been most literally deeds of darkness. They never could have come to birth had public affairs been kept frankly open, as they should be, to public scrutiny. It is, in the finest sense, dramatic that the decisions of the United States Supreme Court withholding from corporations the privilege of the plea of incrimination have been handed down at the moment when the public has been prepared to appreciate the full meaning of publicity. If State and Federal administrations now do their full duty under the authority which these decisions have conferred upon them, there will be no further need of the literature of exposure.

## The Distrust of Liberty

THERE are always men and women in society who are sure that they know how other people ought to behave better than the other people can know for themselves. Satisfied that their own views of right and wrong are perfect and final, they go about the business of extracting notes from their neighbor's eyes without consciousness of restricted vision or a sense of shame. Their activity we can always anticipate and meet with gentlemanly resistance or a sense of humor. The real danger to liberty lies in some combination of general indifference with

they are true. This question will have to be threshed out, and we cannot help it, just as all other critical questions must be; and there is not the slightest reason for Christians to be afraid. The discovery of truth will always help and never hurt the world; and the decision of such questions as this can never touch the essential, cardinal truths of religion.

### A Prophet of Peace

A LATE cabled report said that Mr. Carnegie's gift to the cause of simplified spelling was not received with favor in Great Britain, where the praise of the past prevails; but we notice that in his rectorial address to the students of the University of St. Andrews the "twelve words" are printed in the shortened form, even *thru* and *thruout*, altho we have twice observed *through* by oversight.

But the address is not on the subject of simplified spelling. It treats of one single subject, and touches nothing else, except when he cannot refrain from approving the simplified creeds of Scotland. It is the evil of War and the beauty of Arbitration that he presents with cogent and earnest, if not perfervid, rhetoric to his young hearers. He tells them that of all the evils that curse humanity war is the chief, and is the last to persist. He would have the students of St. Andrews put first in their aim and purpose the great things to be achieved, and none is so great as the abolition of war.

Of course that means the substitution of arbitration for war; and, best of all, a league of the nations for the settlement of all disputes, a Court of The Hague doubled, extended, its powers enlarged and its force prescribed. We are interested to see that he thus anticipates just such an effective council of the nations meeting periodically, as we have earnestly advocated. Referring to the proposal of the St. Louis Inter-Parliamentary Union and the invitation of President Roosevelt, Mr. Carnegie says:

"Should the proposed periodic congress be established, we shall have the germ of the Congress of Nations, which is coming to keep the peace of the world, judging between nations, as the Supreme Court of the United States judges between States, embracing an area larger than Europe. It will be no nov-

elty, but merely an extension of an agency already proved on a smaller scale. As we dwell on the rapid strides toward peace which man is making, the thought arises that there may be those now present, who will live to see this World Council established, through [read thru] which is sure to come in the course of time the banishment of man-slaying among civilized nations."

Now how shall such a council of nations be organized? Mr. Carnegie suggests a good way. He says that five nations co-operated in quelling the recent Chinese disorders and rescuing their representatives at Peking. These five nations could banish war. Let even three of them form a League of Peace, inviting all other nations to join; then let them agree that since war anywhere in the civilized world affects all nations, no nation shall go to war, but shall refer all international disputes to the Hague Conference or other arbitral body for peaceful settlement; and, to enforce this, let the League agree to declare non-intercourse with any nation refusing compliance. The nation refusing arbitration under these conditions would be put in a sorry plight; but, if it still persists, Mr. Carnegie suggests the use of necessary force to maintain peace, each member of the League agreeing to provide its necessary portion of the force or the money.

This is very much what we have advocated. It comes very near to a congress of the nations with legislative as well as judicial functions. It has in it at least the germ of what is sure in the end to be developed, when Russia, relieved of her internal disturbances, shall be able to call that second meeting of the nations at The Hague, which President Roosevelt has gracefully referred to her.

The English speaking peoples are getting tired of war. Military authorities in both Great Britain and America are complaining of the difficulty of getting voluntary recruits. The shortage of officers in the volunteers and militia in England is twenty-five per cent. In this country 3,500 men are lacking for our navy. The service is unattractive. War is losing its illusions. Political economy condemns it; Christianity damns it. Men and angels cry out for peace on earth. Mr. Carnegie bids the students of St. Andrews form leagues of peace, and resolve, under no matter what provocation, to insist on arbitration for all disputes.

**On Ten Plays of Shakespeare.** By Stopford A. Brooke. New York: Henry Holt & Co. \$2.25.

These lectures of Mr. Brooke's are of a rather conventional pattern. They consist mainly of moral and esthetic commonplaces interrupted by occasional flashes of original insight. Not that we would be understood as condemning the good old stock reflections about "the sanity" of Shakespeare's judgment, his "deep-seated joyfulness," and the like—there is probably a good deal of truth in this sort of romantic apotheosis; and now that such a mode of criticism is passing away, it is well perhaps that its lesson should be left ringing in our ears. But after all what is most interesting in these papers are the glimmerings of that new vision which is beginning to recognize in Shakespeare, not so much the interpreter of the human problem, as the most forcible and vivid exhibitor of that problem in all its amazing confusion and intricacy. "That is the glory of Shakespeare," Tennyson is reported to have said, "that he can give you the incongruity of things." And to much the same effect Mr. Brooke's remarks of the close of "Romeo and Juliet." "With that strange apartness of his [Shakespeare's] from any personal share in human trouble, which is like that of a spirit outside humanity—all the more strange because he represented that trouble so visibly and felt it so sharply—he does not attempt to solve or explain the problems. He contents himself with stating the course of events which constitute it, and with representing how human nature, specialized in distinct characters, feels when entangled in it." It is such faint and occasional glimmerings and apprehensions of a new Shakespearean criticism, penetrating more or less obscurely the accumulated fogs of legend and superstition, which form for us the main interest of Mr. Brooke's volume.

**Bossism and Monopoly.** By Thomas Carl Spelling. New York: D. Appleton & Co. \$1.50.

Confessing himself to have been, by early association, by education and by professional environment and interest, inclined to ultra-conservatism, Mr. Spelling declares that an earnest study of po-

litical conditions has swung him about to a conviction of the need of the radical reforms which he advocates in his book. It is a sorry tale of graft, fraud and oppression by Big Business, co-operating with political bosses, which he relates. He has looked over the whole ground and has found chicanery and robbery wherever this unholy alliance has been made. In the face of conditions, the seeming apathy of the people not unnaturally affects him with wonder. But he sees signs of a revolt and he expects remedial action. Municipal, State and Government ownership are the indicated remedies, he maintains, and tho there are, of course, obstacles in the way of the public's assertion of its rights, they are not insurmountable. He is not afraid of the charge of paternalism, nor even that of socialism; interested persons will always be found to fling these terms at all who seek to limit privilege. The prime duty is to divorce ourselves from political parties, thus overthrowing the power of the bosses, and to work with might and main for public ownership. The book covers a wide field of discussion and is full of information. Tho desultory and disjointed in parts, it is well worth the serious consideration of all citizens interested in the welfare of their country.

**Letters and Essays.** By Alfred Ainger. 2 vols. New York: Macmillan & Co. \$5.00.

Those who, in visiting London, have hovered delightedly about Lamb Court, who have come upon Goldsmith's grave in its own quiet corner, or have dropped into the medieval church of the Knights Templar, will easily understand why the late Canon of the Temple should so often have found himself mousing about the haunts of his fascinating neighbor, the gentle Elia. The spirit of Charles Lamb, and Goldsmith, and Dr. Samuel Johnson, more than that of Blackstone and Bacon, has consecrated the neighborhood, which lies between the older London of Ben Jonson and Shakespeare and the new-old of Dickens and the theatrical moderns, elbowing them both at close quarters. Canon Ainger clearly loved the place, a large fragment of these essays and lectures dealing with literary matters and authors centering at the old church, ho-

vering about the ancient gardens, there where "the studious lawyers have their bowers." In a walk of half a mile radius he could tread in the steps of Shakespeare, Jonson, Swift, Addison, Izaak Walton, Milton, Burke, Garrick; sup with Sam Johnson and the radiant Boswell at the old Hummums, or with Wordsworth, Coleridge and Southey on their forced visits to the metropolis. Mild intellectual feasts he takes with most of these great men of England—a safe guest, who neglects the champagne and talks in the genial library vein. One might have found in Boston, in the middle of the last century, wiser and wittier Shakespearean scholars, or in New York Lamb-lovers and Swift-sure critics of deeper insight, but few who would make better neighbors at the feast. He puts aside canonicals to deal gently with Burns; to Coleridge and Swift is less kindly; enthuses over the haunts of Lamb in Hertfordshire; becomes mildly controversial as to the alleged cynicism of Shakespeare in his later days, but in general indulges but little in the purgatorial flashes of the critic or in any lighter fireworks. The two volumes are likely to find contented readers best among those who look for a discussion of style and obvious quality rather than verbal felicities and critical niceties.

**The Philosophy of Religion.** By George Trumbull Ladd, LL.D. New York: Charles Scribner's Sons. 2 vols. \$7.00.

Professor Ladd has been a student and teacher of religion and psychology for forty years, and his writings on psychology and on the nature of the Bible, in themselves almost a small library, are very widely known. The present work presents at considerable length the facts of man's religious experience, the origin and development of religion in various races, and the relation of religion to other departments of human life, and this treatment of the phenomenology of religion is followed by a criticism of the conceptions and tenets of spiritual experience from the point of view of modern science and philosophy. It aims to be a quite free and scientific treatise of the total religious life and religious development of humanity, but its chief interest is to prove philosophically that

theism is entirely tenable and also demonstrable by the instruments in the hands of philosophy. Professor Ladd is an enemy of agnosticism, the religious agnosticism of the Ritschlians as well as the irreligious agnosticism of Haeckel. He writes in an irenic spirit, and always with constructive aim, but he is sometimes more abstruse than is needful and more than a trifle prolix.

## Pebbles

"JONES used to be president of an insurance company."

"Has he reformed?"—*Princeton Tiger*.

OH, FROTH!

A tramp was extremely thirsty,  
And longed for some nice wet cheer;  
He stood by a brewery window  
And got a draught of beer.

## Hamilton and the Insurance Trustees

THERE was nothing more disgraceful, more injurious to public interests, or more criminal, in the varied list of offenses revealed by the Armstrong Insurance Committee than the expenditure of millions of the policy-holders' money for the prevention or the purchase of legislation.

Andrew Hamilton, an intimate friend of the late President McCall, was the agent thru whom expenditures for such purposes were made by the New York Life. At times he was also the agent of other companies. To him the New York Life paid about \$1,350,000. An investigating committee of the trustees held him and the late President responsible for a large part of this sum, and took measures to have both of them sued. Hamilton returned from Paris, angry and determined to show that the trustees were equally responsible, legally and morally, with the President and himself for what was done and for the payments that were required for the foul work. From one end of the country to the other has been read the report of his bitter attack upon them at the hearing in Albany.

Was he telling the truth? If we bear in mind the character of Hamilton and the nature of the business in which he has been engaged, the presumption must be in favor of the men of prominence whom he assails, if their denials or explanations are not controverted by good evidence. For every sum of money received by him he returned a voucher, which was duly audited by a committee composed in part of trustees who were paid for the work. What were this Auditing Committee's duties? The by-laws say that the first of them was:

"To examine all disbursements and pass upon all bills and accounts and the current expenses of the company."

Monthly reports in writing to the full board were required. It should be added here that it was the duty of the Finance Committee "to take and have a direct personal supervision over the funds of the company."

Two members of the Auditing Committee were also members of the investigating or "house-cleaning" committee, whose report against President McCall and himself so excited the indignation of Hamilton. One of them says he never heard of Hamilton until his name came out in the Armstrong inquiry; that it was not possible for the committee to go behind the records and vouchers submitted by the Comptroller; and that the payments to Hamilton were disguised by being charged up to the accounts for legal expenses and real estate. The other says he knew Hamilton was employed by the company and that he enjoyed the confidence of President McCall, but did not know the terms of his employment and never heard of "a legislative bureau." Other trustees assert that they had never heard of Hamilton. We add here the interesting statement of Mr. John Claflin, who has been a member of the Finance Committee:

"Prior to Mr. McCall's testimony, I did not know that Hamilton was disbursing any amounts of money, large or small, for the company in connection with legislation. After Mr. McCall had testified, I expressed to him my astonishment at the facts which he had disclosed, and I asked him why he had not consulted some of his trustees before making the payments to Hamilton. He replied that he considered the matter in the light of a secret service, and that he believed his authority as president justified him in making any payments which he thought beneficial to the company, without consultation with any of the trustees."

These are the essential parts of the explanations which are to be set up against the assertions of Hamilton. If the suits come to trial, we shall know more about the matter than the record now accessible shows.

While we do not question the truthfulness of any trustee's statement to which we have referred, we cannot believe that the nature of Hamilton's business and the purposes for which such large sums were paid to him were unknown to all the trustees or to all the members of the two committees. And it seems to us that those who did not know, but were paid for auditing, did not make sufficiently searching inquiry as to the vouchers that were laid before them. If officers of the

company disguised these payments, as one of the trustees says they did, they should now be prosecuted. The law provides punishment for such offenses.

Hamilton cannot reasonably expect that his mere assertion will be accepted in preference to the denials of prominent trustees. If he has documentary or other convincing evidence, and will produce it, we shall be glad to give it all the weight it deserves.

For what he did he offers no apology. On the contrary, he appears to be proud of his work. He was governed by what he calls "the higher law":

"The insurance world to-day is the greatest business proposition in the United States. And, as great affairs always do, it commands a higher law. In defending its rights and property you cannot stop to kick every cur that comes along and barks; and if you can sweep them out in other, perhaps mysterious, but honest, ways, you are defending and asserting the higher law which great enterprises have a right to command."

By this defense of corruption must the man be measured. And we presume that those who employed him, knowing what he was doing, also looked to a "higher law" to justify or excuse not only their use of him for corrupt purposes, but also the unlawful acts by which they sought to satisfy their own greed.

We say "unlawful," because we believe that the insurance investigation has revealed violations of the criminal laws by prominent officers, who should be brought to justice. Mr. Alton B. Parker, formerly the Chief Judge of New York's highest court, said last week in an address to the Mississippi Legislature:

"There are to-day within the State of New York a few men who, involved in insurance frauds, have furnished evidence, fairly corroborative on the witness stand, of their own venality. After a long judicial experience and some study of this question, I say to you that I do not believe it would be possible, in that great city, to draw a grand jury which would not indict for at least two, and perhaps three, of the most serious crimes known to the law. Still further, it would not be possible, by any change of venue, for any of the men so indicted, if fairly proved guilty, to escape conviction in any one of the other sixty counties of the great State of New York."

Some of the offenses to which we refer are now being considered by a grand jury, which has asked the court for instructions as to indictments for larceny in hypothetical cases that set forth the

action of the companies concerning contributions to political campaign funds. The court's response will soon be made known. There are other cases to be considered, involving charges of forgery, bribery or conspiracy. There has been delay, but we assume that District Attorney Jerome now intends to make a thorough official inquiry as to all these offenses. Some men of prominence are saying to the public that guilty rich men are sure to escape punishment. Neither in New York nor in any other part of the country should there be any evidence to warrant such an assertion. Punishment under the law should be as certain for the guilty millionaire as it was for the needy thief who came out of prison two weeks ago, after having been confined for years for stealing one cent.

## The Literature of Exposure

FIFTY years from now, when the historian of American literature writes of the opening years of the century, he will give one of his most interesting chapters to the literature of exposure, and he will pronounce it a true intellectual force, a vital element in the creative activity of later years.

Like all realities in the mental life of a people, it came unheralded and swiftly. In 1900 it did not exist. Two or three years later, a magazine article here and there betrayed a slight vermilion tint, like maple tree buds in early spring. Then, all at once, the news stands, from Bar Harbor to Los Angeles, from Seattle to St. Augustine, blossomed forth in every hue of rhetorical red, from the aniline cerise of Miss Tarbell's tale of Standard Oil to the Tyrian crimson of Mr. Lawson's story of Amalgamated Copper. It will disappear as quickly as it came. Already the question is heard every day, on the mart and in the library: "Haven't we had enough?"

It will disappear, we mean, as a reigning passion in journalistic literature. Journalistic exposure itself, of public and private wrong-doing, is not in the least novel, and it will not go out of style. But between the matter-of-fact output of steady-going journalism and this sociological *Erscheinung* there is a difference.

Literature is more than a tale of facts,

as architecture is more than a tale of bricks. Literature and architecture are products of the creative imagination. Yet they are more also than the poet's vision and the builder's drawing. They are substantial things, constructed of facts or of bricks. They are art, because they fashion and combine their materials to the magic of esthetic form, because they reveal the creative personality of him who fashions them, and because they have power to move him who reads or beholds them.

Judged by these tests, the recent work of Lincoln Steffens, of Miss Tarbell, of Mr. Lawson, of Sinclair and Phillips, is literature, beyond a peradventure. It has taken the tale of facts from the year books and the official reports, from the statutes and the decisions, and from unwilling witnesses before investigating committees, and has wrought them into narratives that stir the blood. Its writers have seen in these dead materials that which only imaginative insight ever sees—their significance, their relation to life, their potential striking force.

We cannot expect, however, that the literature of exposure, more than other developments of literature in the past, will give to the world an indefinite number of writers of true creative power. Already the masters have imitators, and the quality of the output must inevitably deteriorate. Imaginative grasp of significant relations will give place to sensationalism, and a fine prophetic scorn of iniquity in high places will degenerate into personal abuse.

And even if these inherent tendencies of all true literary evolution had not to be reckoned with, there are laws of human nature that must bring the literature of exposure speedily to a period. The public cannot stand at attention with its eyes fixed on one spot indefinitely. It is bound to get restive, and seek diversion in other interests. When that happens the literature of exposure has done its work, at least for a time. To keep on creating it, even tho its creators waved the wand of the wizard, would be to waste enchantment. Nay, it would be to weary and to irritate, and to make the public out of sheer annoyance lose some of its present fervor of indignation against unrighteousness.

All right thinking men must rejoice that the literature of exposure came into existence when it did, and all sane men will be glad if it gives place to something less fervid, in due time. It has accomplished a great purpose, and the American people will be sounder—more sincere, more fearless in right doing, henceforth because of it. The public conscience has been awakened and wrongdoers have been stricken with wholesome fear. But henceforth the work of exposing evil must be transformed into a steady-going constructive effort to prevent it.

And more and more we shall see that the all-important preventive measure is that matter-of-fact, unsensational, everyday publicity which a democratic people has an absolute right to impose upon all political and corporate transactions that are authorized by the State. The deeds of evil that the literature of exposure has brought to light have been most literally deeds of darkness. They never could have come to birth had public affairs been kept frankly open, as they should be, to public scrutiny. It is, in the finest sense, dramatic that the decisions of the United States Supreme Court withholding from corporations the privilege of the plea of incrimination have been handed down at the moment when the public has been prepared to appreciate the full meaning of publicity. If State and Federal administrations now do their full duty under the authority which these decisions have conferred upon them, there will be no further need of the literature of exposure.

## The Distrust of Liberty

THERE are always men and women in society who are sure that they know how other people ought to behave better than the other people can know for themselves. Satisfied that their own views of right and wrong are perfect and final, they go about the business of extracting moths from their neighbor's eyes without consciousness of restricted vision or a sense of shame. Their activity we can always anticipate and meet with gentlemanly resistance or a sense of humor. The real danger to liberty lies in some combination of general indifference with

a prevalent feeling that restrictive measures are necessary "for the common good."

Like every social phenomenon, the distrust of liberty is recurrent. The community has "spells" of it. For years together people are animated by a healthy spirit of personal independence and assertiveness. They feel that it is both bad form and unwise to meddle overmuch with one another's ideas and habits. They discountenance schoolmasterish legislation and a paternal administration. Then, all at once, the moral weather changes. We don't know just why everybody seems to be "let down" and a bit irritable. Things seem to be going wrong. At every turn we encounter a benevolent friend of the suffering body politic who knows a sure cure. The quack doctors hawk their wares, and, presently, the spiritual board of health gets busy. Everybody finds himself held up by the morality squad, and forced to make a public profession of faith as a friend of "decency" and good order, or as a winker at "license" and vice.

Of course we have to stamp out indecency—or try to; and they are doing a praiseworthy work who are keeping certain vulgarities and frauds out of the mails, and out of the schools. So much must be allowed. Just what is unfit to be allowed on the stage or in print is sometimes a nice question, to be sure, but we may admit that it is an extreme case when philosophical anarchism or the defense even of polygamy or free love is prohibited.

Of these prohibitions those which affect Sunday concerts and Sunday saloons are the most difficult to treat. The Government has nothing to do with Sunday as a religious institution; but it has much to do with assuring the working man one day's rest in seven. To be sure some work must be done on Sunday; some people must work that others may have comfort and rest; but the difficulty is to set the limit. Probably a Saturday saloon is as bad in itself as a Sunday saloon, and as much deserves suppression; but if you allow the Saturday saloon, why, leaving out religious considerations, should we object to the Sunday saloon? It is not easy to say. So the line between a Sunday evening

"sacred concert" and a secular concert is not easy to draw, and doubtless very wise are the policemen to whom we commit the task of making the distinction.

While the laws for protecting common morality must be enforced, the right of liberty of speech, even for political or social heresies, is not to be attacked. Our most sacred benevolent organizations—we mean the insurance companies—have suffered sadly of late from free speech, and the people approve. We even let free speech blaspheme Congress and State Legislatures. But somewhat serious must be the state of mind at Albany, where free speech has wrought such mischief to the good and great this winter that its possibilities for evil are naturally felt more deeply than in some other quarters. Its full potentiality of iniquitousness had not been suspected, however, until Assemblyman De Groot, of Queens, introduced his bill providing that any person

"who, by word of mouth, or by written or printed circulars, message, letters, documents, pamphlets, newspapers or magazine articles or publication of any kind, made, issued, or circulated by him or his authority, advocates or teaches the duty, necessity, or propriety of putting to death by legal sanction or otherwise, persons afflicted with an incurable mental or physical disease, because of their said condition, is guilty of a felony."

We don't feel quite sure whether an old-fashioned flaxseed poultice and a camphor steam, or a new-fangled fresh air treatment on the roof, would give Mr. DeGroot the speedier relief. But in any case we protest against the suggestion that he should be isolated. His peculiar kind of lung trouble, tho virulent and possibly infectious, is probably not contagious. We would let him see his friends and talk.

For, in general, we hold that the best therapeutic for the complication of moral maladies, malarial, congestive and grippy which is just now depressing us, is a treatment that may be described as open and generous. Plenty of fresh air, a nourishing diet, sunshine and unrestricted intercourse with intelligent and cheery companions, will often work wonders in bodies personal and bodies politic when they are suffering from these disagreeable attacks. Liberty, after all, is the best medicine for jaded nerves that have been shaken by it. *Similia similibus curantur.*

## The Dean of Westminster's Letter

THE Dean of Westminster's letter to the Archbishop of Canterbury is addressed to conditions that are common to both Great Britain and the United States. It relates to the question of the intrusion of mythical elements in the Gospel histories as well as in the Old Testament, and especially of what is sometimes called the Gospel of the Infancy, meaning the account of the birth and childhood of our Lord as it is given in the Gospels of Matthew and Luke, but omitted in Mark and John. The Virgin birth is an article in what is called the Apostles' Creed, altho composed long after the time of the Apostles, and it has been, therefore, spoken of as a cardinal doctrine in the Established Church of England, and no less in all other Churches in Europe and America. But of late no little discussion has arisen over it; and signatures have been made by clergymen to a circular declaring for or against freedom of belief as to it; and it has now been decided to present for trial Dr. Crapsey, an Episcopal clergyman of the State of New York, who has been charged with heresy in this matter. It is to meet this condition, and to calm the rising tide of doubt and fear, that the Very Rev. J. A. Robinson, Dean of Westminster, and a special student of early Church history, has written this letter and published it with the approval of the Archbishop of Canterbury, as the preface to a book on the Incarnation.

The author begins by saying that those who are asking for an authoritative pronouncement by the bishops on the Virgin birth quite mistake the temper in which the subject should be approached, and are in quite too much fear. There is, he says, among thoughtful men much disquietude as to the doctrine. For this the scientific habit which seeks natural causes is responsible. Many such men, he says, see a moral necessity for the resurrection of our Lord, but not for his miraculous birth. There is "a genuine and widely felt difficulty of belief which deserves to be treated most sympathetically by Christian teachers."

Further, says Dean Robinson, they are confirmed in their doubt by the knowl-

edge that the two great teachers of the incarnation, St. John and St. Paul, do not mention the Virgin birth, as if they thought it of little importance, if they knew of it. To be sure it is in Matthew and Luke, but it is not in the earliest stratum of the Gospel narrative, as critics generally admit; and they begin to ask whether the tradition were not an aftergrowth. They know that German scholars of the highest eminence have generally rejected the story as unhistorical, and they are confirmed in their doubts.

This, very briefly, is Dean Robinson's view of the present condition of religious thought on the subject in the Church of England. How does he meet it?

As to the scientific temper he says little can be done. Men will seek, and should seek, natural causes wherever possible. But, he says, the important matter is the incarnation, not the way it came into the world. On the critical side we have a problem that is now being worked out by scholars, without passion, and they must be allowed, in a calm way, to study and discover the truth. No drastic method, such as has been suggested, should then be employed to require the belief of the doctrine. A pronouncement by bishops, or an authoritative statement of the argument of its belief would do more hurt than good.

A chief error, he thinks, is in the idea that the Virgin birth is a "cardinal doctrine." The resurrection is a cardinal doctrine of the faith, but not the Virgin birth. To declare it such is "to use language which no synod of bishops, so far as I am aware, has ever ventured to use."

This quieting, possibly disquieting, letter has been thought of so much importance that it has been reprinted in the leading Episcopal journal of this country, for the consideration of the clergy who are disturbed by the discussion which is likely to arise over the trial of Dr. Crapsey. It is unfortunate that the trial is to take place. Trials for heresy settle nothing. Conclusions are reached in quite another court, that of careful study and sound reason; and heresy trials confuse the real conclusion we desire, which is not whether a man's views agree with an old or a new formula, which has itself no authority, but whether

they are true. This question will have to be threshed out, and we cannot help it, just as all other critical questions must be; and there is not the slightest reason for Christians to be afraid. The discovery of truth will always help and never hurt the world; and the decision of such questions as this can never touch the essential, cardinal truths of religion.

## A Prophet of Peace

A LATE cabled report said that Mr. Carnegie's gift to the cause of simplified spelling was not received with favor in Great Britain, where the praise of the past prevails; but we notice that in his rectorial address to the students of the University of St. Andrews the "twelve words" are printed in the shortened form, even *thru* and *thruout*, altho we have twice observed *through* by oversight.

But the address is not on the subject of simplified spelling. It treats of one single subject, and touches nothing else, except when he cannot refrain from approving the simplified creeds of Scotland. It is the evil of War and the beauty of Arbitration that he presents with cogent and earnest, if not perfervid, rhetoric to his young hearers. He tells them that of all the evils that curse humanity war is the chief, and is the last to persist. He would have the students of St. Andrews put first in their aim and purpose the great things to be achieved, and none is so great as the abolition of war.

Of course that means the substitution of arbitration for war; and, best of all, a league of the nations for the settlement of all disputes, a Court of The Hague doubled, extended, its powers enlarged and its force prescribed. We are interested to see that he thus anticipates just such an effective council of the nations meeting periodically, as we have earnestly advocated. Referring to the proposal of the St. Louis Inter-Parliamentary Union and the invitation of President Roosevelt, Mr. Carnegie says:

"Should the proposed periodic congress be established, we shall have the germ of the Congress of Nations, which is coming to keep the peace of the world, judging between nations, as the Supreme Court of the United States judges between States embracing an area larger than Europe. It will be no nov-

elty, but merely an extension of an agency already proved on a smaller scale. As we dwell on the rapid strides toward peace which man is making, the thought arises that there may be those now present, who will live to see this World Council established, through [read thru] which is sure to come in the course of time the banishment of man-slaying among civilized nations."

Now how shall such a council of nations be organized? Mr. Carnegie suggests a good way. He says that five nations co-operated in quelling the recent Chinese disorders and rescuing their representatives at Peking. These five nations could banish war. Let even three of them form a League of Peace, inviting all other nations to join; then let them agree that since war anywhere in the civilized world affects all nations, no nation shall go to war, but shall refer all international disputes to the Hague Conference or other arbitral body for peaceful settlement; and, to enforce this, let the League agree to declare non-intercourse with any nation refusing compliance. The nation refusing arbitration under these conditions would be put in a sorry plight; but, if it still persists, Mr. Carnegie suggests the use of necessary force to maintain peace, each member of the League agreeing to provide its necessary portion of the force or the money.

This is very much what we have advocated. It comes very near to a congress of the nations with legislative as well as judicial functions. It has in it at least the germ of what is sure in the end to be developed, when Russia, relieved of her internal disturbances, shall be able to call that second meeting of the nations at The Hague, which President Roosevelt has gracefully referred to her.

The English speaking peoples are getting tired of war. Military authorities in both Great Britain and America are complaining of the difficulty of getting voluntary recruits. The shortage of officers in the volunteers and militia in England is twenty-five per cent. In this country 3,500 men are lacking for our navy. The service is unattractive. War is losing its illusions. Political economy condemns it; Christianity damns it. Men and angels cry out for peace on earth. Mr. Carnegie bids the students of St. Andrews form leagues of peace, and resolve, under no matter what provocation, to insist on arbitration for all disputes.

### Lettish and Moro Massacres

In Russian Lithuania the local papers report 639 of the insurrectionists executed in two months, of whom 18 were hanged and the rest shot, besides 251 who were flogged. That is about the same number as that of the Moros whom we Americans killed in the island of Jolo the other day. We do not doubt that in both cases the insurrectionists thought themselves patriots making war against oppressors. Now we do not pretend to represent that the two cases are further parallel, for they were not. We believe that the Russian revolutionists were rising against a most oppressive government, and that a rising was justifiable, or would have been if it had a good chance of success, and if there had been a better way by making trial of the national Duma. Further, the Russian method of subduing the rebels, not only in battle, but by subsequent executions and floggings, was brutal and indefensible. In the case of the six hundred or more Moro men, women and children, trapped in the crater of the extinct volcano and there exterminated, our only information is that they were fanatics, madly, but patriotically, according to their light, and most foolishly and ignorantly, acting against their own interests and those of their own people who had submitted to the American rule. They had become freebooters, like David in the time of Saul, and were robbing the peaceful villagers who had accepted our control, and so were enemies of the peaceful Moros themselves. If we were to maintain government and prevent anarchy it was necessary to suppress them. We accept—for we have no evidence to controvert it—the statement of General Wood that they were such fanatics and robbers, who had to be conquered. If they were determined to die, we had to give them their choice. We want to believe all General Wood says, for the honor of our flag. We do not believe that our soldiers are likely to be cruel, not even, we hope, in hot blood. But it is a sad thing to be told that, with the fighting men and women, children were killed because they were held up as shields in the fight. That does not look as if those Moros were so determined to die; but as if they hoped our soldiers

would spare them and their children. At least that is the way it would look in the case of other than Moslem fanatics. But, as we have said, we prefer to take the facts as they are presented for our faith; and we only ask one question not yet answered, and which must be answered, Why were not these fanatics, robbers, rebels, rounded up to be starved out, rather than to be all bayoneted or shot? That would have looked so much better on paper, so much better in history; for it would not have to be apologized for and explained. So complete a slaughter needs more defense than it has yet had, and we are glad that the Senate has asked for all the documents in the case. Already General Wood is correcting his reports, and tells us that some women and children were saved.

### Forest Reserves

We doubt very much if the reader who will compare the map of the actual and proposed forest reserves of Idaho, as published with Senator Heyburn's article in THE INDEPENDENT of this week, with a good map of the State, will accept the Senator's conclusions. Idaho had in 1900 a population of 161,772, about that of Indianapolis, or Kansas City, or Rochester, or St. Paul. This population sends two Senators to Washington, or one for a population of a city like Dayton or Hartford. This population is scattered over a territory of 84,000 square miles, ten times that of Massachusetts, as large as that of Kansas. The population was not two to a square mile. The regions set apart for forest reserves are in an extremely mountainous region, which can never be inhabited, for the Rockies are higher than the White Mountains of New Hampshire and more inaccessible. If any part of the country should be given over to forest reserves, Idaho should have a large share of the benefit and protection. We would rather have the system extended, and we wish the condition of the United States Treasury had allowed Congress to appropriate the five millions asked for to make a great forest reserve in the White Mountains. There we are seeing the wasteful destruction of the timber which makes that region so attractive as a health resort for

the jaded people of other States. Now it is the paper pulp mills that are denuding those hillsides and leaving the soil, that is not washed away and burnt out, to be left for alders and blackberry bushes. The burden of protecting such a mountain resort from destruction belongs to the country and not to the State. If Idaho does not want reserves, New Hampshire does, and Governor Rollins speaks for the interests of his State when he favors the measure.

**The Devil a  
Monk Would Be**

Yes, the race track gamblers have a bill before the New York Legislature to limit gambling; that is, to limit to safe terms; that is, to limit so that they shall get all the profits, so that it will be whitewashed sufficiently to be introduced into other States and be made a permanent institution for the betterment of the world and the improvement in the breed of horses! And Dr. Slicer believes them, is impressed by their simple, translucent goodness, and backs their scheme—Dr. Slicer, who has his doubts of Matthew and Paul, but not of the rich ring that runs the races. Now it is safe to say that what those fresh apostles of honest gambling—like “honest graft”—want, it is safe for the rest of us to be very suspicious of. We have to wait till the sheep’s fleece has well grown over the wolf’s hide. We think it would be well to skin the wolf first, so that the new skin could have a chance to get attached, with hopes that the sheep spirit might “strike in.” Gambling at races is one of the worst forms of vice that prevail. It is this New York gambling ring that has just, at the last moment of the Legislature’s session, got in an act to introduce a racing park in New Hampshire, which has stirred up the decent people of that State. They introduced it as a bill to improve the breed of horses; but it is gambling that is the purpose of the races, not the improvement of horses. Gambling is defined as that form of agreement in which a person pays money without knowing what or how much he is to receive for it, which is precisely the condition of the gambling at the races. And great care is taken to increase the element of chance

by imposing extra heavy weights on extra fast horses. The object is to help inferior horses and hurt the best horses—and they call it improving the breed, and tell us they are friends of the horse! And just now they see a rising tide of opposition to their mischievous vice, and they are ready to turn monk. The Jew Apelles and Dr. Slicer may believe them.

**“Under My  
Footstool”**

There was not much to be said new about the great Students’ Volunteer meeting at Nashville for missions. The old story and argument has been told many times, and must often be told again as new generations come on the stage. The same old arithmetic must be taught in the schools, and students must anew be told their duties to the world that needs to be regenerated. But it is not our part particularly to repeat the rules of arithmetic or the arguments for missions. They are an old story. But there was one fact connected with the Nashville meeting which it is our duty to mention, and which we do not see that other journals call attention to. It is, that no colored people were in attendance. And yet Nashville has large negro colleges, which have graduates in the mission work in Africa, and which had hoped for great inspiration from the meeting. What was the reason? Simply this, that the committee in charge—Northern men mostly—agreed to humiliate their own colored students by not allowing them to sit with their State delegations. The custom is to seat the delegations by States in various parts of the hall. But in Nashville it is the custom to reserve a corner for negroes—a “Jim Crow” corner. The committee in charge of the arrangements agreed that the Nashville colored students should be put in this corner, and that then all colored students from other States should be put there as their guests. To this humiliation the Nashville students could not submit, and would not ask students from New York or Pennsylvania to submit, and they had in self-respect to stay away. They had hoped that Christians, meeting for the conversion of the world, would be themselves Christians. They remembered that when the Young Men’s Christian Association

had met in the South no such discrimination was allowed, and they have felt deeply pained. It was a wrong which lies at the door not of the students as a whole, but of the weak and flabby committee in charge, who had not the courage and sense to insist on the rights of those whom they represented, and who forgot the hot rebuke of James to those who say to the poor man, "Stand thou there or sit under my footstool." Had they possessed the courage which their position required, there would have been no sort of local difficulty.

*United* is a good word. The "United" two Baptist bodies of the maritime provinces of Canada have adopted it in their basis of union. First, after much preliminary discussion, the Baptist and Free Baptist Churches of New Brunswick came together on a basis of union in which the doctrine of predestination was left out, and also no article appeared on close communion, but a distinct utterance was made as to believers' baptism by immersion, which shuts out both infant baptism and sprinkling. The churches of both bodies, almost without exception, approved. As to close communion, it had been shown in the previous consultations that in both bodies, and to about an equal extent, pedobaptists were admitted to the Lord's table. This union was effected last autumn; and now the Free Baptists of Nova Scotia have adopted the basis of union, which assures the union of the two bodies in the two provinces, and the name adopted is "The United Baptist Church." It is not strange that with this Canadian example, the Free Baptists of the United States should be seriously talking of union; and consultations have been held with the Disciples, the Baptists and the Congregationalists. We judge that the negotiations with the Disciples have developed difficulties, but none have as yet arisen, at least in the meetings of the committees, with either the Baptists or the Congregationalists. The Free Baptists differ from the Baptists as to predestination and close communion, and if the Baptists of the country are as ready to drop these articles as are those of New Brunswick and Nova Scotia, and as are the Baptists of the Eastern

States, there should be no difficulty. From the Congregationalists they differ in rejecting infant baptism, and if the Congregationalist view makes it a form of consecration, not obligatory, then there should be no bar to union there, especially as the local fellowships have been more with the Congregationalists than with the Baptists. But, one way or the other, a new United Church ought to be accomplished.

#### The Russian Duma

The elections for membership in the Russian Duma go on with the expected difficulty. There is the natural lack of faith in it in many places, where few care to vote, while in other places the voters feel free to cast their votes and elect their genuine representatives. The first Duma will have a most unsatisfactory membership, and will be more conservative than are the people, because it will be the progressive people that think it a trick and stay away. But there will be sufficient popular representatives to assert the right of speech, and that will be much, and will do much, even when it cannot affect the votes. It is not the first year, or five years, of the Duma that we must consider, but the result when it gets well agoing and has conquered its right to exist. This kind of revolution cannot go backward. Do we not remember that the American people had so little faith in their own national form of government that three States failed to elect representatives to the first Congress under the Constitution, and Congress had to adjourn for several weeks after it was called in this city for March 4th for lack of a quorum? We must not then be surprised if when the Russian Duma meets on March 10th there be an imperfect representation, for conditions are more unfavorable than they were in the United States. As they are refusing in Russia to go to the polls, so Rhode Island and North Carolina long delayed to adopt the Constitution, and New York and Virginia and Massachusetts hesitated. We may expect disturbances before May 10th, for the reactionaries will do their best to excite uprisings simply to defeat the Duma and any reference of power to the people; but on the side of Witte and the Czar is the financial

situation. The Russian Government must borrow several hundred million dollars, but the financiers will not lend it on the Czar's word. They insist on the ratification by the people. That is the way that Paris and Berlin put in their word and influence, and when money talks it has to be heard.

Mr. Morgan's restoration of the cope to the Italian church from which it was stolen has a very pretty counterpart in the case of a finely illuminated manuscript purchased three years ago by Mr. Yates Thompson. It was a second volume, and had been mutilated by the cutting out of some of the miniatures. He discovered that the first volume belonged to the French Government; and then that ten of the twelve missing miniatures were in the Royal Library at Windsor. They ought all to come together, and accordingly King Edward presented the miniatures, and Mr. Thompson presented the volume thus restored to France. It was a very pretty act, and the story is like a romance; and the two volumes are now valuable for their courteous history, as well as for the fact that the miniatures were by no less an artist than Jehan Fouguet.

It is a serious condition, threatening to royalty, when over a hundred meetings could be held by the Social Democrats in Berlin last Sunday to honor the memory of the dead of the revolution of 1848, which drove the Emperor out of his capital. Since then Europe has been reorganized in its governments, and all in the spirit of that revolt. Germany has her Reichstag, even altho the system of representation could be improved; Austria and Hungary are under a fair representative government and working toward a better; Italy is free and satisfied; France is a republic; and Russia even is electing a national Duma. The next ten years are pregnant with further reforms in the direction of popular government.

In the disintegration of radium, by the giving off of helium, the amount of energy set free is 1,000,000,000 great calories for one gram of radium. Now to reconstruct the dissipated elements would

require as much energy as was lost in their dissipation, and this explains the hopelessness of their synthesis, as no such amount of energy can be employed. How were these elements first constructed? That is a question for the students. A German physicist, W. Meigen, suggests that the dissipation of elements is an actually irreversible process, like the dissipation of heat.

Here is a curious illustration of the crookedness of human nature. A number of leaders in the Cumberland Presbyterian Church have bitterly opposed union with the Northern Presbyterian Church on the ground that its new creed retained too much Calvinism. But now that they are beaten and the union is to take place, they are trying—most of them living in the Southern States—to carry over their churches into the Southern Presbyterian Church, which has not any new creed, but which retains in full the old Westminster Confession, as a protest against which the Cumberland Church was founded. It is evident that they think more of sectional than of theological doctrine.

A notable achievement in astronomy is successful photographing of the canals of Mars by Prof. Percival Lowell and his assistant, Mr. C. O. Lampland, at the Lowell Observatory. The existence of those canals has been denied since they were first announced by Schiaparelli, who discovered them with a surprisingly small telescope. Professor Lowell has given much study to these objects, and has at last presented them in photographs, thus confirming their objective existence.

Judge Parker had no right to assert, during his visit in the South, as he is reported, that President Roosevelt intends to ask a renomination at the end of his term. He has distinctly declared that he would not, and to say that he means to do so is, to say the least, discourteous. As to the propriety of the Democrats seeking a Southern candidate he is right, for his electors are there; but it would hardly be good politics to choose the nominee from a safe State, unless it was felt that defeat was sure.

# Insurance

## The Yellow Dog and His Revelations

THE event of last week in insurance circles was the unexpected appearance before the New York Legislature of Andrew Hamilton, who walked into the Assembly Chamber on Thursday, March 15 and demanded a hearing while the report of the Armstrong Committee was under consideration. The interruption was sensational, as was also the speech that he was permitted to make in defense of John A. McCall. As for himself he made no apology. He gloried in the work given him to do and in the doing of it. He took to himself the title of yellow dog, and speaking to the members of the Legislature, distinguished lawyers in attendance and insurance men of high and low degree, he said:

"Yes, gentlemen, they may talk about the Yellow Dog, but the dog is a dog of courage and loyalty."

Hamilton repudiated individual responsibility for his acts and expenditures that have met with such caustic criticism, and said that the trustees knew about them and approved them all. If the statements made by Hamilton can be substantiated and proved it will be exceedingly difficult for some of the trustees of the New York Life Insurance Company to secure the justification they will doubtless seek. In such a case, and in point of fact any way the matter is regarded, the argument will be strongly in favor of the adoption of the Armstrong recommendations and their enactment into law.

Seth Low, in a recently published letter, has voiced a general sentiment when he argues in favor first of the proposal to prohibit investments on the part of life insurance companies in the stocks of companies of various kinds, which has led in the past and might lead in the future to an attempt toward stock control. Second, to permit the policy-holders to organize, if they will, entirely new boards of trustees. Mr. Low closes his letter with the following paragraph, which seems to us to merit the strongest kind of endorsement:

It is argued in some quarters that to expose the control of these vast funds to a vote such

as is proposed by the bill submitted by the insurance investigation committee, is a policy so unwise as to be almost a policy of adventure. But if the Legislature follows the recommendations of the committee as to forbidding ownership of stock by life insurance companies, the motive heretofore existing for the control of such companies will have largely disappeared; and it may well be doubted whether the policy-holders will not work out for themselves results of which the rest of us will be quite as proud as those which have been achieved by the managements now in power.

All the opposition on the part of the insurance companies to the recommendations of the Armstrong Committee should be of no avail. Their report should be adopted in toto.

THE rapidly moving flywheel of any large manufacturing establishment is symbolic of great power. Visitors to the plant where it is installed view it with curiosity and a spell of fascination clusters forever around it. Running properly, no matter how swiftly, a flywheel of this kind runs almost noiselessly. The potency of such a flywheel is not always fully appreciated by those who look casually upon it, and seldom is it understood how great are its destructive possibilities. There is a constant strain on all flywheels that tends toward the bursting of each one asunder. The small flaw that it is almost impossible to avoid in the casting, necessarily entering into it, may result as a finality in the bursting of the flywheel, and when this is the case every fragment carries damage and destruction with it. There is never any warning. One moment the wheel is fulfilling its office and in another great masses of iron are centrifugally hurled in every direction with irresistible force. Human life surrounding machinery, massive masonry, all suffer destruction or great injury. Accidents of this kind are of necessity reckoned with as one of the hazards of manufacturing. It was to offset such a hazard, in so far as insurance can do it, that flywheel insurance was created, and a growing patronage of such protection on the part of manufacturers indicates that the hazard is being recognized more and more as a legitimate subject of insurance.

# Financial

## Railroad Earnings in 1905

RETURNS received by the *Financial Chronicle*, from 170,528 miles of railway in this country, show an increase of \$150,080,075 in gross earnings during the year 1905, and an increase of \$48,105,420 in net. Taking the remaining mileage into account, the *Chronicle* estimates the entire increase at \$180,000,000 gross and \$60,000,000 net. The estimated gains for a series of years are shown below:

| Increase in:       | Gross.          | Net.           |
|--------------------|-----------------|----------------|
| 1905 over 1904.... | \$180,000,000   | \$60,000,000   |
| 1904 over 1903.... | 10,000,000      | Loss 5,000,000 |
| 1903 over 1902.... | 210,000,000     | 50,000,000     |
| 1902 over 1901.... | 105,000,000     | 2,000,000      |
| 1901 over 1900.... | 155,000,000     | 70,000,000     |
| 1900 over 1899.... | 120,000,000     | 32,000,000     |
| 1899 over 1898.... | 140,000,000     | 55,000,000     |
| 1898 over 1897.... | 90,000,000      | 30,000,000     |
| 1897 over 1896.... | 75,000,000      | 45,000,000     |
| 1905 over 1896...  | \$1,085,000,000 | \$339,000,000  |

HARVEY FISK & SONS have completed plans for raising about \$100,000,000 to finance the four tunnels under the Hudson river which are being constructed by the Hudson Companies.

....With a view to the use of automobile cars for traffic on branch lines, the Erie Company has placed a contract for a Ganz car, which will have seats for sixty persons and be capable of maintaining a speed of 50 miles an hour.

....William A. Read & Co. have bought from the Minneapolis, St. Paul and Sault Ste. Marie Railroad Company \$2,860,000 of the company's first consolidated mortgage 4 per cent. gold bonds, interest upon which is guaranteed by the Canadian Pacific.

....The New York, New Haven and Hartford Railroad Company has added to its trolley property by purchasing a controlling interest in the Hoosac Valley Street Railway Company, which has 28 miles of road, extending from Cheshire, Mass., thru North Adams to Williamstown.

....At the recent annual meeting of the American Woolen Company, President Wood said to the stockholders that 1905 had been the best year in the company's history. Net sales for the year showed an increase of \$9,000,000, and

the increase of net profits was \$1,738,000. After paying dividends on preferred stock and charging \$1,367,000 to depreciation, the surplus for the year was \$1,852,000. The total undivided profits amount to \$10,049,000.

....In accordance with the resolution introduced by Jacob H. Schiff, adopted at the February meeting of the New York Chamber of Commerce, President Jesup has appointed Frank A. Vanderlip, Isidor Straus, John Claflin, Dumont Clarke and Charles A. Conant to be members of a special committee for the consideration of the general question of currency reform. This committee's report will be submitted to the President of the United States and the Secretary of the Treasury.

....The bill introduced at Albany by Senator Cooper, for the regulation of branch banking, is, in some respects, quite unsatisfactory to New York bankers. It provides that banks having branches shall make new applications to the Superintendent of Banking for permission to operate them, that the parent bank's capital shall be increased by \$100,000 for each branch, and that 10 per cent. of the increase shall be kept with the Banking Department at Albany, instead of in the bank's vaults. President Nash, of the Corn Exchange Bank (which has the largest number of branches), while raising no objection to the proposed increase of capital, criticises and opposes the other provisions. If the bill should become a law, the Corn Exchange Bank's capital would be increased from \$2,000,000 to \$3,000,000.

### ....Dividends announced:

Mergenthaler Linotype Co., quarterly, 2½ per cent., payable March 31st.

Western Un. Tel. Co., quarterly, 1¼ per cent., payable April 16th.

United Fruit Co., quarterly, 1¾ per cent., payable April 14th.

Otis Elevator Co. (Preferred), quarterly, \$1.50 per share, payable April 16th.

Otis Elevator Co. (Common), \$2.00 per share, payable April 16th.

Franklin Trust Co., quarterly, 3½ per cent., payable March 31st.

International Silver Co., quarterly, 1 per cent., payable April 2d.

United Copper Co. (Common), quarterly, 1¼ per cent., and extra ½ per cent., payable April 30th.

United Copper Co. (Preferred), semi-annual, 3 per cent., payable May 15th.

Electric Storage Battery Co. (Common), 1¼ per cent., payable April 2d.

Electric Storage Battery Co. (Preferred), 1¼ per cent., payable April 2d.

## Survey of the World

### Important Decision in the Beef Trust Case

The Government has suffered a serious reverse in the decision of Judge J. Otis Humphrey, of the United States District Court, at Chicago, discharging all the individual defendants in the Beef Trust case on the ground that they are entitled to immunity because Commissioner Garfield, of the Bureau of Corporations, procured from them information as to their business and the matters covered by the indictments. It is a defeat of a very serious character, not only because all of these sixteen indicted men (the Armours, Swifts, Morrisises, Cudahys, etc.) escape trial, but especially for the reason that the decision vitally affects other important official investigations concerning Trust combinations and railway companies and may compel a complete change of the methods used. The question was regarded as one of so great importance that Attorney-General Moody went to Chicago and consumed the greater part of two days with an argument in support of the Government's position. While all the individual defendants are set free, their corporations, also indicted, are held for trial, but the penalty for them, in case of conviction, is only a fine of \$5,000 on each count. Mr. Moody, in his argument, treated with some humor and much sarcasm the doctrine set up by the defendants, that under the law creating the Bureau of Corporations they were entitled to immunity, saying that for the discovery of this doctrine "uncounted generations of captains of industry would thank" the defendants' leading counsel, John S. Miller. He pictured all the Trust officers going to Washington (instead of avoiding subpoenas) for relief, as invalids go to Carlsbad. On the street at the capital, one of them might

be saying to another: "Good morning, Brother Rockefeller. Have you had your immunity bath today?" For the court to establish such a doctrine, he said, would be a calamity for the Government and the people. The Government would be crippled in its attempts to enforce the laws. He contended that immunity could not rightfully be claimed except by a person giving information under oath and in response to a subpoena. There had been no compulsion in this case, he asserted. Defendants' counsel held that there had been compulsion by Commissioner Garfield. They pointed out that the information thus obtained from the defendants had been turned over to the Department of Justice and used in procuring the indictments. President Roosevelt's published letter, saying that this had been done, was a part of the proof. Judge Humphrey said in his decision that the defendants had volunteered nothing, but had given only what was demanded by an officer who had the right to make the demand, and who had explained to them what his power was. They had given under a sense of legal compulsion and therefore were entitled to immunity under the act. "The privilege given by the Fifth Amendment permits a refusal to answer, but only as to incriminating evidence. The act gives immunity for evidence of or concerning the matter covered by the indictment, and the evidence need not be self-incriminating. The privilege must be personally claimed by the witness at the time; the immunity flows to the witness by action of law and without any claim on his part." In the course of the arguments reference was made by defendants' counsel to the attitude of the Government toward Paul Morton in the Atchison railroad case, as shown by the letters

of President Roosevelt and Attorney-General Moody when ex-Attorney-General Harmon gave up his position as special counsel. Immunity had then virtually been granted to Mr. Morton. It is doubted whether an appeal from Judge Humphrey's decision will lie, owing to the quasi-criminal nature of the proceeding. At Washington it is thought by many that the decision will stand. If it does, then the criminal prosecution of the officers of the Trusts and similar combinations, as to which Commissioner Garfield and his agents have made investigation, is barred. The Standard Oil investigation is finished, but all the prominent Standard Oil officers are immune, because Mr. Garfield procured information from them. The same, it is said, is true of his inquiries as to the Sugar Trust, the steel industry, the Tobacco Trust and the coal railroad companies. Mr. Moody admitted in his argument that immunity would extend to the railroad officers involved in the very recent proceeding as to rebates alleged to have been given to the Sugar Trust at New York. It is also asserted that railroad officers from whom the Interstate Commerce Commission obtained information as to alleged violations of the law are protected in the same way.

#### Railway Franchises in Philadelphia

Mayor Weaver, the official leader of the reform movement in Philadelphia, has compelled the Philadelphia Rapid Transit Company, which for many years has had a monopoly of the street railways, to surrender several valuable franchises, with the understanding that they are to be taken and used by the Philadelphia and Western Railroad Company, a competing corporation now operating a line from Parkersburg to the city boundary. The Transit Company has been building a subway on Market street. The time required for the completion of this work has been extended several times, but was to expire in April. Another extension (one for three years was sought) could not be passed in the Councils over Mayor Weaver's veto. The Councils are no longer controlled by a boss or a ring. The Mayor used his power over an extension to procure the

surrender of certain unused franchises which had been granted in a scandalous manner. An agreement was reached on the 20th. The Transit Company has three years to complete the subway in Market street, and it undertakes to make subways under Broad and Walnut streets, with an elevated road to Frankford. It surrenders franchises for a subway in Chestnut street, for two long elevated roads, and for surface roads in Broad streets, where no tracks will be laid. The franchises thus given up go to the Philadelphia and Western, which will thus reach the center and the water front, and have large opportunities in the western and southwestern sections. This company will be bound not to consolidate with the old one. It is said to be associated with the Gould system, and it may furnish to that system an outlet to tidewater at Philadelphia. All the franchises were originally granted in perpetuity, and they will retain this character. The Mayor could obtain no concession for limited periods. The impression in Philadelphia is that the Mayor has been remarkably successful, as his only weapon was his power to veto the extension of time. The franchises surrendered, and the one for the Market street subway, are those which were procured a few years ago from the Legislature by certain politicians, under curious circumstances, and afterward confirmed by the local Councils and approved by Mayor Ashbridge, who signed the papers hastily, at midnight, against popular protest and in the face of an offer of \$2,500,000 for them from John Wanamaker. They afterward were acquired by the existing and controlling railway company, officers of which now admit that \$1,500,000 was paid for them. On the 24th inst., four days after the franchises were reclaimed in the interest of competition, ex-Mayor Ashbridge died.

#### The Lynching in Chattanooga

Edward Johnson, a negro, recently tried for assault upon a young white woman named Taylor, was taken from the jail at Chattanooga, Tenn., on the night of the 19th, by a mob, and hanged to the pier of a bridge. This was an extraordinary case of lynching,

because Johnson was then in the custody of the Supreme Court of the United States. Johnson had been convicted and he was to be hanged lawfully on the 20th. Counsel assigned to him by the court declined to take an appeal. Three other lawyers appointed by the court to review the evidence decided against an appeal. Action in Johnson's behalf was taken, however, with the help of a fund raised by the negroes of the city. Application to the Supreme Court of the State was made, but to no purpose. Habeas corpus proceedings before Judge Clark, of the Federal Circuit Court, proved to be futile. But appeal to the Supreme Court of the United States was successful. On the 19th a stay was ordered, and the necessary instructions were promptly telegraphed to the Sheriff and the court at Chattanooga. Johnson thus passed into the custody of the Supreme Court. That night the mob lynched him, thus furnishing a notable and unprecedented example of contempt of court. It appears that the trial of Johnson was marked by extraordinary features. Miss Taylor was unable positively to identify the prisoner as the man who had attacked her. A juror rose and questioned her, saying that if she would identify Johnson he would come down from the box and cut the negro's heart out. On the day preceding the lynching religious services were held in the jail for Johnson's benefit. He then made confession of faith and was formally received into the Baptist Church, having been immersed in a bathtub. He declared that he was innocent. Four companies of militia were on guard in the city for two or three days following the lynching, to prevent race riots. It is reported that two men were shot. The District Attorney and Marshal have been directed by the Attorney General to arrest the lynchers, if they can be identified. The Supreme Court was shocked by this exhibition of contempt for its orders, and desires to punish those who were guilty of it.

**Fighting in the Philippines** Another engagement with hostile fanatics, this time in the island of Samar, took place on the 24th. At first it was reported that Governor George

Curry was missing and probably had been killed, but it is now known that he is alive and well. The Government and the people of the coast towns have for a long time been annoyed by the Pulajanes, who are savage fanatics. There was an agreement that the surviving Pulajanes should surrender to Governor Curry at Magtoon on the 24th. About 100 of them presented themselves under cover of a flag of truce and then suddenly attacked the Americans and the constabulary. There was a hard fight. Governor Curry and Judge Lobinger escaped by swimming across a river and were missing for thirty-six hours. The constabulary force lost sixteen men killed or severely wounded. The bodies of thirty Pulajanes were buried. Governor Curry (formerly Captain in the Rough Riders and, later, Chief of Police in Manila) has called for troops, and will, he says, "prepare to wage a war of extermination against the fugitives, which is the only alternative." He has the sympathy and aid of the people.—Last week's despatches present contradictory assertions about the killing of women and children at Mt. Dajo. Governor-General Ide reported to Secretary Taft that the newspaper accounts had been sensational and in all essential details false. "Some women and children were killed or wounded by preliminary shelling at a distance." General Wood complained of sensational statements "made up in Manila" and added that there had been "no reference in any cable from Mindanao to the killing of women and children." In his first despatches to Secretary Taft, however, he had said that he was "present thruout practically the entire action" and that "a considerable number of women and children were killed unavoidably in the fierce hand-to-hand fighting"; that women were dressed like men and charged with them, and that men used children as shields while charging upon the troops.

**Mr. Roosevelt and the Labor Leaders**

By appointment, a large delegation representing the American Federation of Labor met the President at the White House on the 21st and presented a long list of griev-

ances. The eight hour law, it was said, was violated frequently in this country and had been nullified in the Canal Zone by legislation. Immigration should be restricted. The Chinese exclusion law had been violated, and it was proposed that it should be weakened by a new law. Use of the writ of injunction had been perverted to the injury of laborers. Legislation for the protection of seamen was needed. Other matters were mentioned. In reply Mr. Roosevelt made a long address. The pending bill concerning injunctions, he said, went as far as it ought to go, but the workingmen could defeat it if they desired to do so, for the capitalists opposed it. He hoped it would be passed. It was necessary that courts should have power to grant injunctions. In the last four and a half years the Government had never invoked this power against combinations of labor, but had frequently used it against combinations of capital. He declined to consider the delegation's reflections upon the action of Congress. He was in favor of the eight hour law in this country, but he explained at length that it would be an absurdity in Panama, where the conditions were different. If specifications as to the violation of it at home were submitted, he would have the law obeyed. He explained his policy as to the exclusion of the Chinese. Laborers should be kept out, but the professional and business classes should be admitted and courteously treated. In support of his views he would stand unflinchingly. As to his order forbidding Government employees to petition to Congress for increase of pay, he explained that it was a matter of discipline to require them to make their requests to the heads of their departments. On the following day he sent a letter to the Federation's Secretary, asking for specifications as to violations of the eight hour law, and promising to see that the law was efficiently enforced. It is understood that the result of the interview was not wholly satisfactory to the delegation. On the 24th the Executive Council published a statement of the Federation's purpose to seek relief by the ballot and to pursue more aggressively the policy of questioning candidates for office.

### The Coal Miners

During the past week public attention has been diverted from the controversy between the anthracite miners and their employers to the conference of bituminous operators and miners at Indianapolis. It is understood that from the beginning the operators of Western Pennsylvania, led by F. L. Robbins, of the Pittsburgh Coal Company, have been willing to grant a small increase of wages. But to this the operators of Ohio, Indiana and Illinois would not consent. In the joint conferences, Western Pennsylvania has voted with the miners for a restoration of the wage scale of 1903, which would involve an increase of about  $5\frac{1}{2}$  per cent. On the 26th, the miners' union, represented by President Mitchell and other prominent officers, delivered to the operators its ultimatum, which was that under no circumstances would it accept anything less than this increase. An adjournment was taken, and, up to the time of our going to press, no agreement had been reached. Some expected that Western Pennsylvania would break away from the operators' association and independently make terms with the union. By means of this association the relations of the mine owners to the miners in the central competitive bituminous field have been successfully regulated for a long time past. The anthracite operators (the coal railroad companies) have consented to a further conference with the union at New York, but at last reports no progress had been made. It is quite clearly shown, however, in the reply to President Mitchell's letter and in statements given to the press, that the operators intend to make no concessions, but will insist upon a continued observance of the rules laid down by the Arbitration Commission, three years ago. In these statements they assert that the demands of the union involve a wage increase much exceeding 10 per cent., and that the pay of certain classes of workmen would be increased 100 per cent. Continued agitation for an eight-hour day, they add, may suggest the expediency of requiring the inside workmen to work 8 hours instead of only 4 or 5. They say that the average for all does not now exceed 8 hours. The date of the expiration of the agree-

ments in both branches of the industry (next Saturday) is near at hand, and much preparation has been made for a suspension of work.

### British Legislation

The new Liberal Government is not at all precipitate in bringing its measures before Parliament, but it is being gradually committed on vital questions of the day, which are brought before it in one form or another. The verdict of the country against protection was formally ratified by a vote of 474 to 98, on a resolution introduced by Sir James Kitson, declaring that the result of the recent General Election had been a demonstration of the fidelity of the British people to Free Trade, and announcing the determination of the House to resist all proposals savoring of Protection. Mr. Balfour ridiculed this as "a vote of censure on the Opposition, a novel Parliamentary operation," and objected to it as tying the hands of the Government against any attempt to broaden the basis of taxation, either for social reform or national defense. The Premier declared the objections of Mr. Balfour and Mr. Chamberlain "futile, nonsensical and misleading," and applied the Closure, with the result as given above. On the Chinese Labor question the policy of the Government, as outlined by Mr. Winston Churchill, is to allow the outstanding licenses to be carried out, altho this would admit of 16,000 more Chinese being brought into the Transvaal. Then the importation would be stopped. If the Transvaal Legislature, when constituted, should make new proposals, they would be examined, and if found to be in conflict with the fundamental principles of liberty, they would be vetoed by the Government. This threat of overruling the action of the colony, on what they regard as a local issue, has aroused bad feeling in the Transvaal, and is likely to lead to a conflict between the Colonial and Imperial powers. The attitude of the new House on the army question was tested by a motion of Major Seely to reduce the vote for 204,100 men on the Home and Colonial establishments, outside of India, by 10,000 men. This was opposed by Mr.

Haldane, Secretary of State for War, who, however, suggested the possibility of some economies and advocated the development of a large volunteer force as a reservoir to supply the army in case of need. The proposed reduction was defeated by a vote of 240 to 56. A "Pure Beer" bill, requiring that every public house keep beer of the old fashioned sort in the materials for which not less than 85 per cent. of barley should be used, was introduced, but defeated. In opposition it was urged that the modern beer from glucose was brewed in a more scientific manner and was less harmful than the old, because it contains less alcohol.

### The Conference at Algieras

It is generally believed that the International Conference on Morocco has practically come to an agreement and will soon adjourn. If the conditions are as rumored it is to be regarded as a victory for France, rather than for Germany. The latter has given way on both bank and police question. France will be allowed three-fifths of the stock in the Moroccan bank to be established, and French and Spanish police alone will have control in six out of the eight ports. For the protection of Tangier and Mogador an international force will be organized under the management of a Lieutenant Colonel from Austria, or some other neutral country, who will report to the Sultan and to the diplomatic corps of Tangier. This arrangement is to last for five years. This plan for a mixed police at all ports, instead of a division of the portes among the different Powers, which was likely to lead to territorial claims, is ascribed to the American delegate, Mr. White, and to President Roosevelt, but it was introduced by the Austrian representative with the indorsement of Russia. The privates and non-commissioned officers are to be natives, and there is to be a Swiss Inspector General over the whole force, with supervisory, but not mandatory powers. It is reported that Emperor William is much chagrined over the failure of Germany to gain any substantial advantage from the Conference which he forced, and the Prince von Bülow, who received

his title as a reward for securing the Conference, will lose the chancellorship and be succeeded by Prince Hohenlohe-Langenberg.

#### Italian Politics

The new Italian Cabinet under Baron Sonnino is not having perfectly smooth sailing even during its first month. The Opposition rallied and elected 16 of the 27 members of the budget commission, or, as we would say, the committee on appropriations. They also elected as Secretary of the Chamber of Deputies Signor Cirmeni, who was Under Secretary to Signor Fortis in the preceding Cabinet. The nomination by Premier Sonnino of Signor Giuseppe Biancheri, President of the Chamber, was accepted, as all factions have confidence in his honesty and justness. He has presided over the Chamber for thirty years under all sorts of ministries. He is one of the oldest parliamentarians of the world, as he is eighty-three years of age and has been a member of the Chamber for fifty-three years. There are two questions of great difficulty before the Italian Government, the nationalization of the railroads and destitution and depopulation in the southern provinces. In regard to the latter the Government proposes to reduce the land taxes by 30 per cent. and to provide other measures of relief for peasants who do not own land. The Sicilian sulfur industry will be promoted. The emigration from Southern Italy to America has reached an unprecedented figure. The total number for 1905 was 250,000. This is an average of 200 to every 10,000 of the population, and in some districts the proportion is as high as 400.

#### Reaction in Russia

Now that all fear of revolution has been banished from the minds of the ruling classes in Russia they are adopting repressive measures more openly. Interference with the freedom of the elections to the Duma seems to be general, and the several manifestoes promising freedom of the press have made no perceptible improvement. A petition presented to the Emperor in favor of Alexis Souvorin, editor of *Russ*, who was sentenced to one year's imprisonment in a fortress

for "publishing proclamations and statements designed to instigate riot, sedition and armed revolt and tending to cause the bankruptcy of the State," was rejected by him, and the harsh sentence will be carried out. Mr. Souvorin is the son of the editor of the *Novoe Vremya*, which he represented in Portsmouth at the Peace Conference. In Moscow 842 persons have been imprisoned for political reasons. Count Witte is so far successful in checking anti-Semitic riots, but he is likely to go out of office at any time, as it is rumored that his health is failing under the strain of his responsibility and that his influence is waning. Probably he is kept in office because he is thought to be the only man who can rescue Russia from her financial difficulties. Estimates are being cut down, but this is not sufficient to provide for the \$500,000,000 deficit this year. The new income tax is expected to yield \$21,500,000 a year. According to its provisions incomes of \$450 are exempt. Those above this must pay a graduated scale of five to seven per cent. based on the taxpayer's own declaration.—The Caucasus has become pacified by an agreement between the representatives of the Armenians and the Tatars concluded at Tiflis. This provides for a permanent central council of conciliation, for mutual disarmament, for the establishment of local councils elected by universal suffrage, and for high schools and a university in the Caucasus. Now that the Russian Government has restored to the Armenian Church the property which it confiscated over a year ago, the Georgians have become emboldened to ask that their national Church be freed from the control of the St. Petersburg Synod and that the autonomy which it possessed before the Russo-Turkish war be restored.

#### The Hungarian Situation

There is yet no prospect that the Hungarian Government will find a speedy release from the difficult and embarrassing position in which it is placed. On the contrary, it is being inevitably driven to more and more severe and arbitrary measures of repression. The Fejervary Cabinet has, for over a year, exercised governmental powers to which

it has no legal right, for it has not and never has had the support of a majority. The coalition of opposition factions comprising a majority of the Hungarian Parliament, insisted upon the apparently insignificant, but really symbolic, use of Magyar words of command in the Hungarian army, which the Emperor-King refused to grant, as he considered it destructive to the Dual Monarchy, that he is sworn to maintain. On February 19th he again dissolved Parliament because it refused to accept the Fejervary Cabinet. The date prescribed by the constitution for the election of a new Parliament is May 19th, but Premier Fejervary and the majority of his cabinet wish to postpone the election until the country becomes quieter. The Ministers of the Interior and of Justice oppose this delay as unconstitutional and dangerous. At the same time that the Cabinet is showing this division, the Coalition is also splitting up. Baron Banffy has deserted it, claiming that it insisted too much upon trivialities and disregarded essentials. Franz Kossuth, the leader of the Independence Party, and the strongest man in the Coalition, is now too sick to take part in its meetings. In his absence Count Albert Apponyi has presided, and the Coalition has taken some very extreme, if not seditious, action in opposition to the Government by a pronunciamento which gave notice to all whom it might concern that treaties concluded by the Government without Parliamentary sanction are null and void for the State; that the actions of the royal commissioners in the counties are utterly illegal; that the voluntary performance of military service and the voluntary payment of taxes are both contrary to law and unpatriotic; and that the executive committee expects the patriotism and law-abiding character of the Hungarians banks to prevent them from helping the Government to dispense with Parliamentary control. The banks have recently lent \$20,600,000 to the Government, which is in sore straits owing to the lack of appropriations from Parliament and the difficulty of collecting taxes. In reply to these attacks on its administrative powers and credit, the Government has retaliated by issuing an official ordinance dissolving the executive committee of

the Coalition on the ground that it has been inciting the people to resistance to authority. Meetings at which the members of the Coalition were to speak to their constituents have been prohibited by the Government, and the sale of newspapers upon the street has been forbidden. M. de Rudnay, who gained an unfavorable notoriety when Chief of Police at Budapest for the severity of his temper, has been made Royal Plenipotentiary to maintain order in the Hungarian capital. The gravity of the situation is increased by the ill health of the aged Emperor-King, who is liable to die at any time, and who has not now the personal influence over affairs that he possessed when younger.

#### Archeological Finds in Greece

Within recent years a number of monumental remains from the earlier periods of Greece have been restored, this policy having been decided upon after much discussion as to the advisability and wisdom of such a restoration. Among these restorations is the Lion of Chæroneia, which is generally regarded as having been accomplished very successfully. On the Acropolis in Athens the Greek architect Balanos has reconstructed the west wall of the Erechtheion. The same savant has restored in the temple of Phigalia, in Arcadia, the Cella walls out of the old massive stones, and has materially enhanced the beauty of this unique monument. In Olympia, chiefly thru the liberality of C. Schuette, a wholesale merchant of Bremen, two new columns in the Hera temple have been restored, under the management of C. Kavarav. How much the scenery gains thereby is seen from the fact that most of the columns in Olympia have been destroyed by floods and earthquakes, altho the Hera temple has about a dozen columns more or less well preserved, Olympia was a forest of temples and columns. It has also been determined to restore the Zeus temple, as many of the columns belonging to this famous structure are still lying around in the grass, in a broken condition indeed, but mostly at the places where they originally stood. It has further been decided to rebuild again in its former shape the Treasury House of Athens in Delphi. As

the French have fully excavated this structure, and their finds in inscriptions and sculpture have become the possession of archeological science, the City Council of Athens, at the suggestion of Theophile Homolle, the leader of these researches, undertook to rebuild this magnificent structure and the work has been practically completed, and it stands there now, as it did in times gone by, as a proud monument of victory, erected originally from the Persian booty secured at Marathon. New material had to be used only in the upper parts of this building, as the lower parts and the foundation were well preserved in the rubbish of centuries. The Munich *Allgemeine Zeitung* expresses its warm commendation of such restorations if they continue to be done by men who understand their business. This journal also reports that the Archeological Society of Athens has decided to undertake excavations on a grand scale in Ithome and Messene. The work has been mapped out by Professors Kawwadias, Lampros and Politis. In Chalcis in Euboea, among the earthworks erected in the Middle Ages by the Venetians, remnants of old Ionian structures have been found.

#### Fighting in Nigeria

Nigeria, in Western Africa, has been the scene of late military activities. In the northern portion the French and British territories meet, and the two Governments work in harmony in repressing uprisings. A force of fanatics, who seem to have developed a Mahdi, have come to the north and invaded Sokoto, and a French force has suffered the loss of seven officers captured or killed. The British force which was sent against the natives met with strong resistance. The natives twice charged the British square, but were repulsed with a loss of several hundred men, including, perhaps, the Mahdi. The town of Satirk, where the rebellious natives made their main stand, was bombarded and then captured at the point of the bayonet. In Southern Nigeria the British have reported several successful expeditions to put down cannibalism, slave dealing and human sacrifices, and the maintenance of paths thru the forests. An interesting incident is that from Sierra Leone an expedition was sent to the Hinterland of Liberia,

with Liberian consent, to punish the tribes who had been raiding the Sierra Leone territory. This was accomplished, and a new chief appointed, who promised to maintain peace.

#### The Pope and His Catechism

Under the title "*Compendio della Dottrina Cristiana Prescritto da Sua Santita Papa Pio X.*," the Pope has issued a new catechism, which on its title page is announced as intended for the dioceses of the Roman Province. On the introductory page the Pope addresses the Cardinal Vicar General, Pietro Respighia, emphasizing that the necessity of a better instruction in religion had suggested the preparation of this catechism, and stating that the catechisms of the different Italian dioceses had been examined and the contents of the new catechism been taken chiefly from the texts that for years had been approved by the Bishops of Piemont, Liguria, the Lombardy, Emilia and Toscana. The book itself contains a short catechism for preparing those who propose to take first communion, as also a catechism for the advanced youth, and brief instructions for very small children, followed by instructions concerning the chief church festivals, a bird's eye view of biblical and church history, and short prayers for morning and evening. A noteworthy feature of the work is its practical recognition of civil marriage. In answer to the question: "What is civil marriage?" the catechism says:

"This is nothing else than a formality prescribed by the law in order to guarantee and to secure to parents and their children the civil consequences of their union."

"Does civil marriage suffice the Christian?"

"No it does not suffice, for it is no sacrament and hence no real celebration of marriage."

"In what condition are those found who are married only according to civil law?"

"They are in a deplorable condition, and before God and the Church their union is illegitimate."

"Is it, nevertheless, necessary to enter upon a civil marriage?"

"It is necessary to do this; for altho civil marriage is no sacrament, it, nevertheless, serves to secure the consequences in civil life to parents and children of the marriage union. For this reason, too, the Church authorities as a rule permit the churchly marriage only after the steps demanded by the civil law have been taken."

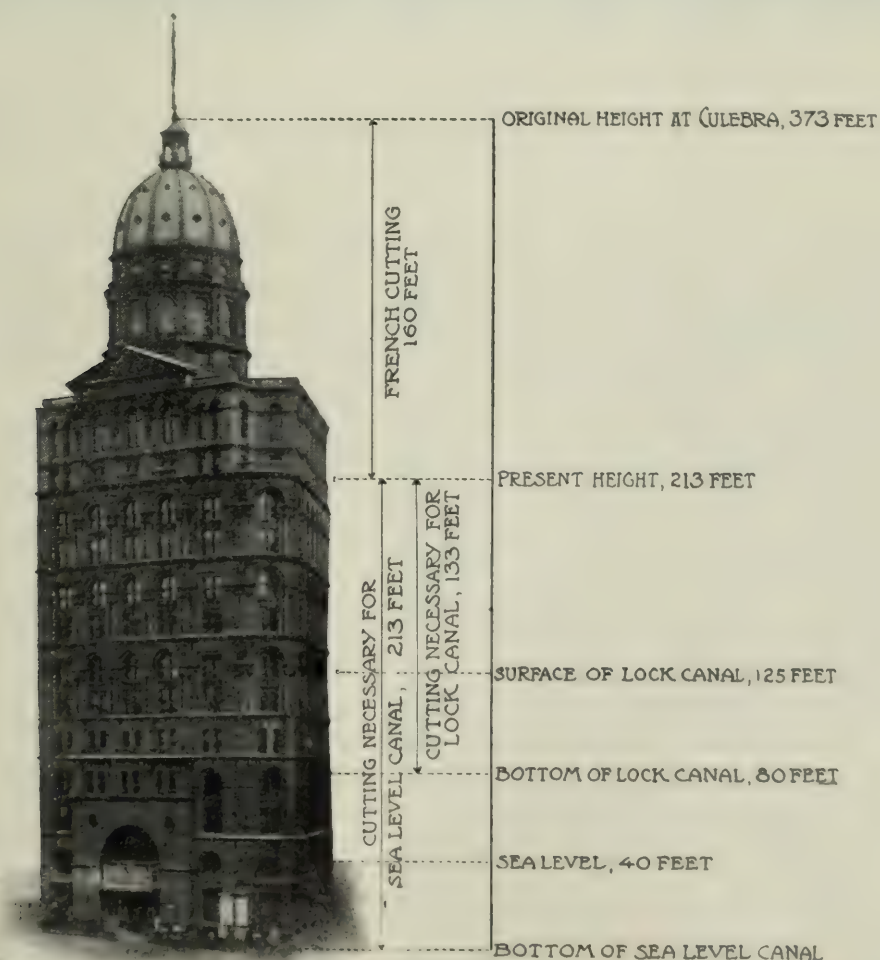

# The Sea-Level versus the Lock Canal

BY EDWIN E. SLOSSON AND GARDNER RICHARDSON

[In the first article of this series published March 15th, the two editors of *THE INDEPENDENT*, who have just returned from Panama, presented their conclusions as to the general conditions there. In the next article of March 22d, they discussed certain aspects of "Life in the Canal Zone." In this they present plainly and impartially the arguments on both sides of the question which is now before the American people. The three following articles will give some interesting points about the people of Panama and the country they live in and the labor question from the standpoint of the negro laborer.—EDITOR.]

CONGRESS is now called upon to decide the most difficult and momentous question of modern engineering, the choice of the type of the canal to be built at Panama. When doctors disagree there is a chance for the patient to have his say. This is decidedly a case where doctors disagree. The question of a lock or sea-level canal at Panama has been under discussion by engineers ever since the International Scientific Congress met at Paris in 1879 to decide it. In fact, the location of a

dam at Gatun, which is the most important feature of the plan now recommended to Congress by the President, was suggested by M. Le Lepinay as early as 1859. During the years since the discussion began the factors have been altering in value, excavation has become cheaper, vessels have become bigger and lock machinery has been improved, but still neither side has gained a clear victory over the other in the argument. And today they are as far apart as ever. Engineers of good standing differ as much

An Illustration of the Excavation at the Culebra Cut Compared with the World Building, New York.

Profiles of the Proposed Lock and Sea-Level Canals with Summit Elevation at 85 feet. The shaded linear distances in miles. The figures above at the end of the perpendicular lines give the present height of

as \$50,000,000 on cost and seven years on time of construction, and each side denounces the other's plans as impracticable, dangerous and extravagant.

The question ought to be decided quickly, for we have an expensive plant on the Isthmus and an army of men ready to go to work, and they cannot be profitably employed until it is known what they are to do. As it is now we must dig out and move again much of the dirt that the French got out, for they piled it too near the banks for the wider channel contemplated today, and if the plans are fundamentally changed again there will be more of this lost labor. After we decide what kind of a canal we want, the question will arise who is to do the work, and, if it is decided to let it by contract or at least to get bids with that in view, this will mean many months of waiting for advertising and estimates.

This is how the question stands as it is submitted to the grand jury of the American people. There was appointed, last June, a Board of Consulting Engineers, composed of eight Americans and one nominated by England, by Germany, by France, and by the Netherlands, and the consulting engineer of the Suez Canal. These met in Washington, studied the plans submitted to them in the light of all available information, made a brief visit to the Isthmus and agreed to disagree. Among the many plans for lock canals they decided that the best was that with a surface level of 60 feet above the sea, with four locks, no two in the same place. This they compared with the sea level project, and reported in favor of the latter by a vote of eight to five, all the foreign engineers favoring the sea-level plan. The minority of the board then took up and de-

veloped a plan for a lock canal at an elevation of 85 feet above sea level and six locks, three of them in one flight. The two reports being then brought before the Isthmian Canal Commission, the minority report in favor of the 85-foot canal was adopted by a vote of five to one. It also received the emphatic indorsement of Chief Engineer Stevens, Secretary of War Taft and President Roosevelt, and was by the last transmitted to Congress, with the statement that the Canal would be built on that plan unless Congress should decide in favor of the sea-level canal.

M. De Lesseps, after his success with the Suez Canal, entered upon the Panama project with a light heart, for the distance to be cut thru was only half as much, but the disastrous failure of the scheme ruined his reputation, shortened his life, swept away the savings of thou-

sands of French families, and involved the public men of France in a cloud of scandal. The fundamental difficulty with the French was that they failed to take into account that the Panama route requires much deeper cutting than the Suez, and thru rock instead of sand, and that the climate is a greater impediment. The watershed between the Atlantic and Pacific at this point is the Culebra Hill, on the one side of which is the Chagres River, carrying off three-fourths of the drainage into the Atlantic, and on the other the Rio Grande, taking the rest into the Pacific.

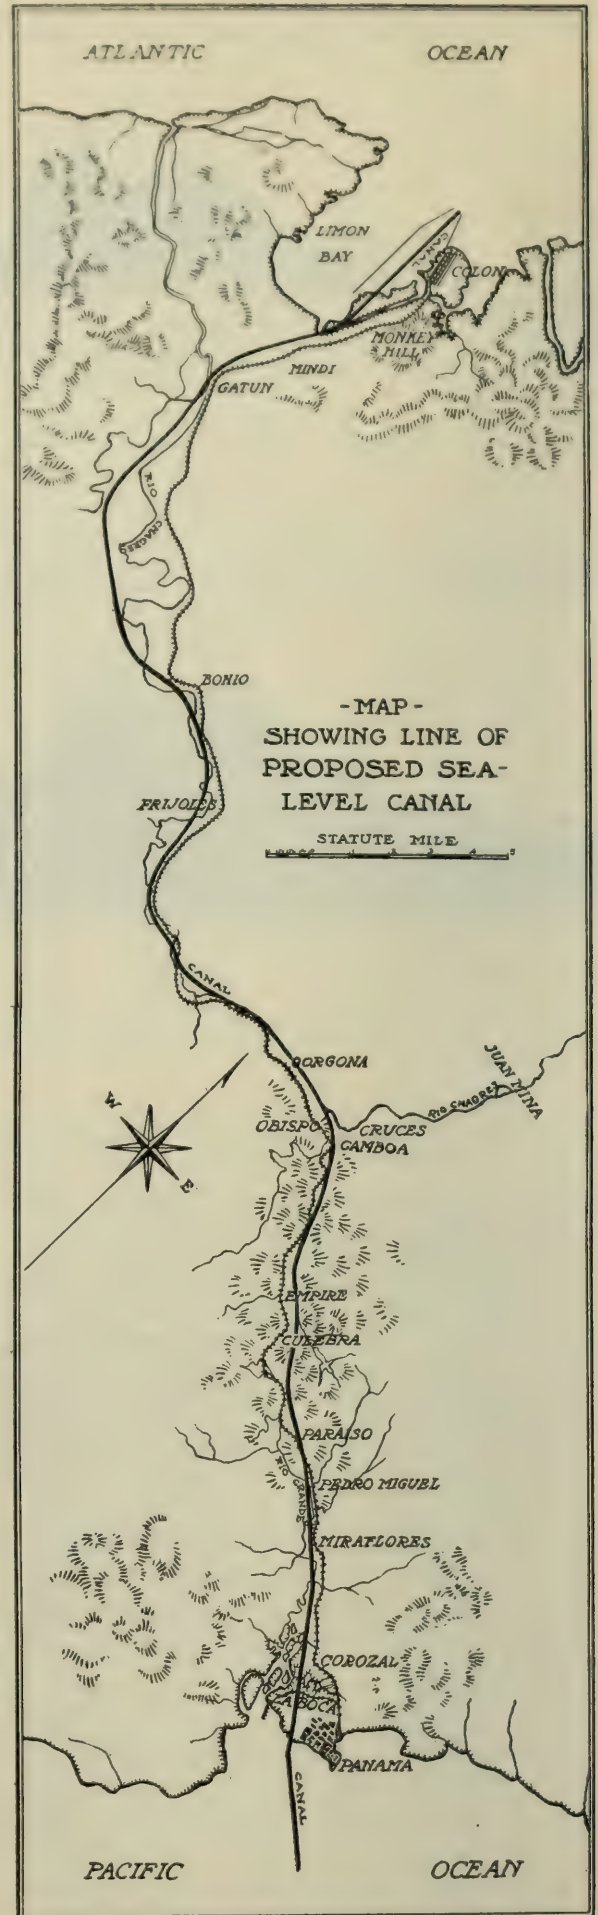

It is hard for the layman to conjure up a solid reality from looking at paper diagrams. Some concrete analogy is needed, and for those who have been in New York, or are familiar with its topography, the following illustration may be helpful: Suppose a volcanic eruption

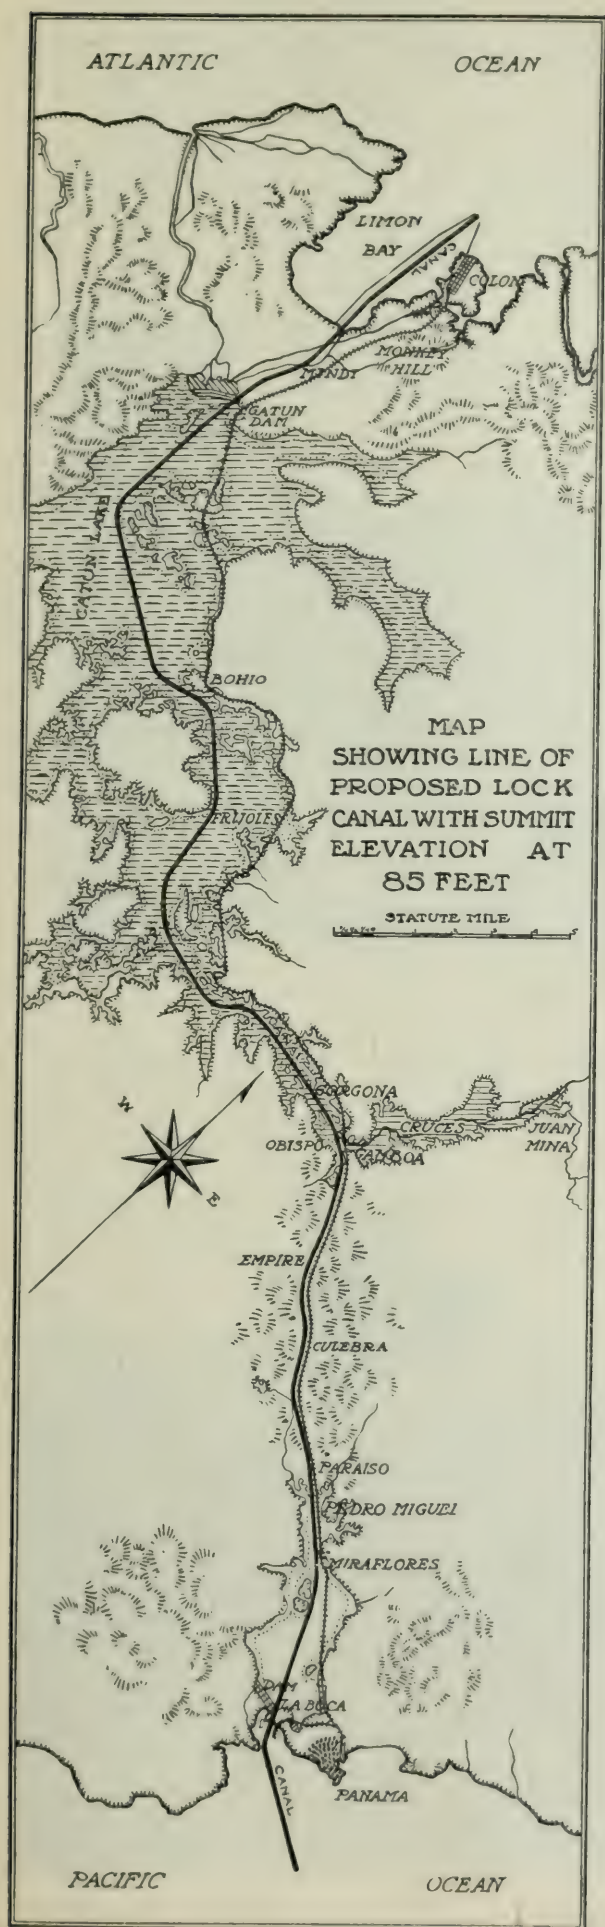

should overflow the city of New York, like Herculaneum, with lava, and cover the site with a great hill of soft rock, from the Battery to Harlem, the highest point being at the Pulitzer or World Building, the gilded dome and lantern of which would just be covered, while the hill would slope off gradually to the foot of the Grant Monument, between seven and eight miles in total length. Naturally the first task of the archeologists of the future, in their examination of the buried city, would be to excavate Broadway thruout its entire length, and unearth the buildings on each side. If, then, we imagine them to dig out Broadway to its present level and twice its present width, we have an undertaking very much the same as that running the sea-level canal thru the Culebra Cut. Of course, there are many additional difficulties, such as the Chagres River, which flows into the canal near Culebra at right angles to its course. Its waters are necessary for a lock canal, but its flow is too irregular for convenience. In this dry season it is a clear and peaceable little stream flowing some 300 cubic feet per second, but in the wet season it rises in a few hours to a muddy torrent of 1,200 times its former volume. The advocates of the sea-level canal propose to control it by a dam, 130 feet high, at Gamboa, where the Chagres strikes the canal, thus converting it into a deep reservoir or lake of nearly thirty square miles. The lock canal project would make a much larger lake at a lower level by means of an immense dam at Gatun.

Fortunately the Culebra Hill is not as high as it was. The French cut its crest down from 343 feet above sea level (373 feet above the bottom of the sea level canal) to about 180 or 190 feet.

The old French company (1881-1888) did a surprising amount of work under great difficulties, all along the line of the canal, most of it dredging. The receivers of the bankrupt company (1889-1894) and the new Panama Company (1894-1904), founded upon its ruins, did no more work than was necessary to hold the canal concession from the Colombian Government. The excavation work of the American Isthmian Canal Commission (1904 to 1906) has been chiefly confined to widening the cut and making

trenches for tracks. Altogether the intermittent labor of the last twenty-five years has resulted in taking out about 80,000,000 cubic yards of material and about half of this excavation will be available for a sea-level canal. In round numbers the sum stands as follows:

AMOUNT OF EXCAVATION IN THE PANAMA CANAL:

|  | Cubic Yards: |
|--|--------------|
| Old French company (7 years)...            | 72,000,000   |
| New French company (15 years)...           | 7,000,000    |
| Isthmian Canal Commission (1½ years) ..... | 1,000,000    |
|  | 80,000,000   |

Further excavation required for a sea-level canal (13 years)..... 231,000,000  
 Further excavation required for the lock canal (9 years)..... 96,000,000

This is presented graphically in the profiles on top of the page.

We have now spent about \$76,500,000 on the Panama Canal and practically none of it has gone for real excavation, for that is not yet fairly begun. The Suez Canal cost only \$83,000,000 altogether. First we paid \$40,000,000 to the French company for their franchise, plans, buildings and "good will." Then \$10,000,000 to the Republic of Panama for the control of the Canal Zone, and we have spent or contracted for \$26,500,000 up to February, 1906. Now, the engineers offer us a sea-level canal for \$247,000,000 and a lock canal for \$140,000,000. This does not include the total cost for the sanitation and government of the Zone, amounting perhaps to \$1,000,000 a year during construction and other necessary expenditures, and the interest on the money invested will bring the total sum up to about \$400,000,000 for a sea-level canal and \$250,000,000 for a lock canal. And this does not include the cost of fortification of the canal and its terminal ports, on which we have no figures. The question before us, then, practically resolves itself into this, shall we, every man, woman and child of us, pay \$5 apiece for a sea-level canal to be delivered in 1919 or later, or \$3 for a lock canal in 1915 or later?

The engineers have dashed the hopes of the public somewhat by declaring impracticable two plans which appealed strongly to the popular mind. One was for the "Strait of Panama," a canal so wide and deep as to give a free ocean

passage, and the other was that a lock canal could be gradually and cheaply cut down to the sea level. The latter is, indeed, possible, but the cost would be so much greater than to construct a sea-level canal in the first place, that if we adopt a lock plan now we are practically confined to that type of canal for an indefinite period in the future.

The sea-level plan, as recommended by the Board of Consulting Engineers, indicated on the accompanying map and profile, begins near Colon, with a channel 500 feet wide, dredged thru Limon Bay and protected by jetties. The channel across the Isthmus will be 40 feet deep and in the earth sections have a bottom width of 150 feet, with suitable side-slopes, giving a surface width of 300 to 400 feet. In rock the bottom width is to be 200 feet and the surface width 208 feet. At the Panama end there is to be a tide lock, for the tidal range at this point is 20 feet. These gates, however, will not have to be closed for more than a few hours on half the days. The points

in favor of this project are that it provides a practically uninterrupted passage from sea to sea, and it can be made deeper and wider without difficulty, when the size and number of the passing vessels demand it. The time of completion depends upon the rapidity with which the excavation at Culebra can be done, and this the majority of the board calculate as 10 years, but they add two or three years to the estimate to cover unknown contingencies.

The advocates of the lock canal attack this project on the ground of expense, inconvenience and delay. Chief Engineer Stevens, for instance, believes that the cost would be at least \$275,000,000, instead of \$247,000,000, "and might be very much more," and that the time necessary for completion will be 18 or 20 years, instead of 12 or 13. It is also claimed that the inconvenience, delay and danger of running ships thru a long, crooked and narrow channel will be greater than passing thru the locks and lakes that they propose, for turning-

The Site of the Great Gatun Dam and Lake. The dam will extend from the hill in the distance on the left to that from which the photograph was taken, and the locks will begin near the palm tree.

Cut Near Pedro Miguel, Where One Lock is to Be Constructed.

out places must be provided where a large ship must tie up while another passes it, as in the Suez Canal.

The plan of the minority for a lock canal at an elevation of 85 feet above sea level presents some novel and attractive, but questionable, features. By placing a large dam at Gatun and another at Pedro Miguel they would convert the greater part of the canal into one immense lake, which ships can navigate freely. The total length of the canal is 49.7 miles. Of this 35 miles will be over 500 feet wide, while the depth will be 75 feet near the Gatun dam and nearly as much for many miles. Only in the Culebra Cut will the width be reduced to 200 feet at the bottom and the depth to 45 feet. This would solve the Chagres difficulty, for the waters of this and other torrential streams can pour into the great Gatun lake without materially increasing its depth. On the Pacific side three shorter dams will turn the Rio Grande into a smaller lake.

The weak points in this project are the Gatun dam and flight of locks, both of

•which are of unprecedented size and, in the opinion of a majority of the consulting engineers, of questionable stability. The dam is to be a mile and a half long and 135 feet high, withstanding a head of water of 85 feet. The accompanying photograph shows the site.

It is impossible to excavate to the rock at Gatun and to build a masonry dam, so it is proposed to make it of earth, on an earth foundation, but of such slope and material as to practically be one of the hills. It is to be 374 feet broad at the water level and one half mile at the base. By using the clay and silt from the dredging below Gatun and the indurated clay from the Culebra Cut it is expected that the dam can be made practically impervious to seepage.

To raise and lower the ships thru the 85 feet between the level of the sea and that of Lake Gatun a duplicate flight of three locks is planned. These will require a greater mass of masonry than has been constructed in modern times, 3,500,000 cubic yards of concrete. This will

open a new and very extensive market for the manufacturers of Portland cement. Each lock is to have 40 feet depth, 95 feet width and a usable length of 900 feet, or only 790 feet if the double gates are added as proposed for protection against accidents. This will accommodate any ships now built or in sight, but it is doubtful whether it will provide for any that "may be reasonably anticipated," as required by the Spooner Act. In the opinion of the majority it would not, and they hold that no locks should be constructed of less dimensions than 1,000 feet usable length and 100 feet width.

The tendency of recent years is to increase greatly the size of ships, and there is no reason to think that the limit has been reached. The Cunard Company has now on the stocks two ships which are to be 800 feet long, 88 feet beam and 36 feet draft. It is fortunate for the world that the construction of the canal has been delayed, for if we had now the canal planned by the French in 1894, with 29.5 feet depth and 98.4 feet bottom width, or even that of our own Commission in 1901, with 35 feet depth and 150 feet bottom width, they would not be adequate for ships now afloat.

The majority of the consulting engineers regard this flight of three consecutive locks as very dangerous on account of its liability to injury by accident or design. An ocean liner entering the upper lock from the lake might, thru a mistake in signals, such as sometimes occurs, dash against the gates at full speed, break thru and go plunging down the whole flight into the canal, 85 feet below. In time of war, or just before its declaration, the explosion of an innocent looking boat loaded with dynamite in the locks, or even the use of a few sticks of it by some fearless men from the jungle might disable the canal for months, just when it was most needed. The locks at Sosa Hill, on the Pacific, and even those at Gatun, will be within range of the guns from battleships upon the ocean. In short, the five foreign and three of the American engineers claim that such locks are "altogether beyond the prudent design for safe operation and administrative efficiency."

In reply to this the advocates of the

lock canal quote the success of the Soo, which handles thru its locks annually three times as much traffic as the sea level Suez, and with fewer delays and accidents.

There is no question but what we can dig the canal. The French could if they had had the United States Treasury to back them. But it is to be in a peculiar sense a national undertaking, and we want to be able to take pride in it, especially since the pecuniary profit on the investment is uncertain. To take pride in it as an American achievement, it must be a clean, honest and efficient piece of work, for this is what we like to believe to be the American way of doing things. In a sense it is not so important that the canal shall be a good one as that it shall be well done. If it turn out to be too crooked it can be straightened afterward, but crooked ways in finance and politics will remain a national disgrace, such as rests upon France.

It is impossible to cut the cable as Dewey did at Manila, but some method will have to be devised by which the men on the Isthmus are freed from the supervision and overruling of all the petty details of their work. The cause of the delay and expense so far is the duality which extends thru the whole canal business. There are

Two Headquarters: Washington and Panama.

Two Governments: Panama and the Canal Zone.

Two Monetary Systems: Gold and silver.

Two Corporations: The Isthmian Canal Commission and the Panama Railroad Company.

Two Purposes: Patriotic and commercial.

And the list could be extended indefinitely, all causing conflict and "lost motion."

In some cases this embarrassing duality could be reduced to an efficient unity. In others it cannot be, at least at present. The one thing so far that has been efficiently managed in Panama was the revolution. This was done on time and with no unnecessary expense. If we could discover how this was done and apply the same methods to the digging of the canal it would facilitate matters.

# MUSIC

## ART AND DRAMA

### Grand Opera

In reserving "Carmen" for the last week but one of the season, the manager of the Metropolitan Opera House did not show his usual shrewdness. It made it impossible to give more than two performances of Bizet's popular opera when half a dozen crowded houses would have been a certainty. The tickets for both occasions were all sold a week in advance. What caused this demand was not the Carmen of Miss Fremstad so much as the first appearance of Mr. Caruso in his second French rôle. The part of Don José proved to be better suited to him than that of Faust. Heretofore Mr. Caruso—who might have made his living as a caricaturist had he not been born a tenor—has distinguished himself more as a comic than as a tragic actor; after seeing him in "Carmen"—especially in the final scene, where he stabs the gypsy girl—one has to admit that he is great in tragedy, too. Vocally also he was superb, although Bizet's Franco-Spanish melodic curves differ considerably from those of the Italians whom Mr. Caruso usually interprets. The popular Italian tenor has added to his artistic stature considerably by his Don José, but it is not likely that he will ever rival in versatility Jean de Reszke, who was almost equally great in Italian, French and German rôles. Caruso as Tristan is inconceivable.

In Europe, Caruso has a rival whose name is Bonci. It is admitted that his voice has not the same beautiful quality, but the claim is made that he is a greater artist. In all probability we shall hear him next winter. Mr. Oscar Hammerstein, whose specialty is the building of theatres, has nearly ready a huge house

which is to be inaugurated with grand opera in rivalry with the Metropolitan. He has secured Bonci and Edouard de Reszke; also Madame Gadski; Madame Calvé has been named, altho she is also announced for a concert tour. Altho Jean de Reszke has retired from the stage, Mr. Hammerstein hopes that, for Edouard's sake, he will consent to sing a dozen times in New York. Jean's closest friends doubt that he will do it.

Is there room in New York for two grand opera companies? The Metropolitan certainly makes money; it is almost the only company in the world that does so. Mr. Conried's personal profits for the season of 1904-1905 are said to have been \$108,000. At most of his performances the house is crowded; often hundreds are turned away. The question is whether this overflow is big enough to float another company. It must be borne in mind that the success of the Metropolitan Opera House is not due entirely to artistic causes. The "horseshoe," with its dozens of millionaires, is an essential part of the show. New York is crowded all winter with visitors. Many of these might hesitate to pay \$5 for a chance merely to hear an opera; but when they find that they can also ogle the most prominent plutocrats in the country for three hours they succumb to the temptation.

There are a good many more millionaires in New York than there are box holders at the Metropolitan. If Mr. Hammerstein can secure a few dozen of these others, as his box holders, he may succeed with his operatic undertaking. On artistic attractions alone he cannot rely. The number of popular operas is limited, and so is the number of singers

who are great enough to interest capacious New Yorkers. Some of Mr. Hammerstein's plans it is possible to diagnose as unwise even now. He intends to open in October; while the wealthy opera patrons do not return till late in November. He talks of giving only French and Italian operas—with possibly a Wagner opera or two, sung in Italian, as in the "good old times." But, apart from "Carmen" and "Faust," what French operas are likely to draw crowded houses? Charpentier's "Louise" is the only one of recent date that has had a real success, even in Paris. As for Italy, both Mascagni and Leoncavallo seem to have come to the end of their tether. Leoncavallo's "Roland of Berlin" had a sensational success in the Prussian capital, but that was because of the Kaiser's personal interest in it; it has not been sung anywhere else. Puccini is well represented at the Metropolitan Opera House with his "La Bohème" and "Tosca"; nor is his latest opera, "Madame Butterfly" (to which London has taken a great fancy), available for Mr. Hammerstein, since Mr. Savage has announced that he has secured the American rights for it.

That it is not a trifling matter to undertake a new operatic enterprise may be inferred from the statement made by Mr. Conried in his recent report that the performances at the Metropolitan this season have cost \$51,000 a week. The receipts, nevertheless, were so tremendous that a handsome profit remains. The lovers of French opera are the only ones not pleased with the season just closed. "Faust," with five performances, and

"Carmen," with two, make up the French list. Italian opera, thanks to Caruso, fared much better. There were fourteen operas by Italian composers ("Bohème," "Lucia," "Rigoletto," "Aïda," "Favorita," "Gioconda," "Trovatore," "Pagliacci," "Tosca," "Sonnambula," "Traviata," "Il Barbiere," "Don Pasquale," "L'Elisir d'Amore"); these, together were sung 47 times. Fifteen operas by German composers were given 55 times; the list includes Humperdinck's "Hänsel and Gretel" (which had 11 perform-

ances, or 5 more than any other opera in the repertory), Goldmark's "Queen of Sheba," Strauss's "Fledermaus" and "Gypsy Baron," Mozart's "Don Giovanni" and Flotow's "Martha" (these two were sung in Italian), and Wagner's "Tannhäuser," "Lohengrin," "Meistersinger," "Tristan," the four Nibelung operas, and "Parsifal." Wagner, as usual, is at the head of all composers with 31 performances. Yet notwithstanding the vital significance of the foregoing, Mr. Hammerstein expects to

get along without the Wagnerian operas.

Wilhelm Gericke.

### Mr. Gericke's Farewell

The last evening and matinee concerts of the present season by the Boston Symphony Orchestra, given on March 15th and 17th, respectively, were in all probability the last Mr. Wilhelm Gericke will ever conduct in New York. The term for which he was engaged has expired, and he has declined a re-engagement. He will be missed by several thousand music lovers thruout the East-

ern section of the country, where the ministrations of the Boston players have made him a familiar figure. Wilhelm Gericke, more than any other, has made the Boston Symphony Orchestra what it is—the finest orchestra in America, and one indeed that compares favorably with any orchestra in Europe. He has had practically absolute control over the organization's artistic life, and, while he was always a hard drill master, he succeeded in creating such an *esprit de corps* among the players of his band as has never been equaled in any other orchestra in America. Mr. Gericke first came to Boston in 1884. He had been graduated from the Vienna Conservatory in 1865, had gained a wide experience as conductor at Linz and at the Imperial Opera in Vienna, and was a musician well equipped. The Boston Symphony Orchestra had been founded by Mr. Henry L. Higginson three years before his coming. Its material was still fresh and in parts crude. Mr. Gericke improved its personnel by bringing over such sterling artists as Franz Kneisel, Alwin Schroeder, Otto Roth, Louis Svecenski and many others. At the end of five years Mr. Gericke's health failed and he retired for a period of rest. He returned in 1898, and since that year has been continuously at the head of the orchestra, so that the full term of his service has been thirteen years. The single aim of all his endeavor has been the proclamation of sheer tonal beauty; and with the Boston Symphony Orchestra he has achieved that aim. His attitude toward his art, his bearing at the conductor's desk, his methods, his interpretations, and the feeling with which they have been imbued, may all be summed up in the one word—classic.

His classicism has been thoroughgoing and uncompromising and, altho forced by the competition of his time and environment to take cognizance of the newer developments and tendencies in music, he has not shown any great sympathy with the ultra-modern emotional school or any large comprehension of the works of its leading exponents. His devotion to smoothness, refinement, polish and brilliance has often led to the charge of unemotional coldness and total lack of enthusiasm and it has seemed sometimes

as if he sacrificed eloquence for the sake of elegance. But he has followed his lofty classical ideals persistently and with unflagging zeal.

Who will be Mr. Gericke's successor has not yet been announced.

## Orchestral Music by American Composers

Compositions of proved and known worth by Edward MacDowell and unknown works by Henry F. Gilbert and Arthur Shepherd made up the program of the first concert, on March 10th, given by the New Music Society of America, which has been formed to encourage the development of music in the United States by bringing to light the best work in the larger instrumental forms that has been or is now being written by American composers, and, specifically, to make it known by actual public performance. This first concert of the society was a success. It enlisted the co-operation of the Russian Symphony Orchestra and its conductor, Mr. Altschuler. It was good to hear again the "Indian Suite" and the second piano concerto of Edward MacDowell, and their hearing gave poignant emphasis to the realization of the loss both music and America have suffered by the early blighting of his brilliant career. By excess of work this man of genius literally burned his brain out; he is now a mental, nervous and physical wreck, and there is practically no hope for his recovery.

The last number on the program was a work by the newest aspirant for musical honors in this country, Mr. Arthur Shepherd, who was born in Idaho in 1880, received his training in the New England Conservatory, Boston, and is now the conductor of a symphony orchestra in Salt Lake City. He was represented by an "Overture Joyeuse" (why the French title, Mr. Shepherd?), which won the Paderewski prize last year for an American orchestral composition. This starts out with some big full round swinging chords, which it is joyous to hear, and much of it is imbued with genuine musical feeling, but it is a bit too long and the high plane of beauty on which it starts is not sus-

tained thruout. The orchestral treatment is brilliant in some parts and halting in others. The piece left the impression that the young composer's technical skill in expression is not yet commensurate with his ideas. That he has ideas of his own is unmistakable; and the work gives abundant promise of greater things to come.

✻

### Victor Herbert With the Philharmonic

The most popular, and therefore the most successful, musician in America is

Victor Herbert.

Mr. Victor Herbert. Not only is he beloved of the populace which takes its music solely as a light amusement, but he has also the esteem of serious minded music lovers and musicians, as has been demonstrated anew by the fact that he has been the "star" conductor of two successful concerts by the Philharmonic Society this winter. Further to show the society's regard for him the program of his concert of March 3d included his "Suite Romantique" (opus 31). This piece is not one that will enhance Mr.

Herbert's reputation as a symphonic writer; he has done much better things. Its component parts are too commonplace. But it does display a lavish command of tonal colors and something of the composer's mastery of the art of orchestration, which is far indeed from commonplace. Mr. Herbert is an accomplished conductor, and he secured from the orchestra a notably fine performance.

The present season will end, for a time at least, the policy followed by the Philharmonic for the last three years in engaging several eminent conductors for each season. The society has engaged Mr. Vasili Safonoff for three years—the longest term for which he was willing to make a contract. This distinguished Russian has made a deeper impression than any other of the visiting conductors. That it has been able to secure his services for a period of three years is an assurance for the Philharmonic of continued artistic excellence and increased prosperity.

✻

### The Oratorio Society

At its third concert of the season the New York Oratorio Society sang Handel's "Judas Maccabeus," a 160-year old work, but one that has been so seldom heard here that it was almost a novelty. The last preceding performance of it was in 1885. The narrow range of its emotional content precludes any possibility of this oratorio's ever ranking with "The Messiah," yet it is one of Handel's master works, and in England it is second only to "The Messiah" in popularity. It was composed at the demand of the Prince of Wales to commemorate the victory of "The Butcher" Duke of Cumberland in the battle of Culloden on April 6th, 1746. It sounds very, very old fashioned now, but none the less is interesting to hear—once.

✻

### Society of American Artists

The last exhibition of the Society of American Artists, before it rejoins again the Academy from which it seceded in 1877, shows, above all other things, how wise that proposed action is, for the exhibition hardly varies from the Academy exhibition of this season.

The place of honor in the Vanderbilt Gallery is given to the Winged Figure by Thayer, owned by Mr. Freer, which is perhaps the poorest work of that painter in his maturity. Next it is a "Mother Reading to Children," by George DeForest Brush, which shows

while the head has the sympathetic charm with which Mr. Brush always studies children, the attention to detail in the painting of all the rest of the picture is painful. Many children have been painted this year. Lydia Field Emmet received the Julia Shaw prize for

Prize Picture in Society of American Artists' Exhibition.

Mr. Brush at his best. It is less of an "arrangement" in the manner of the Florentines than his family groups of other years, and yet lacks nothing of the beauty of color and sentiment he is always inspired to express by the lovely wholesomeness of his admirable family. He has also in the exhibition a portrait of a little boy in a riding habit, in which,

a portrait of a boy in a white sailor suit which has the best work in it that she has done so far. Paul Moschcowitz shows a little boy not so well painted as many of his former portraits. Adelaide Cole Chase's portrait of Master Hyatt Mayer is good, but her "Little Girl in a Kimona" is unsuccessful in line. Charles Curran's portraits of four brothers in a

landscape is an extraordinarily uninteresting picture. Luis Mora's "Brother and Sister" is unrestful in grouping and slimy in handling. He has several Spanish canvases here that, while they still lack simplicity, are much abler. Louise Cox's "Miss Muffet" is tryingly lacking in breadth of treatment. Sargeant Kendal, always a serious worker who has not yet learned the trick of concealing his labor, shows three portrait groups. Albert Herter's portrait of a child is tight in treatment. Irving Wiles, who has come into the front rank as a portrait painter, shows a good portrait of Dr. John W. Burgess. Smedley is not up to his last year attainments. Henri seems to have little further to develop with his manner of seeing human beings. His "Miss Nivison" is certainly a frightening person if truthfully presented. With his strong artistic personality it seems to be difficult for him to be broadly interested in differing characteristics of figure and expression. All his women conform to a pose that has apparently become canonical. Ellen Emmet seems to have settled into a mannerism of heavy color and solid if sometimes dull handling.

Of landscapes there are few worth mentioning. Albert Croll has a fine sky in his "Arizona Clouds"; Redfield's prize winning "River Delaware" is dreary; Carlsen's "Lazy Sea" is not as promising as the marine he had at the Academy. Paul Dougherty's "Sunset on the Head" is the strongest thing in sentiment among the attempts at rendering moods of nature.

Of pictures with human interest, Jerome Myers's "Recreation Pier and The Band Stand," "A Religious Procession" and "An Appreciative Audience" are beyond all others. This man's color is becoming richer and less mannered, and apparently he is not going to fall a victim to any mere trick of quality. In an entirely different way Karl Anderson's "Student of Steinlen" is an interesting picture. A studio with a nude model at rest is the background for a large figure of an artist poring over a drawing of the admired master. The interest of the man in the drawing is unmistakable. Jean MacLean's work in two veins is an advance over last year's; "The Locket" is a charmingly refined

and sympathetic portrait study and the "Sunlight in the Square" is a good bit of thoughtful composition in color and mass. Hugo Ballin's decorative pictures have become a feature of all the exhibitions. His "Lute Player" is better than the picture that took the prize at the Academy. He has a landscape with a church on a hill in it that is good in many ways. There is little sculpture of importance. Solon Borglum's small horses are always interesting, and the huge polar bears by Roth make an imposing mass at the entrance to the Central Gallery; Bessie Potter's "Beatrice" is graceful in line, and Calder's "Man-Cub" is strong.

### Recent Portraits by Shannon

The exhibition at Knoedler's might have been called "The Decadence of a Good Man." Anything sadder than the group of vulgarly elaborate compositions, coming so soon after the firm establishment of Shannon as a painter to whom we might look for better and better work, has not been seen in years. What is the matter with us? How is it that we could commercialize a painter so quickly? We are told of the great price Shannon now demands and gets, and we are forced to believe that he is painting purely and simply for the price. His work last summer in London was coarser than we were used to from him, but it remained for American sitters to hasten the decline apparently.

### The Modern Gallery

With an exhibition of works by the brothers Leon and Scott Dabo there was recently opened at 11 East Thirty-third street a gallery to be devoted to the young men whose works are not welcomed in the two or three annual exhibitions, as a rule. The first of the projected exhibitions was a restful group of landscapes reminiscent of the work of the Nippon Bijitsuin of Japan, but so full of what we all feel about nature in her serene moods that they were a delight. They were entirely detached from any personality of the human kind, so much so, in fact, that it was impossible to tell the work of one brother from that

of the other. They both place on all their canvases a small cabalistic mark which is supposed to mark a starting point for the interest. Aside from this borrowed fact the things are worthy of attention for many qualities of line and color and for perfect realization of what they attempt.

### The Ten American Painters

Even with the addition of William M. Chase the Society of Ten only contains nine painters, and their thirty-odd can-

very well with his "Green Window Curtain," which has lovely color, tho the construction of the room is hard to understand. His two portraits also show that curious lack of convincing drawing, or rather suggestion, of the backs of the heads. Dewing shows one of his beautiful little portraits only. Benson has an experiment with a choppy sea called "Coasters in Harbor" that is not successful in rendering the movement, tho it is in the handling of light. These men can apparently paint all lights, Mr. Weir all

Horatio Walker's Ave Maria.  
Copyrighted, 1906, by N. E. Montross, New York.

vases, shown until March 31st at the Montross Gallery, make an exhibition that is a pleasure in its easily to be seen size as well as in the unity of interest displayed. Childe Hassam is not as well represented as usual here, having his big decorative canvas, "June," which, by the way, took the Carnegie prize there, at the society, and showing here only four pictures that were in his own exhibition earlier in the year. Chase comes into line

the subtlest tones and gradations of it, from the delicate springtime effects and the clear monotony of midday to the light that adds charm to a "coon-hunt." His "Gentlewoman" is as fine a thing as he has ever done. Tarbell's "Girl Mending" is less pleasing in arrangement than his memorable "Girl Sewing" of last year, but a man can hardly do two things as good as that was. De Camp's personal seriousness is impressed upon one by his

portrait of himself. The searching interest in the artistic problem is rendered as in few pictures of artists by themselves. The other two pictures by him have his rather over strong color to an unpleasant degree.

Metcalf's "Mountain Laurel" is most

ing. Indeed, the season, as a whole, has shown no noteworthy novelties with the exception of "Peter Pan" and "Man and Superman."

"The Embassy Ball" neither adds nor detracts anything from that Mr. Augustus Thomas's already established position as

Francis Wilson in "The Mountain Climber."

interesting among his six landscapes, and Robert Reid's "After the Storm" is a jolly little riot of high tones. His "Gold Screen" is forcedly decorative, but would hang better, doubtless, in a larger room.

### The Drama

There have been no notable new plays put on the boards since our last dramatic criticism appeared up to the present writ-

an American playwright. It is one of those improbable comedies where every character is more or less of a humorist, even those who attempt to be serious, and where the spectator's sides are sure to ache from laughter and mirth. It is an American play laid at Washington, and the audience seemed to appreciate the jokes on the Senate and American politics. Lawrence D'Orsay, who took the part of the "blawsted" Englishman, was

capital, tho the caricature must have been anything but pleasing to the people in the audience with English sympathies.

"The Mountain Climber," by the authors of "Are You a Mason?" is an excellent farce. There are many exceedingly humorous situations in the play, full advantage of all of which was taken by Mr. Francis Wilson. The play will never become a classic, but with Wilson's comedy it is infinitely better than it could possibly be lacking this. It is sure to give an evening of laughter.

The colored race makes a contribution to theatrical compositions in "Abyssinia," as first produced last month at the Majestic Theater. Williams and Walker, in this new musical creation, were received with much favor, not only by their own countrymen, but by the whites as well. Most of the songs were tuneful and taking.

"Brown of Harvard" is the third comedy of college life that has been put on the stage in the last two years. It is not quite as good as George Ade's "The College Widow," but compares favorably with "Strongheart." Instead of the inevitable football scene, with the cheering crowds, we have in this case a boat race. The cast is good, and altho the real essence of college life has never yet been put on the stage, nevertheless some illusion is there, and the play is interesting from beginning to end. The plot, however, is most improbable, for students in our American universities are never such deep-dyed villains as the bad ones in this play. Students have their faults, but seduction and forgery are not among them.

"The Triangle," a Play of Manners in Four Acts. There is nothing new or specially striking as to plot. A worldly

mother endeavors to make a marriage between her young daughter Alice and a middle-aged United States Senator. The name and the situation are a bit suggestive at this present time. The first two acts are commonplace. In the last two the acting of Charlotte Walker, an unhappy wife, deserves praise, for she not only is an attractive woman, but she plays her part with intelligence and feeling. Ferdinand Gottschalk, in his personation of her husband and dupe, rises well to his part, better than the man who completes the triangle. The end culminates in a tragedy, and one leaves the theater feeling that the play and the stage setting were so nearly good that it was a pity that it had not been entirely so.

"His Majesty," a musical diversion, as produced at the Majestic Theater, the book and music for which is by Shafter Howard, is very amusing. There are several members of the cast in which spontaneous humor dwells and they easily carry the performance. The ballet is artistic and well trained. The members thereof are for the most part youthful and beautiful, and wear smart gowns. Several novelties appear in their evolution. "His Majesty" affords Miss Blanche Ring with a new vehicle for her talents, which she fully improves.

"The Redskin," which was put on at the Liberty Theater last month, is drawing fair sized crowds, tho, with the exception of an Indian dance and Indian music by the orchestra, it is almost worthless. The playwright apparently took a stock plot that would have suited the characters of white people, and made Indians act them. The conversation is mostly mock heroic, the dramatic situations are foolish and the character of the Indian is not at all true to life.

# The Morocco Conference

BY EDOUARD TALLICHET

[The author of this article is Editor-in-Chief of the venerable Swiss review, the *Bibliothèque Universelle*, and is a recognized authority in Europe on all international questions. It is the best article on the Moroccan situation we have yet seen.—EDITOR.]

IF the Morocco question were not associated with other questions, we might have good reason for expecting a happy issue to the conference at Algeciras. But it is so far from being a simple question that it is involved in the entire concerted movement of German policy and almost inextricably complicated with it. The chief object of the famous visit to Tangier, planned at Berlin, was to break the *entente cordiale* between France and England. The result was a complete check for Germany. Even the threats of war have only succeeded in drawing the two countries more closely together and strengthened their determination to maintain an alliance that is ever becoming more and more advantageous to them.

There is reason for believing that, at the present moment, the internal situation of Germany is having an important, if not decisive, influence on the settlement of the Morocco difficulty. In spite of the very great benefit conferred, during the Russo-Japanese war, on German industry, which supplied Russia with arms, munitions and ships, its present situation leaves much to be desired. The new commercial treaties are not favorable to it, and, as in all strongly protected countries, where everything is managed by the Government, it has developed too rapidly, so that it is obliged to enter into competition with itself on its own ground; it no longer has a sufficient number of foreign outlets, manufacturers have been forced to lower prices and are complaining that they can no longer sell at a profit, nay, have to sell at a loss. Hence the Government of the Empire is bound not to allow any of the markets open to its industries to be closed, and to open as many others as possible, no matter how insignificant they may at first sight appear.

Such is the case with Morocco. No country has less interest in it than Germany. Its commercial relations with it

are of very little importance, but it aims at increasing them and has its thoughts fixed on the future.

But there is another thing which will bear far more heavily on the settlement of the question. Germany has not been able to increase incessantly her military expenses—she is at the present moment on the point of transforming her artillery and making other changes as well—and, above all, to make such extraordinary additions to her maritime strength, without gravely unsettling her budget. She is now obliged to augment her resources by \$60,000,000 at least, which probably will not be sufficient, in the long run, for an end can never be seen to such expenses. At the present moment the Federal Government has taken the matter up very energetically; it has laid before the Reichstag a scheme for new contributions which is well calculated to agitate Germans, already crushed under the weight of multiple imposts. Until now the Empire had no direct revenue except that produced by the customs. For the first time, it has proposed to levy direct taxes on beer and tobacco, taxes so detested by the common people that they have risen up, on more than one occasion, in several states, when an attempt was made to impose them; it has also proposed a complete system of stamps on railway tickets, checks, invoices, etc.; finally, duties on inheritances, which would affect particularly the great landed proprietors. Thus the three great classes of the population would be involved, which is only just; the common people thru beer and tobacco, the merchants and manufacturers by the stamps, and the country squires by the succession duties.

The scheme, which formed one indivisible whole, when handed over to be dealt with by a commission, was completely demolished. Nobody would have it, and all kinds of propositions were offered to take its place. The sacrifice demanded of the Parliament and of the

people is so great—especially at the present moment—that it is necessary to justify it by demonstrating that Germany is in a critical situation in Europe, and that she must increase her military and naval strength if she is to carry on war successfully, or impose peace. The patriotism of all had to be appealed to. Hence the dispatches from Algeciras, evidently inspired by the Imperial Government, which have repeatedly spread doubts thru Germany and thru Europe as to the success of the conference, and fears that a war would result from it. On the other hand, a pretended anxiety to reassure everybody was displayed, it being said, more or less officially, that the rupture of the negotiations would not *ipso facto* entail war, but that the powers concerned would simply return to the *status quo*—an utterly impossible thing to do, by the way, for the mere fact of the meeting of the diplomats has entirely changed the situation and rendered it truly dangerous.

It may be admitted as self-evident that intervention in Morocco is justified by the weakness of its Government and its inability to assure the safety not only of the subjects of the Sultan, but, more important still, that of the foreigners, mostly Europeans, established in the country. It is not less evident that this task can only be accomplished by a single power, the nearest and the most interested in the maintenance of order and, for this very reason, disposed to make the necessary sacrifices for the purpose. France is clearly the power that fulfils all the conditions. Germany is too far and is not furnished with the instruments required for such a work, which would place her, moreover, in too close contact with Algeria, where France can, on the other hand, easily find the men who will be indispensable for the purpose.

But if France appears best fitted by her situation to accomplish a necessary work and to solve temporarily a problem bristling with difficulties and full of perils to the peace of the world, it may be asked whether she herself is really prepared for it, and whether she can take charge of it, not only to her own advantage, but to that of Morocco; two questions which, in truth, make only one, because the result for her will be in direct

proportion to the gain acquired by Morocco.

Now on this subject an immense number of things might be said, some of them very painful. Altho a republic, France has not yet got rid of certain old ideas which do not harmonize in the slightest degree with her new institutions. Save in Algeria—and we may include Tunis—where she has accomplished in many respects a really civilizing work, tho in a somewhat imperfect and hesitating fashion, all her other colonies, especially the latest, have presented a spectacle that is always very sad and sometimes hideous. In Indo-China the natives are placed under an absolutely despotic *régime* of the most oppressive character. In the French Kongo, as well as in the Belgian Kongo, the exploitation of the natives and acts of sanguinary brutality have been carried to a point that has aroused the horror of all those who have learned the particulars. The case of Madagascar is worse still. In the first place, to be perfectly frank about the matter, the conquest of this great island was simply an act of piracy and a violation of the law of nations; the only parallel to the deed was the capture of Kiao-chau in China by Germany, for Madagascar had a regular Government and had long emerged from savagery. It had liberal institutions, which were developing slowly, as in medieval Europe. Never before had there been such an attempt at moral elevation made by men of color; they adopted all the best that there was in modern civilization, rejecting the worst element in it, namely, a great military establishment. This absence of even defensive force should have won for the Malagesy Government the respect of all and protection against an unnecessary conquest, since it threatened no one and was trying to rise to the level of Europe by its own efforts. Now France, under the most futile pretexts, set her heavy foot on this delicate and opening bloom of civilization. After proclaiming that she only aimed at a protectorate, she dethroned the queen, sent her to live in Algeria on a meager pension, and took possession of the great island, simply and solely in virtue of the abominable maxim: "Might makes right," putting

an end brutally to one of the most interesting political experiments ever attempted.

The conquerors might be forgiven if they had brought to the natives, whose land they had seized without the shadow of a right, some manifest improvements in their moral, social and economical situation, and if they had given a vigorous development to the progress already accomplished. Unfortunately there is every reason for believing quite the contrary. In the first place, the greater part of the good work accomplished under the ancient *régime* would seem to have been entirely lost. Then, the natives have been so ill treated that they have attempted to rebel, and this has only served to bring down upon them bloody reprisals. They are crushed by taxes which they are unable to pay, and forced labor of the worst kind has been imposed on them. The result has been the same as in the Kongo: the death of a number of men who could not possibly perform the tasks enjoined them and the depopulation of the island.

All that we have just said has not been spread abroad by the enemies of France; it has been published by the French press itself. And it should be added that the other colonizing powers are pretty much in the same position. Besides Spain, which owes the loss of her exotic possessions to her bad administration, and Portugal, England, the oldest colonizing power, has passed thru the same phases. Thanks to Burke, we have a vivid recollection of Warren Hastings and of his misdeeds in India. We remember also the revolt of the Sepoys, which was very near wresting from the English the most valuable of their possessions. Fortunately for them, they have taken to heart all the checks which they suffered, and, instead of seeking to palliate their errors, they have, on the contrary, governed their colonies in a spirit that grows more and more humane every day, giving to their subjects just the dose of liberty that suits their constitution, and assuring to them everywhere the protection and the justice that are rightfully theirs.

As to Germany, who has become the champion of Morocco, just as she was the bosom friend of the most sanguinary

sovereign of the age, Abdul Hamid, no one is ignorant that her colonies are among those that are the worst governed. The famous trials of Dr. Peters and others, among her colonial agents, would have abundantly proved it, even if the revolt of the Hereros, to which we shall, perhaps, have to add that of her colonies in Eastern Africa, did not demonstrate the fact by the most irrefutable arguments. And her taking of Kiao-chau was the real cause of the Boxer rising, which led to the expedition of the European Powers to China, followed by the great Russo-Japanese war, the consequences of which, to Europe and to China, cannot yet be fully foreseen, but which will certainly be portentous for the entire world.

On a number of points France has been unable to make the Republic a reality. She has remained the prisoner of her bureaucracy, of traditions that control her and date from the First Empire. As a result of the parliamentary system certain Ministers, who had no training in the handling of great affairs, have been given the charge of departments about which they knew little; they were consequently compelled to allow themselves to be guided by their subordinates, who had this advantage over them that they were acquainted with the official routine of the administration. Now, many of these functionaries, who have become heads of departments, either thru favor or length of service, have neither the aptitude, nor the knowledge, nor the breadth of views necessary for the government of a great country. All their zeal consists in defending obstinately the traditions of their department. Here probably is to be found the source of most of the errors committed by the Government of the Republic.

When France took possession of Tunis and established her protectorate over it, she pledged herself not to fortify the port of Biserta, the fortification of which would be regarded as a menace by Italy particularly. France did not keep her engagement, and Biserta became a war port. It would be quite safe to wager that this breach of faith was one of the masterpieces of the bureaucracy. Naturally, Germany made use of this fact as an argument against the establishment

of France in Morocco, and so the Republic is now paying, very bitterly, but very justly, for an act of disloyalty that is turned against her at a critical moment.

If we add this fact to those we have dwelt on before, it will be seen that one of the first reforms to be desired for the Republic is a change in the spirit of administration and the placing of it in harmony with the democratic and liberal institutions desired by the country. Let us return to the colonies. It is manifest that there exist in Indo-China, the Kongo-Madagascar, as in the foreign possessions of other countries that believe themselves at the head of civilization, methods of government that are an outrage on morality and on the public conscience. In a struggle which lasted long years, and on some occasions was near leading to a war, England, partly supported by France, succeeded in the last century in putting an end to the horrors of the slave trade, with this heart-rending result, that several Powers have taken possession of vast savage countries and introduced into them a system of government worse, perhaps, than the slave trade, the suppression of which had been regarded as a triumph of civilization.

But what about Morocco?

In presence of the opposition France has encountered, which appears to be irreducible, it may well be asked if she is capable of accomplishing her task, if her effort would not be premature, and if the acceptance of the conditions proposed to her would not increase tenfold the danger which she wishes to ward off? The *status quo*, which is very tolerable, would be far better than a lame solution, which would open the door to all sorts of quarrels and furnish every kind of pretext for hostilities. Sometimes it is necessary to trust to Time, who is a great master, and finds at their proper hour the solutions that were vain-

ly sought for when they were not yet possible.

The great interest of this affair for France is that it allows her to see clearly, on one side, the gaps and weaknesses in her present political situation, and, on the other, the means at her disposal to improve it and to transform into living forces the hidden incapacities which have been revealed to her. Let her continue, as she has done, particularly in these last years, to rid herself of the bonds of the past which impeded her onward march, and the moment will come, quicker, perhaps, than she suspects, when the whole world would gladly abandon to her a work which she will have really prepared herself to prosecute both for her own welfare and for that of Morocco.

But the conference! Well, even though it should dissolve without having apparently attained any result, it would be completely erroneous to think that its labor has been in vain. Having met in the interests of peace, it has been able to see, and Europe, in a large measure, to see with it, what are the methods and aims of German policy. In everything and everywhere Germany shows herself entirely penetrated with the ideas of the first half of the last century, the ideas of the Holy Alliance, ideas which are tending to disappear and will seem more antiquated and absurd in the eyes of the different peoples the larger the share they have in the government of their several countries. The people have begun to understand that they have nothing to gain and everything to lose by increasing the power of their rulers, by enlarging their armies and inflating their taxes and public debt. There are certain currents which people float down with dizzying rapidity when they end in cataracts, but these currents are never ascended again. We know what has been the success of German policy in the Far East. It is likely to obtain no more in Morocco.

BERNE SWITZERLAND.

# The Outlook for Federal Regulation of Insurance

BY JOHN F. DRYDEN

[The Hon. John Fairfield Dryden, United States Senator from New Jersey, throughout his life has been a deep student of life insurance. Before he graduated from Yale, and had completed his preparation for the bar, he had formed plans which in 1875, resulted in his originating and founding the Prudential Insurance Company of America, of which he is still president. There are few who are so well fitted as Senator Dryden for intelligent comprehension and exposition of the subject which he treats in this article.—EDITOR.]

THE regulation and control of the insurance business by the Federal Government is one of the many important problems of interstate law resulting from the extraordinary growth and development of the individual States and the increasing complexity of their legal and commercial relations to one another. The problem is not peculiar to the American nation, but finds its counterpart, among other countries, in the German Empire and the Swiss Republic, both originally confederations of States, or Cantons, each with their own peculiar commercial laws, customs and usages. In course of time these became national in character, demanding national legislation in general matters of commerce as well as insurance. The German law regulating the business of insurance throughout the Empire became effective in 1901, after several years of inquiry and deliberation. A corresponding law is now under consideration by the Swiss Republic. The subject matter is peculiarly national in character, more so now than in the past, on account of the growth of American insurance companies, the extension of the business and the inevitable tendency to cross State lines and assume the character of interstate commerce.

Certain subjects are so fundamentally national in their character that they received the recognition of constitutional consideration and they were as such incorporated in the fundamental law of the land. New problems, however, have arisen in the course of our national, commercial and industrial development, and the necessity of uniformity has been recognized and finds its expression in the deliberations of a body known as the National Conference of Commissioners

of Uniform State Laws; made up of commissioners created by the different States meeting annually in conference and organizing themselves into a national body for the better accomplishment of the work for which its members were appointed by the States. This body has been successful, to a very considerable extent, in eliminating needless incongruities and friction in conflicting State legislation. Among the subjects considered are Commercial Law, Marriage and Divorce, Negotiable Instruments, Uniform Incorporation Laws, Conveyances, Purity of Articles of Commerce, and *Insurance*.

In practice, however, uniform State legislation upon any subject is a most difficult problem, on account of the changing character of legislative bodies and the ever-present possibility that a statute or code adopted one year may be altered in material respects a few years later. The more important of these subjects, however, imperatively require uniformity and continuity of law and legislation, and in few directions is this more necessary than in the case of insurance. Thus far the efforts to bring about Federal regulation and control of insurance companies have not been successful, but those who favor such legislation have no reason to feel discouraged. It required nearly a hundred years to provide the nation with an effective national statute governing bankruptcy throughout the country, all previous efforts to establish uniformity of State legislation upon this point having failed. It required fifteen years or more of Congressional consideration and deliberation to pass a national pure food bill, and it is nearly twenty years since a movement was inaugurated

to provide uniform marriage and divorce laws. It is but proper and wise that this should be so, for no national legislation of so far-reaching and important a nature should be enacted hastily or unwisely, or until it has been considered from every

tions was equally applicable to insurance companies following much the same line of commercial activity. Subsequent experience has fully sustained this view. Bills providing for Federal regulation of insurance were introduced in 1866, 1868,

John F. Dryden.

reasonable point of view, and with a due regard to all the interests affected.

The movement for Federal supervision of insurance had its origin in the passage of the National Bank Act of 1864, the inference being natural that the theory of supervision and control of banks engaged in interstate and national transac-

1892, 1897, 1899, 1900 and 1905, but it is only in recent years that this movement has attained national proportions. The reasons for this are not far to seek, for while on the one hand the business of insurance has grown to extraordinary proportions, affecting practically every commercial and personal interest thru-

out the land, on the other the conflict of State laws upon the subject, the burden and expense of a multiform system of State supervision, have increased until a point has been reached where the public interests require that the subject should be dealt with by Congress upon the broadest possible scale of national consideration.

The new bill which I have introduced (S. 3026, 59th Congress, 1st session) contains some fifty separate provisions, of which the first thirteen relate to the organization of a Federal Bureau of Insurance in the Department of Commerce and Labor, the same to be in charge of a Comptroller of Insurance, who is required to furnish a bond of \$100,000.

In nearly all essentials the bill, as far as possible, conforms to the organic acts establishing other departments of the Federal Government, but in particular the National Bank Act. There is to be a Deputy Comptroller, who is also to be a bonded officer, and an actuary, who is required to be a person of recognized professional ability and experience. The general supervision and control of the bureau is under the direction of the Secretary of Commerce and Labor, and all fees or other moneys collected are required to be paid into the Treasury.

The Comptroller must make an annual report to Congress, including the details of all examinations made of companies during the year, together with a complete statement of the receipts and disbursements of the bureau.

The provisions of the act apply to all corporations, associations or partnerships engaged in interstate insurance business, who make and deliver insurance contracts outside the State of incorporation or origin of authority, but have no application to fraternal societies or organizations carried on for the sole benefit of members and not for profit. Such associations or societies may voluntarily take advantage of the act, and, after complying with all its provisions, become duly authorized by the Comptroller to transact interstate insurance.

The Comptroller is required to establish rules and regulations and reasonable fees for conducting the business of insurance, including annual and other reports to be made by companies. The pen-

alty for failure to make or transmit any report or statement of fact required is \$100 for each day of delay.

The Comptroller is also required to have a conservative valuation made of the business of life companies, or determine the reinsurance reserve of other companies, upon approved methods and tables, and by such a standard of interest as may, in his judgment and discretion, best serve the purpose to determine and establish the true financial conditions and attendant liabilities of companies.

Authority and power to inquire into the details and facts of the management of all corporations engaged in interstate insurance is given to the Comptroller, and he may have the companies examined by special examiners whenever necessary or expedient. To this end he may invoke the aid of any court of the United States, to require the attendance and testimony of witnesses and the production of books, papers and documents.

Failure to obey such order of the court may be punished as a contempt thereof. It is also provided that companies may be investigated by the Comptroller upon the complaint of any State Commissioner of Insurance.

The actual and reasonable expense of every examination or special investigation of the affairs of an insurance corporation engaged in interstate insurance must be paid by the corporation so examined. All charges and fees for making such examinations, however, must be presented in the form of an itemized bill, approved by the Comptroller of Insurance, and the amount thereof must be paid into the Treasury of the United States.

Corporations transacting interstate or foreign insurance are specifically exempted from making any other or separate statements or reports, and are not to be subject to any visitorial powers or examinations of their business and accounts other than by the Comptroller of Insurance, or by the proper authorities of the State of incorporation or origin.

Corporations engaged in the business of insurance in more than one State must file a copy of their charter or other documents of local authority, and annually publish a list of their stockholders or trustees. They are required to make a

deposit of \$100,000, either with the Commissioner of Insurance or with the proper official of the State of incorporation or origin.

After these requirements have been met to the satisfaction of the Comptroller, a certificate of authority and power to transact interstate insurance must be issued, whereby such corporations are authorized to transact business in any State, Territory or District of the United States, without further supervision or regulation than by the Comptroller of Insurance or the duly authorized official of the State of incorporation or origin. Provision is made for conditions under which the certificates of authority shall be revoked and for proceedings in case of receivership.

The bill has been introduced on behalf of the policy-holders of all American insurance companies, in the firm belief that their present and future interests demand the additional protection of a Federal statute regulating insurance transactions between the States, in addition, of course, to such supervision and regulation as constitutionally belong to the States from which the companies derive their charters. The following important benefits are expected to result:

1. Increase in the security of policy-holders.
2. Increase in publicity of details of investments and expenditures.
3. Decrease in the burden and expense of over-legislation.
4. Decrease in the burden of onerous taxation.
5. Decrease in the expense rate and the cost of insurance.
6. The stamping out of fraudulent insurance enterprises.
7. Adequate national protection for American insurance companies transacting business in foreign countries.
8. The advancement of the cause of sound insurance throughout the United States.

The hope that some fifty different States and Territories will agree upon a uniform code governing insurance companies and the insurance contract will lead to disappointment, for it is contrary to all our past experience in commercial and social legislation. The insurance business is entirely too complex and of too transcending importance, affecting as it does the welfare of every man, woman and child thruout the United States, to be left to the uncertainties of possible harmony in legislation at some date of the remote future.

Never before has the issue been so plain and so well defined as at present. The proposed legislation in the State of New York, radical as it is in many of its most important provisions, proves better than any other argument which can be advanced the necessity for Federal legislation upon the subject of insurance. Certainly an issue of such importance should not be left to the Legislature of a single State legislating directly or indirectly with reference to the management and methods of life insurance companies and their policy-holders of other States.

It has been objected to the proposed measure that "There is nothing in the bill governing conditions or practices in any branch of insurance, and the measure, if enacted and declared constitutional, would permit insurance companies engaged in said interstate insurance to transact business without any of the restrictions now prevalent in the States exercising the best form of supervision." This statement is quite contrary to the facts. The bill as outlined in the preceding synopsis provides distinctly for a clear recognition of the right of the State to govern and control the companies chartered by it, not only under statutory law, but also under the common law. It does not take away from the right of any State a single privilege or an iota of power whatsoever over the insurance corporations of its own making. The bill, however, adds materially to the security of the policy-holders, improves the method of State supervision, and provides for complete publicity of the facts respecting the business in reasonable detail. The bill does not provide an insurance code respecting the insurance contract, because such legislation does not fall within the province of the Federal Government. No country which has legislated upon this subject upon a broad or national scale has confused the sphere of legislation respecting the insurance business on the one hand with that of the insurance contract on the other. For illustration, the German law regulating insurance companies thruout the Empire as a substitute for the multiform system of supervision by individual States previous to 1901, distinctly avoids any reference whatever to the insurance contract,

which has been under separate consideration and which, it is expected, will be provided for in the near future in a comprehensive and carefully framed general code governing the insurance contract throuth the Empire. Under our peculiar system of State and Federal government, as defined by the Constitution, it would not fall within the province of the Federal Government to legislate with respect to matters which are entirely subject to State control. What the bill aims to do is to put an end to interstate warfare upon insurance matters, and to eliminate a vast amount of over-legislation and conflicting legislation seriously opposed to the interest of the policy-holders. The bill seeks to establish the business of insurance upon the basis of national laws with the guarantee of national protection.

Another criticism which has been offered against the bill in a recent hearing before the Committee on the Judiciary of the House of Representatives is a restatement of the earlier objections, that the proposed legislation would not be held to be constitutional. Aside from the broad principle that this legislation is primarily a political question, and not subject to judicial review until it is actually brought before the Supreme Court for a final decision, it is not necessary to take into consideration the past attitude of the Court toward an interpretation of the commercial status of the insurance contract in interstate law, for it does not directly affect the question involved in a Federal statute establishing an effective, comprehensive and enduring system of supervision and control over insurance companies engaged in interstate business.

Another objection which has been advanced against the bill is that it has primarily the endorsement of the insurance companies. Aside from the fact that there is by no means a unanimity of opinion among insurance companies as to the expediency or necessity of the proposed statute, the mere fact of the companies being in favor of this bill should certainly not operate against its passage. The bill is not only in strict conformity to all our general legislation upon cog-

nate interests, but its various provisions are carefully modeled after the corresponding provisions of different State laws which by long experience have been found best adapted to the purpose. Upon one point, however, there should be no misunderstanding, and that is the fact that the proposed legislation has the emphatic endorsement of the public at large. Before introducing the measure I secured an intelligent expression of public opinion, and in response to a very carefully framed letter of inquiry I received 7,454 replies, of which 6,581, or 88.3 per cent., were emphatically in favor of the proposed legislation. This expression of opinion favorable to Federal supervision was practically uniform throuth the United States, every State and Territory being included in the scope of my inquiry. The most emphatic expressions of opinion came from commercial colleges, 98 per cent. of the replies being favorable. I received 195 replies from university and college presidents, of which 96 per cent. were favorable to the proposition. From other interests more or less affected by the passage of the bill the percentages of favorable replies were as follows: Labor organizations, 96 per cent.; commercial associations and boards of trade, 96 per cent.; accident insurance companies' presidents and agents, 93 per cent.; prominent policy-holders, 92 per cent.; life insurance agents, 92 per cent.; fire insurance agents, 91 per cent.; national bank presidents, 91 per cent.; New York Republican Club, 90 per cent.; American Historical Association, 89 per cent.; American Economic Association, 88 per cent.; Civic Federation, 82 per cent.; law school presidents, 77 per cent.; life insurance presidents, 73 per cent.; fire insurance presidents, 68 per cent.; and members of the American Bar Association, 68 per cent.

The results of this inquiry fully warrant the conviction that the proposed legislation has the hearty and almost unanimous approval of the American people more or less directly affected by the passage of the bill.

WASHINGTON, D. C.

# The Case of Senator Smoot

BY JULIUS C. BURROWS

[Senator Burrows, of Michigan, left the House of Representatives in January, 1895, to take the seat in the Senate made vacant by the death of Senator Stockbridge. He is upon several important committees, Finance, Naval Affairs, Philippines, etc., but as chairman of the Committee on Privileges and Elections he has held the responsible position at the head of the long and perplexing investigation of which he speaks in the following article, giving a better idea than has generally obtained, as to the real work of the committee, and what must rightly be expected of it.—EDITOR.]

REPLYING to the request of THE INDEPENDENT for a brief statement of the question at issue in the matter of Senator Reed Smoot, now pending before the Committee on Priv-

ileges and Elections, for the reason, in the language of the protest, "that he is one of a self-perpetuating body of fifteen men, who, constituting the ruling authorities of the Church of Jesus Christ

J. C. Burrows.

ileges and Elections, and as to the present status of the investigation, I will say that when the credentials of Mr. Smoot were presented to the Senate there was filed at the same time a protest against his being permitted to qualify by taking the oath of office, or to sit as a member

of Latter-Day Saints, or Mormon Church, claim, and by their followers are accorded the right to claim, supreme authority, divinely, sanctioned, to shape the belief and control the conduct of those under them in all matters whatsoever, civil and religious, temporal and spirit-

ual, and who, thus uniting in themselves authority in Church and State, do so exercise the same as to inculcate and encourage a belief in polygamy and polygamous cohabitation; and who countenance and connive at violation of the laws of the State prohibiting the same, regardless of pledges made for obtaining the Statehood, and of covenants made with the people of the United States, and who by all the means in their power protect and honor those who, with themselves, violate the laws of the land and are guilty of practices destructive of the family and the home."

The protest charges that Senator Smoot is a member of such organization and one of the apostles. The prayer of the petitioners that the oath of office should not be administered to Mr. Smoot, in the first instance, or he be permitted to take his seat in the Senate, could not be granted, for the reason that it has been the invariable practice of the Senate from its organization to admit to membership any person having a duly authenticated certificate of election, and leave for future inquiry any question which might vitiate the election or render the holder of such certificate ineligible. To adopt a different practice would place it within the power of the majority of the Senate to deprive a third of the States of representation until the question of the regularity of election might be tried and determined. So, as I say, the rule has been uniform to admit to membership the holder of a duly

authenticated certificate of election. That course was followed in the case of Mr. Smoot, and the oath of office administered, and he took his seat as a Senator from the State of Utah.

Subsequently, the protest above referred to was, by order of the Senate, referred to the Committee on Privileges and Elections, with direction to make inquiry into the charges set forth in the protest, and, generally, "To investigate the right and title of Reed Smoot to a seat in the Senate as a Senator from the State of Utah." In obedience to the order of the Senate the committee has prosecuted the inquiry with diligence, and has examined nearly 100 witnesses, whose testimony covers more than 3,000 pages of printed matter, which will be submitted to the Senate, together with the report of the committee thereon. The last hearing before the committee will occur on the 26th inst., followed by the argument of counsel, and it is expected that the conclusion reached by the committee will be reported to the Senate early in April.

Of the character of the testimony, you readily understand it would not be proper for me to even express an opinion at this time. As to the result of the investigation, of course, I cannot speak. When the Committee on Privileges and Elections has concluded its labor and made its report, the matter will then be in the hands of the Senate for final disposition.

WASHINGTON, D. C.

## A Prayer for Patience

"Blessed Are the Meek"

BY PHILIP STAFFORD MOXOM

O God, I lift my heart to Thee,  
With deep desire one boon I ask—  
Grant this, that I may patient be,  
Whate'er my burden or my task.

Give me a temper meek and strong,  
In all that I must do or bear—  
Undaunted by outrageous wrong,  
Unfretted by insistent care.

Help me to suffer and be still,  
When suffering Thou dost ordain,  
When heavy lies the weight of ill  
And days are dark with grief and pain.

Breathe in my heart that spirit mild,  
Sweet Resignation's perfect grace,  
Which Jesus showed, Thy Holy Child,  
When He this lowly path did trace.

Like Him I would the triumph know  
Of overcoming ill with good,  
And drinking deep, while here below,  
The joy of His beatitude.

SPRINGFIELD, MASS.

# The Church and Social Service

## Two Letters

BY THE REV. CHARLES M. SHELDON AND THE REV. W. D. P. BLISS

*Mr. W. D. P. Bliss, Amityville, Long Island, N. Y.*

MY DEAR MR. BLISS: I have read with much interest your articles in THE INDEPENDENT on The Church in Social Service. It seems from your conclusion that in large part the Church is a failure on that side of constructive work. If the Church were wiped off the map of New York what other institution would take its place, or is there any other institution which is doing anything even to compare with the good things the Church is doing? My question simply covers the interrogation concerning an *institution* of some kind. Can righteousness or social service for the people be carried on without some organized, concrete body to represent it, and you do not say in your articles whether you believe such a concrete organization will grow out of what is now the Church or grow up entirely outside of it.

I ask these questions because, so far as I have gone in my own experience, I have not yet found anything outside of the Church which contains the spiritual and Christian leaven necessary to organize men and women together for social service. In other words, I have found more selfishness and more hypocrisy and more narrowness in organizations outside the Church than within it. I do not need to say, of course, that I believe myself that the great remedy for America is a profound and real revival of Christianity in the hearts of the people, and the fact that we need it so much is, to my mind, the best proof that we are going to have it.

My only excuse for writing you at all is the interest which your articles in THE INDEPENDENT provoked, and also because I am an optimist and believe in the Church as an organization, ultimately, as moved by the divine impulses, which is to shape the future social relations of men.

CHARLES M. SHELDON.

*The Rev. Charles M. Sheldon, Central Church, Topeka, Kansas.*

MY DEAR MR. SHELDON: With your kind consent, I answer your letter of February 15th thru the columns of THE INDEPENDENT, because you give able expression to what several clergymen have written me and because your letter raises questions of general interest and of deep and far reaching import. As you say, I do imply, because I so believe that the Church is, in large part today, a failure on the social side of constructive work, and I do know, or think I know, institutions which not only can be compared with the Church in good things done in social work, but are far ahead of the Church in that line of her activities. I have only room here to consider one such class of institutions—the organized labor unions of America.

Of course I do not for a moment mean that I would dream of substituting the labor union for the Church. The social side of life is not all of life; and I do not need to say that there are life functions of the most vital importance, in religious education, moral and spiritual culture, together with divine worship, which the labor unions do not fulfil, which they are not fitted nor framed to fulfil, and which, I am happy to say, I believe the Church does fulfil today, to say the least, better than any other institution. I agree with you that if the Church were wiped off the map of New York today, I do not know what other institution could take its place.

But all that does not prevent the labor union from being today, *on lines of social effort*, far more useful than the Church—dropping for the moment the all important question of fitting and preparing individuals for their social efforts. That is another question. Of that anon.

But on lines of social effort compare for a moment the labor union and the Church. The most important social need

of man is, I think, useful, ennobling, honorable, steady, well paid daily work. Would you begin to compare what the Churches are doing to secure such work to the laboring masses of our country with what the labor unions are doing? The Church does sometimes, thru employment bureaus or other agencies, indeed find work, for some of the more ignorant and needy, whom the labor union does not help. I have no reason nor inclination to discredit or to minimize any good things the Church does. These are not few. The Salvation Army, to credit that organization to the Church, finds work for some 50,000 unemployed men per year. I would that other Church organizations did as well. But the American Federation of Labor, for upward of 2,000,000 working men, is their one economic hope and defense and support. With scarcely an exception you will find that wherever a trade is organized strongly and well wages are high, conditions of employment favorable, and that wherever a trade is not organized wages and conditions are low. You will find no such difference between the wages of Church working men and non-Church working men. If anything today our best working men (*economically speaking*) are out of the Church and our poorer working men within it. For *economic* help, probably not one working man out of one thousand would look to the Church rather than to his union. It is the Church which cannot be compared with the union in this important respect.

Next in importance to work, in social need comes perhaps a high wage, because this means the possibility of a good home, healthy food, education for children, provision for old age—all that socially raises life above the brute. In this would you again for a moment compare the Church with the labor union? If possible, here the advantage is still more with the labor union. What has the Church done in her social activities to raise wages? The labor union is the one institution today that is elevating wages. It is the laborer's one bulwark in many trades against a fall of wages to a European and, in some occupations, to a Chinese level.

Take it in minor matters—in sick bene-

fits, out of work benefits, death benefits. How many Churches have such organized benefits? Multitudinous lodges have, almost every labor union has, but the Church very rarely has. Many of the larger unions spend hundreds of thousands of dollars each year for the sick, the out of work, the widow and the orphan.

Turn to another most important matter—industrial legislation. Who works for legislation forbidding child labor, shortening the hours of woman's work at night, demanding protection for life and limb, enforcing hygiene and propriety in factories and stores? Here and there, indeed, a noble Christian clergyman, layman or laywoman may be at work for this, but the Church as a Church almost never. It is organized labor to whom American labor, organized or unorganized, mainly owes whatever it has of social privilege and advancement and protection.

But you say the Churches lead in charity. I am not sure of this. I do not think that usually our ecclesiastical charities are our best charities. But we do freely admit that the Church does more than the labor union in respect of charity. The labor union is not a charitable organization. It scorns "charity." Laboring men know, what the Churches do not seem to know, that what the working masses need and want and demand today is not charity, but, as they are continually insisting, justice, fair play, opportunity, organization. Says Canon Barnett, who for over thirty years has lived and labored among the most pitiable masses probably of any city in the world:

"The most earnest members of a charity organization society cannot hope that organized almsgiving will be powerful so to alter conditions as to make the life of the poor a life worth living. Societies which absorb much wealth and which relieve their subscribers of their responsibility are failing; it remains only to adopt the principle of the Education Act, of the Poor Law and of other Socialist legislation, and call on Society to do what societies fail to do."

Said President Tucker in our own land:

"The philanthropy which is content to relieve the sufferer from wrong social conditions postpones the philanthropy which is determined at any cost to right those conditions."

If you urge that in the former ques-

tionable philanthropy the Church is in the lead, I doubt if the labor unions will deny the Church that unenviable distinction.

But all this, I repeat, does not mean that I would replace the Church by the labor unions. Let us turn for a moment to what we call the personal virtues. Here I gladly give the palm, at least so far as inculcating virtue goes, to the Church. But even here I must in honesty declare that on some points I have not found the Church in advance of the labor union. Take the wealthy young men growing up in our churches and colleges—I have not found in them as a class more personal purity than I have found in the sons of the working classes. It is not from the laboring class that our divorce problem threatens. Take it in honesty, I more than doubt if the business honesty of our average church business man is much in advance of the honesty of average trade unionists. When it comes to personal sacrifices, I think I know that the average trade unionist sacrifices almost infinitely more for what he believes to be the hope of the world, than the average church member does for what he believes to be the world's hope.

I do not say this of all workingmen. Yet says Dr. Rainsford, whom we are missing today in New York:

"I believe the labor leaders in the United States, taking them all in all, are just as good as the leaders in law, or finance, or society, or politics. \* \* \* I know a man who for years in this country has occupied one of the first positions as a labor leader. No word is too bad to be said about him by most of the press and some of the colleges, and I know, as a matter of fact, that the man, with a large family of children, never drew but one-half his

salary during the whole time he held office and put the other half back into the treasury of his organization. I know a man who, if my judgment amounts to anything, is one of the ablest men in the United States—a man who has great powers of tongue and great powers of organization—and altho, alas! he is outside the Christian Church, I venture to say, a large, whole-souled Christian, too. That man is at the head of an enormous federation in this country, and has never taken but two dollars and fifty cents a day, which is due to him from his trade, and he has never taken even his two dollars and fifty cents except when he was engaged in the active business of his federation. \* \* \* This winter, with an old mother to support, that man walked the streets in the cold for three long weeks to get work (and there is no better workman at his trade) \* \* \* before he could get a job for two dollars and a half a day, rather than give in and surrender his principles. I say that if our Lord and King were back on the earth, I believe from my soul that those men would be in his train."

Some think the only function of the Church is to be an inspirer—not to do social reform work. It is a defensible position. But if it be so, I recognize still that social action, social structural reform, not charity, is *the* need today. I recognize further that this is what is coming, and coming rapidly in America, as in all countries. And for this I have to recognize that the Church is doing and as now constructed can do very little. Therefore, when you ask me of the future, I know not. I believe in the Church, I believe there always will be a Church. "The gates of death shall not prevail against her." But I also fear that the Church has got to go down into the gates of death.

Just what will be the Church of the future, just what will be its connection with the Churches of today, I do not know. W. D. B. BLISS.

## Christensdämmerung

BY CURTIS HIDDEN PAGE

CLEAR, clear, oh hear!  
The soul of the utmost sphere  
Speaks to the listening ear  
Near, near.

Bright, bright, O night,  
In the dying gods' despite  
See on the eastward hight  
Light, light.

High, high, O sky,  
Beacon the sight on high  
Of a God made man to die  
On high, yet nigh.

Shine, shine, O sign  
Of the human soul divine,  
Proving the wondrous Trine  
Mine, mine.

COLUMBIA UNIVERSITY.

# Literature

## The Jungle

THE question is, how seriously shall we take this story of life and conditions in the packing-house districts of Chicago.\* Mr. Sinclair unquestionably has genius, but he lacks judgment, and has always been disposed to exceed the truth in the violence of his effort to tell it. The truth does not lend itself to as much emotion in representation as Mr. Sinclair has to spare. Besides, he has what may

Upton Sinclair.

be termed the "fly-blowing" genius. The kind of inspiration he has leads him to settle upon what is abnormal, painful, decayed. And, in reading this book, we must not forget that it was Mr. Sinclair's literary nature which caused him to lay the scene of this book around the dump-holes of Chicago. Nothing would induce him to write a story with a happy pair of lovers, a spring branch and waving green trees in it, because he believes that the "only way to dramatize a wedding is to break it up." Just so, there

may be some mitigating circumstances connected with the horrors he describes, but he does not admit one. The horrors crowd each other so continuously without even a paragraph of relief that even the reviewer found himself often more interested in the author's powers of luridity than indignant at the iniquities so realistically portrayed. He tells only of the sick cattle killed and sold for beef, of the chemical poisons used to reclaim tainted meat, of the diabolical formula used for making sausage, and other hideous secrets of economy in the Durham Company's packing houses. And, more particularly, he dramatizes the woes of the miserable gangrened humanity in Packingtown, all of which he represents as being caused by the Durham system, which encourages the fiercest competition between hungry men for work, which takes every advantage of their ignorance, poverty and weakness. He has exercised all his nightmare powers to lay the scene horribly, even to convey the smell of it—"an elemental odor," he says, "raw and crude; it was rich, almost rancid, sensual, strong," that smell of the stockyards and packing houses. And it is suggestive of Mr. Sinclair's dramatic method of making a small thing stand for something monstrous when he represents the peasant family who are to be victims of his tale as having "traveled all the way from Lithuania to it." The idea is, that it heralded to their unsophisticated noses the savagery, the stench and moral destruction into which they were going. Every incident recorded, indeed, is meant to be symbolic of the final tragedy. Thus the wedding feast, with which the story begins, and which is (from the standpoint of literary art) the only part of the book by which it can lay claim to the title of a "novel," conveys an impression of the passionate temperament, the simplicity and virtue of these peasants, who are to be converted, by the Durham system, into beggars, thugs, thieves, prostitutes. We must not lose patience even when he writes that amazing apostrophe to the hog on page 41, that tells the celerity with which the animal is snatched up and

\* *THE JUNGLE.* By Upton Sinclair. New York: Doubleday, Page & Co. \$1.50.

converted into pork, and that concludes with this touching appeal:

"And now was no one to believe that there was nowhere a god of hogs to whom the hog personality was precious? To whom these hog squeals and agonies had a meaning? Who would take this hog into his arms and comfort him, reward him for his work well done and show him the meaning of his sacrifice?"

Jurgis, the hero of the book, who has stood by and watched the killing process that first day, exclaims, "Dieve! but I'm glad I'm not a hog!"

But that is the very point the author is really hinting at. Jurgis is also a hog, so far as the Durham Company's system is concerned—a creature to be used up and cast aside with other refuse of the packing house. And that is what happens. The calamities which befall Jurgis are coldly impersonal. They are the tentacles of the system which cheat him out of his home, out of his wife's virtue, which cast him in prison, which bereave him of every tie and madden him into becoming a mere creature whose one law of life is self-protection. He becomes a tramp, of necessity. The author makes it clear that he had no choice. And that is the chief horror of the whole situation, the lack of choice for all such unhappy men and women. In the same way Jurgis becomes a thug, then a heeler for a ward politician, at last a beggar. And on his way thru these miseries, the author tells of all the other systems of graft known to the rich and powerful of the city. Never was such a black picture drawn of greed and inhumanity practiced by that class of society which we are accustomed to reckon generous and honorable.

There is no denying that Mr. Sinclair has the reality of terrible possibilities back of his representations. It is not whether the thing is literally true that counts for so much as it is the proof the book offers that such things may be true in every horrible detail. The power exists in the hands of great corporations to bring these miserable conditions to pass. And it is a sort of axiom of human nature that the more power a man or set of men have the more unscrupulous they are in exercising it. If one-tenth of the author's statements have ever been true of any one living worker in Packingtown, it constitutes an argument for socialism

or any other form of revolution that is well nigh incontrovertible. But this is just Mr. Sinclair's purpose.

*The Jungle* is really a socialistic tract, and not a novel at all. That is why the book ends with an apostrophe of "The Co-operative Commonwealth," and makes the very belief in it convert Jurgis from a sodden, hopeless beggar into heroic manhood. But if there is as much wrong as he represents, the most heavenly-minded socialists would be changed into raging demons of vengeance once they get the chance to even things up with the Lake Shore capitalists. Human nature is mighty true to life whether it be found in a labor unionist, a socialist orator, or an old Beelzebub capitalist. And the one who gets the chance to make the laws usually frames them so that they will pinch the other fellow's foot.

To sum up, then, the book, tho overdrawn from a literary standpoint and almost surely exaggerated as to facts, is a powerful and harrowing narrative of the life of an ignorant immigrant, a victim of the business sordidness and political graft of a great modern American city. *The Jungle* may do some harm; also, it will surely do much good.

### Life of Lord Granville

As was foreseen by Lord Edmond Fitzmaurice when he completed his great work, it is inevitable that a comparison should at once be made between the new *Life of Lord Granville*\* and Morley's "Gladstone," which appeared in 1903. Nor need the author have feared the comparison. If these two portly volumes cannot lay claim to full equality in style and political insight to John Morley's monumental work on Gladstone, among the lives of the statesmen of the Victorian Era, they may be ranked second, with Charles Stuart Parker's "Sir Robert Peel," the third volume of which appeared in 1899, forming a close third. These three biographies, more than any historical work that has yet been written, give an insight into political conditions and the course of events, and also into the personalities of the great figures on

\*THE LIFE OF GRANVILLE GEORGE LEVESON GOWER. 1815-1891. By Lord Edmond Fitzmaurice. 2 vols. Pp. xx, 543; xxiv, 535. New York: Longmans, Green & Co. \$10.00.

the stage of English and European history during the second half of the nineteenth century.

There is scarcely a phase of English political history, between the accession of Queen Victoria and Gladstone's first Home Rule bill, which does not receive further illumination in the letters of Lord Granville, or in letters written to him and included in these volumes. The Crimean War and the Indian Mutiny are both brought within the scope of Lord Granville's life. The mutiny is especially fully treated, owing to Granville's close intimacy with Lord Canning, who was Governor-General of India thru the whole of that trying period. Canning and Granville wrote running diary letters to each other, describing, on the one hand, the events of the mutiny and the policy of the Indian Government in dealing with it, and pacifying the country when it was suppressed; and, on the other, the feeling in England, the steps taken by the Home Government, and the criticism provoked in England by the too great clemency of the Governor-General, a criticism which drew out a protest of blood and tears from Canning. What Canning pleaded for was a real reconciliation between the English and the subject races of India. "I believe," he wrote to Granville, "that unless we use our efforts to check the growth of this antagonism of dark skin and white skin, it will fix itself in India, where hitherto, to the credit of English common sense and feeling, it has been unknown."

The new light on the Crimean War is of especial interest just now when Russia is occupying the front of the stage in European politics. Like the Spanish War of 1898, the Crimean War was a war which detached critics have frequently considered superfluous and one which, by a little more diplomacy, might have been avoided. But, like the war with Spain, the war between Great Britain and Russia in 1854 was the action of the nation which the Government could not restrain. Lord Granville, then a member of the Aberdeen Cabinet, was among the English statesmen who regarded the war with disfavor; but when once entered upon he felt that it must be pushed thru with efficiency.

After the conclusion of peace, Granville was selected as the Queen's special representative at the coronation of Czar Nicholas II. After his visit to Russia, Granville wrote to Canning: "My impression of Russia is that it has immense resources, if they are properly developed, but that this will not be the case; that it is an immensely complicated machine of which the governing wheels are not to be trusted, and which having been kept at high pressure by a very energetic engineer will certainly give way somewhere or other in the hands of a very feeble one." As this was written fifty years ago, it must be conceded that there was a longer lease of life in the "complicated machine" than Granville apparently imagined. Nevertheless, recent events have abundantly proved the truth of Granville's observations and judgment. "Russia is not strong for aggression," he added, and the collapse that has followed her aggression in the Far East may be taken as confirmation of this estimate.

As in the "Life of Gladstone," so in the *Life of Lord Granville*, there is much fresh light on the part taken by Queen Victoria in political life, and especially in foreign politics, during her long reign—light which entitles her to a high place in the Hall of Fame of the advocates of peace, and which suggests the real value and usefulness of sovereigns under constitutional government. The long struggle between the Queen and the Prince Consort, on the one hand, and Palmerston, who was then Premier, and Lord John Russell, then Foreign Secretary, on the other, as to the part which England should take in the Austro-Italian struggle of 1859, ended in a victory for the Queen, and England remained neutral in a war in which, had she become the ally of France and Sardinia, the whole of Europe might have become involved. "It has ended very well," wrote Granville to the Duke of Argyll; "Johnny has had a lesson that the Cabinet will support the Queen in preventing him and Pam (Lord Palmerston) acting on important occasions without the advice of their colleagues. A schism, dangerous to the court and the Government, has been postponed."

A section of the book of interest to

American readers is that dealing with England's relations with the United States during the Civil War and the subsequent Geneva Arbitration. In the negotiations which were necessary before the arbitration proceedings could take place, Lord Granville, as Foreign Secretary in Gladstone's first Administration, had a large share, and it was partly due to his patience, courtesy and ever-conciliatory temper and bearing that these negotiations did not prove abortive, as again and again they threatened to become.

It might be suggested that the reading of the Granville memoirs would have been greatly facilitated had the page headlines and the chapter headings indicated more clearly the ministries in office and Grandville's position during the respective periods. Such a chronology as that supplied by Morley to his "Gladstone" would have been of great value, and it is to be hoped that in a later edition Lord Edmond Fitzmaurice may see his way to supplying one.

**Everyman's Library.** Edited by Ernest Rhys.  
**The Golden Book of Marcus Aurelius.** Translated by Marie Casaubon, with an Introduction by W. H. D. Rouse. **Biographia Literaria.** By S. T. Coleridge, with an Introduction by Arthur Symonds. New York: E. P. Dutton & Co. Cloth, 50 cents; leather, \$1.

Bohn's Library did a great and good work in its time by supplying English and foreign classics at a price within the reach of every reader, but the series is now behind the times, typographically and bibliographically. Therefore, we give a hearty welcome and a sincere recommendation to this new series of standard works, which are both cheaper and better than Bohn's. The volumes convenient in form, 4½ by 7 inches, and very light to hold. By getting into the habit of slipping one in the pocket or hand bag one can soon get a comprehensive knowledge of the best literature by improving the odd moments when one waits for train or trolley. They are neat in type and binding, and no one need be ashamed to have them seen in his hand in public or on the best shelves of his library. It is unfortunate that we cannot get them as the English do, for a shilling apiece, but even at 50 cents they are bargains, as

books go in this country. The series will comprise a thousand volumes, covering the important works in the fields of History, Science, Essays, Fiction, Travel, Philosophy, Theology, Poetry, Drama, Classical, Oratory, Romance and Biography. The introductions are written by some of the foremost English men of letters, such as Andrew Lang, Augustin Birrell, G. K. Chesterton, A. G. Swinburne, George Saintsbury, Sir Oliver Lodge, Theodore Watts-Dunton, Prof. C. H. Herford, Stopford A. Brooke, and Richard Garnett. Fifty volumes are now on sale. One conspicuous advantage of such a series is that it affords a school or public library to stock up on standard works of little cost and trouble. They are all books that "no gentleman's library can be without." Every person who is called by his friends "well read" will feel a prick of conscience if, on looking over the list, he finds some with which he is not familiar, and he would be ashamed to confess how many such there are. The best way to get the classics read is to have them handy.

**The Religion of Numa and Other Essays on the Religion of Ancient Rome.** By Jesse Benedict Carter. New York: The Macmillan Company. \$1.00.

This is less a handbook than a sketch of the change by which the original agricultural and secluded mythology of Rome and its gods who had their proper home within the *Pomerium*, developed into the prevailing mythology of the classical period. In a scholarly way, and following the lead of George Wissowa and W. Warde Fowler, the author carries down the introduction of Etruscan, Greek and Oriental deities, as far as the death of Augustus. The subject is not without philosophical interest, lifeless as the original gods of Numa were. We see them filled out with individuality, Grecised, humanized, and then proved unsatisfactory, and requiring, under Sulla and Pompey, new deities to fill the lack of the old gods, until the Dea Mater of Pessinus and Comana brought in loose and lascivious elements which required the stern hand of Senate and Emperor. The author, however, does not develop, but only characterizes, the influence on society of Cybele, Isis,

and Mithra. For the nature of their worship the reader may turn to the late volume of Professor Dill, which treats of "Roman Society" at the time of Nero. One observes that, like most students of classic mythology, our author takes such gods as Hercules to be purely Greek, and does not seem to look back to their Oriental origin; for much of the Greek mythology crossed the sea from Asia Minor and Syria, and was even there but of a secondary origin. This little volume is full of suggestion and value.

**The Mountain of Fears.** By Henry C. Rowland. New York: A. S. Barnes & Co. \$1.50.

It is, perhaps, ungenerous to ponder on how many authors of short stories have been formed upon Kipling, altho he is responsible for so much contemporary fiction besides his own. *The Mountain of Fears* more than suggests him as master. Yet it is original, and in a new field, with a tropic luxuriance of style befitting the exuberant scenes where are enacted the grewsome dramas of several stories. Among such riotous vegetation, on such a volcanic soil, strange growths of character are to be expected, and we find their vivid flowering beautiful but poisonous, like "Rappaccini's Daughter." *The Mountain of Fears* is an unusual book, albeit morbid, as tales of the uncanny need must be.

## Literary Notes

THE new edition of "*College Songs*" just published by Oliver Ditson Company, Boston, adds to the old and perennial favorites a number of new ones that have attained popularity in some of our colleges.

....All persons who intend to write a book some time, and many others—if there are any others—will be interested in a volume published by the Grafton Press, New York, on "*The Building of a Book*." It is edited by F. H. Hitchcock and consists of a collection of articles by experts on all the processes of book-making from that done by "The Author" to the no less essential part played by "The Advertiser." (\$1.50).

....Under the title of "*Songs of Mother and Child*," Lida Brown McMurphy and Agnes Cook Gale have published a collection of about 170 short poems. They are mostly taken from periodicals, and among them we recog-

nize a half dozen which first appeared in *THE INDEPENDENT*. It is an admirable volume to give to a young mother. (Silver, Burdett & Co., New York.)

....The most important paintings in the Royal collection at Buckingham Palace and Windsor Castle are being sumptuously reproduced in 180 photogravures of imperial folio sizes, with an introduction and descriptive text by Lionel Curt, Surveyor of the King's Pictures and Works of Art. Charles Scribner's Sons have a limited number of the Edition de Luxe to sell in this country at \$100 for the two volumes in art canvas.

....Teachers who wish to interest their pupils in the life history of mosquitoes and the way they carry the germs of yellow and malarial fever will find useful the microphotographs and sketches and the elementary and graphic explanations given in the annual report of the American Mosquito Extermination Society, just published. The next meeting of the society will be in New York, April 11th, and it will certainly be a jubilant one, for it will have reports of the two great triumphs of the past year in the war against mosquito diseases in the Canal Zone and New Orleans. H. C. Weeks, Bayside, L. I., New York City, is Secretary of the society.

## Pebbles

### ATCHISON PECULIARITIES.

AN Atchison washwoman has a desk telephone.—An Atchison mother points with pride to the fact that her daughter uses seventeen different instruments on her finger nails, and she didn't go to a boarding school to learn about them either.—An Atchison mother is so much in love with her husband that she cries if he goes to the cellar to fix the furnace without kissing her.—Some of Life's Little Ironies: An Atchison woman who has not a moment to call her own has a silk lounging robe. She takes her baths in a china wash-bowl, but owns a bath-robe. She never gets a chance to see inside of a theater, but is the possessor of a handsome theater wrap.—*Atchison Globe*.

THE young man who was making a call in Westport, had said he would have to be going, and they were standing just outside the front door, having a final little chat. He was leaning against the house talking in subdued tones. It was then 11:30 o'clock. They had been there ten minutes, perhaps, when suddenly a man in pajamas appeared at the door.

"Father," said the girl in a tone that showed mortification, "why are you down here looking that way? Are you walking in your sleep?"

The father looked at the young man. "George," he said, "I've never complained about how late you have stayed here talking to Mary, and I'm not going to kick about that tonight, but for goodness sake stop leaning against that door bell! You've got the whole family awake!"—*The Ladies' Home Journal*.

## Life Insurance and Grand Juries

IF officers and trustees of the great life insurance companies have broken the laws, it is in New York that they must be brought to justice, but the whole country is interested in the effort to be made here, be it futile or successful, to test the statutes which seem to cover the offenses disclosed by the investigation. Therefore the controversy between Judge O'Sullivan and District Attorney Jerome, and especially the conduct of the latter, are matters of national concern. In opposition to the desire and the advice of Mr. Jerome, the judge has now given to the grand jury instructions which clearly point to indictment. We cannot fully summarize what has been said and done since the grand jury's (or Mr. Jerome's) questions were addressed to the judge, but we shall speak of certain acts and utterances which especially deserve attention.

The law of New York says that any trustee or any officer of any corporation who appropriates to his own use or to that of any other person other than the true owner or person entitled to the benefit thereof, any money which he is authorized to have in his custody or control, is guilty of larceny, if he does this with intent to deprive or defraud the true owner of his property, or of the use or benefit thereof. Mr. Jerome admitted that this law was applicable to the life insurance officers who had given large sums of their companies', or their policyholders', money to political campaign committees. This is the only offense thus far brought to the attention of the grand jury. But in the brief which he submitted to the judge he argued that neither the crime of larceny nor any other crime had been committed, because there had been no felonious intent.

The law says nothing about felonious intent, but it does speak of "intent to deprive or defraud the true owner of his property." Judge O'Sullivan tells the jury that this is the intent (to "deprive or defraud") that is essential, and that it is for the jury to decide whether there was such intent. If there was, they

should indict. And he reminds them that the concealment of this appropriation of the companies' money by false accounts (which, under the law, is forgery) should be considered in seeking evidence of intent to deprive or defraud. Moreover, the false accounts were officially reported to the State authorities, and this probably was perjury.

Mr. Jerome's curious conduct is properly the subject of criticism. We do not refer especially to the questions and the submission of his brief, altho this was an unusual procedure, but to acts and sayings whose contradictory character are regarded by many as indications of insincerity or of a cheap flippancy which such an officer should avoid. Finding that the judge did not agree with him, he proposed that the very men who, he said, had committed no crime and ought not to be indicted, should be arrested at once and held to answer. And further:

"In order that the case may be argued by the highest legal ability, the best poised judgment of judicial experience that there is, I shall engage Alton B. Parker on behalf of the people." In the evening, a few hours later, in a public address, he ridiculed the same Alton B. Parker:

"He goes into the South and he says: 'The way to convict is to convict.' Note the judicial note. He says there is no grand jury that would not indict these men. Gentlemen, it is because the grand jury would indict them with or without evidence that there is one public official in New York who will not permit them to indict without the evidence. So much for cheap clap-trap even if it comes from the Sage of Esopus."

Why, then, had he offered to select ex-Judge Parker as an example of the "highest legal ability and the best poised judgment of judicial experience?"

Mr. Jerome should not complain if, on account of this incident and others that might be mentioned, his attitude excites distrust. The pending cases and others which have not yet been laid before the Grand Jury are of such a character that the sincerity of the District Attorney becomes a matter of great importance. If indictments should be found in the campaign fund cases, Mr. Jerome would clearly be disqualified as a prosecutor. His brief and his argument with Judge

O'Sullivan would, or should, prevent him from conducting the prosecution of the indicted men for larceny.

What action the Grand Jury will take we do not know, but they should have all the evidence and be perfectly free to ascertain for themselves whether it was with intent to "deprive the true owners" of their money that the money was given for political purposes, and the giving of it then concealed by false entries in the books; also to ascertain whether forgery was committed, and whether there was intent to "deprive" in maintaining a House of Mirth at Albany and in appropriating millions for "yellow dog" operations in that city and elsewhere. If such misappropriation of trust funds can be prevented by an enforcement of existing laws, let the fact be demonstrated. If existing laws are inadequate, the need of speedily making new ones will be conclusively shown.

It is not essential, Judge O'Sullivan says to the Grand Jury, that there should be evidence of self-gain. But the jury may ascertain that the paying of great sums to campaign committees really involved pecuniary or other gain for the persons who ordered or procured the payment. All that is still in the dark. The jury may properly seek evidence on this point. Concealment by false entries warrants a suspicion that there was something more than a simple campaign contribution to be covered up. Even a contribution of \$200,000 from a life insurance company's funds for charitable purposes would probably suggest searching official inquiry, with a view to indictments for larceny, if it had been hidden under a false account.

## Child Labor Then and Now

SOME interesting comparisons of the extent of child labor in New York State twenty years ago with that at present obtaining are given in the monograph of Dr. Fred. Rogers Fairchild, on "The Factory Legislation of New York State," recently published by the American Economic Association.

Child labor in the factories of this State was practically unregulated previous to 1886. The employment of children, even of very tender years, was gen-

eral, and was attended by grave abuses. In the mill districts of Cohoes, Amsterdam, Little Falls and Utica, many children began work at eight or nine years of age. In one mill in Cohoes, out of 3,200 employees, 1,200 were children under sixteen. In New York city children began working in the gas houses at eight, nine or ten, while in the cruller bakeries children of from nine to thirteen worked all night. From 5 to 25 per cent. of the cigar workers were children under fifteen, many of them being about nine, and some no more than four. The paper collar factories in 1884 employed between 1,500 and 2,000 children under fifteen, and the candy factories, jute and hemp mills, pencil factories, paper box and button works and artificial flower factories employed other thousands. "It was not uncommon," states an inspector in the report for 1886, "for children seven and eight years old to be seen trudging before daylight to the factory, and after twelve hours of steady work and confinement trudging back to their homes after dark." The "natural law" of the *laissez-faire* exponents evidently did not work out its beneficent results according to schedule. Instead, the weakest, the most helpless, were taken and unmercifully exploited. Only by State intervention and the pressure of the labor unions was the exploitation checked.

The first factory act was passed in 1886. Among other provisions, it prohibited the employment of children under thirteen in all factories. It has been several times amended, the session of 1905 adding some provisions designed still further to safeguard the children. As the law now stands, it prohibits work in factories by children under fourteen, and by those between fourteen and sixteen except under proper certification. Such children must give proof of age, of schooling (or, on examination, proof of ability to read and legibly write simple sentences in English), and must show the normal physical development of children of their age. The law also prohibits night work (before 6 a. m. and after 9 p. m.) for children under sixteen, provides for proper inspection, and throws upon the employer the onus of proving that his child employees are of legal

working age. Children working in the open sheds of the tanneries, apart from machinery and the general factory processes, are held by the opinion of the Attorney-General not to come within the provisions of the law. There are provisions, also, for child workers in mercantile and street occupations, but since these do not come within the scope of Dr. Fairchild's inquiry, they need not here be mentioned.

Dr. Fairchild's comparative data do not include results obtained under the more recent amendments, closing, for the most part, with the year 1903. But he finds a very considerable reduction in both the absolute and the relative number of child workers from the period previous to 1886. Taking the national census figures, he finds that the 20,627 employed children in 1870 formed 5.9 per cent. of the total number of factory workers, while the 29,529 in 1880 formed 5.6 per cent. The first year of the new law freed thousands of child slaves, and by 1890 there were but 12,263, forming 1.6 per cent. of the total, and in 1900 13,139, with the same percentage. The State Bureau's figures give like results. In 1886, according to the Factory Inspector's estimate, children formed 12.5 per cent. of the factory workers. In 1887, the year when figures on the subject began to be kept, the percentage was found to be but 8.4, while in 1903 it had fallen to 2.1. The decrease is general thruout the State, tho Brooklyn and Long Island still show a relatively high percentage (2.9). The southern-central counties (the Sixth Inspection District) show the lowest percentage (1.2). As a result of the decrease of employment, school attendance has considerably increased, and as a result both of the law and the pressure of the unions, hours of labor have been generally reduced from eleven and twelve to nine and ten.

Illiteracy—particularly among those who might be expected to be affected by the child labor laws—is also shown to have declined. In 1880 there were 12,680 illiterate children between the ages of ten and fourteen years. In 1890 there were 7,669, and in 1900 4,740. The percentage of illiterates for the ten-to-fourteen-year period was 2.5 in 1880, 1.4 in 1890, and but .7 in 1900.

Much remains to be done in stiffening the provisions of the child labor law in New York State. The temptation to exploit children for profit is doubtless greater than ever, by reason both of the increasing stress of competition and the constant perfecting of machinery. But it is something to show for progress that, by constant hammering at the law-makers, an intervention by the State has been given which has reduced the number of child workers by one-half, has aided in shortening their workday, has increased their attendance at school, and has thereby considerably lessened the degree of their illiteracy.

### A Filipino Teacher on American Teaching

IN December last a debate was held at the provincial high school at Bigan, province of South Ilokos, Luzon, upon the question, "Is the American Teacher More Successful as a Supervisor?" It may be necessary to explain that the American teachers formerly used to try to conduct the principal school of the town to which they were assigned, or at least to give it the larger part of their attention, themselves giving the instruction in English. It was impossible, with the resources of the Philippine Government, to hire enough American teachers to do this work properly, at the same time reaching directly but a small proportion of the children of school age in the islands. The American school teacher's place in the Philippines has gradually come to be that of a supervising teacher, who primarily teaches the Filipino instructors, tho the American teacher goes into the classes and conducts them whenever he pleases; in the main, however, he is a normal instructor and a superintendent of the schools in the larger towns and in their outlying *barrios*. The teachers in the intermediate and high schools are nearly in all cases Americans, few Filipino teachers having yet fitted themselves to take up these courses according to modern methods. One such teacher among the Filipinos is Miss Severa Paredes, of Candon, South Ilokos. Her argument in this debate is interesting not only as bearing on this question of school policy in the Philip-

pines, but in a broader way, as showing what alert Filipino minds think of the American educational program in general; and it shows how our American teachers, who meet and sympathize with the people, are our best representatives. Her argument is still further of interest because of its English form. It is as follows, and we adopt it as our own editorial utterance:

"Honorable Judges, Ladies and Gentlemen:

"We believe that making the American teacher a supervising teacher has been an advantage to the Filipino schools. Under the old system the American teacher worked for five hours each day among the schools in the *centros* [i. e., the "centers," or chief inhabited districts, of the *pueblos* or towns]. His entire time was spent in doing classroom work generally for about one hundred pupils. Now the same teacher as a supervisor not only teaches, but he assists the Filipino teachers in the management and organization of all the schools in the *pueblo*. He teaches whenever he wishes and wherever he thinks it necessary. Every afternoon he spends one and one-half hours instructing his teachers and preparing their work for the day following. In this way he comes in contact, either directly or indirectly, with from one to three thousand pupils. Instead of having his ability and influence spent on the few hundred pupils in the *centro*, it is distributed among the entire population of the *pueblo* and is felt sometimes by as many as forty thousand people. If there is any truth in the theory that the greatest good comes from teaching the greatest numbers, then we are doing the proper thing.

"In the provinces of Ilokos Sur and Abra we have fourteen American teachers doing supervisory work in the primary grades. If these fourteen supervisors had charge of the *centro* schools alone, they would be teaching about 2,000 pupils at most. Under present conditions, these same teachers have charge of 19,730 pupils, or nearly ten times as many. They are aided by 263 municipal and 45 insular teachers, giving an average of 64 pupils to each teacher. We have 13,373 pupils in Grade I., 4,663 in Grade II., and 1,694 in Grade III.

"These pupils are graded by the supervising teachers, and not by the Filipino teachers. They are in the same grades that they would be if the supervising teacher were teaching them every day in the *centro*. Now, who does not believe that it is better to be extending instruction to 19,730 pupils than two or three thousand? We have 6,500 pupils in the second and third grades. Could we have this number if our American teachers were doing classroom work in the *centros*? Most certainly not. We do not contend that it is possible to educate 20,000 pupils under the present plan as rapidly as the American teachers could educate 1,000 under the former one, but we do contend that it is one hundred times better for the Filipino people and for the Filipino schools to educate 20,000 pupils at a slower rate than it would be to educate one or two thousand at a much faster rate.

"Our Filipino teachers are doing good work. The records in the office of our division superintendent show that nearly all of them have passed or are capable of passing the Grade III. examination. If you go thru the schools in this province, you will find about 20,000 boys and girls who can read and write. If you go thru the schools of these islands, you will find nearly 1,000,000 boys and girls who can read and write. Does this not seem an advantage? There are nearly 5,000,000 people in these islands interested in education. This in itself is a great advantage which would be impossible under the old system.

"The American teacher as a supervisor not only teaches, but he helps the Filipino teachers in teaching the Filipino people. By Filipino people we mean the great mass of population which lives in the *barrios*, as well as the comparatively few who live in the *centros*. We mean the poor as well as the rich. We mean the farmer and the fisherman as well as the merchant. We mean the men and women of the nation who will some day form the body and soul of the Filipino Government, and without whom no Filipino Government may ever hope to be instituted.

"One of the great objects of the American Government in these islands is to teach Americanism. Unless this can be

taught and instilled into the people, they will take but very little interest in Americans and American institutions. The supervising teacher can do this work most successfully. By his work in the *barrios* he comes in contact with all the people. He meets the people who, for hundreds of years, have been held down in ignorance and servitude by the people in the *centros*. He meets the people who have never dreamed of rising to a higher level. He meets the poor and the lowly, the downtrodden. He meets the men who pay the taxes and support the Government, the men who do the work of the islands. In a word, he meets the Filipino people. Who is here who will contend that the work of the American teacher and the American schools is not to meet and educate these people? We believe that one of the duties of the supervising teacher is to show these people their true position in life, to teach them that all men are created equal, that the poor man may be a better man than the rich man, and to take an interest in the education and advancement of their children. If he succeeds in doing this, he will have completed the great object of the Department of Public Instruction and will have conferred on the Filipino people a blessing ten thousand times greater than if he had spent all his time working in the *centro* schools.

"Just so long as the fathers of the Filipino children now in school see the supervising teacher in their *barrios* taking an interest in their welfare and doing all they can to aid their children, so long will those fathers be contented and take an interest in American schools and in American government, and as long as we have the good will and support of the fathers of 500,000 school children, so long will we have progress in our schools and peace and happiness in the Philippine Islands."

## The Commonplace Christian

Most of us are commonplace people. Intellectual geniuses are very few, one in many thousands, perhaps in millions. Men of marked ability, not geniuses, but men of initiative and leadership, are scarcely one in a hundred or a thousand. They tower above the mass, leaders be-

cause they are born and built such; men who have got training and power, because it was in them more than it was in other men. As there are some few geniuses and leaders, captains of larger and smaller industries and professions, so there is another extreme of incompetence and weakness, the ne'er-do-wells, because it is not in them to do well. As others may lead, so these must be carried, too feeble even to follow. But the great mass of us fall somewhere between these two extremes, more or less successful, ordinary, commonplace men and women, the mainstay of the world, who carry its burdens, more competent to do its prosaic work than they are to judge and invent and decide and show what must be done.

That these commonplace men are not leaders is not their fault. They are not built that way. From their childhood they must be taught to rise to the next stage of opportunity and power, and to the next; but there is a limit which they cannot pass, simply because they have intellectual or physical limitations. Their ambition is properly satisfied with the successes which are within their reach and which they attain. Their work is honorable, and in it they have a just pride. They do not grieve because they do not reach what they could not accomplish. They do well all that our social organism requires.

What is true of men intellectually is true of them spiritually. Heights of religious experience which choice souls can enjoy are quite out of the reach of many others. Most of us are commonplace Christians, and cannot be more than that. We are not St. Pauls, much less St. Johns. Burning, passionate zeal is not in our make-up. There are a few people who feel, or believe they feel, what is called the consciousness of God, of living in his presence and communion; who, like pagan Socrates, always hear an inner voice; who, like Augustine, could give a dozen years to defining the City of God, or who, with apostles and prophets, have been rapt up to heaven and seen and heard things not lawful for man to utter; but such are the exceptions of religious experience. Most of us have short wings, or none at all. Our range is on the earth, and we only

look for another country—that is, a heavenly.

Now, what can be expected of ordinary, commonplace Christians; of those who understand daily duties, but have no special enthusiasms; whose life is taken up with life's ordinary duties, and who have no time and no aptitude for unusual revelations, and no particular consciousness of an immanent God?

For them there is possible the substantial essence of religion, which does not consist in deep experiences, but in duty performed. They cannot give much time to special religious meditation or prayer, but a great deal to their daily service for their fellow men, honestly, truly, patiently, lovingly performed. They are the kind described in one of the Psalms, as those who shall abide in the Lord's tabernacle, because they walk uprightly, speak truth, slander not, despise an evil man, and keep their oaths; who, as a prophet says, do justly, show mercy, and walk humbly before God; who attain the kingdom of God, because, as one Apostle says, they follow after righteousness and peace; or who, as another says, possess religion because they are tender to the fatherless and the widow, and keep themselves spotless in an evil world; or who can reach the beatitudes of our Lord, because they are pure in heart, are peacemakers, and really desire righteousness and are therefore filled. These are common attainments, within reach of all, attained by multitudes of commonplace people; by people who practice these virtues in their homes, in their daily work and business, in the narrow circle of their acquaintance.

They have the right to thank God and take courage. Sometimes they are disturbed because they have not all the experiences that preachers talk about. But it is not theirs to give themselves up wholly to any other sort of religious life. If they are not praying all the time, or thinking of God or "their latter end," they are doing better, because they are doing their duty as it lies next to them. When they die the preacher will recognize that they have been saints, and they are saints now, good enough saints, so that they need not worry about their lack of pious emotion. They cannot give

their lives to religious labors as some can, and they ought not to. Who knows but they are just as acceptable in the sight of God as are those who have other talents and therefore other duties? There is no more reason why they should envy those who seem to have other graces than there is why they should fret because they are not this poet or that inventor or that president. To each his own.

Possibly preachers sometimes set up unattainable standards before us. Perhaps they do not understand us; it may be they do not understand themselves; sometimes their conception of religious experience is based on figurative expressions and lacks the clarity which common sense can apprehend. Let them tell us what we are to do, and not so much what we are to feel; let them put before us with all insistence our obligation to live a right life, where we are, in our circumstances and within our capacities, that we may be acceptable commonplace Christians, which is all most of us can be or ought to be.

### An Amusing Civilization

Too much zeal is bad for the sense of humor. The organs of our capitalistic industrial system have too much zeal at times for their own intellectual good. One of them, which makes a speciality of intelligence and learning, seems to have been curiously victimized by a subtle, and we judge, very unscrupulous emissary of the wicked masses, whose dissatisfaction with the existing industrial order occasions uneasiness among the groomed and scholarly elect.

Commenting upon the jejune socialistic views of Mr. Joseph Medill Patterson, this earnest champion of "the better element" remarked:

"Socialism, after all, will find that it has to face the same old problems that have perplexed the framers and operators of government from the cavemen down."

Whereupon a Machiavellian contributor, entrapping the editor with the delicate compliment of wondering "what kind of an education and reading these wealthy would be Socialists have been given," betrays him with the disingenuous question: "Did not Lycurgus try this imprac-

tical socialism with most amusing results?" and the editor, all unsuspecting, naively prints two pages from Plutarch, which this confidence man had copied out for him. The passage may without slang be describes as a capitalistic gold brick. This is the story, whether true or not, as Plutarch tells it:

Lycurgus, it appears, found "a prodigious inequality." Sparta was overrun with indigent persons who had no land, while wealth was cornered by a comparatively few citizens. The moral atmosphere was heavily charged with "insolence, envy, avarice and luxury." The eminent statesman who observed these conditions without resorting to despotic or revolutionary measures "persuaded" the citizens to cancel their real estate deeds and make a new division of the land. Sparta was divided into nine thousand lots and the remainder of Laconia into thirty thousand lots. Each lot had an average annual productive capacity of seventy bushels of grain for each man and twelve bushels for each woman subsistent upon it, besides wine and oil in proportion. Being thus made equal in respect of their possessions, the citizens who were ambitious of distinction "might seek it in virtue, as no other difference was left between them but that which arises from the dishonor of base actions and the praise of good ones." The amusingness of this "revolt" is obvious!

The Spartans, however, like the Socialists of today, did not think it necessary to make an equal division of their movable goods. Lycurgus, therefore, to secure further "results," anticipated the great American "crime of '73" by demonetizing gold and silver and issuing a base coinage of iron. When this inconvenient money became current the immediately "amusing" result, as Plutarch records it, was that "many kinds of injustice ceased in Lacedaemon!" Nobody cared any longer to steal, or to take a bribe, to defraud, or to rob, "when he could not conceal the booty"—a truly hilarious consequence.

Not yet quite content with these mirth-making reforms, Lycurgus "excluded" unprofitable and superfluous art. The ingenuity and craftsmanship of the people was thereupon directed into other chan-

nels, with the joyful result "that excellent workmanship was shown in their useful and necessary furniture, as beds, chairs and tables." This result Plutarch believes would have followed anyway from the use of iron money, as the Spartan coin would not pass in the rest of Greece, and foreign articles of luxury could not be imported or disposed of. Indeed, so depressing was this currency upon commercial enterprise and professional specialization that—most amusing consequence of all—there could no longer be found in Sparta "either sophists, wandering fortune-tellers, keepers of infamous houses or dealers in gold and silver trinkets!"

It is always well to be sure that one is right before going ahead, and what better way of making sure is known than the well tried plan of comparing our schemes of reform with the experience of bygone generations? Surely it is worth while to bring the dreams of dreamers squarely up against the historic test, and compel them to face unflinchingly the consequences which may undoubtedly be looked for if we have the childishness recklessness to repeat the quoted Lacedaemonian experiment. It is not out of place, either, to recall the superficially but not essentially different socialistic history of Athens in the Periclean age. Athens, it will be remembered, went the whole figure in social democracy. Having turned out her historic oligarchy, she even committed the idealistic nonsense of extending general amnesty to the entire plutocratic class, with the exception of the little political ring of Thirty and a few other officials. Then she filled by lot all administrative offices, including the board of health and the department of public buildings—among which were some very nice temples. Unemployed persons were taken care of by the state, and prices of the necessities of life were regulated even more strictly than the Fabian Socialists of London would regulate them by their device of municipal trading. And the results in Athens, as in Sparta, were what might be called "amusing." Virtuous citizenship came to be regarded as a worthy object of ambition, and instead of billionaires Athens produced within less than two hundred years more men of

genius than all the rest of the human race collectively had produced before or has produced in an equal time since.

Surely these chapters of history deserve the thoughtful consideration of our impetuous reformers. Let us look before we leap. Greece, we are told, coquetted with socialism; nay, throwing off all restraint, she embraced it. And what a "result" of such light-minded trifling—so "amusing!"

## Twentieth Century Agriculture

SECRETARY WILSON, in his last report for the Department of Agriculture, talks in large figures; but we have been growing into a familiarity with such figures as relating to agriculture. We have heard for some time past of a 2,000,000,000 corn crop, and lately this has climbed to 2,500,000,000 bushels, with a constantly increasing export demand. Figures nearly as enormous meet us in other directions. The apple crop of the United States has crept up to nearly 100,000,000 millions of barrels. In 1896 it was over 70,000,000, and in 1904 it was over that figure. This year the grain exports for nine months were 105,000,000 of bushels, as compared with 48,000,000 last year. The corn exports are also more than double those of 1904. There is good reason for believing that all of these sums will be doubled within ten years. The corn crop will probably reach nearly 400,000,000, while its value, instead of being somewhere about \$1,000,000,000, will be nearer \$3,000,000,000. It is already the most important of our products, both as food for human beings and for animals—while the by-products are of no mean value.

All this means that agriculture has worked its way once more to the front of the industries. Almost unaided by Governmental patronage, it has risen out of the depression of the last century, and bids fair to be the leader and dictator of the twentieth. However enormous the products, we hear no more about over-production. The foreign market absorbs our surplus with such readiness that we cannot keep up with the demand. In fact, some of our chief products, while leaping forward with astonishing rapidity in the quantity of production, are

unable to satisfy the absorptive markets of the world. While this tells admirably for the farmer, it is literally taking some kinds of produce entirely out of the dietary of the poor. The once very common and almost despised apple is now selling in the markets of our chief cities for \$5 a barrel, while very selected stock is even higher. This leaves only the culls for the poor man, and those at a price beyond that which could formerly command the very choicest fruit. Secretary Wilson tells us that the grand total of farm products, for 1905, can be summed up at about \$6,400,000,000—taking these products as they are found in the field. Before they reach the consumer we have to add the cost of transportation and the profits of the middlemen. From what we know of such estimates we believe this is under the total, rather than over it.

The value of farm exports Secretary Wilson puts down at \$875,000,000, and in relation to this he reasserts the fact that agriculture has reversed the international balance of trade, turning it in our favor. The farmer began this achievement just about ten years ago, giving us at first a small trade balance of about \$50,000,000; which he has since raised, by steady strides, to over \$600,000,000. These huge figures sum up a balance in our favor, at the present time, of considerably over \$5,000,000,000. This the farmer has done, while, at the same time, feeding our rapidly growing population with abundance. Even our slums do not lack food. Starvation, or even deprivation of sufficient food, is becoming more and more rare in America.

Probably the farmer has given very little attention to balance of trade, or national and international affairs. He has grown what he could, and is rapidly learning to grow it according to more scientific methods. He has begun greedily to absorb all information concerning crops and how to grow them. Agricultural colleges are steadily growing in import and importance. Experiment stations are meeting, successfully, the great problems of culture. The farmer knows better how to fight his rivals and encourage his allies. At Washington, the Agricultural Department has gained ascend-

ancy over all the rest as a center of interest and influence with the people. More than this, agriculture has won its victories without special encouragement and aid from outside of its own resources. Manufactures have been protected from the very outset, and they have been built up by governmental aid; but the farmer was left to paddle his own canoe. He has done his work under astounding depression, when deserted farms were the order of the day, but he has come out ahead. Old Hayseed is dead and buried. The Grange has done a good deal to advance agriculture, but the impulse given to agriculture by science has been the real key to the success of the Grange.

The simple fact is that agriculture is a science capable of infinite evolution. It means the development of forces even yet comparatively unknown. Mr. Burbank tells us that we have scarcely entered upon the work of creating new and grander plants and fruits:

"Science sees better grains, better nuts, better fruits and vegetables, in new forms, sizes, colors and flavors, with more nutrients and less waste, with injurious qualities eliminated, and with more power to resist the sun, the wind, the rain and the frost."

He anticipates fruits without stones, seeds or spines; better coffee, better spices, better timber and paper trees, as well as more beautiful flowers. Agriculture has gone on kindly listening to every science, and making it a part of production; until now botany, geology, entomology and even ornithology are integral parts of ordinary farming. The Secretary of Agriculture finds that distributing old seeds is a worthless employment, for he is much better employed in the creation of new cereals and new fruits, under scientific supervision, and the distribution of these to increase the welfare and the wealth of the country.

President McKinley, in that magnificent speech delivered just before his assassination, foresaw much of what was to come, and already has come. The creation of new markets was to him the great problem and duty of American statesmanship:

"Our capacity to produce has developed so enormously, and our products have so multiplied, that the problem of more markets re-

quires urgent attention. Only a broad and enlightened policy will keep what we have, and no other policy will get more. Reciprocity is the natural outgrowth of our wonderful industrial developments. What we produce beyond our domestic consumption must have a vent abroad. The period of exclusiveness is past. Commercial walls are unprofitable. A policy of good will and friendly trade relations will prevent reprisals. Reciprocity treaties are in harmony with the spirit of the times."

This was the voice of the highest statesmanship. Mr. Jefferson laid it down as an axiom that the United States must be essentially and always pre-eminently agricultural. Mr. McKinley saw this more clearly toward the end of his brilliant career. Spanning a continent, it is our supreme duty to make our food products keep pace with a rapidly growing population, and at the same time turn off a surplus sufficient to make us the equal of all others in commerce, while the balance sheet of nations shall ever show a credit in our favor.

## Temperance in England and America

IF we have lagged far behind Great Britain in some things, such as the abolition of slavery and the development of the post office, we set the example in the reduction of the drinking evil, which was so great in Dr. Johnson's day that he could say that in his youth "all the decent people in Lichfield got drunk every night, and were not thought the worse for it," and he boasted that there had been a great improvement in his day, which we should think an evil one. There was a Talmudic injunction that every good Jew should drink in Purim till he could not distinguish "Blessed be Mordecai" from "Cursed be Haman," and the spirit of that rule was not foreign to both English and American habits a hundred years ago or less. It is much less time ago than that when a distinguished American clergyman, at a clerical dinner in Scotland, where the cup that inebriates flowed freely, was asked to tell the company why he refrained, and what was the feeling on the subject in this country. As he told about total abstinence sentiment here one of the clergymen cried out: "Rank bigotry!" The next day the host told him that he ought to apologize to

the guest for his rudeness, and this he attempted to do, when the answer came, "Oh, don't apologize; it is not necessary; I knew you were drunk." In the town of Wrentham, Mass., less than a hundred years ago, when the people gathered with shovels and teams to level off the village green, the minister appeared at noon in his dressing gown, carrying a tin pail full of rum and a dipper to distribute it to the workers, while another man followed with a bigger pail of water and a bigger dipper. No one thought it wrong, for did not the ministers always provide rum for their dinner at their meetings at councils, etc.? And this continued until the time of the great temperance revival led by Dr. Lyman Beecher, and followed by the great Washingtonian movement.

Great Britain has taken the reform more gradually and more slowly; but the reform is now real and growing. The Church is getting ashamed of its alliance with the breweries, and the Nonconformists, who now number a full half of the population of England, are pressing the duty of abstinence, and the Liberals are promising legislation to limit the number of public houses.

The evidence of the lessening evil is seen in figures published in the *London Times*, by Dawson Burns, D. D. For six consecutive years the drink bill of Great Britain has shown a steady decline, notwithstanding the increase of the population. In 1899 the estimated expenditure for distilled and fermented liquors was \$929,636,135. Each year since then it has decreased from five to twenty-five million dollars, so that the total decrease in six years has been \$108,796,430. That is, while the population has increased  $6\frac{1}{2}$  per cent. the expenditure for liquors has decreased almost 12 per cent.

It will be interesting to consider the causes which have made drinking less popular in Great Britain. They are doubtless much the same as in this country; in good part the religious and moral propaganda against the evil, and in part the better understanding of the injury done to health by the use of alcoholic drinks. We used to be told that no men were so hearty and strong as those that drank moderately. Now the doctors tell a different story. Now athletic trainers forbid the use of all stimulants, and rail-

road companies demand abstinence of those in positions that require great care of the life of passengers. It is seen to injure a man's chance for long life, or for success in business, if he is a drinking man; while the crusade against treating has some effect. Thus, Great Britain is becoming a temperate nation; and this is equally true of England, Scotland and Ireland. Scotland still drinks the most whisky, and England the most beer, but in each there is a notable diminution in the amount consumed. With us the device of local option, to take the place of State prohibition, is a most important factor, and every year the area of prohibition extends. And it is interesting to observe that all our Churches are as one in this movement. The other day, what was called the Bishops' bill was before a committee of the New Jersey Legislature, to control the evil of saloons, and the Catholic and Episcopal bishops of the State, and other clergy and representative citizens were present to support it. Against them stood nearly two hundred saloon keepers; and we venture to say that the presence and appearance and behavior of those men discredited their case before the committee.

#### The Fight in Samar

There seems to be no trouble with the maintenance of peace in the larger part of the Philippine Islands. The people are mostly peaceable and satisfied, and are approaching self-government fairly well. But there are less civilized portions of the Islands, like Jolo and Samar, where the conditions never have been satisfactory and are not now, and where our Insular Government is resolved to put an end to anarchy and robbery. It is clear that the peaceful Filipinos, the agricultural and industrial people, who are the ones we are to protect, are on the side of the American rule in these islands, and that they have, as constabulary, fought bravely under the American officers. Scarcely had the slaughter of six hundred of the Moros been explained with some satisfaction than we have the further account of the fight with the fanatical Pulujanés in Samar, in which the American Governor of the island was falsely reported as killed. There seems

to be no question as to the facts in this case. There was simple treachery on the part of the company of Pulujanes, who pretended to surrender and then made a mad rush to murder the Americans and the constabulary. Of course, they were overpowered, for guns are better than bolos, and nothing else could be done. We have increasing evidence that the native constabulary are loyal, and that they represent the mind of the bulk of the Filipinos.

#### Jerome on Hysteria

We said last week that the period of the Literature of Exposure was passing by; not that exposures would cease, but that the making literature out of it had reached its climax. This is in part due to the extravagance of some of its artists. Mr. Jerome says that we have had, throughout the nation, a case of absolute hysteria, and that the superlatives have got exhausted. He is right. Because some Senators are unworthy, it does not follow that the Senate is composed of millionaires who have bought their seats with money. Because there has been extravagance in some large insurance companies that deal in hundreds of millions, there is no reason why thousands of poor people should surrender their policies. That is hysterical. Mr. Jerome told the truth:

"The real terror is not what has been told you. The real evil in this insurance situation is that some eighteen or twenty men can control hundreds of millions of quick moving assets; can sit in their club and can make the game of finance a brace game if they want to. The great evil is in that. You can't pick out eighteen or twenty men so good that the power of \$1,500,000,000 should be entrusted to them." Very true; but just how are we to prevent eighteen or twenty men from controlling hundreds of millions of quick moving assets? That is a question for Mr. Jerome to answer. One proposition is to limit the business and the surplus of insurance companies; shall the same medicine be given to banks, and trust companies, and railroads, and manufacturing companies? That is a serious matter.

#### Southern Conference for Education

There can be no question that the Conferences for Education in the South, presided over by

Mr. Robert C. Ogden, are welcomed by the most progressive citizens. Last year the sessions were held in Columbia, S. C., and for this year the Governor of Kentucky, the universities and colleges of the State, the Superintendent of Education, the Chamber of Commerce and the newspapers have warmly invited the Conference to Lexington, to open on May 2d. The business of these Conferences, as related by the Southern Education Board, is to increase the national spirit for the support of schools from the public funds, whether common schools or advanced schools. The purpose is not to impose any Northern scheme of education, but to encourage the Southern progressive aims; and, accordingly, the speakers are chiefly Southern men, altho not a few Northern men are in attendance. When such Southern men as President Alderman, of the University of Virginia; Governor Aycock, of North Carolina; President McIver, of the North Carolina Normal College; President D. B. Johnson, of the South Carolina Normal College, and Congressman Bowie, of Alabama, are the supporters of this movement, we may be sure that it will be earnest for improved education, and will not offend the prevailing better spirit of those who control public sentiment in that section of the country. It is a duty for those sections which have developed, for one reason or another, a complete system to give their encouragement and help to those sections that have been impoverished, and in which the school system is of later growth; and every aid should be given to this movement and to others of a kindred character—whether devoted to primary, industrial or advanced education, and for all classes of the community.

#### Disfranchisement in Georgia

They have negro disfranchisement pretty well accomplished in Georgia, without any constitutional provision, says Clark Howell, who is running for Governor. He boasts, and we quote from a speech reported in his own paper, that "Georgia has already disfranchised the negro more effectually than any other Southern State has done." He says:

"Georgia has no negro officeholders, not

even negro magistrates, nor does a negro hold any county office in the State."

There is one negro in the Georgia Legislature, to be sure, but Mr. Howell excuses that wrong in this way:

"The county from which that single negro goes as representative has not one negro county officeholder or magistrate, and no county in the State is more earnestly protesting today against this disfranchisement law than this one, because in it there are three educated negroes to one educated white man, and its people know if this law is enacted it will put the political control in the hands of the negroes, whereas now it is controlled by the whites."

What a glorious record that is, that in a State where nearly half of the people are negroes, they are thus excluded from office, and almost equally from the ballot. It is a beautiful illustration of true democracy. And the two candidates before the people vie with each other as to which has the best plan to keep the negro out. Meanwhile, the negro saws wood, gets land, gets property, gets education, and will, one of these days, get the ballot and his share of the offices, in spite of Clark Howell, Hoke Smith and the Democratic party.

**An Alaskan Tunnel** They talk in Russia of building a tunnel under Bering's Straits, to connect Siberia with Alaska. There are no insuperable difficulties about it, and we doubt not that one of these days it will be possible to go all the way by rail from New York to St. Petersburg or Peking. For the Asiatic and American coasts are but 36 miles apart, and there are islands half way between, so that there would be two tunnels of 18 miles each. But it must not be thought that the tunnel would make Russia and the United States "natural allies." Russia has wondered why America does not love her. The reason is plain; it is impossible to love a country ruled as Russia has been. Just as France will not give Russia more money until there has been a measure of popular government, so America will not give Russia her heart until freedom comes to the Russian people. Sympathy attaches itself to character, not to exterior conditions. But by the time the tunnel is pierced, the Russian people will have conquered their liberties, and thus the American people will overflow with that

sympathy which it is impossible to give to a land of knouts and Cossacks and Grand Dukes; where the people have no rights and where, by the ten thousand, they are compelled to carry their wrongs and hatreds to these shores. But let the tunnel be made, and another between England and France. The engineering difficulties can be overcome, and the connection will help international fellowship.

Whatever the new British Government may not do—and much that was promised must fail thru the opposition of the House of Lord—they will surely pass a bill thru the House of Commons, by an overwhelming majority, to end the support of denominational schools out of the public money. Only one other subject are they so determined upon, and on that they have simply to do nothing—and that is to maintain the British principle of free trade. There are two hundred Non-conformists in the Commons, and they are determined to end the injustice. What France has done in one way, England will do in another; and then they will end the privilege of the Established Church in Wales. But who can tell what the House of Lords may choose to do? Should they block the Liberal program, the old question will come up of mending or ending it.

The reported agreement between the Tatars and the Armenians in the Caucasus looks like the return of the golden age. They had been fighting and killing each other for years, and finally concluded that it was better to hang together than to hang apart. They seem to have paid no special attention to the Russian Government, but have concluded to get up a set of local governments of their own. They will have universal suffrage, a central university and local high schools, and a central conciliation board, indeed pretty much all the paraphernalia of a government, with equal rights to Armenians and Tatars, and the Russian Governor allowed to look on and approve, where he cannot help himself. It is almost too good to be true, for it is the feuds of the races and religions on which rule has rested.

It was to be expected that an intelligent Governor would veto such an absurd act as that which passed the Maryland Legislature providing that none but registered voters of the State should be allowed to labor on the great sewerage and other systems planned for Baltimore. It seems incredible that so absurd a bill could ever be enacted. It would vastly increase the expense of the improvements, to be paid by the taxpayers, and would shut out both Italians and negroes in great numbers, just the people whose unskilled labor is needed. There is too much of this greedy selfishness in our popular politics.

The pastoral of the aged and learned Bishop Bonomeli of Cremona, in defense of the separation of Church and State, with the disapproval of it in Pius X's encyclical to the Provincial Synod of Milan, is making an immense turmoil in Italian ecclesiastical circles. Bonomeli has been in Rome, but his Papal audience has been thwarted. The issue between Cremona and the Vatican is that the Bishop favors the American plan of separation, while Pius X has come out squarely and flatfootedly for the old doctrine of Boniface VIII, Gregory VII, Pius IX and Leo XIII. Meanwhile our American hierarchy and the Catholic press will be carefully teaching that a free Church in a free State best suits the United States, but no other country.

A lovely story is told of a discovery in Washington, reported in London, and cabled back to this country. It is that Professor Elmer Gates, of Washington, has found "about five octaves above violet," a kind of invisible light rays which throw a shadow as long as the creature is alive, but cease to cast a shadow after it is dead. That is, the body of the rat, or man, casts no shadow, but the life in him does. Indeed, when the life ceased in the case of a rat, the shadow was observed to vanish and pass upward! We shall believe this story when it is properly corroborated. Dr. Elmer Gates has previously proved to possess scientific imagination.

It is of very little use to speculate as to what is going on in Russia. Count Witte still holds power, but is bitterly

attacked and threatened on both sides, and may be overthrown or murdered at any time. We still hold that such a constitution of the Duma, with all its restrictions and all the retentions of the autocratic rule of the Czar, is the surest and best step that can be taken; for such a step involves another to succeed it; and a representative Parliament once established will know how to enlarge its powers. But the revolutionists think that too slow a way, and their success may prove that they are right. There is more revolutionary disturbance to come when the winter is over.

So far as the indications of political weather can be relied on, there is no storm brewing at Algeiras, for the weather is clearing. It looks much as if Germany will get the nominal advantage in the Moroccan dispute, and France the substantial gain. Germany wanted international police control, and she gets it, by France and Spain being made joint trustees of good order, with Switzerland to look on and see that they do right. That is international, as Germany demanded, but France is predominant in the control, and will really handle the police and keep the peace, and do what she wants. So Germany saves her face while suffering a real defeat, and France gathers the fruit.

The failure of a commission from Methodist denominations to agree on a plan to unite their mission churches in Japan must not be laid to the lack of the spirit of unity, but to other conditions. The Northern and Southern Methodists can unite abroad, if not at home; but the Methodist Protestant Church has no bishops, and is considering another union. The Canadian Methodists are in the same condition, and their union in Japan is likely to follow that which they plan in Canada.

Do people value religion? Is religion obsolete or obsolescent? We hear it so said at times. The Anglican Church last year made voluntary offerings to support religion to the amount of \$40,000,000, which at four per cent. represents a capital of a thousand million dollars, an amount which indicates that they put a considerable value on their religion.

## The Telephone Business

THAT 1905 was a highly favorable year for the business of the American Telephone and Telegraph Company is clearly shown by the interesting annual report of the company's president, Frederick P. Fish. The net increase (1,217,694) in the number of telephone instruments under rental was almost twice as large as in any previous year, and it made the total 5,698,258, against only 1,580,101 at the beginning of 1900. The year's increase of exchange stations for the nearly forty subordinate local companies (which, in most instances, this central company controls by owning a majority of the stock) was 25 per cent. The daily average of toll connection has risen to almost 14,000,000. It is not surprising that the year's increase of net revenue was nearly \$2,000,000, and that the amounts carried to reserve and surplus rose from \$1,476,000 to \$3,167,000.

This recent extraordinary growth has been due mainly to the efforts of the company and its associated corporations to adapt the service to the demands of users of all classes. Control is not so definitely centralized as to prevent local initiative. Competent men in every section of the country are encouraged to solve local problems. A constant reduction in the investment per station, and in the average cost of operation, has been accompanied by a reduction in average rates. With respect to competition, President Fish says that in the last three years the general situation has become distinctly more favorable to the company's interests:

"That the competition of two telephone companies, operating in the same field, is an economic mistake, from the standpoint of both the investor and the telephone-using public, is coming to be more and more fully recognized. The subscribers, to derive the greatest value from telephone service, should be enabled to connect with all subscribers in his exchange area. If there are two companies, the subscriber having considerable business interests finds it almost indispensable that he should be connected with both companies, at increased cost and inconvenience. Those who have the service of one company only cannot carry on conversation by telephone with the subscribers of the other, and therefore have no connection with a portion of the telephone-using public." Competing companies, the report says, for the most part began with unremuner-

ative prices, and there have since been repeated efforts to increase them. These companies appear to be operating at an expense of not more than 60 per cent. of gross receipts, and Mr. Fish points out that the actual average for the Bell companies is about 73 per cent.

....Hugo Baring and George D. Hallock, two partners of the firm of Baring, Magoun & Company, will organize a new banking house to be called Baring & Company.

....The Union Trust Company, of New York, of which Edward King is president, and whose capital is \$1,000,000, now has a surplus of \$7,900,965.64, as shown by its recently published report.

....The Van Norden Trust Company, of which Warner M. Van Norden is president, has recently been admitted to non-member membership in the Clearing House. The Van Norden Trust will clear thru the Fourth National Bank.

...."The Earning Power of Railroads," a book of 290 pages, compiled and edited by Floyd W. Mundy, and published by the Metropolitan Advertising Company, at 6 Wall street, contains a useful collection of statistics, conveniently arranged, relating to 125 railroad companies in this country and Canada. The tables are preceded by forty-five pages of instructive explanatory statements, and followed by 120 pages of notes. This compact manual deserves the attention of intelligent investors.

### ....Dividends announced:

Union Typewriter Co. (1st Preferred), 3½ per cent., payable April 2d.

Union Typewriter Co. (2d Preferred), 4 per cent., payable April 2d.

Union Typewriter Co. (Common), 3 per cent., payable April 2d.

Am. Woolen Co. (Preferred), 1¾ per cent., payable April 16th.

Westinghouse Elect. & Mfg. Co. (Preferred), 2½ per cent., payable April 10th.

Atch., Top. & S. F. Rway. (Gen. Mortg. 4s), coupons, payable April 2d.

San Francisco & San Joachim Vall. R. R. (1st Mtg. 5s), coupons, payable April 2d.

N. Y. Cent. R. R. (Utica & Black Riv. Div.), semi-annual, 3½ per cent., payable March 30th.

N. Y. Dock Co. (Preferred), 1½ per cent., payable April 16th.

Natl. Park Bank, quarterly, 4 per cent., payable April 2d.

Amer. Chiclé Co. (Preferred), 1½ per cent., payable April 2d.

Amer. Chiclé Co. (Common), 1 per cent., payable April 20th.

Buffalo & Susq. R. R. (Common), quarterly, 1¼ per cent., payable April 2d.

## Survey of the World

### No Tariff Revision This Year

Mr. Payne, chairman of the House Committee on Ways and Means, received a letter, last week, from Mr. McCall, of Massachusetts, a member of the same committee, who had been authorized by other Representatives from his State to ask for "a consideration of the tariff by the committee, with a view to its revision and readjustment." Mr. Payne replied in a long letter. The question was, he said, whether the conditions were now such that the public interest demanded a change in tariff rates, and it could be settled practically only by the concurrent view of the majority of the party in power. He asserted that a majority did not want a general revision. Congress, he continued, was "not prepared to review the tariff schedules in that calm, judicial frame of mind so necessary to the proper preparation of a tariff act, at a time so near the coming Congressional elections." Warmly praising the Dingley bill, he admitted that some improvement could well be made in its rates. But "we should never enter upon a general revision until we are satisfied that such a revision will accomplish results far outweighing any well grounded apprehension of business depression and consequent evil results which would come, even temporarily, from such revision." He did not think that the tariff question should be taken up at the present session, and he had reason to believe that a decided majority of the committee agreed with him. It is reported that the Massachusetts members, with other revisionists, will attempt to procure the calling of a caucus for a consideration of the question, desiring that a vote shall be taken, altho they fore-

see that a large majority will stand with Mr. Payne.

### Crisis in the Coal Industry

At the Indianapolis joint conference the bituminous operators and miners failed to agree. A restoration of the scale of 1903 (equivalent to a wage increase of 5.55 per cent.) was demanded. To this only the operators of Western Pennsylvania (or a majority of them) would consent. But before final adjournment a resolution was adopted by the miners, at the earnest request of President Mitchell, permitting miners to work for any operator who would agree to pay them the desired increase of wages for two years. This was in the interest of Western Pennsylvania, and especially for the benefit of Francis L. Robbins and his employees. Mr. Robbins's company (which has a long contract with the Steel Corporation) employs nearly 30,000 men and produces, mostly in Pennsylvania, about one-third of the bituminous output of the four States which are called the central competitive district. Last Monday was a miners' holiday. Mr. Robbins asserted that on Tuesday all his company's mines would be in operation, under the new scale, and that enough other operators would follow his example to place half the output of the four States upon the new wage basis. About 384,000 bituminous miners were affected by the action at Indianapolis, but 120,000 of these are not organized. After the failure to agree, those operators who opposed the increase of wages adopted a resolution (which they telegraphed to the White House) asking the President to appoint a commission to inquire and

report concerning the situation at their mines. At the same time, Mr. Robbins and President Mitchell telegraphed to Mr. Roosevelt that at least half of the tonnage of the four States was willing to pay the increase. Mr. Roosevelt also received a message from the operators of the Southwest, saying they would submit their claim to arbitrators appointed by him. At last reports he was not inclined to take any action. The supply of soft coal in the West is small. For example, the Chicago railways have enough for only six weeks.—On the 29th, after the final disagreement in the bituminous industry, the anthracite authorities of the miners' union issued, at Indianapolis, an order suspending work at the anthracite mines in Pennsylvania on and after April 2d, and at the same time telegraphed to President Baer, of the operators' committee, asking for a conference on the 3d. He inquired if it was true that such an order had been issued. They replied that it was, but that men to man the pumps and protect the property had been directed to remain at work. Whereupon, with the remark that such action was extraordinary, he consented to hold another conference. The latest reports indicate that the operators will make no concessions. In the anthracite district about 150,000 men are affected. Some of them quit work Saturday morning. It is said that within a short time about 10,000, having saved money, have returned to their former homes in Europe. The anthracite companies have large supplies of coal on hand, perhaps enough for five or six months. They have posted notices saying that they will continue to observe the conditions imposed by the Arbitration Commission. Retail prices of coal at New York have been increased by from 50 cents to \$1 per ton. It is pointed out by the miners' union that the order for a suspension of work was not equivalent to an order for a strike.

#### Railroad Rate Questions

The debate in the Senate upon the pending Railroad Rate bill shows a growing sentiment in favor of amendments providing for a review of the Commission's orders by the courts, with much difference of opinion as to the

limits within which such a review should be made. An elaborate argument made by Senator Knox (formerly Attorney General) on the 28th ult, excited much interest. Mr. Knox holds that the bill as it stands (the bill passed by the House) is unconstitutional, "because (1) it does not provide any method for challenging the unlawfulness of the orders of the Commission in a direct proceeding against the Commission; (2) it prohibits parties affected and aggrieved by the Commission's orders from defending proceedings to enforce them, upon the ground of their unlawfulness; and (3) it so heavily penalizes disobedience of the Commission's orders as to make any attempt to secure a judicial hearing in any form of proceeding impracticable." He had heard doubts suggested, in and out of the Senate Chamber, as to the character or capacity of the courts, and he protested against "this shallow and dangerous notion." Public sentiment and conviction should loyally support the judicial power, recognize the patriotism and good faith of the courts, and maintain their authority and independence. Friends of the bill attended a conference at the White House on the 31st, those present being Senators Dolliver, Clapp, Cullom, Allison and Long, Commissioners Knapp and Prouty, and Attorney General Moody. In deference to the large number of Senators who believe "That the bill in its present form is unconstitutional, an agreement was reached with respect to an amendment for review by the courts. This amendment provides that all orders of the Commission, those for the payment of money excepted, shall take effect within such reasonable time as the Commission shall prescribe, and shall continue for such period of time (not exceeding two years) as shall be prescribed in the order, unless sooner set aside by the Commission or suspended or set aside in a suit brought against the Commission in the Circuit Court, sitting as a court of equity, for the district in which any carrier who is plaintiff in said suit has its principal operating office; and "jurisdiction is hereby conferred on the Circuit Court to hear and determine in any such suit whether the order complained of was beyond the authority of the Commission

or in violation of the rights of the carrier as secured by the Constitution." This appears to permit action by the court only when the ordered rate is confiscatory. It is opposed by a considerable number of Senators for various reasons. Mr. Tillman objects because it does not say that there shall be no suspension of an order pending litigation. Others assert that it is unconstitutional because it restricts the power of the court. Among the amendments already pending are one by Mr. Foraker, forbidding railroad companies to issue passes except to their own employees, and one by Mr. Culbertson, restraining companies from contributing to political campaign funds.—The first trial under the Elkins law, relating to rebates, is now taking place in Philadelphia, among the defendants being the Great Northern and other railroad companies.—In the New Jersey Legislature, the House bill increasing the taxes of railroad companies by about \$3,000,000 has been passed in the Senate by unanimous vote.—For the investigation required by the Tillman-Gillespie resolution, the Interstate Commerce Commission has issued a sweeping order, addressed to the Eastern roads engaged in the coal trade and designed to procure all needed information as to community of ownership and the interest of the companies in coal properties.

**Unworthy Consuls** President Roosevelt has sent to Congress the report of Mr. Pierce, Assistant Secretary of State, concerning his investigation of consulates in the Orient. While Mr. Pierce says that Mr. Wilcox, Consul-General at Hankow, is not a useful officer, and that the habits of Mr. Greener, Consul at Vladivostok, "are said to be extremely bad," his severest criticism is reserved for John Goodnow, formerly Consul-General at Shanghai; Robert McWade, who was Consul-General at Canton, and O. F. Williams, who was transferred from Manila to the office of Consul-General at Singapore. His main charge against Mr. Williams, however (who was in office when the report was made), is that he had not gained the respect of the Colonial Government and that he was lacking in zeal and efficiency.

Goodnow, he says, was the subject of scandalous reports and ugly rumors, and his employment of two men, White and Derby, was discreditable, because they were men of a coarse type, whose language in the office was grossly indecent and profane. Goodnow is accused of being interested in fraudulent transfers of Chinese ships at the time of the Boxer rebellion, of improperly issuing passports, of using his great judicial power to obtain improperly large sums of money to which he was not entitled, and of other financial operations of a questionable character. Mr. Pierce asserts that McWade was disgracefully drunk in public at the opening of the Canton-Hankow Railway; that he employed a convicted felon in a place of grave responsibility; that he took pay for fraudulent Chinese certificates, and interfered with the Chinese Government by extending his protection over Chinese, asserting that they were American citizens. The general opinion, he adds, was that McWade was notoriously corrupt.

#### The Recall of Ambassador Storer

Bellamy Storer, recently Ambassador at Vienna, has returned from Egypt to that city and is ill at his residence there. His resignation, he says, was demanded by cable on the 6th ult., and forwarded on the 7th. The Foreign Office at Vienna received on the 27th a dispatch from Secretary Root, saying that the President had terminated the authority of Mr. Storer to represent him, had recalled Mr. Storer, and had named Secretary Rives to act as Chargé until the arrival of the formal letter of recall. This appears to have been not wholly satisfactory to the Vienna Government, which was not inclined to accept a substitute for the Ambassador before the reception of a letter of recall. It was reported in the press that Mr. Storer had been removed because Mrs. Storer, earnestly desiring that Archbishop Ireland, of Minnesota, should be made a Cardinal, had made an improper use of a letter in which President Roosevelt expressed his preference for the Archbishop. On the 31st ult., Mrs. Storer gave to the press a statement denying that she had ever used improperly a letter of the President, and saying

that "the President" had never written to her concerning Archbishop Ireland "except in a letter last December upon another subject." Mr. Roosevelt, in 1900, when Governor of New York, she added, had sent her a letter, "so that I might show it to Cardinal Rampolla, to convince the Vatican of the friendly attitude of prominent Americans toward Archbishop Ireland's policy." One half of this letter was purely personal. She sent to Cardinal Rampolla the other half, which was as follows:

"I have just received your letter. I need not say what a pleasure it would be for me to do anything for Archbishop Ireland. You know how high a regard I have always felt for him. He represents the type of Catholicism which in my opinion must prevail in the United States if the Catholic Church is to attain its full measure of power and usefulness with our people and our form of government. I absolutely agree with what Judge Taft says to you in his letter of March 20 with relation to that part of this problem which affects the Philippines, but the problem as a whole affects the United States as a whole. A reactionary or in any way anti-American spirit in ecclesiastical affairs would in America, in the long run, result in disaster, just as certainly as a similar course in political affairs.

"I may add that the bigoted opponents of Catholicism are those most anxious to see triumph within the ranks of Catholicism this reactionary spirit and the throwing out of men who have shown broad liberalism and Americanism in their policy.

"Of course, I do not feel justified in interfering in any way, directly or indirectly, in the matter at the Vatican, but it is only fair in response to your letter that I should write you fully and frankly of my great appreciation of Archbishop Ireland and of my firm conviction that the real future of the Catholic Church in America rests with those who, in the main, work along his lines.

"You may be interested to know of the large percentage of Catholics, without exception men standing as high in capacity as in integrity, whom I have placed on various important commissions in this State. So much for that part of my letter that is in direct answer to the main part of yours. I do not know whether it will be of any assistance or not, but I hope so. I need not tell you that it is a pleasure to write it or to do anything else you desire me to do if it is in my power.

"You must have a pretty hard time in Madrid, and I earnestly hope that the signal devotion to the good of the country which you and Bellamy have shown will result in its proper reward and in your being transferred in the not distant future to Rome, or better still, Paris."

Mrs. Storer adds that her husband and herself will wait and see what the Washington authorities think right to publish

about the matter. "If they publish their reasons for the recall of Mr. Storer, we have many proofs of the right being on our side."

✽

#### The Philippine Islands

At the recent engagement with a band of 107 Pulajanes in Samar, 30 of them were killed and 40 wounded. It is said that there are in the island not more than 2,500 of these fanatical outlaws. They are Visayans who have fallen back into barbarism and who prey upon the peaceful agriculturalists. The latter approve Governor Curry's avowed purpose to wage a war of extermination. —Since the acquittal of certain native editors accused of libelling Colonel Baker, the native press at Manila has severely criticised the constabulary and, indirectly, the Government. The paper with which these editors are connected is printed in Spanish and Tagalog, has a large circulation and exercises considerable influence among provincial officers and in labor organizations. It is said to be promoting agitation designed to discourage the introduction of American capital.—It was reported that Archbishop Ireland, who is now in Rome, and who called upon the President just before his departure from this country, had been commissioned by our Government to settle certain pending questions relating to church property in the islands. This has been denied by Secretary Taft, and also by the Archbishop, who sends word from Rome that his visit is purely a personal one.—Answering questions before a Senate Committee, Secretary Taft said that the Government paid \$3,600 in mileage allowances and traveling expenses to General Leonard Wood and an accompanying aide, last summer, when the General came from Manila to Boston, for a surgical operation, and some weeks later returned by way of Suez, in order that he might consult a specialist in London. The mileage allowance to Boston was given by the Secretary at General Wood's request, and for the return journey a similar allowance was granted by the President's order. These payments excited the criticism of certain Democrats in the committee. The War Department will require General Wood to refund the difference between

his actual expenses from Manila to Boston and the allowance of seven cents a mile.

**Various Topics** Benjamin F. Barnes, assistant secretary to the President, has been nominated to be postmaster at Washington. This appointment will be opposed, because Senator Tillman and some other persons hold Mr. Barnes responsible for the harsh treatment of Mrs. Minor Morris, when she was forcibly ejected from the White House, in January last; also because Mr. Barnes' residence for voting is in New Jersey, and a great many of the people of Washington stand for home rule in local appointments.—It is said that the President, owing to the release of the indicted packers by the decision of Judge Humphrey, will send a message to Congress, recommending that the law granting immunity and defining conditions under which it may be acquired be so amended that it shall not go beyond the limits indicated by the Constitution. It is reported that the five indicted beef companies will not be prosecuted, mainly for the reason that if they should be convicted the penalty would be a fine of only \$5,000.—The Ohio Legislature passed last week a bill increasing the saloon tax from \$350 to \$1,000.—By unanimous vote, on the 27th ult., the House Committee on Naval Affairs decided to provide in the naval appropriation bill for the construction of one battleship, to be the largest and most powerful in the world. It is expected that the cost of the proposed battleship will be \$10,000,000, and that its displacement will be about 20,500 tons, or 2,000 in excess of the displacement of the new British battleship "Dreadnought."—The recent Democratic primaries in Arkansas show that James H. Berry will be displaced in the United States Senate by Governor Jeff Davis.—On the 29th ult. seven ships arriving at New York brought 11,383 immigrants, the largest number ever received at that port in one day.

**The Natal Natives** The Liberal Cabinet in England got itself into disfavor with all parties by interfering with the execution of twelve natives of Natal; and was obliged to make a some-

what humiliating backdown to avoid offending Colonial sentiment. The poll tax which had been imposed upon the natives by the Government of Natal aroused such resentment that there was believed to be danger of a serious revolt. The police sent to collect the poll tax at Bryne were attacked on February 8th by a band of forty natives in ambush, and several policemen were killed. Martial law was declared and order was restored by a force of 400 troopers. Twenty of the natives were arrested and tried by a court martial composed of five militia officers. Twelve of them were found guilty of murder and treason and condemned to death, and the sentence was confirmed by the Governor in council. When the Colonial Office at London learned of the impending execution, a telegram was sent by Winston Churchill, Under-Secretary of State for the Colonies, but with the approval of Lord Elgin, the Secretary, ordering a suspension of the sentence until the Ministry could examine into the question. This interference by the Imperial Government in a matter over which the Natal Government considered that they had complete jurisdiction, aroused great indignation. The Premier, Charles John Smythe, and his Cabinet resigned instantly. The Conservatives in Parliament denounced it as a violation of constitutional usage and a usurpation of power, like that of George III in America, and likely to end in the same disaster. The objection was raised that the natives should have been tried by the civil courts, since the murders were committed before martial law had been proclaimed. Sir Henry Edward McCullom, Governor of Natal, explained to Lord Elgin that the prisoners were given a fair trial, with legal representatives, and the guilt of each fully established. Lord Elgin then cabled as follows:

"His Majesty's Government never had any intention to interfere with the Government of Natal or to control the Governor in the exercise of his prerogative, but in view of the presence of British troops in the colony the Imperial Government was in duty bound to obtain precise information with reference to martial law cases, with regard to which an act of indemnity must ultimately be assented to by the Crown. In the light of the information now furnished his Majesty's Government recognizes that the decision of this grave matter

rests in the hands of your Ministers and yourself."

The Cabinet of Natal thereupon withdrew their resignations, and the twelve Natal natives were shot on the following morning. They are reported to have repented and confessed their crime. The announcement of the execution in the House of Commons was received with angry cries of "Shame!" from the Irish Nationalists and Laborites, and one Ministerialist denounced it as a "bloodthirsty murder." Natal has been a Crown Colony since 1856 and the most loyal in South Africa.

#### And Other Parliamentary Difficulties

In addition to offending Natal in this matter, the Liberal Government has also, within the few weeks of its existence, aroused the animosity of the Transvaal and Cape Colony or certain influential classes of their population, by their disapproval of the Chinese labor system and its administration. Mr. Chamberlain proposed in the House of Commons that the Government should appoint a commission to examine into the moral and economic aspects of the Chinese labor question in order to satisfy its ministerial conscience and make up its mind whether it was "slavery unabashed," "semi-slavery" or "tainted with slavery," all of which terms had been applied to it by members of the Cabinet in the late campaign. Instead of leaving the matter unsettled for years, much to the detriment of the colony, a commission should determine the truth at once in order that the Government could come to a decision on the point on which they had won the election. Mr. Chamberlain's proposal was received with jeers and rejected by the usual vote of three to one. Mr. Byles introduced a motion disapproving of the conduct of Lord Milner as High Commissioner and Governor of the Transvaal in authorizing the flogging of Chinese laborers in violation of treaty obligations and without the knowledge of the Secretary of State for the Colonies. He said that if the resolution were rejected every "prancing proconsul" in the empire would be encouraged to disregard the law and to act as a little autocrat. Mr. Chamberlain and Mr. Balfour op-

posed the resolution on the ground that it was unfair to pass a vote of formal censure—something that was done only twice in the last century—upon one of the greatest and most devoted of England's public servants, for an insignificant act, which he had acknowledged to be an error in judgment. Mr. Churchill said that, in consideration of the facts that Lord Milner had served the country for twenty years, strenuously, faithfully and disinterestedly and was now merely a retired civil servant without pension or gratuity, it would be inadvisable to censure him personally and without a hearing. He, therefore, moved an amendment condemning in general terms the flogging of Chinese coolies, but inviting members in the interests of peace and conciliation in South Africa to refrain from passing censure upon individuals. The Government amendment was passed. The House of Lords, to offset this action, passed a resolution eulogizing Lord Milner for his services as High Commissioner.—One of the main objects of the Labor party has been to secure an act of Parliament annulling the decision of the judges in the Taft Vale case, which made the officers and funds of trades unions liable for any acts of its members, even tho the union is not incorporated. The Government Trades Disputes bill does not cover this point to the satisfaction of the labor leaders, who introduced a bill of their own with this clause:

"No action shall be brought against a trades union or other association as aforesaid for the recovery of damages sustained by any person or persons by reason of the action of any member or members of such trades union or other association."

Sir Campbell-Bannerman thereupon accepted their bill as a substitute for the Government measure and it passed its second reading by a vote of 456 to 66. The Premier explained that the object of the Government was to "place the rival powers of capital and labor on an equality, so that in the event of a fight it should be a fair one."

#### French Mining Troubles

The miners of the Pas-de-Calais district to the number of some 40,000, who have been on strike ever since the great disaster in the Courrières mine at

Lens, have become exasperated by the discovery that the work of salvage in the mine after the explosion was so imperfectly carried on as to fail to rescue many, who might have been saved. Twenty days after the catastrophe, and two weeks after all attempts at rescue had been abandoned as useless, thirteen miners made their way from one of the galleries where they had been imprisoned. They were almost starved and blind, for they had been almost without food and water for twenty days, during which time they had been struggling to find their way thru the debris and bodies which clogged the entrance. They had lived on the bark from the timbers in the mine and the hay and oats which had been placed there for the horses. This was all their food, except a few carrots which had been brought down for lunches, until the decomposing body of a dead horse was found near the stable, which was cut up and used for food, but this caused ptomaine poisoning in some of the men. The hero of the rescue was a miner named Nemy, thirty-eight years old, who took command, and by his energy and resourcefulness kept the men together and at work, at the same time cheering them up by his hopefulness and good humor. Nemy portioned the food among them, kept them from sleeping long, and regulated their work by his watch and a record of the days. The men suffered much from the cold and lack of water, as well as from the carbonic gas in the mine. After finding their way to the shaft where the men were at work, the released miners were taken to the mouth of the shaft, where their relatives were awaiting them, Nemy's wife being dressed in mourning for him. The miners were then kept in a darkened room in a hospital and fed frequently on small doses of liquid food. It is believed they will all survive. Ever since the disaster the shaft house has been besieged by the wives and mothers of the miners, who persisted that their loved ones were not dead and demanded to be let into the mine to rescue them. The appearance of the thirteen survivors and the discovery of the bodies of some of the men, indicating that they had perished by starvation and exhaustion, and not from the

explosion, has aroused fierce animosity in the miners against the operators, who had already been condemned by public opinion, for their failure to protect the lives of the employees by providing safety apparatus and regulation. The new radical Minister of the Interior, M. Clemenceau, took an unprecedented step in going in person, without escort or protection, to the headquarters of the strikers in Lens, and talking to them plainly as to the attitude of the Government. He stated that their right to strike was not disputed, and that they could make what use they saw fit of that right, but they must not molest any one of a different opinion. If they obeyed the law they would be protected. Their rights were the same as those of a Minister or the President of the Republic. He called their attention to the fact that for the first time in a strike there was not a single soldier to be seen on the streets, and called upon them to afford France and the world the admirable spectacle of a strike carried thru peacefully and freely. The confidence he expressed in them, however, seems to have been misplaced, for, under the exasperation caused by the incidents of the Courrières mine, there has been much disorder. Strikers besieged the house of a miner named Carron, who refused to quit work. When he appeared at the doorway he was pelted with stones, whereupon he fired into the crowd, fatally wounding one of the strikers. A mob of 2,000, then, tried to lynch Carron, but two squadrons of cavalry came to the rescue and removed him to the jail, tho only after a fierce fight between the strikers and the soldiers, in which many on both sides were injured. A mob of 1,500 strikers attempted to invade a mine at Trevin, and attempted to drive out the men that were working, but were repelled by the soldiers with fixed bayonets, and dispersed. The strikers demand 15 per cent. increase in wages, better protection for the miners, recognition for their unions, and pension for long service. Representatives of the mining company are willing to grant an increase of 10 per cent. in wages of underground men, and 5 per cent. for the others. The mines of this region have been very profitable, having paid dividends from

50 per cent. in 1803 to several hundred per cent. last year.

### The Moroccan Question Settled

The International Conference on Moroccan Reforms, in session at Algeciras, reached an agreement on March 31st, and its provisions are now being embodied in a formal protocol to be presented to the Sultan of Morocco. The result of the Conference is a compromise in which neither France nor Germany can claim a clear diplomatic victory. The maintenance of order in the ports, which has been one of the most difficult points to settle, has been arranged by placing the police service in the hands of France and Spain. Four of the ports, Mogador, Saffi, Matzagan and Rabat, will be in charge of France. Spain will have control of Tetuan and Larache. The two most important ports, Tangier, on the Mediterranean, and Casablanca, on the Atlantic, are to be policed by a force under the joint control of France and Spain under the supervision of an inspector of police from a neutral power. This police agreement is to last five years. The Bank of Morocco to be established at Tangier will be international, each country having one share, with the exception of France, which has three. The French loan of 1904 is recognized and the rights of the holders will be protected. The bank will be under the control of four supervisors appointed by the Bank of England, the Bank of France, the Imperial Bank of Germany, and the Bank of Spain. Resolutions were introduced by the various delegates and adopted by the Conference, calling the attention of the Sultan of Morocco to various internal reforms. As in the former Conference on Morocco the American delegate, Mr. White, called attention to the disabilities placed upon the United States and their ill treatment. Sir Arthur Nicolson, the British delegate, recommended the abolition of slavery in Morocco. Herr von Redowitz, the German delegate, made an appeal for the establishment of lighthouses on the coast. Count Bolesta-Koziebrodski, delegate from Austria, urged the importance of the publication of commercial statistics of the country. The Duke of Almodovar advocated the construction of railways. The Reform

program, adopted unanimously by the Conference, will be presented to the Sultan of Morocco by Chevalier Malmusi, the Dean of the Diplomatic Corps at Tangier, with the recommendation of the Powers that it be put into effect immediately. It is not apparent that Germany has secured any substantial advantage by forcing France to submit the Moroccan question to a Conference of the Powers. France and Spain are in close agreement as to Morocco, and Spain has already by treaty acquiesced in the French projects, so the action of the Conference practically results in placing the maintenance of order in the hands of France alone. Germany does not secure the control of a single port, and she has failed to secure in the Conference the complete support of any of the other Powers, except Austria; both Italy and Russia have, on the whole taken the side of France. Our State Department has not decided what will be done with the share of the Morocco Bank allotted to us, but it has been decided that it cannot be subscribed for by the United States, so it may be turned over to some financial firm of this country.

### The Russian Elections.

Notwithstanding the predictions of interference by anarchistic bombs or bureaucratic arrests, the elections to the Duma proceeded peaceably in most of the cities. In St. Petersburg the banks closed and business was generally suspended on April 2d during the election for the Municipal Congress which is to choose six members to the national parliament. The Constitutional Democrats won here, as they have in the primary elections by the landowners. In St. Petersburg the qualified voters number about 130,000, of whom over 80,000 are officials. The Government would not allow public meetings and speeches, so the campaign was conducted thru the newspapers and by means of circulars distributed by messengers. Ivan Tolstoy, a son of Count Tolstoy, and a Constitutional Democrat, was elected an elector at Kaluga. In Odessa all the sixty-six candidates of the workmen in the factories were arrested by the authorities on the eve of the primary election, and they were directed to choose more conservative candidates.

# The Coming of the Daffodils

BY ALFRED AUSTIN  
POET LAUREATE OF ENGLAND

“Awake, awake! for the Springtime’s sake,  
March daffodils, too long dreaming!  
The lark is high in the spacious sky,  
And the celandine stars are gleaming.  
The gorse is ablaze, and the woodland sprays  
Are as crimson as August heather,  
The buds they unfurl, and mavis and merle  
Are singing duets together.

‘The rivulets run, first one by one,  
Then meet in the swirling river,  
And in out-peeping roots the Sun-god shoots  
The shafts of his golden quiver.  
The thrush never stops in the hazel copse,  
Till with music the world seems ringing,  
And the milkmaid hale, as she swings her pail,  
Comes out from the dairy singing.

“The madcap lambs round their staid dams  
Are skipping as, one time, *they* did;  
And, proud of the cheat, will the cuckoo repeat  
Soon the tale of the nest invaded.  
The swain and his sweet in the love-lanes meet,  
And fondle and face each other,  
Till he folds her charms in his world-wide arms,  
With kisses that blind and smother.”

Then the daffodils came, aflame, aflame,  
In orchard, and garth, and cover;  
And out April leapt, and first smiled, then wept,  
And longed for her Mayday lover.

# Internationalism and Naval Supremacy

BY RICHMOND PEARSON HOBSON

[No subject sets the advocates of Peace so quickly at war among themselves as Disarmament or a Naval Bill. Captain Hobson, of "Merrimac" fame in the Spanish-American War, has shown unusual activity for a strong navy and for the Peace Plans of the Interparliamentary Union. We have thought our readers would be interested, therefore, in his way of reconciling the two positions. Whatever may be thought of his conclusions, a record of over 1,000 speeches in favor of a strong navy and resolutions in 246 cities for an International Congress, give Captain Hobson a place in both movements. He is now running for the Democratic nomination for Congress in his home district in Alabama. It would be interesting, in case of his winning a seat in Congress, to follow the results of his throwing at the Peace People his plan for a powerful navy, and at the War People a bill for a large appropriation in aid of the Peace Plan of the Interparliamentary Union. —EDITOR.]

BY internationalism I understand all those movements which have for their object the establishment of justice and the perpetuation of peace among the nations. During the latter part of September, 1904, it was announced thruout the world that the Interparliamentary Union had adopted a resolution calling upon President Roosevelt to invite the nations to assemble in conference, to consider, among other things, the advisability of establishing an International Congress; also that the President had decided to comply with this request. This was evidently the most advanced step yet taken in internationalism, and was hailed with delight by the workers for peace in all parts of the world.

Readers of THE INDEPENDENT were not unprepared for this action, for the series of articles which it has published during the past two years on various phases of internationalism had not only foreshadowed this event, but had contributed, in no small way, to its occurrence.

After due consideration of this important resolution I decided that the prospect of its immediate adoption by all the Governments was too slight to justify *any* change in America's proper naval policy. For some years it had appeared to me that our proper policy was to adopt at once a progressive program, which, in a quarter of a century, would give the United States the most effective navy afloat.

It seemed to me after the passage of this resolution that the adoption of such

a program by the United States would *accelerate*, rather than retard, this movement for a system of law and order in international affairs. True, there are many good people who have no sympathy for those who favor strengthening our navy. But why should any one refuse to advocate a strong navy under existing conditions, and stand for this plan of the Interparliamentary Union as the best way to improve conditions?

My idea in advocating a strong navy for the United States is not with a view merely to its use in war.

Some nation must have the strongest navy, thus giving to that nation what we may call naval supremacy. The nation which has the justest foreign policy ought to have the strongest navy. From its birth the United States has had the justest foreign policy of any nation in the world, and can be counted on in the future to have the justest policy. Therefore the United States ought to have the strongest navy.

In proof that our nation has had the justest foreign policy witness the Monroe Doctrine itself, which sought no special advantage, commercial or otherwise, for the United States, but which staked the life of this nation on the preservation of the lives of South American nations; witness our treatment of Spain. What other nation ever paid the expense of sending back home the defeated army of an enemy, and in addition paid for territory it had gained possession of and could have held? Witness the return of \$750,000 paid by Japan as indemnity for breach of commercial treaties, the return

of a payment made by China which was afterward ascertained to be greatly in excess of the actual damage.

The United States is the only nation

the coming international organization. The greater the naval power and the more commanding the position of the United States, the stronger and the

*Richmond Pearson Hobson.*

that can be safely trusted with great naval power without danger of its abuse.

The organization of our States into the Union is essentially the prototype of

quicker in their action will be the forces that are making for peace and justice, thru this proper organization of nations.

The grave danger of the whole move-

ment for international justice and permanent peace is the possibility of another war in Europe or Asia before the international organization can be completed, thru the education of public opinion along the lines indicated by the recent suggestion of the Interparliamentary Union. If the United States had an adequate navy this would steady international affairs during this critical period, when it is so essential to keep the peace, in order that the great commercial, moral and religious forces now operating in the world may bring forth and perfect an international organization, which can administer justice and preserve peace on a just basis. As long as war forces are strong in the world, the United States must have a commanding navy to support just international policies. Indeed, our navy is the guardian and hope of peace under existing conditions. Only when the nations are finally federated, and peace and justice hold undisputed sway, can we be relieved of the duty of securing naval supremacy.

The relation between American naval development and the plans proposed by the Interparliamentary Union seems, therefore, to be this: A strong navy for the United States is the imperative need of the present moment; the International Congress and the other incidental machinery that would go with it constitute the chief hope of the future, when permanent peace can be founded on a world wide system of law and order. Both are necessary steps for securing universal peace and justice; both deserve the hearty support of all the American people, and particularly of their Representatives in Congress. One can be taken by the United States alone, and without delay. The other can only be taken when the co-operation of all the nations is secured.

Under these circumstances a citizen in the realm of internationalism should do everything in his power to cause the adoption by the United States of a strong naval program and the establishment of an International Congress by the consent of all nations.

In facing the situation which now confronts us with a view to determining the proper relation between internationalism and naval supremacy, I am reminded of

Washington's injunction: "In time of peace prepare for war." We have never had a wiser or better man than George Washington as President of the United States, and his words are not yet out of date. Nevertheless, he looked longingly toward the day when peace might become permanent. Internationalism was never heard of in his day. It is a decided reality in ours; it may become the controlling factor in the near future. Then all that the Interparliamentary Union hopes for will be achieved, and we can then begin to figure on making our pro rata contribution to the maintenance of an International Police Power instead of spending whatever is necessary to hold naval supremacy. Meanwhile, let us face the facts as they are and devote ourselves to each duty in the order of its importance, adopting the safe motto for those who love peace and justice, that as long as cannon are to be used in our affairs we will see that the heaviest cannon are on the side of Right.

As THE INDEPENDENT has done so much to promote this practical plan for peace, its readers may be interested in the following facts, which indicate how the great masses of the people feel on this subject. When the calling of The Hague Conference was announced, in response to the request of the Interparliamentary Union, I had engagements to speak in over 200 cities situated in various parts of the United States. I determined to introduce, at the close of each address, a resolution endorsing the plan of the Interparliamentary Union for an International Congress and also the strengthening of the United States navy. And since January 1st, 1905, such resolutions have been enthusiastically approved by a rising and almost unanimous vote in two hundred and forty-six cities, situated in thirty-five States and two Territories, by audiences aggregating about two hundred thousand persons. This is worth speaking about, because it proves beyond question that the masses of the American people are prepared to go the full length of the proposition put forward by the Interparliamentary Union. Indeed, they are prepared to go even further than has been proposed, as will appear from the following extract from the resolution which has been

adopted so enthusiastically in so many of our cities:

In the interest of peace and justice

*Be it resolved* by this gathering of representative citizens . . .

That general treaties of arbitration should be negotiated by the United States with all nations.

That the United States should continue to urge the convening of the second Hague Conference, and should urge the establishment of an International Parliament, and the other machinery necessary to perfect an international organization for the administration of justice among nations, as justice is now administered among the States of the American Union. . . .

*Be it further resolved*, That the mayor is requested to name a Committee of Three to notify the Representative of this District, the Senators of this State, and the President of the United States of the passing of these resolutions..

I am persuaded from personal contact with the masses of our people that they are ready to stand for a system of law and order co-extensive with our commerce, and for an adequate navy pending universal consent to this practical plan for peace.

GREENSBORO, ALABAMA.

## A Miracle

BY HARRIET PRESCOTT-SPOFFORD

APRIL, April, full of hopes,  
 All a world of sunny sheen  
 'Round her, wanders up our slopes,  
 Bluebirds following, in her hands  
 Bursting leaf-bud's tender green.  
 Laughing, lilting, on the rocks  
 She hangs her saxifrage, and gropes  
 Thru dark woods with venturing bees  
 To wet spots of anemones.  
 There she makes the velvet nooks  
 Of black and white and bubbling brooks  
 Red with swinging maple-keys,  
 Listens for the melting snows,  
 Calls her violets, and goes  
 Dreaming shyly of the rose  
 Sometime opening where no blast  
 Of the wild east ever blows.  
 Then climbs the sky with all her flocks  
 Of huddled clouds in snowy bands,  
 For far and undiscovered lands.  
 And we smile this year as the last,  
 Nor know a miracle has passed  
 Into the Unknown from the Vast.

NEWBURYPORT, MASS.

We are sure that every one of our readers will be interested in this picture of Abraham Lincoln reading *THE INDEPENDENT*. Altho Lincoln was a warm friend and constant reader of *THE INDEPENDENT*, this of course, is not a real photograph of him—it is of Mr. Benjamin Chapin, who has impersonated Lincoln on the lecture platform for the past few years, and who has just written a drama called "Lincoln," which began its career in this city at the Liberty Theatre, last Monday. We have been to the play, and if it impresses the American people as it has us, Mr. Chapin will have to travel up and down the land for many years to come until every city, town and hamlet shall have seen it. We do not say that "Lincoln" is "the national American drama," or even a great play from a technical point of view but as a true and sympathetic representation of the man most beloved by the American people, it will touch the heart of everyone. In the drama Lincoln is the central figure of selected scenes—domestic and political—loosely connected by a simple love story; but it is Mr. Chapin's impersonation that makes the play. In form, feature, gait, gesture, even tone of voice, he is Mr. Lincoln's double. His great height, his lanky loose jointedness, his lofty brow, deep set eyes, and gaunt cheeks are wonderfully exact. His side face (as this picture shows) seems actually identical with Lincoln's, and his front face nearly so. Mr. Chapin is at his best in the homelier parts of the play, where Mr. Lincoln is the "indulgent father, the patient and humorous husband, the kind-hearted friend, or the weary statesman sleepless beneath his load of anxieties;" but even in the climaxes, where the national fate hangs in the balance, he seems to measure up almost to the stature of the martyred President.

# A Week of System

BY THE BACHELOR MAID

[Some of our readers, as we are still occasionally reminded, have not forgotten a former article by "The Bachelor Maid." This one will probably not stir up such a commotion, but still it requires some comment in our editorial pages.—EDITOR.]

ACCORDING to my aunts and grown up female cousins I was a most worthless little girl. My father spoiled me by teaching me Latin and my mother did even worse by weakly surrendering when I struck against serving the traditional apprenticeship in the use of my needle by hemming the family sheets. The result was (they said) just what might have been expected. I would at any time neglect the most obvious domestic duties to devour a new book; nay, so shameless was I that I could sit down happily in the midst of the wildest disorder for a twentieth reading of my beloved "Innocents Abroad," while my patient mother picked up my scattered raiment from floor and chairs, and toiled over its missing hooks and buttons. Furthermore, I had no very profound conviction of sin when an aunt would drop in on a Saturday and mention pointedly that when she stopped at Mrs. Carter's she found little Mary seated by her mother's side assisting in the weekly darning. So far as I permitted the incident to affect me at all it was to reflect that it was rather impertinent of my aunt and very stupid of little Mary Carter, whom I had always detested anyway since the day I invited her to my dolls' dinner party and she gobbled up all the candy at the very beginning, instead of waiting for me to serve it in courses, as was seemly. With my consciousness of superiority in manners I could afford to regard with indifference my trifling deficiencies in the field of needlework.

Even now, with my youthful follies many years behind me, I trust that it is not heretical to say that I think I see in it all a striking example of how Providence permits even our sins to work for good; for if I hadn't read Scott and Byron and Macaulay, and Greek and Roman history, and the various other classic things with which every civilized person

is supposed to be familiar, during those unregenerate days when I could neglect all manner of other work for them with never a slightest prick of conscience, *when* I should like to know, could I ever have read them?

For, I assure you, I reformed—oh, long ago!

It was about in my fourteenth year, I think, that paucity of other reading matter led me to peruse a Sunday school paper story of a thoughtless girl who went off to a picnic and left her poor mother with all the work of the house, five small children to comb and dress, and the inevitable sick baby, to return and find the poor mother at death's door, from which perilous location she was recalled only by the repentant prayers of the thoughtless young girl, combined with some efforts on the part of the family physician. Considering the supposedly seared state of my conscience the effect upon it of this literary work was miraculous. What if *my* mother should die of overwork? I began to make my own bed and assist in the care of my little brother. But, my intellectual tastes continuing strong, the question arose: How prepare my lessons, read all the books I wished to and still be a comfort to my mother dear? Quite providentially there came in my way at this very time a highly convincing article, proving by examples drawn from life the stupendous results to be accomplished by the systematic use of time. Here was the longed for solution, the method by which I might bring forth fruits worthy of repentance; from that hour dated my definite attempt to live a truly useful life.

The initial step (it chanced to be my summer vacation) was to rise at five a. m., take a walk in the dewy morn and translate a page of Greek before breakfast. The practice of my music, out of consideration for the household, was to be deferred until after the morning meal,

while the remainder of my day was duly distributed to domestic tasks, reading more or less light, and social intercourse with my young friends. Some time in August the family attention was attracted to my diminution in weight and lack of enthusiasm even for spring chicken, and a physician was summoned. After some consideration he diagnosed my case as one of too much early rising. I do not know when a physician's dictum has carried such conviction to my soul; with that one sin against my health I have never again been chargeable. But, tho an exhausted body forced me to a change of method, my faith was in no wise shaken in the saving grace of the principle, and, to this day, tho I've continuously seen my roseate morning castles of achievement collapse in melancholy ruins before nightfall, tho I've been "floored" by nervous prostration, I cannot renounce that early belief that if only one could ever have a single whole day in which to give the thing a fair trial, wonders might be accomplished, and even fame won, by the systematic employment of one's time.

Therefore, on New Year's morning, 1906, I, as usual, lay upon my pillow (until I was late for breakfast), and planned how, now that the Christmas rush was over, I should read up all the back numbers of my philological and other magazines, besides three months' accumulation of books, take up seriously a long purposed bit of investigation in connection with my own specialty, and, since my little musical gift appears to give pleasure to my friends, faithfully devote an hour and a half each day to piano practice. Besides this and my regular work it seemed that it would not be difficult to find time for the daily paper and other periodicals dealing with current events.

On January 2d I decided to postpone the beginning of the systematic life to the second week of the year. This would afford an opportunity to make up the sleep lost in course of the holiday week's festivities, write letters of thanks for numerous Christmas presents yet unacknowledged, and put my wardrobe in order. (In recent years I have learned to mend.) With Sunday morning I began piously by starting early to church

and took the particular car which was derailed at a switch half way downtown, and detained for thirty minutes. After church I decided to call upon Miss Richardson to discuss details of a Y. W. C. A. meeting on Wednesday, which she had unexpectedly importuned me by telephone to lead. That took the time before dinner in which I had expected to read *THE INDEPENDENT* and study the lesson for my mission Sunday school class. Dinner over, I felt a headache coming on, and deciding that care of the health is, after all, a religious duty, I resolved to forego the mission school and take a nap. I was just dozing off when Minnie Robertson came "just for a second"—and stayed until dark. When bedtime came I was disgustingly sleepless, and so, of course, overslept in the morning. I was late to breakfast, and feeling constrained to interview my washerwoman relative to the matter of starch in petticoats, I barely reached the scene of my daily labors as the nine o'clock bell sounded. However, the day was not bluer than Mondays in general, and I dismissed my last class with considerable enthusiasm, surviving for the plans for my out of college hours.

But the sight of sundry pictures, books, handkerchief cases and hatpin holders recently acquired recalled to me as I entered my room the scandalous fact that their givers were still unthanked, and that, worse still, I had never responded to Charlotte Briggs's letter suggesting that she and her husband might stop here this month on their way to California, and it was written two weeks before. I decided that these letters could be delayed no longer, if they took till dinner time (and they did), and, anyway, there would still be the evening for music and the *Classical Review*. At dinner young Dr. Christopher represented to me that the fondest desire of his heart was to hear "Die Walküre" in my company; in fact, he had bought tickets, so that we simply must go. Well, we had a nice little supper afterward, and I hope his devoted aunt didn't wake up and look at her watch when we came in.

Tuesday morning I again went to breakfast in slippers and a consciousness that my shirt waist was not fastened down in the back. That afternoon I had

just come in from work when Sara Williams telephoned to know if I would go for a walk. Now there is no expressing how I enjoy Sara. She is a lovely oasis of cleverness in my desert of uninteresting feminine (not to say masculine) acquaintance. Besides, daily exercise is necessarily a part of any civilized "system," and I saw how I could return mentally and physically refreshed by a brisk half hour's walk with her, and then accomplish ever so much before dinner. But Sara wanted to walk on the river front. We had a perfectly beautiful time climbing around cotton bales and tar spattered lumber, watching the winter sunset and abusing our respective boarding houses and mutual friends—but we did not return till dark. And that night there was Mrs. Irwin's euchre. Of course I was too tired to go, but then it was partly in my honor, and how could I send regrets at the last moment? I went and brought home the first prize.

Wednesday's breakfast I prefer to pass over in silence. I proposed to devote the hour and a half between my last class and the Y. W. C. A. meeting that afternoon to a batch of exercises which an aggravated case of conscience had impelled me to require of the freshman class that morning. During the time two freshmen came to ask for a list of desirable class mottoes, Nellie Lovell to beg suggestions for the '06 Annual, and a fellow teacher (who shows no symptoms of living by "system") just dropped in to chat a bit because she noticed that I was in my class room. Just at the close of the Y. W. C. A. meeting there came a deluge of rain, which kept us prisoners until I reached my lodging after dark and in bare time for dinner. As we ascended the stairs together after that function Miss Bailey assured me that she just *must* have my opinion on her new hat—she'd bring it to my room in a minute. She did not carry it *out* of my room for over sixty minutes, and after the amount of information acquired in that space as to what sister Mollie paid for her hats and gowns in New York, and what taste brother Will displayed in selecting apparel for his wife, and how Miss Bailey herself had *never* worn low shoes, with reasons annexed, I felt no desire for philology or

Chopin's "Etudes." The temporary adoption of an "early to bed and early to rise" policy made me the second person in the dining room Thursday morning. When I ventured some jocose observations upon it as a notable occurrence, old Mrs. Kelly, who was first, said, in a voice charged with italics:

"When *I* was young we were taught that by using time *systematically* it was possible to be on time for *all* things, but I suppose you 'new women' have improved upon that idea." (Mrs. Kelly divides her time between crocheting in her own room and flaying the reputations of her acquaintances in the rooms of others, and is justly proud of never having earned a dollar or committed any other "unfeminine" act in all her long and blameless life.)

Thursday is the day for senior notebooks to be handed in. During the two hours in which I tried to correct them seven people came to my room on business of varying degrees of legitimacy. When I reached my own room at thirty I found letters from Mrs. Everett, requesting the address of my Chicago dressmaker by return mail, and from Mollie Wentworth, abusing me for not having answered her last letter. (Mollie does *that* systematically once a month.) My conscience did prick me concerning Mollie, so, turning a stoical back upon piano and magazines, I applied myself to those letters as soon as I could remove my hat and coat. Then I remembered Tom and his immensely entertaining letter of Christmas week. Tom is my brother-in-law, and I'm exceedingly fond of him. I also appreciate the benefits of keeping him fond of me. Besides, Alice is away on a visit, and what could cheer his loneliness more than a letter from her sister? There was just time to get it in before dinner. That was the night for the regular meeting of the Beethoven Society, and attendance at that is a duty in whose performance I am rather scrupulous, it being an organization dedicated to the elevation of musical taste in a community which delights equally in ragtime and light opera. I returned late, overslept again, and partook of my oatmeal (while the other boarders had reached the stage of pork chops) amid superior smiles

from Mrs. Kelly and black silence from my landlady. Just after breakfast there came a letter from Bob. Bob is my young brother, temporarily a medical student and perennially "broke." His casual remark that he had nothing wherewith to pay his next board bill touched me no less for being familiar. I had a "vacant hour" between one and two, just time enough to dash to the bank and send off a token of sisterly affection under a special delivery stamp. On my desk upon my return from that errand were a notice of an important meeting on Saturday of the Political Equality Club, at which all members were "urgently requested to be present," and a note from a fellow teacher hoping that I would honor her by attending the lecture which she purposed giving that night before a club at the other end of the city. I already had an appointment at four o'clock with Miss Winters to go to the meeting of a charitable society which she is organizing. At half past three, I being barely in from college and having not even begun my toilet, she was announced. As, twenty minutes later, I entered the parlor, feeling "thrown together" and generally unamiable, she remarked, with the air of one achieving an entirely new and original witticism: "The late Miss —."

"Our engagement was for four o'clock," I said.

"Oh, yes! I know it," she answered; "but I got tired of sitting in my room, so I thought I'd just come along."

At the meeting, where I had expected to be only a spectator, they elected me as treasurer, and said that they had chosen Friday for the day of meeting because they knew that that would make it possible for me always to be present. I had not strength enough left to protest, nor, later, to invent a plausible excuse for staying away from that lecture. I went, and was caught in the rain—in the suit which I had pressed only last week.

It is now Saturday. I am not going to the Equality Club meeting; I am not going to admit a caller, I am not going to write a letter; I *think* I am not even going to mend, tho there my black voile has been hanging unworn for a month because of a hole in the yoke, and the sleeves getting more out of fashion ev-

ery minute. I have not done one thing that I ought to have done today; but I have freed my mind. As I look over these pages I wonder—to what end? For the most lenient critic would tell me that they possess no unity. Of course not. How may there be unity in the history of events bound together only by their conspicuous lack of that quality? Yet if it is an excellence in literary style that one's very mode of expression be permeated with that which he seeks to describe, the most stubborn editor must recognize in these pages an example thereof hardly to be surpassed.

But, aside from literary merit, where is the moral? There be those, I am aware, wives of Methodist ministers and estimable adherents of sundry other creeds, who have expressed their doubts as to my ability to write a *moral* treatise at best, much less at the end of so exasperating a week. But it seems to me that the impartial reader of these pages must detect in me certain gropings after the useful life, so far as any unwedded champion of race suicide and divorce may hope to attain it. Therefore I have a feeling that there must be a moral somewhere in this week's—and many another week's—experiences, could some one but point it out; I would reject the trite and easy explanation that in its disappointments may be found that chastening which makes for growth of character, for I see no evidence of its truth. Nor am I disposed to listen to another equally obvious suggestion sure to be offered: that one may not hope to combine in a single person the professional woman, the amateur musician, the church worker and the social favorite. Would you have me renounce all interest in charitable and religious work? And as for music, consider its admitted effect upon the savage breast (which my mother, from extensive experience in her own family, declares the school teacher's all too prone to be). And one of my life's loftiest aims is to disprove by personal example the absurd charge that professional women lack the graces of those bred for matrimony alone; therefore, must I on principle cling to the humanizing influences of social life. In short, I refuse to listen to any suggestion that it is thru fault of my own that each

week's end finds me lamenting because of "nothing done." My system is all right; of that I'm sure—if I were the only being on the planet. Or if I could control the actions of all who surround me. If I could do that—ah! no longer should I be the victim of the non-professional and the non-systematic. For I should persuade some millionaire philanthropist to provide a vast asylum for the segregation (with due forms of amusement) of the people who have no other definite way of passing their own time than by wasting that of others. And I should try to provide people with some other means of recreation, instruction and philanthropic activity besides the everlasting "club." (Alice, who lives in the most "clubbed" town in the State, and, for her husband's profession's sake feels constrained to belong to them all, declares that all the time she would devote to their supposed objects is absorbed in making chicken salad and dressing herself for their regular meetings and extra "entertainments.") I am not sure that I should absolutely wipe out the calling system, but I should never again in my tenderness of conscience submit to the chronic "dropper-in" and the yet more deadly "stayer." And I should suggest to adoring pupils and the impressionable

female whom I meet at summer resorts and on railway trains that they find some other outlet for their affection and admiration than thru an active and voluminous correspondence. Nor should I permit the "peace" of Christmastide to be disturbed by the necessity of a perfunctory acknowledgment of all gifts before Twelfth Night.

But since this method of carrying out my system, beautiful and simple tho it be, seems at present impracticable, I am meditating something else as a temporary expedient. It is a movement in favor of the establishment by government of a rigorous press censorship for the purpose of suppressing all literature maintaining the feasibility of a systematic life in a society where all created things are in league to oppose it. For if that *ignis fatuus* had not been set glimmering before my deluded eyes in guileless youth, I might today be happy and worthless. But I must dress for the call which Sara and I are to make this evening upon Mrs. Gresham. We haven't been there this winter, and are conscience stricken. . . . I wonder if Mrs. Gresham is bearing the omission with as light a heart as I bear the like sins of my acquaintances toward me.

## The Lure of Spring

BY ELLA HIGGINSON

Did a robin call  
From the alder tall?  
Oh, listen. . . . Hush. . . .  
Did I hear a thrush?  
And the gray wood thru  
Did I catch the blue  
Of a bluebird's wing?  
Did a sparrow sing?  
(Or do I dream?)

Hark, hark! . . . Did I hear,  
From the lonely mere  
That shrill note set  
In the flageolet  
Of the frog? . . . Did I hear,  
Sweet, fine and clear,  
From the meadow—*hark!*  
The song of the lark?  
(Or do I dream?)

And trembling and high  
Did a voice go by—  
Sweet, lyrical, pure—  
With a thrill and a lure?  
Did it rise and fall,  
Flute-like, and call—  
"Oh, waken and sing,  
I am Spring, I am Spring!"  
(Or do I dream?)

And hand in hand  
Thru the flower-sweet land,  
Did *we* go the way  
Spring went today?  
Dearest, thru bloom  
And song and perfume,  
Did *we*—*did we*—  
Find Arcady?  
(Or do I dream?)

# The Republic and the Zone

BY EDWIN E. SLOSSON AND GARDNER RICHARDSON

[The three previous articles of this series have dealt with "The Present Condition of Affairs In Panama," "Life In the Canal Zone" and "The Sea-Level versus the Lock Canal." Two more articles describing some scenes in picturesque Panama, and giving the laborers' point of view, will be published in our next issue.—EDITOR.]

THE relation between the Government of the United States and that of the Republic of Panama in regard to the Canal Zone is so entirely unprecedented and peculiar, and involves so many intricate and undecided questions of administration and jurisdiction, that it would long ago have led to serious conflict if it had not been for the tact and good will which have hitherto been exercised on both sides. Such close harmony between the heads of both Governments cannot, however, be expected to continue indefinitely under party or personal changes of administration. The spirit of generosity, concession and compromise which has smoothed over the difficulties which have arisen is likely to die out, and racial antipathies and national jealousies, now latent, will in time prevail. In some respects the position of Governor Magoon is like that of a British resident adviser in the Native States of India, but instead of having a despotic maharajah to manage, he has to deal with the President of an independent and sensitive people.

The Canal Zone does not belong to the United States, but what we lack to make our ownership complete it is difficult for one who is not a lawyer to say. Our le-

gal rights are thus defined in the treaty signed at Washington November 18, 1903:

"The Republic of Panama grants to the United States in perpetuity the use, occupation and control of the zone of land and land under water for the construction, maintenance, operation, sanitation and protection of said canal of a width of ten miles, extending to the distance of five miles on each side of the center line of the route of the canal to be constructed.

"The Republic of Panama grants to the United States all the rights, power and authority within the Zone . . . which the United States would possess and exercise if it were the sovereign of the territory . . . to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power and authority."

Besides the Zone, we have the same rights over any other land and water "which may be necessary or convenient for the construction, maintenance, operation, sanitation and protection of said canal."

As an instance of the conflicts that arise between the United States and her protégée may be adduced the tobacco monopoly. The United States has the right, according to the treaty, to import free of any duty or restriction all provisions "and other things necessary and convenient" for officers and employees, and most of these class tobacco in some

The French Record and Our Own. The Height of the Solid Line Shows the Number of Deaths from Yellow Fever Per Thousand of Employees for Each Month Under the French Régime (1881-1889), and the Dotted Line the Corresponding Mortality from Yellow Fever Under American Management (1904-1905).

The American Way of Making the Dirt Fly in the Culebra Cut.

form as both "necessary and convenient." But the Colombian Government in 1901, when it was hard up for money on account of revolutions, sold the tobacco monopoly for a term of five years, and the Panaman Government, when it came into power in 1903, did not disturb the arrangement. The concessionaire, Mr. Isaac Brandon, a prominent banker of Panama, was one of the financial backers of the revolution which freed Panama from Colombian control. But a clause was inserted in the new constitution providing that the concession was not to be renewed. So when the Canal Commission began to supply its employes with tobacco, together with other "staple and fancy groceries," it ran up against this concession, and had to go out of the business. By the terms of the concession Mr. Brandon and nobody else has the right to import tobacco into Panama free of all duty. All other importers have to pay to him a

duty of \$2 gold for each kilogram. The working of the law may be illustrated by this example: An American who wanted a particular brand of cigars for his own use sent to the States for \$5 worth, but before he could get them from the custom house he had to pay Mr. Brandon \$10 for the privilege. Or, another case, a man importing \$18 worth of tobacco paid Mr. Brandon \$75 for it. The concessionaire, of course, can sell his own tobacco, which he imports free, at almost any price that suits him.

This was one of the difficulties which Secretary Taft was to arrange by his visit to the Isthmus, but since he found that the concession was to expire in February, 1906, and that the constitution prohibited its renewal, he decided to let it alone. In order to prevent its being made more extortionate by raising the duty and thereby enabling the concessionaire to raise his price, he stipulated that the duty should not be raised, and this was

The Bucket and Crane Method of Excavating Used By the French. From a Photograph Taken in 1888.

Building In Panama. It Takes Two Men Twenty Minutes to Hoist Eight Brick to the Top of the Building. This is, However, Quite Rapid Enough to Keep the Bricklayers Supplied.

made one of the provisions of the executive order of December 12th, 1904.

But the matter was not settled so happily as it seemed, for when the cigar concession expired February 28th, it was renewed for ten months longer by order of President Amador. His justification for this action is that he has no power to lower or remove the duty on tobacco, and that to abolish the concession without this would deprive the people of tobacco except at extravagant prices. Several merchants who wanted to share in the tobacco business offered to protect the country from this calamity, but they were not able to overcome the President's constitutional scruples. It is reasonable to suppose that in the formation of his opinion he relied somewhat upon his legal adviser in such matters, the Secretary of Finance, who has a double reason to be regarded as an expert on the subject, for besides being officially in charge of the customs, he is a partner of Mr. Brandon's. Accordingly an un-

pretentious and economical advertisement was inserted in a Panama paper shortly before the expiration of the concession asking for bids, and it was again awarded, without formidable competition, to Mr. Brandon for ten months, at the end of which time Congress will be in session. He now pays \$2,125 a month, which is 50 per cent. more than he has been paying. The total value of the new concession is estimated at \$300,000 by some who did not get it.

Another source of revenue of the Panamanian Republic is the lottery concession, which pays 10 per cent. of its gross receipts to the Government. The national lottery occupies the lower floor of the Bishop's palace, on the opposite side of the Plaza from the Cathedral, and Sundays when the drawings take place it is the center of an excited crowd. The President of the Republic owns fifteen lottery shares. Everywhere, on the corners of the streets and in the markets, are men, women and children holding out bunches

of lottery tickets for sale; everywhere, that is, except in the Canal Zone, for there public gambling is prohibited. The Panaman Government objected strenuously to this restriction on one of their national institutions, and brought the matter before our Supreme Court, which held that Congress had not yet extended their jurisdiction over the Zone.

This leaves the Zonal Government in a very peculiar position. Since the expiration of the last Congress the Commission has no legislative power, and, unless the President has power to do it, there is no way of enacting new laws or altering the present code, which is adapted from that of Porto Rico. For the most part they are obliged to meet emergencies by acting under the vague term of "the police power"; which, as some of our municipalities have found, is elastic enough for almost any purpose. An American citizen may be condemned and executed by the courts of the Zone without writ of habeas corpus, right of trial by jury, appeal to a higher court, or any of those comforts and conveniences which common law has accustomed us to think necessary for the assurance of justice. As a matter of fact, it has not been found necessary to put anybody to death—that is, by formal condemnation—altho in one instance that came under our observation a man was shot at Empire while trying to escape from the chain gang working on the road. He was a Jamaican negro serving a three-years' sentence for raising a pay check. When stopped by the sergeant he attempted to fell him with his ball and chain, but was shot and instantly killed by a negro policeman. A coroner's jury was convened, the policeman acquitted, the convict buried and the whole affair over by noon. There are about 40 prisoners in the Zone penitentiary, and the police make about 350 arrests a month, few of them for serious offenses.

The Zone police, under Captain Shanton, is a very creditable force of about 210 men. Public gambling and houses of prostitution are banished from the Zone, altho they are to be found in the cities of Panama and Colon, which can be reached within an hour or two. The order maintained on the Zone is so strict as to be irksome to certain kinds of men. "It

is like being in prison to live in the Zone," we heard, and several complained to us loudly over being deprived of their inalienable rights as Southern gentlemen of "cuffing a sassy nigger."

As a whole, both the white and black employees are a very peaceable lot, and either a man or woman is safer from insult and injury, day or night, anywhere on the Zone or in the cities, than he would be, say, in the suburbs of Chicago. There is nothing at all of the exuberant rowdyism characteristic of the mining camp or construction gang in the States. But there is still much vice of a dull, gross kind, and many of the men fall victims to hard drinking or heavy playing.

The postal service, like almost everything else on the Isthmus, is duplex. We began by using our own stamps, surcharged "Canal Zone," for our own mail, but this was objected to by the Republic as robbing her of part of her revenue, altho it is hard to see how. So, in accordance with the policy of President Roosevelt not "to interfere with the welfare and prosperity of the Republic of Panama," we burned our stamps, \$4,000 worth—much to the joy of the few collectors who had got hold of specimens—and now we buy the stamps of Panama at 40 per cent. of their face value, print "Canal Zone" across them in red ink, and sell them at face value to our employees for their private correspondence. The letters written home by Americans on the Zone are received by our own postmasters and transmitted by our own railroad and steamship lines. The authorities of the Republic of Panama do not handle them and are by treaty expressly prohibited from even opening the pouches that contain them, yet Panama gets 40 per cent. of the postage on them. Of course this American mail amounts to much more than the native mail. This double postal system is the cause of much delay and annoyance. It sometimes takes two or three days for a letter to get transferred from a Panaman post-office to a Zonal post-office, altho they are really in the same towns and only a few blocks apart.

The two monetary systems on the Isthmus are very confusing to a stranger. In change for a United States

greenback he gets from the storekeeper a handful of Panaman silver, which is usually more than he expects and less than he is entitled to. The white men in the employ of the Commission are paid in gold—that is, American bills, and the black men in Panaman silver worth only half as much. This ratio of two to

coined at the United States mint in Philadelphia, and turned over by the Government of Panama to these banks, who issue it to us as needed for the payroll of the laborers.

There is no coin smaller than the ten cents silver, the equivalent of our nickel, so for subsidiary coins the people of Pan-

Hand Drilling for Blasting in Soft Rock on the Side of the Culebra Cut.

one is maintained by an agreement between the United States and the four banks of Panama, Isaac Brandon & Bros., Ehrman & Co., The International Banking Co., and The American Trade Development Co., who have the handling of all the money, some \$700,000 a month, paid out by the Commission for labor and material. The Panaman silver is

ama have adopted the custom of free and unlimited coinage of tobacco without asking the consent of any other nation. If a Chinaman offers you a fresh cocoanut for 15 cents, you give him two Panama dimes and get a neatly wrapped plug of tobacco, two inches square, as change. As we have already explained, it is Mr. Brandon who keeps the tobacco

as well as the silver from depreciating below its coinage value.

The cities of Panama and Colon are excluded from the Zone, but even in them we have the right of sanitation, which nowadays means a great deal. It means that we tear up their streets, put down water and sewer pipes, and impose and collect rates to pay for them; that we make periodic visits to every room in every house, to see that it is kept sufficiently clean; that we screen their cisterns and put spigots in every rain barrel; that we cut down trees in plazas; that we quarantine cities and ports at our pleasure; that we burn sulfur in their houses and thereby spoil their pianos, brasswork and silverware, and occasionally set fire to the building; that we move houses or tear them down as we please; we take patients away from their families and physicians; we offer up strange incense in the churches; we impose a fine of five dollars when we find in a back yard a tin can with a few "wiggles" in it; all of which drastic measures have been justified by their results.

The people of Panama have submitted with remarkable patience to these high-handed proceedings, which appear to most of them absurd and unnecessary. Still, our sanitary measures have caused a great deal of popular animosity against us. Many claims for damages have been filed. Where these were clearly just and for small sums they have been paid, but the larger and more doubtful ones are "pending," which means that we will pay whenever and whatever we like, for there is no way in which suit can be brought against the United States.

The people of Latin America do not have our fear of yellow fever, which they regard as one of the inevitable ills of life, much as we do measles or consumption. They do not think it is worth while to screen their windows to prevent it, but if a case of the plague appears, they are willing to burn down the town if it would do any good. When a man at La Boca, the Pacific terminal of the Canal, came down with it, South and Central America and Mexico quarantined against the port, and it was more than a month altogether before there was clear sailing again, so the congested freight could be cleared away. And this was a time when

a free exit at the Pacific end was most needed, for the overloaded docks at Colon, on the Atlantic, had not yet been freed from the accumulations of the preceding months. Chief Engineer Stevens says that he "found, on his arrival last August, from 13,000 to 16,000 tons of freight piled up at Colon in a hopeless mass of confusion." Some of it had been there for a year and a half. For 3,000 packages of it no papers could be found, and some of it has not yet found owners.

Modern sanitarians are not working in the dark as much as their predecessors. Just as they got rid of yellow fever by killing off the *Stegomyia* mosquitoes, so they checked the bubonic plague by killing the rats which carry the disease. Dr. Perry, the Pied Piper of La Boca, attacked the rats on the wharf and ships, and by trap, poison and sulfur dioxide destroyed them at the rate of several hundred a month. Many of them, on being examined in the hospital laboratory, were found to be infected with the plague. The buildings and wharves were cleaned by washing with a solution of mercury bichloride. There were only two cases and deaths from the plague at La Boca, in June and in August, and since then none. The hospital still buys all the rats offered, dead or alive, at 5 cents a head, but none of them are infected.

As for the yellow fever, the record of its conquest is best shown in the accompanying chart, which compares the number of deaths per thousand from this disease during the French occupation with that of the American. We have now 23,000 employees on the rolls, and most of these are not immune. The French at their busiest period, 1884-1887, had 15,000 to 17,500 employees, and lost from 128 to 308 a year from yellow fever alone. The average sick rate among our employees is from 20 to 22 per thousand, which means that about 500 men are in the hospitals at any one time. Among the negroes, who constitute six-sevenths of the total force, pneumonia is the most fatal disease.

The politics of the Republic of Panama, like those of one of our country towns, resolves itself essentially into a fight between banks for the control of the public funds. The Republic started off in life with the comfortable dowry of

\$10,000,000 from us, and we have promised also \$250,000 a year in perpetuity after nine years, which, at the present rate of progress on the canal, we must begin to pay several years before it is finished. Of this sum about \$8,000,000 is invested in American securities, paying from  $3\frac{1}{2}$  to 4 per cent. interest. The last and only Congress of Panama appropriated a million and a half for public improvements, which was distributed after the manner of our river and harbor appropriations, a little to each section of the country and a good deal to some, for building roads, bridges, wharves, etc. All of these are very much needed, no doubt, but whether the money has been spent wisely and how much is left are questions which those who are "out" would like to find out for themselves by getting at the books, for they claim that no valid or complete financial report is ever made by the Governments. That the Government is chary with its reports is indeed apparent. There is no descriptive literature published on the geography, history and resources of the country, and no census has been taken since 1870. At that time the population was 220,000, but now it is probably greater by half. The area of the Republic is 32,380 square miles, about the size of Maine. There are no roads running its length and very few across it.

In politics Panama always used to be Liberal, and sent up to Bogota solid delegations of that party. The Conservatives, even with the aid of the Colombian army, were never able to do more than hold Colon and Panama. At the time of the Revolution, the leaders of both parties got together, and Don Amador Guerrero, a Conservative, was elected President of the new Republic, and Don Pablo Arosemena, a Liberal, became Vice President. The Liberals think that the Conservative ring have ruled the country and spent its money in their own interests, and they are making a determined effort to win the election next June, with Don Pablo as their candidate for President. But they charge that the Government is not going to allow a fair election; that their

men are being disfranchised and refused registration. Under the present *régime* the mayor and other local officers are appointed by the President, who is, therefore, in a position to exert a great influence in all parts of the country. The Liberals believe in local self-government. Then, too, the Conservatives in power have the support of the Church, for the Liberals believe in a separation of Church and State, and would cut off the appropriation of public money now made for ecclesiastical purposes, which is \$39,000 a year, besides that paid for the Church schools. In addition, the Conservatives boast that they have the backing of President Roosevelt, who will not wish to see a Government so pliant to American influences as the present one replaced by one of doubtful attitude, which will have to be placated by new concessions. But Secretary Root has given assurance that the United States will not interfere in the election in any way.

This is doubtless true if they are peaceable, but if the Liberals should attempt to gain by force of arms what they think they have been cheated out of at the polls, the United States would be forced to take a hand to preserve order. We put a stop to one fight between the Liberals and Conservatives in Panama by running an impromptu armored train up and down the railroad, and that was years before we had our present treaty rights.

If "the revolution of July" comes off—and people on the Isthmus talk of it as confidently as they speak of Christmas's coming—there would be a strong temptation for us to put an end to this duality of government by annexing the country. But it would not be a favorable time to do this, for in July, also, the Pan-American Congress meets at Rio Janeiro, and it is reported that Colombia will there bring forward a claim for damages against us for alienating the affections of Panama. In this she is likely to have the backing of some of the other American republics, and it would be embarrassing for us to have Panama on our hands just then.

# The State Management of Railways in Italy

BY CAVALIER GUSTAVO VIGNA DEL FERRO

[We have hardly realized in this country the Revolutionary movement in Italy whereby the National Government is peacefully taking over the privately owned railroads. As the railroad question is apparently from now on to be in politics in this country, it should interest us to see how Italy solves her Railroad Problems.—EDITOR.]

THE management of the railways in Italy, which for twenty years has been entrusted to private enterprise, is now, in accordance with the Convention of 1885, about to be resumed by the State, an experiment but imperfectly tried before that date. A complex train of circumstances and a strong current of public opinion have led to this decision on the part of the Government. The causes are for the greater part political, and are such as prevail more or less in all the countries of Europe. Radicals and Socialists have always advocated State management because of their belief in the advantage of concentrated public action, and the conservative party agrees with them on this point, but for another reason, viz., because all railway servants would, under State management, be disciplined, and directly under Government control should mobilization of the army be necessary. To these general reasons there may be added others which apply particularly to Italy. In almost all countries railways repay more or less the capital invested in them. But in Italy the question is more complex; a few lines pay their cost fully, some yield a miserable interest on the capital, and others nothing whatever, in which case the public pays while making little or no use of the railway. The railway convention planned by Genala in 1885 did not realize expectation. Its administrative system was too complicated, its arrangements not clearly defined, its obligations and rights uncertain and confused, united to an excessive uniformity in services, and tariffs not sufficiently adapted to the exigencies of time and place. But the part where faults (not always involuntary) and defects were most discernible and on account of which complaints were most justifiable was the financial system. The times were unpro-

pitious; the rosy illusions of the period when this arrangement was propounded were followed by another period in which depression, discouragement and financial disaster disturbed the entire life of the country, and consequently diminished railway activity. The funds for maintaining and improving the lines, the stations, the plant, and the general working power were totally inadequate, having been computed on estimates too meagre and drawn from insecure sources. Hence, a debt from the State to the companies gradually accumulated until it rose to a sum of 1,500,000,000 francs, now to be liquidated. Given such a state of affairs it is not surprising that in the various offers by the railway companies, from November, 1902, until a few months ago, there should always appear as a fundamental principle, the payment, in one form or other, of some interest on the capital, even if small. There is no longer any industrial firm to buy up a railway and take on itself all the hazards and risks of a private enterprise; it is only the capitalist who, judging by the results of the last twenty years, will make the experiment of investing his money, sharing the profits with the State. And, for this reason, all proposals not founded on the principle of reimbursement of costs, whether for diminution of tariffs, increase of train service, or for improvements consistent with modern requirements, had to be followed by special compensation. Certainly the events of later years and the provisions as to the inevitable consequences of the new economic social tendencies are such as to justify these demands. Home and foreign markets vary with the state of agricultural and industrial production; national industries are peculiarly sensitive to the consequences of protectionist treaties, also to the effects of the care which

some European states bestow on their own industries, fostering their development and preventing crises. Hence the necessity for the State to intervene, protecting production by the reduction of tariffs, sometimes even to the mere cost of transit, so that the supply may baffle foreign competition and also reach distant markets.

The growing need for means of expansion in country places with a redundant population poorer than that of the cities; the desirability of granting reduced rates of traveling to workmen and tillers of the soil and accommodation for third class passengers in the faster trains and greater facility for international communication—these with other causes oblige the State to request, nay, to command increase and other improvements in the train service, tho there may not always follow, especially at first, the anticipated benefits.

Social changes and changes even greater in the conditions of labor have contributed in Italy, as in other countries, to raise the wages of railway servants, their work being increased by the augmentation of traffic. Increase of work demands, in the interest of public safety, a shortening of the working hours in certain branches of the service, thereby causing a greater outlay in wages, which at the present time represents about two-thirds of the total working expenditure. In this state of things and in uncertainty as to future cost of working it is easy to see how capital is frightened away from such risky enterprise unless specially guaranteed. The State, on the other hand, cannot fix the tariffs or time tables for any certain number of years without detriment to the economic condition of the country, which in many ways shows an encouraging development in industries and commerce, and therefore demands more frequent, more rapid and less costly means of transport. For all these reasons, and others more especially Italian which I omit for the sake of brevity, the general public and leading men are fully persuaded of the necessity of the railways being again placed under the management of the State.

It may, therefore, interest American readers to know that the system about to

be adopted in Italy is in its general lines the same as that which at no very distant period will be necessary in the United States. Of this there is an indication in the proposal of President Roosevelt to restore that authority to the Interstate Commerce Commission of which it had been partially deprived by the well known decision of the Supreme Court.

In Italy, about a year ago, as the 30th of June, which was the limit of time appointed by the convention, approached, it was considered desirable to appoint a Parliamentary Commission to study the question in the abstract, while it was at the same time foreseen that an opinion favorable to the State management of railways would ultimately prevail in Parliament. The Commission, of which several members, for instance, Carmine and Rubini, are men of large Parliamentary experience and technical knowledge, on the 17th of March, 1904, presented a report as to the general outlines of a plan of management by the State of those railways which at the expiration of the period fixed by the convention would not again be granted to private companies. It was the general opinion in the Commission that an autonomous administration should be formed for the railways, but not an autonomy pure and simple, which would lead to irresponsibility, and throw the fiscal consequences on the Government authorizing it. This would be inconsistent with the principle of representation, which is founded upon the responsibility of the chief authority. Carmine traced the outlines of a plan of autonomous administration, which may be thus summarized: The management of the railways belonging to the State should be entrusted to an autonomous administration acting in the interests of the State. At its head there should be a director-general with a council of administration in which should be equally represented:

1. The general interests of the State.
2. The industrial, commercial and agricultural interests of the various districts.
3. The railway employees.

The Council of Administration, to which members of Parliament should not be eligible, should nominate from among its number an executive committee se-

lected so as to represent equally the three above mentioned categories. The working should be entrusted to different departments under a managing board.

The current expenses should be under the superintendence of the Treasury, into which the board should pay annually for a certain number of years a fixed sum, the amount of which should be limited so as to leave sufficient funds (after the payment of current expenses) to pay interest, to meet bonds as they fall due, within a period not exceeding thirty-five years, and the preference shares guaranteed on railway property which the board may issue to meet the expenses of extension, improvement and completion of lines and the increase of rolling stock as the exigencies of traffic may require.

To the Government should appertain the duty of seeing to the proper working of the railways; to Parliament the scrutiny of the yearly accounts, the right of decision as to variations of tariff outside certain limits, and of authorizing the issue of preference shares when the relative amount exceeds a fixed limit in proportion to the increase of the net profits.

On the basis of this theoretic scheme, Tedesco, then Minister of Public Works, brought forward a bill on February 21, 1905, for regulating the State management of railways. According to this bill the new administration will have an autonomous character consistent with the constitutional organization existing in Italy, and will exercise its functions under the supervision of the Ministry of Public Works and of the Treasury, on both of which, within their respective domains, will be conferred limited powers, not interfering with the autonomy and consistent with the principle of ministerial responsibility to the Parliament and to the country. The autonomy will exist chiefly with regard to the special balance of the railways, to which will be assured funds proportioned to the profits of the traffic, and therefore independent of the fluctuations of politics and of the variations of the finances of the State.

The administrative power will be represented by a council, by a board of directors, with central offices for the whole system, and by subordinate departmental boards. The railways will pass into the hands of the State in

their present condition, which will be gradually transformed without disturbing the regular working. The administration, with the central offices, will direct, reorganize and control the work of the departments, provide for new lines of railway, for the purchase of supplies, for the hire of rolling stock, for the general time tables and tariffs, and everything in short, connected with the service.

The question of the employees has given rise to agitation of various kinds, from a singular form of obstruction—which, with the pretext of a scrupulous observance of the regulations, delayed the service of trains, rendering it almost useless—to a general strike. By the law of April, 1905, all the employees of State railways, of whatever grade or position, are considered public officials. Those who voluntarily abandon or refuse to undertake their duties, or do their work in such a way as to interrupt or disturb the continuity of the service, are to be considered as having resigned, and, therefore, to be superseded. But the Director General, with the Council of Administration, after having considered the special conditions and responsibilities may inflict a penalty instead of dismissal.

The mileage of the railways of which the State will assume the management amounts to a total of 5,625, of which 3,038 miles belong to the Mediterranean system, 2,062 to the Adriatic, and 525 to the Sicilian. There are, besides, 1,423 miles belonging to the Southern Company, and 2,635 belonging to other companies, making a total of 9,683 miles.

The differences of opinion as to the mode of working the railways in Italy led, in 1885, to a serious division in the field of politics and gave rise to lively discussions in Parliament. But at present the subject seems to be removed from the heated arena of political parties and freed from the trammels of fixed theories, the question being to discover the methods which should be least expensive and most productive of good results. The extended social and economic movement, which, like international exchange, tends toward a protectionist policy, has created in Italy conditions which must render inevitable the management by the State of the carrying trade of the country.

THE MARQUIS OF GRAHAM.

LADY MARY DOUGLAS HAMILTON

BRODICK CASTLE  
LADY MARY HAMILTON'S ARRAN HOME.

## The Union of Two Great Scotch Houses

BY E. LISLE SNELL

NOT for many years has an engagement been announced which has caused such general satisfaction in London as that between the young Marquis of Graham and Lady Mary Douglas-Hamilton. The marquis is the eldest son and heir of the Duke of Montrose. Lady Mary is the only child of the late twelfth Duke of Hamilton, and the richest titled single woman in the United Kingdom. Their marriage will link together two of the greatest houses in Scotland, which for centuries were conspicuous in the making of Scotch history. From the more human point of view the match appeals still more strongly to sentimental feeling. It is entirely Cupid's work, and both the lad and the lassie embody the best traditions of their

lineage. They are proof that aristocracy can still produce as fine, healthy specimens of virile manhood and womanhood as democracy.

"Bonnie" is perhaps the word that best describes Lady Mary. She is good-looking, but it would be an exaggeration to call her beautiful. She has the frank, open countenance that bespeaks kindness of heart and sincerity and a wholesome, sunny nature. Fair of complexion, the outdoor life that she has led has imparted a ruddy glow to her cheeks and given grace and elasticity to her carriage. She is one of the best horsewomen in the kingdom; is always in the first flight in the hunting field, and is one of the few women masters of hounds in the country. With rod and rifle she is equally expert,

and has humbled the pride of many a man who has gone deer-stalking with her. She is natural and unaffected in manner, dresses simply and cares nothing for what is called smart society.

There is royal blood as well as the choicest assortment of blue blood in Lady Mary's veins. One of her ancestors, the first Lord Hamilton, married in 1474 Princess Mary Stuart, elder daughter of King James II of Scotland, thru whom his descendants became next heirs to the crown after the Stuarts. In fact, according to the laws of hereditary succession, she has a better claim to the English throne than King Edward VII. By other ties of consanguinity she is closely related to some of the present royal families of Europe. Her father's mother was Princess Stephanie of Baden, the younger daughter of Grand Duke Carl, who died in 1818, and was married to the Viscountess Stephanie de Beauharnais, the adopted daughter of Napoleon I. She is therefore the great-great-granddaughter of the ill-starred Empress Josephine and a cousin of the Grand Duke of Baden, the King of Wurtemberg and the Crown Princess of Sweden.

The Marquis of Graham is a strapping fine fellow, standing six feet tall, with athletic frame and well-modeled, clear-cut features, that bear the unmistakable stamp of distinction. He began the strenuous life early, and when a Duke's heir does that he deserves a lot more credit than ordinary plebeian folk, because the temptations that beset him to take life easy are vastly greater. When he left Eton College, instead of passing on to Oxford or Cambridge, he voluntarily sought the more practical kind of education that only real life, with plenty of hard knocks, gives. Resolved to make a thoro seaman of himself, he shipped as a common sailor, served a full apprenticeship in the mercantile marine, obtained his master's certificate when he was twenty-one, and proved his competency by navigating Lord Brassey's steam yacht, the "Sunbeam," from Australia to England, and later to Canada. He completed his nautical education in the navy, and, the better to qualify himself for the command of the Clyde division of the Naval Volunteers, he went through a course of gunnery at Portsmouth.

Naturally this stalwart representative of the fighting Grahams jumped at the chance the South African war offered him to take the field and get under fire. During the famous hunt of De Wet he was in action no less than twenty-nine times in thirty-one consecutive days—something of a record even for those days of endless skirmishes. For his gallantry he was mentioned in dispatches and was rewarded with a medal and three clasps.

A fluent and effective speaker, he took to politics a few years ago, and at the General Election he contested Stirlingshire as a Unionist candidate, but Demos was on the other side and he was defeated. He is far better qualified for a Parliamentary career than any of the other young lordlings who managed to escape being submerged by the democratic flood, and there is little doubt that he will some day succeed in winning a seat in the House of Commons. Meanwhile, the business of making a manly man of himself leaves him little time for dawdling about drawing rooms.

He will be twenty-eight years old next May. His father is fifty-four. If he survives his father he will inherit half a dozen other titles in addition to that of Duke of Montrose, and will come into possession of 115,000 acres of land. But, like much of the land in Scotland, the Montrose property does not yield a very large rental, and there is little money from other sources which finds its way into the Montrose exchequer. In fact, the Montrose dukedom stands in great need of a rich chatelaine, and several English society journals have expressed satisfaction that the Marquis did not have to go to America to find one.

Lady Mary is a very wealthy woman, but since her coming of age last November many grossly exaggerated reports have been published, here and in America, concerning her wealth and possessions—some estimating the former at anything between \$500,000 and \$1,000,000 a year; others crediting her with two or three millions in cash and estates yielding enormous revenues in her absolute control. As a matter of fact, she owns not an acre of land in fee simple or at her own disposal. Under her father's will her estates, comprising some 107,000 acres, are held in trust for her, the in-

come therefrom to be paid to her during her life. Should she marry and have male issue the later will inherit the property, but, failing such issue, it will revert, on her death, to the then Duke of Hamilton.

From lands alone Lady Mary's income, at a liberal estimate, does not exceed \$175,000 a year. Her father bequeathed to her \$500,000 in cash, to be paid to her either on her marriage or when she attained her twenty-fifth birthday. Since 1895 she has received the interest on this capital sum. She is by no means the richest heiress in the kingdom, but she is by long odds the richest titled spinster, for as a rule the daughters of noble families, which are hedged about by the law of entail, receive a comparatively small share of the ancestral wealth and acres.

Had she been born a boy instead of a girl, she would now be two dukes, two earls, three marquises and eight barons, all rolled into one. Her 107,000 acres would have stretched to 150,000 and would have included Hamilton Palace, the magnificent ducal seat. The man who has gained what she lost thru being born a girl was, at the time of her birth, plain Lieut. Douglas Hamilton, of the Royal Navy. He is her fifth cousin only; his nearest ducal ancestor lived in the time of Cromwell, and so remote seemed his chances at first of ever succeeding to the premier peerage of Scotland that he did not even hyphenate his name or sport a crest. But death swept from his path, one by one, the several relations who intervened between him and the dukedom, and, by the time it became evident there was no chance that the stork would pay a second visit to Hamilton Palace and perhaps bring a boy with him, the naval lieutenant was heir presumptive to the longest string of titles in Scotland. The duke made the best of what he naturally regarded as a bad job by so fixing things that his distant kinsman should get not an acre more of land than the law of entail entitled him to, and not a dollar in cash did he bequeath to him. In consequence the reigning Duke of Hamilton is wretchedly poor—for a duke—and in Hamilton Palace are many rooms which are absolutely bare because he cannot afford to furnish them. He would be hardly human if he does not cherish the

secret hope that the stork will bring only girls to the future Duke and Duchess of Montrose. That would make a big difference to his own heir.

Lady Mary, meanwhile, has a bounteous heritage which is hers to enjoy for life. The biggest part of her domain is the picturesque island of Arran, in the Firth of Clyde, sixty miles in circumference, and with 5,000 inhabitants, whom she rules as a virtual queen, with the feudal title of the Lady of Arran. She is much beloved by the simple island folk, who regard her as the head of the Douglas clan, and, as such, would fight for her to the death if need be. And yet, strange to relate, she owes her possession of the island to the treachery against a Douglas of that same Lord Hamilton who endowed her with the royal blood of the Stuarts. He joined a rebellion against King James under the leadership of Sir James Douglas, but on the eve of battle he deserted to the royal side with all his followers. In consequence the Douglasses were defeated, and Lord Hamilton was rewarded with a large share of their possessions, including the Isle of Arran. Marriage united the two houses again some two centuries later, and on the death of the Duke of Douglas in 1761 without issue, James, fourth Duke of Hamilton, became the heir male and head of that grand old house, and annexed the name of Douglas to his own.

Lady Mary has two residences on Arran Island. The chief of them is Brodick Castle, a grand old place, commanding a magnificent view of mountain and sea. In earlier times a fortress stood on the site of it which the heroic Bruce captured from the English. According to local legends it was while hiding in one of the Arran caves that he learned his famous lesson from the spider. Lady Mary's other house, on the other side of the island, she modestly terms a shooting box, but so well is it equipped, and so romantic is the surrounding scenery, that when the King went on a cruise on the west coast of Scotland, four years ago, he was glad to put up there for a few days. At Eaton Park, Suffolk, in England, she has another large estate, with a magnificent residence and stabling accommodation for fifty horses. Truly the Fates have dealt kindly with Lady Mary,

barring the little matter of making her a girl instead of a boy.

Walter de Hamilton, the first of the line to attain prominence in Scotch history, was one of the barons who adhered to the English cause in the war of independence, but after the battle of Bannockburn he changed his politics, made his peace with Bruce and received several large grants of land. The barony had become a dukedom when Charles I ascended the throne. He entrusted the first duke with the task of persuading the Scotch Covenanters to abandon their league and covenant and join the royal cause. The duke failed in his mission, which so incensed the King that he locked him up. Notwithstanding this scurvy treatment, after the fall of the monarchy, the duke raised a Scotch army to rescue the King, was defeated at Preston and beheaded in 1649. His brother, the second duke, tried to put Charles II on the throne and lost his life in the battle of Worcester, 1650.

The family to which the Duke of Montrose belongs goes back to the time of David I, King of the Scots. Sir David Graham was one of the Scottish lead-

ers employed to negotiate the ransom of David II, who was made prisoner by the English at the battle of Durham, in 1346. The family were first elevated to the peerage in 1445, when a barony was conferred on Patrick Graham, on his becoming one of the Lords of the Regency during the minority of King James II. After two generations this barony was raised to an earldom in consideration of the gallantry the third Lord Graham exhibited at the battle of Sauchieburn, where his King was killed. In 1612 a marquise was conferred on the family. It was the first Marquis of Montrose, greatest of all the "fighting Grahams"—the most brilliant soldier, perhaps, that Scotland ever produced, who made the name forever famous in Scotch song and story. Everybody knows—or is supposed to know—how well he fought for his royal master, Charles I, and perished for him on the scaffold. It was not until 1705 that the family reached the topmost round of the peerage ladder, the fourth marquis being made first Duke of Montrose for conspicuous service to the State.

LONDON, ENGLAND.

## Finis

BY EDWARD N. POMEROY.

THE end at last! The journey is completed;  
The fear of failure and its dread were vain;  
Doubt has gone by; despair has been defeated;  
And pleasure presently will vanquish pain.

The early radiance, the east adorning,  
With gold and crimson glorified the sky,  
And told the coming of a grander morning,  
The longing gaze to greet and gratify.

And it is here. The wealth of Orient splendor

Lay in the sun and never was withdrawn,  
But, in an effluence, divinely tender,  
The latter twilight broadens into dawn.

Conflict of conflicts that is won by losing!  
Tie that is strengthened by the severing  
knife!

Day that dies not but brightens at its closing!  
Sweet Revelation of the Book of Life!

WELLESLEY, MASS.

# An Artistic Treasure Trove

BY HELEN ZIMMERN

[The author of this article is an authority on art in Florence, where, during the season, she lectures on the public monuments of the Tuscan capital. Miss Zimmern is the author of many volumes on historical, literary and artistic subjects, and a contributor to various periodicals.—EDITOR.]

**A**STIR thrilled the world of art some few months ago at the news that there had been discovered in the Florentine Uffizi, in a hitherto neglected portfolio, some sixty odd

rough sketches that showed most unmistakably the master hand of Michel Angelo, and were clearly his first rough schemes for various of his most famous masterpieces.

Portrait of Julius II, Michael Angelo's Patron.

To Nerino Ferri, the keeper of the prints and engravings of that world famous collection, is the real discovery due, but he refused to put the prints upon the world on his sole authority, and called to his aid a German art critic, Emil Jacobsen, who confirmed and strengthened the keeper in his surmises. Consequently the discovery bears their joint names, tho the chief merit belongs to Ferri.

Upon the twenty-four sheets of paper, in more or less good preservation, of which the find consists, there are crowded a number of drawings, some of the slightest kind, many mere anatomical studies of muscle contortions or nervous movements, such as Michel Angelo loved to surprise in action. A few are drawn in black pencil, others in red chalk, but the larger number are drawn in silver point. This medium of itself implies a tender, slight line, but manipulated as it is here by Michel Angelo, whose nervous

haste to perpetuate on paper the images that crowded his fertile brain not infrequently caused the point to leave only its impression without having made a visible line; at moments even the point, in the master's eager haste, perforated the paper. We surprise this consummate craftsman in his moments of inspiration; in this intimacy we look into the workshop of his mind, we behold the rudimentary genesis of his mighty conceptions.

Of course to those who are not accustomed to read this species of artistic shorthand some of the sketches may seem a mere confused mass of lines, but to those who understand how to spell out and interpret such rapid touches their value is unspeakable.

There is, however, one powerful, rapid sketch among these papers that is an original in itself and was never further developed. This is the portrait head of that fiery, fierce Giuliano della Rovere,

Study of Knees, Including a Study for the Famous Statue of Night on the Medici Tombs in Florence.

Study for Sistine Chapel "Last Judgment." Figure of the Avenging Christ.

better known to the world as Pope Julius II, the man to whose liberal, enlightened patronage the world owes the Sistine Chapel frescos. Also, however, the man who by his constant change of purpose not unfrequently clipped the wings of Michel Angelo's activity and whose projected sepulchral monument was a cause of incessant annoyance to the artist. The head, seen in profile, drawn in black pencil, is almost life size. The rapidity wherewith the portrait was sketched is manifest. Michel Angelo probably had no sitting for this likeness of the haughty, impatient Pontiff, whose rough blocked physiognomy and salient character features he here puts before us with a master's hand. And it is all the

more precious because portraits from life are of extreme rarity among Michel Angelo's work. Critics discuss as to whether this may be a mere memory portrait, but Ferri is doubtless more correct in believing that the painter made this quick, short study of the most marked points of the Pontiff's fierce face during one of the frequent visits Julius paid to the artist while he was painting in the Sistine Chapel, and not getting forward quickly enough for the Pope's impatience.

For by a lucky chance this portrait dates itself. Julius is here represented as wearing a long beard. Now it is known that he only grew a beard after his second triumphal entry into con-

quered Bologna; and the Sistine ceiling, too, was taken in hand after this date.

It is interesting to compare this portrait with that of the same Pope painted

Interesting are three studies of bent left legs. The most fully carried out is clearly a study for the famous statue of "Night" on the sepulchral monument of

Studies for Fortifications of San Miniato, Also Studies of Halberds.  
Autograph Notes and Sketch of the Head of a Beardless Man.

by Raphael in the Vatican in his "History of Heliodorus." The intimate nature of the two artists is clearly revealed. Michel Angelo emphasized the peculiar traits of his model; the gentler Urbinate strove to mellow them.

On this same sheet are also seen two sketches of several male knees and upper legs.

Giuliano de' Medici in the Sagrestia Nuova of San Lorenzo in Florence. Indeed close study reveals that the entire figure is lightly drawn in, tho its outlines are blurred by the superimposition of some anatomical studies.

For it must be remembered that Michel Angelo drew these outlines for his own convenience, as rough memory

notes, and not for the gaze and convenience of posterity. On this same sheet, in the master's massive sculptural calligraphy, can be deciphered the word *Sticho*, which refers to the human tibia drawn above it.

A number of these sketches evidently refer to the great picture of the "Last Judgment" of the Sistine Chapel, and

and not the right that is raised in judging protest. On other sheets are studies for the groupings of the encircling figures and several for the Virgin's figure. In one she is represented as kneeling in supplication at the feet of her Son, a gentle first idea not carried into effect.

On an unfortunately torn sheet of paper that bears some autograph notes

More Studies for Fortifications, Also a Study of a Horse and Rider for the Great Picture in the Vatican of the Conversion of St. Paul.

very particularly is Michel Angelo obviously preoccupied as to the attitude to be given to his avenging Christ. In the sketch we reproduce it is the left arm

from the master's hand, too few to be legible as regards their sense, he has rapidly thrown on paper a variety of themes. First there are the sketches of

two halberds, not unlike those carried by the Swiss Guard of the Vatican, whose costumes Michel Angelo designed. There is further a tracing of the plans of a fortification in transverse sections, most probably for the fortifications of San Miniato al Monte of Florence, planned and executed by the artist on the occasion of the siege of Florence in 1529.

Then last, but certainly not least, there is drawn in a corner the powerful head of a beardless man.

At the back of this sheet (for Michel Angelo used both the back and front of his paper, since paper in those days was costly) are yet more suggestions for the fortifications of San Miniato, as well as another first design for one of his masterpieces. "The Conversion of St. Paul," in the Cappella Paolina of the Vatican. The divergence between project and execution is particularly interesting here. In the sketch, with its spirited vigor, despite its slightness, the horse is seen to shy at sight of the heavenly vision, and is in the act of throwing its rider. In the finished picture he is thrown and endeavors to quiet the excited beast. The

figures that flank it on each side are identical.

The limits of space do not permit me to treat of each sheet in detail. But I

must, before concluding, speak of just one more. Here we are doubtless face to face with a first plan for the twelve Apostles that in 1503 Michel Angelo undertook to execute for the Cathedral of Florence, a project never carried into effect, and of which there remains as evidence only the roughly blocked out stone now preserved in the courtyard of the Florentine Academy of Fine Arts. Here are seen all the sculptor's characteristic touches, the head small in proportion to the figure, as in the famous "David," the leg that toward the ankle grows curiously slender.

On every line and sheet is manifest how the artist did not shirk trouble, what care he expended on the carrying out with best effect of his ideas and his work, proving once again the truth of Carlyle's dictum that "Genius is an infinite capacity for taking pains." The

special interest of these sketches lies in what they show of the way Michel Angelo developed and perfected his ideas.

# Literature

## A Group of Books on Civics

It is generally recognized that the important problems of public law now confronting the American citizen are administrative in their nature. Constitutional questions have for the most part been laid to rest. In a few cases the need of minor changes in our fundamental law is recognized, but constitutional amendment no longer commands the interest of antebellum times. What we are most interested in at present are such questions as the organization of the civil service and the methods of selection of its officers; the proper distribution of administrative functions between the localities and the central government; the responsibility of the administration to the people and its relation to the political party. There is, accordingly, the great merit of timeliness in Professor Goodnow's work.<sup>1</sup> A bare enumeration of its main divisions will be a sufficient indication that it is a work which the public spirited citizen cannot afford to overlook.

Book I, entitled "The Separation of Powers," discusses the position of the executive and administrative authority in theory and practice. Book II, on "Central Administration," treats of the powers and organization of the Federal and State executive and its relation to other departments of government. Book III, on "Local Administration," is, perhaps, the part of greatest immediate interest, in view of the widespread interest in municipal problems. The remaining three books, on "The Official Relation," "Methods and Forms of Administrative Action," and "Control Over the Administration," are more technical in their nature. They will prove none the less interesting to the layman, altho they appear to be designed primarily for the lawyer.

Two characteristics of Professor Goodnow's method, which especially deserve commendation, are the careful study of the historical development of the institutions treated, and the close attention to the subtle modifications in

legal forms arising thru their practical application. As a result of this method the work presents a breadth of view and a freedom from dogmatism which entitle it to a high rank in the literature of political science.

The literature on the civil service and civil service reform has already reached such proportions that it would make up a very respectable library. In the main only one side of the question, merit system versus spoils system, is fairly represented in literature. Advocates of the former system have felt that it was little short of immoral to admit that any advantages might be found in the spoils system; and the spoilsmen have been too much engaged in action to produce any considerable literature. An opportunity, therefore, existed for the writing of an impartial history of the civil service, with an unbiased account of the practical advantages of the opposing systems of filling offices. Professor Fish has made the best possible use of this opportunity.<sup>2</sup> His complete impartiality is attested by his defense of the spoils system as employed by Jackson and his successors. Prior to that time, the civil service tended toward an aristocratic organization. Men of high family connections were placed in office; and they very soon came to regard their positions as a kind of private property. The spoils system reasserted the right of democracy to shape its own destinies. If it lowered the tone of the public service it created a widespread interest in politics; it gave the masses a political education such as the common people of no other country had enjoyed. With the demoralization of the public service, however, the spoils system lost its usefulness. Its admitted evils outweighed whatever good it contained, and the sound business sense of the community has forced the merit system upon the reluctant spoilsmen. With the aims of present day civil service reformers Professor Fish is in complete harmony, altho he refuses to misinterpret history in order to

<sup>1</sup> PRINCIPLES OF THE ADMINISTRATIVE LAW OF THE UNITED STATES. By Frank J. Goodnow. New York: G. P. Putnam's Sons. \$3.00.

<sup>2</sup> THE CIVIL SERVICE AND THE PATRONAGE. By Carl Russell Fish. New York: Longmans, Green & Co. \$2.00.

obtain an additional argument against the party machine.

Not much room for originality seems to be left for text book writers on civics. The topics that are to be discussed are generally agreed upon; the manner of treatment is pretty well fixed by custom. Dr. Forman,<sup>3</sup> while introducing no manifest innovations, has written a book which will rank among the best of its kind. It offers to the student a large mass of information, clear-

## The Tudors

THE Tudor age has not yet found a Stubbs or a Gardiner. Nevertheless, the period is not lacking in dramatic interest or historical importance. It was fruitful in striking personalities in Church and State and letters; it was no common age that could produce More and Wolsey, Drake, Shakespeare, and Francis Bacon. The constitutional historian, looking for development and transformations in national institutions, will find in

Mr. Burbank's Home, at Santa Rosa, California. From "New Creations in Plant Life," by W. S. Harwood. Copyright, 1905, by The Macmillan Company.

ly expressed, and free from the inaccuracies so common in text books on civics. Mr. Sherman<sup>4</sup> has added to the conventional discussion of governmental forms, a scheme of civil government which the enterprising teacher may organize among his students. By some such practical method, he believes, the extreme dulness which commonly characterizes work in civics may be relieved, and the young citizen may be given an abiding interest in civic affairs.

<sup>3</sup> ADVANCED CIVICS. By S. E. Forman. New York: The Century Co. \$1.25.

<sup>4</sup> CIVICS. By William H. Sherman. New York: The Macmillan Co. 90 cents.

Tudor absolutism materials no less fascinating than Magna Carta and the Petition of Right, and quite as important if one dared to say so. Moreover, a century which opens with the nation Catholic and orthodox and closes with the nation Protestant and verging toward dissent is surely as worthy of study as the age of Becket or Laud. Such an epoch deserves the life's labor of a great scholar seeking neither to praise nor condemn, but to tell the truth so far as the imperfect medium of the human mind will permit. Meanwhile we must content ourselves with the stock of fragmentary

works at our disposal to which two useful contributions have recently been made by Mr. Pollard<sup>1</sup> and Mr. Innes.<sup>2</sup> The volume on Henry VIII by the former was originally published in 1902 in the Goupil series, while the latter book forms a part of the set on English history from the earliest times to the nineteenth century, published under the editorship of Professor Oman of Oxford.

Naturally enough, both authors find the great ecclesiastical upheaval the most interesting theme in Henry VIII's reign, and their views on this controverted subject are worthy of consideration. Mr. Pollard rejects the idea that Henry's sole idea in seeking a divorce from Catharine and separation from Rome was the gratification of his passion for Anne Boleyn; the great events of this reign he attributes to the slow current of historic forces—"an inevitable movement of politics"—rather than to personal motives and royal actions. Henry merely directed a revolution which was inevitable and which, like the upheavals in nature, cannot be judged by moral standards. Specious as Mr. Pollard's argument may seem, it is scarcely convincing to one who has read Gasquet's "England on the Eve of the Reformation" or Gardiner's recent work on the English Church in the sixteenth century. This talk about historical forces is fine enough, but even partisans find it hard to discover much Protestantism or even anti-Clericalism in England before Henry's mighty passion for Anne Boleyn led to the breach with Rome.

The Catholic, however, who takes unction to his soul that Henry was vile and the Church suffered disruption rather than sanction his vice will find small comfort in Mr. Pollard's chapter on "The Pope's Dilemma." Not content with pointing out that Clement had declared another marriage null and void on exactly the same grounds as those upon which Henry himself sought divorce, Mr. Pollard pretty conclusively shows that it was not moral considerations as much as fear of Catherine's powerful nephew, the Emperor, that stayed the Pope in granting the coveted dispensation. The

Pope, as virtual prisoner of Charles V, therefore, could not bend to the imperious will of Henry, and the latter determined to take matters into his own hands by calling a Parliament which was destined to last seven years and carry thru the great measures which separated England from Rome.

Previous writers, notably Brewer, have maintained that this parliament was packed by the King's retainers and hence merely an instrument of his will. To carry out his theory that the Reformation was the product of slow moving and irresistible historical forces and not an accident of personal whim, Mr. Pollard combats this idea and contends that the famous Reformation Parliament was a fair expression of popular will. The evidence he cites in support of his conclusion is, however, by no means convincing; it is too vague and fragmentary. Mr. Innes with, perhaps, better discretion, avoids the discussion of this very important question, for it presents a very difficult problem which cannot be solved without prolonged research.

On the vexed question of the dissolution of the monasteries, Mr. Innes is convinced that the methods of the commissioners who inquired into their condition were "atrociously iniquitous," but that a strictly judicial investigation would have found a state of things often appalling, not seldom vicious, and commonly reprehensible and perhaps incapable of effective reform. Altho this proposition deserves far greater research than either of our authors has put on it, Mr. Pollard practically concurs in this view, but admits that Henry was more interested in getting the property of the monasteries than in reforming their morals. There is, however, a touch of comedy in Mr. Pollard's assertion that "It would be unjust to Henry to deny that he had always shown himself careful of the appearance, at least, of morality in the Church."

Mr. Innes devotes more space to the rule of Elizabeth than to that of her great father, Henry VIII. The diverse aspects of her remarkable reign are discussed with brevity and a due sense of proportion. The settlement in Church and State, the contest within Ireland, the tragedy of Mary Queen of Scots, the

<sup>1</sup> HENRY VIII. By A. F. Pollard. New York: Longmans, Green & Co. \$2.60.

<sup>2</sup> ENGLAND UNDER THE TUDORS. By Arthur D. Innes. New York: G. P. Putnam's Sons. \$3.00.

struggle with Spain, the operations of English seamen and explorers, and the beginnings of Puritanism are described, without any new or startling revelations, but with good judgment and considerable literary feeling. The case of the Queen of Scots Mr. Innes treats with judicial calmness; he points out the inconclusive character of the evidence urged against her, meets the charge of duplicity by calling attention to the duplicity of Elizabeth, but concludes that "if not law or precedent could be found applicable to the case, the execution of the Queen as a public danger was morally justifiable." On the whole the reign of Elizabeth calls forth "a reluctant admiration for a combination of good fortune and dexterity rather than for moral enthusiasm."

Both of these volumes are valuable additions to the literature of English history and will find a place in the student's library. They are no paste pot and scissors compilations, but the products of honest labor over authentic materials, well pondered and fused, with no little literary skill.

## In Memoriam, Annotated by the Author

The special value of this edition of *In Memoriam*\* lies in the author's Notes, now published for the first time, edited by his son, Hallam, Lord Tennyson, and in the introduction to these Notes, also by the poet's son. This introduction is

Sea Plume. From Mayer's "Sea-Shore Life." A. S. Barnes & Co.

made up of extracts from that chapter in Lord Tennyson's "Life" of his father that deals with *In Memoriam*.

Arthur H. Hallam, whose premature death gave rise to this poem, seems, by contemporary testimony, to have been worthy of the poet's lofty praise. Mr. Gladstone's review of the work is quoted

at length; he knew both Tennyson and Hallam and he said of *In Memoriam* that it was "perhaps the richest oblation ever offered by the affection of friendship at the tomb of the departed."

The first sections written (in 1833, the year of Hallam's death) were the two

"Fair ship that from the Italian shore." IX.  
"With trembling fingers did we weave." XXX.

Then, in the author's note book, came the first draft of "Morte d'Arthur," followed by Sections XXXI, LXXXV, XXVIII:

"When Lazarus left his charnel cave,"

"This truth came borne with bier and pall."

"It draweth near the birth of Christ."

The poem was not planned as a whole from the first, but the different sections were written at different times and places, as memories of his friend and their intercourse suggested them to the poet. It was not until many had been written that the thought of combining them in a whole occurred to the writer. According to Tennyson, as quoted in the introduction to the Notes and also in the "Life," *In Memoriam* is not an actual biography of his friend, but a poem "founded on our friendship, on the engagement of Arthur Hallam to my sister, on his sudden death at Vienna just before the time fixed for their marriage, and on his burial at Clevedon Church,"

\* IN MEMORIAM. Annotated by the Author. New York. The Macmillan Company. London: Macmillan & Co., Ltd. \$1.00.

The poem, he goes on to say, is meant to be a kind of *Divina Commedia*, ending with happiness. Thus, toward the close of the poem, the marriage of his youngest sister Cecilia is introduced. He adds:

"The different moods of Sorrow, as in a drama, are dramatically given, and my conviction that fear, doubts and suffering will find answer and relief only thru Faith in a God of Love. 'I' is not always the author speaking of himself, but the voice of the human race speaking thru him."

After the first sections, twenty-seven of them, that treat of Hallam's death, the divisions of the poem, says its author, are made by the first Christmas Eve, section XXVIII; second Christmas Eve, LXXVIII; and third Christmas Eve, CIV, CV, etc. *In Memoriam* was first published in 1850, and, oddly enough, it was not until 1880, thirty years afterward, that Tennyson learned that the meter he had adopted thruout the poem had been used by older poets. Up to that time he had supposed it to be original with himself.

The influence *In Memoriam* exerted upon the thought of its time is well described in the letter of Professor Sidgwick:

"What '*In Memoriam*' did for us," he says, "was to impress upon us the ineffaceable and ineradicable conviction that *humanity* will not and cannot acquiesce in a godless world;" and he adds that this impression was all the more forcible because the author was recognized as the "poet of science."

These "Author's Notes" will lead many gray-haired men and women to read once more the well loved verses that for them have banished doubts, strengthened faith and solaced bereavement for half a century.

**New Creations in Plant Life.** An Authoritative Account of the Life and Work of Luther Burbank. By W. S. Harwood. New York: The Macmillan Company. \$1.75.

The Carnegie Institution, in giving to Mr. Burbank a subsidy of \$100,000 in ten annual instalments, have carried out more literally than in some of their other appropriations the instructions of the founder, "to discover the exceptional man and enable him to make the work for which he seems specially designed his life work." For Luther Burbank has

certainly hit upon his life work in the breeding of new plants, as is proved by his enthusiasm, determination and success. He pursued that aim in the years of poverty and discouragement; he turned aside from wealth for it. A work more important for humanity it is hard to conceive of, for by increasing the yield of a crop he virtually enlarges the area of the habitable earth. To those who used to say that they would believe in Darwinism if anyone could show them a new species, he can offer such proofs by the hundred. New species are nowadays created rather than discovered. A man decides what kind of fruit or flower he wants and then sets out to make it. The reason why Mr. Burbank has accomplished so much is chiefly because he works on a scale approaching that of nature in the development of new species. He uses 500,000 plants in one experiment, and puts 500 different grafts on a single tree. With his remarkable crossings, the plumcot, the spineless cactus, the white blackberry, the pomato and the Shasta daisy, every newspaper reader is familiar. The present volume is written in the same style of extravagant eulogy as the periodical literature. The author shows no desire or ability to make a critical examination of his achievements and to arrive at a just estimate of their practical and scientific value. He devotes much space to vociferously asserting that Mr. Burbank is a scientist of the highest type, but he fails to give in the book any scientific laws discovered or formulated by him.

**Sea-Shore Life.** The Invertebrates of the New York Coast and Adjacent Coast Region. By Alfred Goldborough Mayer. New York: A. S. Barnes & Co.

If the other books of the Nature Series issued by the New York Aquarium prove to be as good as this they will be very useful to the lover and the student of sea life. Children who walk along the beach, and grown ups whose organ of curiosity has not become atrophied thru disuse, are always finding curious things cast up by the sea, and it is usually difficult to find any one about who can tell what they are. This book is, therefore, one that should be put with the baggage which is to be taken to the seaside next summer. It is a concrete refutation of

the theory that a genuine scientist can not write on his specialty in a style comprehensible to the ordinary man. The author is director of the new Marine Biological Laboratory established by the Carnegie Institution at Tortugas, Florida, but, notwithstanding that he knows so much about his subject, he is able to tell what he knows, and to make it interesting, too, without tricking it out with the false psychology and fairy fancies that mar so many nature books nowadays.

**Animal Snapshots and How Made.** By Silas A. Lottridge. Illustrated with Photographs from Nature. New York: Henry Holt & Co. \$1.75.

Any book which encourages the custom of hunting with a camera instead of with a gun is to be welcomed, especially if it is so practical and interesting as this. The author begins with some sensible and elementary advice about the choice of apparatus, and gives abundant evidence of his success as a nature photographer by a large number of excellent snapshots. They are all the more useful to the average reader in that they are not of the animals of Africa or the

birds of Labrador, but are photographs of our common birds and mammals, such as the reader himself can take, provided—but we will not state the provisos lest it should discourage him from undertaking it. The opossum, the skunk, the woodchuck, the raccoon, the fox and the squirrel, and the robin, bluebird, crow and owl are among those photographed and described. To some of our friends who are zealously contending for animal rights, we put the question of whether Mr. Lottridge did not commit a breach of etiquette, if not of ethics, in connecting a telephone with a bluebird's nest in order to listen to the conversation in the privacy of the family circle.

**Lord George Bentinck.** A Political Biography. By B. Disraeli. With an introduction by Charles Whibley. Pp. li, 382. New York: E. P. Dutton & Co. \$2.00.

A reissue of Disraeli's "Life of Lord George Bentinck," which was written in 1852, is peculiarly timely at a moment when, after the lapse of half a century, the cause which Bentinck and Disraeli championed is revived by Chamberlain. Were it not for the somewhat artificial revival of the cry of Protection, the short

The Red-Tailed Hawk. From "Animal Snap-Shots and How They Are Made." Henry Holt & Co.

political career of Bentinck could have comparatively little interest even for students of English politics. Disraeli wrote shortly after the death of Bentinck, when almost all the contemporary figures in political life were still living, and when as yet the vast amount of material which was afterwards to illustrate and explain the period had not yet come to light. The value of this reissue therefore rests almost wholly on the parallel which is now afforded between the situation in 1846 and the situation created by Mr. Chamberlain. Mr. Charles Whibley, who has edited the new edition of Disraeli's biography, has evidently put it forward, expecting that the result of Chamberlain's protection crusade would be a triumphant vindication of the principles fought for by Bentinck and his biographer; for he speaks of the survivors of that time as now about to "witness the approaching triumph of a cause which has been neglected for more than half a century." This prediction is in keeping with the degree of political acumen shown by Mr. Whibley in his judgments of Sir Robert Peel and of Cobden—by such a characterization as he gives, when he says that Cobden, "like most Radicals, lived in a fool's paradise, where facts are of no account, and where, if principles prove fallacious, it is not the fault of the optimist who frames them, but of some vile conspirator against the common good." Mr. Whibley's introduction occupies fifty-one pages. The reader would have felt more gratitude if he had omitted it, and given an index; for the book contains neither index nor detailed table of contents. Nor is it wise for Mr. Whibley, who has already published a "Life of Thackeray," and who is promising the world a new biography of Pitt, to speak of the "arid prose of conventional biography." In truth, Mr. Whibley must hold himself vastly superior to contemporary writers, whether of books or newspapers; for he speaks in another place of Disraeli's work as "free from the taint of journalism." In his historical introduction, Mr. Whibley has certainly managed to compress into a few pages an exhibition of a lack of political judgment and foresight, along with a degree of supercilious cocksureness which will

not conduce to recommend his work to the reading public.

**L'Eglise Réformée de France.** By Frank Puaux. Paris: Librairie Fischbacher.

The question of the separation of Church and State brought forth in France an immense quantity of literature. No doubt the greatest part will be forgotten just as soon as the new order of things shall be definitively established there, as it has been in this country for over a century. But sometimes, in such *littérature d'occasion*, masterpieces are produced which deserve to remain. It has been our good fortune to run across a pamphlet that may well be distinguished in this manner. There are seventy pages of small size, a marvelous compendium of the whole and rich history of the unfortunate Huguenots of France. The purpose of this admirable little book is to arouse the courage of the Protestant congregations of France in the crisis which now confronts them. They are especially financial difficulties—supporting churches and universities—which have to be overcome by not particularly wealthy congregations. The author is the man who has been and probably still is—altho he has now entrusted to younger hands the well known *Revue Chrétienne*—the chief leader of the cause of Protestantism in France in our generation, Mr. Frank Puaux. Certainly, if anything can inspire in his co-believers enthusiasm for their churches, it will be to have in mind constantly the terrible but glorious history of their ancestors, and they will surely, after reading the eloquent pages of Mr. Puaux, say with him. "*Nos pères ont donné leur vie, et nous ne saurions donner notre argent.*"

**Landscape Painting and Modern Dutch Artists.** By E. B. Greenshields. New York: The Baker & Taylor Co. \$2.00.

This is largely composed of somewhat imperfectly fused essays, neither profound nor novel, but agreeably written and giving information that will be helpful to many in teaching them how to see pictures. The author first traces the history of landscape painting from the incidental and conventional sketches that the Italian painters introduced into their

backgrounds, down thru Rubens, Poussin, Claude, Constable and Watteau, to Turner and Corot, and defends with superabundant quotations from poets and critics the legitimacy of the subjective treatment of nature. The latter half of the book, of much more interest and value than the former, consists of a discussion of the seven leaders of the modern Dutch revival, Josef Israels, the father of the school, the three brothers, Matthew, James and William Maris, Anton Mauve, J. H. Weissenbruck and J. Rosboom. These are all impressionists in the

**Australian Life in Town and Country.** By E. C. Buley. New York: G. P. Putnam's Sons. \$1.20.

There is probably no other civilized people whom we know less about than the Australians, because there is no emigration and little travel between our country and theirs, and Australia plays no conspicuous part in international politics. There is some curiosity and much controversy about its novel labor legislation, but most people have only vague ideas of its life. The especial virtue of this book is its elementariness; it does

The Anxious Family. By Josef Israels. From Greenshields's "Landscape Painting and Modern Dutch Artists." Baker & Taylor Company.

best sense of the word, and the most that they have in common is their ability to give atmospheric effects, both interior and out of doors. Their art is traditionally Dutch in the homeliness of its subjects, yet infused with modern sentiment and treated with a new technique. The forty-five full page half-tones bring the characteristics of each artist mentioned vividly before the reader.

not assume much more previous knowledge than the ordinary reader possesses, and it tells the little things that the native does not see, because they are so familiar, but which most interest the traveler because they are so strange. City and society life is tediously alike the world over, so the author is wise in devoting most of the book to the second part of its title, to the "sheep station,"

the "selections" and "Never - Never Land," so similar in its elements to the homesteads, ranches and mining camps and so unlike in form and phraseology. They have many of the same problems that we have, but in their attempts to solve them they show a greater freedom from traditionalism and day by day op-

independent civilization, better adapted to the environment than that the colonists brought with them from home. Australia is finding its legs.

**The Dynasts—Part II.** By Thomas Hardy.  
New York: The Macmillan Co. \$1.50.

Mr. Hardy has published the second

Sluicing for Gold at Freshwater. From "Australian Life in Town and Country." Putnam.

portunism, which is as much ahead of the United States as it is of England. Perhaps the most interesting thing brought out in this book is the tendency shown all thru Australian life, from higher politics to home customs, to break away from the mother country and to develop a new and

part of his monumental drama, *The Dynasts*, in which he views history as a naturalist might peering thru his field glass at a swarming ant hill. Again the "Spirit Ironie," the "Spirit of the Years," the "Spirit of the Pities" and the "Recording Angels" (the plural form is Mr.

Hardy's) hover above battle field and royal bower and council chamber of kings. Or we may fancy the author as an apiarist looking into one hive after another, watching the wars and labors of each and the swarms led by young queens. It is not drama; it is natural history. Only the ants and bees happen to be men and women; such men as Fox, Napoleon, Talleyrand, and such women as Queen Louise, Josephine and Marie

Not thus are dramas made. It is too inhuman or extrahuman. Thomas Hardy writes his "drama of the Napoleonic wars" in nineteen acts and one hundred and thirty scenes, without one thought of its ever being staged except in the visualizing imagination of the reader, who will feel the need of a larger room than a "closet" in which to read so colossal a play. The aerial music sung by the Pities above the Battle

Thomas Hardy, Author of "The Dynasts."

Louise, while above them the strange spirits of the air sing requiems and prophetic masses over the destiny of the Dynasts. It is a drama in which the real characters are nations, rather than men driven by the personified "Will" of which we hear much from the aerial cast:

*"Spirit of The Years.*

Strange,  
He's of the few in Europe who discern  
The working of the Will."

of Albuera has a weird beauty in its refrain, "*Albuera*," and again:

"Something within me aches to pray  
To some great Heart to take away  
This evil day, this evil day."

The strange "stage directions," especially the battle scenes, have all the impressiveness of Mr. Hardy's matchless prose. It is like reading history by flashes of lightning. *The Dynasts* is a

gloomy and powerful epic, but it is not a drama.

**Michel de Montaigne.** By Edward Dowden. Philadelphia: J. B. Lippincott Co. \$1.50.

Professor Dowden's *Montaigne* is the first of the "French Men of Letters." Exactly why this subject should have been assigned to Professor Dowden does not appear. To be sure, no one else has pre-empted the ground, and Professor Dowden has written a sketch of French literature. But there would seem to be little kinship between Shelley's florid and enthusiastic biographer and this shrewd, satiric spirit of mental reserves and *arrière-pensées*. The idea of the series itself is evidently suggested by "Les Grands Ecrivains Français," with which it agrees in its general scope. And inasmuch as Professor Dowden's book is not a work of investigation, but of general criticism, and has virtually no new information to contribute, a translation of M. Stapfer's "Montaigne" out of the latter series would have answered every purpose and saved an extravagant duplication of labor. English criticism cannot compete with French; to meet that terrible engine of literary execution on its own ground is to invite discomfiture. Professor Dowden's volume is by no means contemptible, but it is unfortunate, like most of this serial piecework, in doing again what has been better done already. In comparison with Mr. Stapfer's, his portrait of Montaigne is sadly lacking in sharpness, definition and precision; his analysis of that writer's philosophy is diffuse, vague and unmethodical. That there is a place for such a book, however, is probable; it is written in English and it suits the less strenuous critical temper of the English reader.

### Literary Notes

....Our readers may be glad to have their attention called now to some books published this spring by Silver, Burdett & Co. Among these are an elementary English Grammar of unusual clearness and simplicity of treatment by A. Le R. Bartlett and H. L. McBain; three volumes of American history, *i. e.*, *The Making of the American Nation*, by J. W. Redway, very completely illustrated with pictures and maps; the *Essentials of United States History*, by William A. and Blanch S. Mowry, and *The War of 1812*; the third volume of

Everett T. Tomlinson's *Stories of Colony and Nation*; and for supplementary school reading a well annotated edition of Poe's *Tales and Poems* and Tennyson's *In Memoriam*, and a descriptive reader entitled *Views in Africa*. The same publishers announce a new series of arithmetics, readers and physiologies.

....Count Tolstoy writes us that the article we printed in our issue of January 4, 1906, entitled "A Letter to the Czar and His Advisers," was not written by him and does not express his views. Mr. Herman Bernstein, who translated and procured the article for us, informs us that it was first published in a Russian newspaper, signed Count Tolstoy, and was sent to him as supposedly authentic by one of his Russian correspondents.

....Mr. Warren K. Moorehead, curator of the Department of American Archeology, Phillips Academy, Andover, Mass., has in preparation a volume of 900 pages, which will cover the arts of the American aborigines in pre-Columbian times. The volume is to be called *The Stone Age*, and will be an archeological encyclopedia of the implements, ornaments and utensils of the prehistoric tribes of the United States. It will be copiously illustrated and will be published thru the Funk & Wagnalls Company.

....Prof. J. McKeen Cattell, under an appropriation from the Carnegie Institution, has prepared *A Biographical Directory of American Men of Science*, which includes the addresses, positions, degrees and lines of work of more than 4,000 men of science in North America. Practically all who have done any research work are included. The thousand who have made contributions of real importance to science have been distinguished by an asterisk, after the manner of Baedeker's guide-book. (The Science Press, New York.)

....The Essex House Press, London, announces that it is prepared to print, for private use of their owners, short accounts of interesting or historic country houses in limited editions. The next volume to issue from this well known press is to be Bishop Fisher's *Mornyng Remembraunce*, limited to 125 copies, in red and black. This famous biography of the Lady Margaret, Countess of Richmond, the mother of King Henry VII, and first made public in the form of her funeral oration, is one of the earliest of English classics.

....We have good reason to think, from the letters we receive from our subscribers, that they have been interested in the brief autobiographies which have formed a unique feature of THE INDEPENDENT for the last few years. We believe that many of those who enjoyed reading them as they appeared in the magazine will want to get them in a more permanent and convenient form for their libraries or to give them to their friends, so we have collected the best of them, such as "The Confession of a Japanese Servant," "From Lithuania to the Chicago Stockyards," "The Life Story of a French Dressmaker," "The Story of a Handicapped Life," into a volume which will be published in a week or two.

## Not for Railroad Companies

WE may reasonably infer from the story of Senator La Follette's attempt to guard the great coal deposits of Indian Territory that railroad companies still have friends in the Senate, and that these friends have not been chastened or restrained by the recent exposure of evils due to the control of coal mines by common carriers. Some weeks ago, in the course of debate upon a bill for terminating the tribal relations of the five civilized Indian tribes, Mr. La Follette spoke very earnestly in support of his amendment, which forbade the acquisition of the tribes' coal lands by railroad companies. A vote upon this amendment was avoided, the Senate deciding that the Government should not dispose of the coal lands until after the expiration of certain existing leases.

There appeared to be an understanding that the obnoxious provision of the bill should not be revived. Afterward, however, there was evidence of an understanding that it should be restored quietly by a conference committee, with the hope that it would escape inspection at the time of a final vote. But the new Senator from Wisconsin was not to be deceived. When the bill was reported last week from the conference committee, with the same old leasing paragraph in it, he attacked it sharply, and we hope that his attack will prove to have been successful.

These enormous deposits of coal are a prize great enough to excite the greed of any railroad company that ever granted unlawful rebates to a friend's coal mine or a brother's Salt Trust. Citing the figures of a Geological Survey report, Mr. La Follette showed that there are 437,734 acres of them, in which the coal is believed to have an average value of \$10,000 per acre. This estimate is based upon the tonnage royalties now paid by the lessees of 104,000 acres.

Who control these leases? There are 113 of them, and 53 are held by the railroad companies that have lines in the Territory. We presume that these companies would like to obtain possession

of the remaining 333,734 acres upon the leases for thirty years for which provision is made in that quietly restored paragraph to which Mr. La Follette objects. Here, then, is coal worth more than \$3,000,000,000, a deposit said to surpass any other of its kind in the country, and the railroad companies are longing to get hold of it. They should not be allowed to have any part of these lands, not an acre.

Railroad companies should be required and compelled by law to confine their energies to the business of transportation. They should be common carriers and nothing else. Every one is familiar with the evils arising out of the ownership by railroad companies of the commodities they carry. Within the last few weeks those evils have been shown by the decision in the Chesapeake & Ohio case and by the abundant evidence, produced in the Senate, of the injustice and oppression due to the monopolistic coal-railroad combinations in West Virginia and elsewhere.

It is on account of this evidence of injustice and oppression that Congress has ordered a searching investigation as to all such combinations of production and transportation. The growth of such combinations in recent years has been rapid. Independent mine owners, working at a disadvantage by reason of the competition (frequently unjust and unlawful) of railroad mine owners, are disappearing. They now control but a very small part of the anthracite output in Pennsylvania, where the combination and the rate practices of their common carrier competitors are the subject of an official inquiry suggested by alleged violations of law. Similar conditions are seen in the Eastern bituminous mining districts traversed by several parallel roads that are really under one and the same management. The Railroad Rate bill now pending should be so amended as to require railroad companies to get out of the coal mining business and stay out of it.

These coal lands in Indian Territory should not be leased at present to any

one, and surely not to railroad companies or representatives of such corporations. The Government should have them carefully and thoroly examined by competent persons. Their value should be made known in detailed statements for the information of the public. Mr. La Follette says that, judging by the mines already in operation, they are worth \$174,000,000 in royalties alone, at only 8 cents a ton.

All this mineral wealth, unlike the hard coal deposits of the anthracite combination, or the scattered and numerous deposits of soft coal which are gradually coming into the possession of railroad companies, is controlled by the Government of the United States. It is a trust that should be administered with due regard for the interests of the people as well as for those of the nation's wards, whose claims are admitted.

It will be time enough to decide what the Government's policy ought to be, when every accessible fact about this great store of coal shall have been ascertained and given to the public. Possibly it will be best then to lease the lands, in tracts of convenient size, to the highest bidders, under such restrictions as the public interest may require. It may be desirable and expedient to make some use of this Government control for the restraint of monopolistic coal combinations under private ownership. It is conceivable that at some future time a majority of the American people may prefer that the mines shall be developed directly under Government control in the interest of the public as well as for the benefit of the Indians. There is no need of haste, but there is need that honest legislators shall be on guard, as Mr. La Follette has been, to prevent a surrender of this great property to the railroad companies by lease or otherwise.

### The Moral

It is easy to adorn another person's experience with the proper moral, but hard to point our own with that kind of an Æsop's sting. We lack the right perspective, and, even if we had it, the duty is too painful. This is the trouble with the "Bachelor Maid." After making an effort to live according to a systematic

dispensation of her time and circumstances, she discovers that neither is within her power to control. Under the title "A Week of System" she gives in this issue of THE INDEPENDENT the details of her failure, and at the conclusion she asks, plaintively: "But where is the moral?"

We have asked a wise woman, who replies that if the Maid were not herself she would know, what every reader of her article must see at a glance, that "the moral" is *Don't be a Bachelor Maid*. There are inconveniences connected with the married life for women, but they are not to be compared with the disadvantages of remaining single. When a woman marries she is no longer an ambitious little comet tangling herself up in the tail of her own glories in her effort to sail in all directions at once, but she is a star with a home orbit and a diurnal system of her own. This is why she is not borrowed to finish out other people's systems. She divides her time between her husband, children and home. These divisions are not arbitrary, like a dial of New Year's resolutions, but they last longer because they are natural, like the rising and setting of the sun. They cannot be put off or changed, because life, love and happiness depend upon them. To be sure, she will not have much time to devote to the study of "Philology." But did any one ever hear of a married woman's grieving because she could not find time to devote to philology? Besides, why should she study the science of mere words when the science of her own household is more interesting and far more elevating? When a woman has a husband and five children to learn by heart she can dispense with Mommsen's theory about the kinship of the ancient tribes in Italy deduced from the history of their language. And it is not so important for her to keep up her music as it is for a bachelor maid, whose "loftiest aim in life is to disprove by personal example the absurd charge that professional women lack the graces of those bred for matrimony alone," because her loftiest aim in life is not to prove an unpopular theory, but it is to bring up sons and daughters who will do the singing for her. Besides, the bachelor maid, no less than the fat mother woman, must

grow old at last and get the *age* sound in her singing voice. Age tells first in an old maid's larynx, they say. Then, of course, she would give herself over more and more to the study and teaching of philology and to work in the Y. W. C. A. But no one can teach forever, and there comes a time when study becomes a mere grubbing habit. And the relaxation of the Y. W. C. A. is not bad, but it would have been better if she could have had daughters of her own to train into Christian women. That is, it would have been more lasting, more filling to the heart. And when one gets past a certain age, if the heart is empty, the whole of life is an emptiness, no matter how much one knows about philology. Then the pretty bachelor maid with the fascinating knight errant ideals will have changed into just an "old maid," with a sour mouth, a "strong face" and the muscle strings in her neck showing under the shriveled skin. After that change takes place no one will interrupt her effort to systematize her time. No young man will represent that it is the "fondest desire of his heart" to go with her to hear "Die Walküre." Young men do not talk to old maids that way. If they take them anywhere it is an honor or a duty to do so, but it will not be the expression of a "fond desire."

In short, if the Bachelor Maid persists in being a bachelor long enough she is likely to have more time than she needs to experiment in systematic living. And if she follows the plan laid out in her article she will flatten out into an ugly female authority on the origin and history of words. She will be a "hack" who is glad to do all the hard jobs in connection with the Y. W. C. A. work just to feel that she is not utterly useless. She will wish to keep her class in the mission Sunday school for the same reason; but the attention of the little street gamins, who regard her now with such naïve, sooty-faced admiration, will wander, because the roses in an old maid's cheeks die, and they will feel the spiritual dearth of color in her face. They will miss the sweetening out of her voice when she asks them useful questions about Moses and the prophets. She will come down to mending the clothes of her brother's wife, work innumerable button-

holes in their little boys' jackets, make herself a perfect slave for the family, be treated with tolerant kindness in return, and still feel that she is sadly superfluous—because she *is*, you know. All her life she has spent patching out other people's "systems," filling in their idleness with her charm and strength, and now when ambition is on the wane, when the hope of admiration is dead in her breast (and, mark you, the bachelor maid desires that as much as the normal maid who gives herself in simple womanly payment for it in marriage!), when there is no longer any urgent need of cultivating her mind, she can have all her time for it. Some people may need her, but nobody will really want her for herself.

And now, for the sake of other swaggering "bachelor maids" who may contemplate making similar experiments, a final word about systematic living: No one who is not profoundly selfish or too old to be attractive or desirable can live according to an arbitrary "system," founded upon the ambition to cultivate oneself, even in the noblest Christian traits and intellectual attainments. Also, there is no bondage so enslaving as that required by a "system" of this kind. It is the first thing which marks those women who practice cults and isms as self-conscious, strained and erratic. They do not belong to themselves; they are the bond servants of a system or a theory of life which is arbitrary. It is best to conform to nature in this matter—that is, wear comfortable clothes, eat some meat and some green stuff. A "system" would be sure to put you in a "Ferris waist" and entirely on a vegetable diet. It is best to have a lover, to get married, to bear children, even if it takes all your time from the study of philology, from piano practice, from charitable works. It tends less to conceit, more toward health and to the right order of things, and it pays better in the long run. Even if you are poor, if your husband is disagreeable and your children are aggravating, it pays better at that end of life when the "old maid's" life pays her nothing, except the charity and politeness of relatives and friends.

So says the wise woman whom we have consulted, but we do not know.

## A German Professor on American Universities

LAST winter, when Professor Ostwald was lecturing in Harvard and Columbia, his class room was thronged with people who knew little about his ionic theory of chemistry or his energetic theory of metaphysics, but who were curious to see how the great German scholar looked. It now appears that Professor Ostwald had eyes, too, and was studying his auditors while they were studying him. His official report of his observations and impressions of American universities will be given in his memorial to the Prussian Royal Kultus-Ministerium, from whom he received his leave of absence, but he has given in the *Leipziger Nachrichten* of February 13th some of his experiences in America. In this he tells us some things about ourselves that we knew before and some that we did not.

Among the latter we must class his statement that "Cambridge is the center of the total abstinence movement in America, and the students of Harvard University practice strict temperance in the use of alcoholic beverages." Thus is definitely nailed the slanderous rumors that have been in circulation regarding the habits of Harvard students. But all estimates are comparative. What appears from the standpoint of the *Leipziger Kommers* "strict temperance" might seem like wild dissipation to a Kansas prohibitionist.

He found the American students very slow in their reception of his methods of teaching, and he thinks this is due, on the one hand, to the inferior scientific preparation of our students, which is about two years less than that required for entrance to German universities, and, on the other, to the very different system prevailing here. "In America they know nothing of our cherished academic liberty. The American student is under the continual supervision of the professors and officers of the institution." In contrast to the German system, where the student can attend lectures or not, as he pleases, and has only one examination at the completion of his course, the American student must pass thirty or forty examinations, and attend the lectures throughout his four years' course.

Professor Ostwald specially emphasized that

"the personal interest of American students, apart from their studies, is concentrated wholly upon sport. Athletics completely diverts the academic youth from intellectual and esthetic interests. Football is pre-eminent, but is so conducted that the academic and State authorities are about to prohibit it entirely. During the course of a single semester nineteen students fell a sacrifice to the game of football. A stadium—a sort of amphitheater with room for many thousands of spectators—is provided by every American university for these contests."

He finds that while the American students have to pay much more than the German, yet the salaries of American professors are very small and scarcely adequate to the comfortable maintenance of the standard of life required by their position. The social standing of university professors in America is, however, much inferior to what it is in Germany, "where the scholar justly enjoys general appreciation and respect in the highest circles." The American professor is not independent—appointed for life like the German—but is subject to the will of the president, "who is clothed with the most extensive privileges and exercises extensive authority. Every thread of the administration unites in his person."

Professor Ostwald seems to have been unfortunate in his boarding places. Cambridge, he says, is a small town, without industries or commerce, and does not even possess a good hotel. He was unable to find there the comfort (*Bequemlichkeit*) that a German professor has a right to demand. He and his family were obliged to stay at one of the few private boarding houses of the town and be satisfied with what accommodation they could get there. The students, on the other hand, are well provided for in the university dormitories, and only a few of them live in private quarters as in Germany.

Generally speaking, he says, American universities are modeled after the English, and have, therefore, taken on a clerical character. The majority of them are not, as in Germany, supported by the State, but owe their origin and existence to wealthy endowments. Education is, therefore, much more expensive than in Germany.

It is a pity Professor Ostwald did not extend his visit to the West, for it

would have enabled him to get a fairer view of higher education in America, and he would have modified some of his strictures. He would have found the State universities of the West more like those of Germany in several respects. The tuition fee is little or nothing, the students board about the town instead of in dormitories, and the clerical and patronistic influences he noted in the East are absent.

In criticising Harvard for "the insignificant minority" of its graduate students, only 380 out of a total of 5,000, he is obviously unjust in not including the Law, Medical and Divinity Schools. The thousand students in these professional schools should be classed with the graduate students in Arts and Science, for a Bachelor's degree is required of them for entrance.

Professor Ostwald is heartily in favor of the continuance of the plan for the exchange of professors between German and American universities. His experiences during his five months stay in America were altogether pleasant and he has brought the most favorable impressions and many practical ideas back with him to his German home. "His American colleagues showed themselves very susceptible to new suggestions, and on their part strove continually to help make the stay of the German scholar in a strange land as homelike and pleasant as possible."

We suggest, however, that when we have another German Professor *als Gast*, that we take him around the country more and give him more to eat and drink.

### The Heresy of Over-Faith

AT last the excess of faith has passed its limits and overreached itself in the case of Dr. Dowie's Zion Church at Zion City. The people, and even the deacons and elders, and Mrs. Dowie herself, have rebelled against the authority of Elijah III., and have deposed him from his authority in his absence. It was too much to yield obedience to an absent paralytic when obligations were becoming due and Zion City was in danger of going into liquidation. Accordingly, his remarkable experiment of creating a holy community,

from which all vice is to be banished, and the follies and frailties as well, is to be carried on by the will of the community and not by that of one single man, whose inspiration was suffering from hemiplegia.

The patience and credulity of Dowie's deluded followers have reached the limit, and their act deposing him is an extraordinary utterance of their disillusionment. Indeed, they seem to have broken all bounds, and they make charges against him that are almost beyond belief. They accuse him of "extravagance" (doubtless true), "hypocrisy, misrepresentation, exaggeration, misuse of investments, tyranny and injustice," and then they say that he is "suspended from office and membership for polygamous teaching and other grave charges." That he is guilty of "polygamous teaching" is a great surprise, altho he might have found it, with other things, in the Bible; but the other charges are such as one party in an ecclesiastical quarrel makes of another. We presume they are true, for they are just the sins to which a fanatic is liable.

Like the Latter Day Saints, this is an illustration, not of the decay, but of the excess of faith over reason; only this organization was founded on the Scriptures, pure and simple, and not, like Mormonism, on conscious fraud. Here were no buried golden tablets, but simply the Holy Scriptures, to be interpreted literally. But here was, as with Mormonism, a positive man, who could assert and claim loudly, and no claim is so ridiculous and absurd to reason that it will not find followers of the class who pin their faith to other people's skirts. Most people cannot think, can only follow, and when they are in the attraction of a positive man they must follow him as surely as the tail follows the kite. They are lucky who have as wise and shrewd, and, we will say, as honest, a leader as Dr. Dowie at first was, but it is their chance to follow Theudas. For we believe that Dr. Dowie was essentially an honest zealot, who believed in his own inspiration, and was puffed up with his own self-importance, until he has burst from the extravagance of his own inflation, as other fanatics have done who imagined themselves absolved from moral law, doing evil that good might come.

For, be it remembered, that he taught nothing that he did not find in the Bible. He began with faith healing. The New Testament is full of it, and every wise physician knows its present value. But he would have nothing else in case of sickness except faith. "The prayer of faith shall heal the sick" was to him and his following the end of all medicine. That kind of miracles he performed, and his assistants performed, even altho death and sickness were not banished from Zion, and his daughter died from a burn, and he is himself suffering from a stroke. The Bible forbids pig meat, and so did he, and he "fenced the law" by adding tobacco to the prohibition, as well as all intoxicating liquors. The Bible requires tithes, and so did he. The Bible creates a theocracy, and such was his divine, autocratic rule over the Church; he, the Messenger, the very voice of God, being the single personal proprietor of all the property of Zion. It was a great idea of his to create a city, which he believed would grow into a state, and finally embrace the world, in which the full biblical rule would be obeyed; and we are not sorry to have the remarkable experiment carried out to its possible end, for, on the sociological side, there is much good in it.

His error was that of all these extravagant enthusiasts—the lack of discrimination. Faith is good, but it blunders apart from cold reason. The law of tithes may have been good for Palestine, but not for us. The prayer of faith was and is an excellent thing, but not enough in these days of scientific medicine. A theocracy is a fine way of ruling a state where the priests are the only intelligent men, and the people are slaves of the soil. But these are other days, in which human wisdom and divine have given us new revelations of duty and government and civil liberty, which the Bible saints and prophets and apostles knew nothing of. To us is left the not always easy duty and privilege of applying the basal principles of the Bible to our own conditions and our new knowledge. Meanwhile we shall stumble on, making many failures, because we have not all of us the will to do right, which Dr. Dowie's followers have; and the strict temperance and religious uprightness of the over-faith of Zion may set us an example which we

will do well to consider. At any rate, we hope that the deposition of Dowie will not put an end to the experiment of Zion City.

## The Success of the Moroccan Conference

It was essential that the conference at Algeciras should not fail. Neither Germany nor France wants war or is ready for it, and they were as much bound to come to an agreement as were Russia and Japan at Portsmouth, even tho they might insist and insist on their several positions until they had worn out their patience and had reached the end of concession.

What is the large meaning of the conclusion? Nominally we must say that Germany has maintained her principles and lost her case. She has won her fight against the exclusive right of France to control the police and secure order in Morocco, but she has left France there in actual control, with the help of Spain, and that is substantially all, or nearly all, that France claimed.

It is not always easily seen why France is so insistent on her primacy in Morocco; but the need of it to her is real. France is a colonial Power, while Germany is not. She has managed, and in ways as fair as international enlargement usually is, to secure the right of authority or influence over a larger area in Africa than any other nation. This came naturally to her, for Algeria is just opposite her coasts, a short sail across the narrow Mediterranean. So Algeria became by a necessity of neighborhood the field of her commerce and rule. She has made of Algeria a well governed and prosperous dependency, and the same is coming to be the case with Tunis. The south of Algeria is the Great Desert, and beyond that the further hinterland which includes Timbuctu to the west and Lake Tchad to the east; and all this immense region, not yet fully ruled, now is claimed, and, in a measure, held by France. This makes an enormous empire. Since the war with Prussia and the terrible defeat of 1870 France has created this vast empire in Africa, not to speak of Anam or Madagascar; while Prussia has simply consolidated the German States and

added some useless and expensive colonies on the African coast.

But the German colonies are an ex-crescence and a burden to her, while the African possessions are all the hope and outlet of France. There is all her ambition. While France does not increase her population in Europe, she finds some room for her sons in Africa, and there we may expect, as in other colonies, larger families. One of these days the better part of France will be south of the Sea. But France does not want any interference with her aims. She does not, of all things, want Germany to put her foot in Morocco, and then push downward and outward where she has staked her claim. Germany is not beyond the suspicion of such intermeddling.

As Paul Adam has lately said, France may lose, and is likely to lose, her possessions in Asia. They are of no strength to her, only a weakness. They have to be defended; and when China arises and puts on her arms France and Germany and England as well will have to leave her coasts. The people of Anam and Tonquin are Chinese in spirit and race, and China long ago held a suzerainty over them, and will not forget her rights. The pretences of Western nations will be resented and their aggressions repelled. Then France will have to retreat to her own neighborhood, which is that of North Africa, and there she will build up one of the most powerful empires in the world, one that will supply an indefinite number of soldiers in time of war. Great Britain takes, to be sure, the more valuable portions of Africa, Egypt and the Sudan and all South Africa, so that she can almost run a railroad from the Cape to Cairo thru her own territory; but yet she has not the great solid contiguous empire that France holds, close to her own shores. And North Africa is no mean possession. The ancient empire of Carthage is hers, and she will be predominant all the way from Tunis clear around the western coast nearly to the Equator. She has really won her cause in this conference, for she has kept Germany from taking the naval station at Mogador, and has only delayed her sure entrance into Morocco, while policing some of its ports and keeping the peace along her Alge-

rian frontier. She can afford to give Germany the empty honor of maintaining her right to be consulted, and the name of international control, while France protects her African empire by excluding her German rival.

### Some Minor Improvements

It is pleasant reading when we are told of the boulevards and large parks that are to grace our cities of the future. "The Remaking of Boston" was a taking title for a recent magazine article; but it was none too strong a statement. Every one of our larger cities is busy widening streets, erecting monuments and constructing palatial buildings. But what we are thinking about now is, that order of improvement which consists of small things, and is quite within the sphere of the common citizen to bring about. Among these items we are inclined to place the preservation as well as the planting of street trees foremost. During the last decade probably as much mutilation of trees has gone on as in the previous fifty. In our smaller towns this has been under less restraint and regulation than in the larger. The commonest laborer is set at work to clear the track for the telephone or telegraph line, and he makes short work of hacking or removing the most superb limbs of elms and maples that it has taken seventy-five years to make the glory of the street. Many of the streets in the larger cities are now treeless, or so denuded of foliage that what pass for trees are merely poles.

It is worth our while at this point to note that the Court of Appeals in New York State, during the past year, has decided in favor of a man who sued for damages, because four maple trees in front of his homestead were killed by the escape of gas from leaky pipes. He was awarded damages to the amount of \$150. The Court held that the maintenance of trees in the street, both for shade and ornament, was the proper use of the street; to be enjoyed by the public as well as by the resident, and that these trees make the street of more value to both parties. The gas company had no right, in law, to destroy those four maple

trees. Heretofore it has been very difficult to determine the exact relation which exists between tree property and other property; or whether a man could protect his street plantings if he made them. It can now be said that, in one State at least, a shade tree can be protected. No man or corporation has a right to mutilate or destroy this sort of property. A few shade trees, carefully planted and trained, add largely to the value of property. This is true also of vacant lots; and a well planted neighborhood will draw residents of a higher class than neighborhoods bare of trees. These trees are not only of direct value for shade and shelter and beauty, but constitute a very large part of nature's apparatus for rendering the air pure and wholesome. It is our shade trees that take up the impurities of the soil, the dampness, and after working over all the carbon gases into foliage and flowers, send out ozone and oxygen for us to breathe. We have got a great deal to learn on this subject, and no man is fit to be a city father who is ignorant of the sanitary value of a healthy tree. The law should protect every twig, until it is an absolute necessity to remove it for reasons indubitable.

There probably is no method for managing this matter of trees, and shade, and foliage, without placing the whole subject in charge of a special Board, and this Board should consist of experts in those sciences which are grouped as botany. Cities have it in their power to plant very much more freely than they have done, and to put a stop to a large part of the cutting. It is an understood principle in law that altho a resident has a certain property right in his street trees, he has no right to cut them down, or to remove limbs which are of most value to the public. Yet Yankee ideas of liberty have allowed a very large amount of freedom along this line. It could be kept under restraint by a properly constituted Board—an Outdoor Art Commission. A good deal has already been done by our railroads to make beautiful and wholesome their terminals and station grounds, but a great deal more could be accomplished. All of our public grounds and station grounds should be rendered attractive, with vines and

shrubby and trees. We anticipate a much larger widening of our highways, which will allow a very much larger inclusion of shaded grounds, with fountains, and even brooks of pure water.

It seems impossible at present to get rid of sheds and many unsightly buildings, but these can be either hidden entirely, or made positively beautiful with a little care. We have in mind several locations in Brooklyn and New York where the judicious planting of vines has rendered such locations not only unobjectionable, but positively attractive. Much as has been done to improve our school buildings, there are still many of them in our smaller cities, as well as in the larger, utterly unattended with beautiful grounds. We believe the time is rapidly coming when a schoolhouse that is not ornamental will be held to be a public nuisance. We are learning that children are getting their education not only from books, but from buildings and from all sorts of surroundings. These enter into character and create the future citizens. For the same reason every city should control advertising with a firm hand. Nothing of the kind should be allowed to mar the beauty of trees, or to render more unsightly telephone and telegraph poles, or in any way disfigure public or private property. These advertisements are injurious not only because of their contents, but because of their relation to the beautiful. Public taste is a matter that ought to be looked after and cultivated and improved. We would place everything of this sort also in charge of the Commission controlling the planting and care of trees. It is not impossible for us to do more in this way, for the children of the poorer classes, than can at present be done for them thru books.

We are inclined to add to this list of common things the preservation of points of interest, especially those which link us to the past. Our associations with the beautiful and true of olden times are invaluable. Boston is holding on to its Faneuil Hall, and Old South Church, and Paul Revere's house. The old Granary Burying Ground, and that on Copp's Hill, used before the Revolutionary period, will hardly be disturbed. Such things are not altogether for the tourist

and sightseer, but they are to remind the people of the fact that they do not live wholly in the present.

They broaden our sentiment and tone down our conceit. Old Home Week has proved of immense value to New England. The best part of Old Home Week is the renewal of associations which we should never allow to become too dim. These are a few of the ways in which cities may be improved without large outlays of capital.

Mrs. Bellamy  
Storer

It is most unusual that an American Ambassador should be suddenly dismissed by cable for, as is said, the indiscretion of his wife in meddling with public affairs. Mrs. Storer was a friend of the President's, who was in correspondence with her, and it is said that she used one of his letters about Archbishop Ireland indiscreetly. Just what the letter was we do not know, for while Mrs. Storer, in a letter to the *Herald*, makes mention of a letter lately received, she gives to the public only (and evidently without the President's sanction) a letter which he wrote six years ago, when he was Governor of New York. It was a perfectly proper letter, and said no more than we have said. At that time Archbishop Ireland was in disfavor at Rome because of the conflict over "Americanism." It would appear that Mrs. Storer, a fervent Catholic, was warmly in favor of the Archbishop, and gathered letters in his favor for use in Rome. She appealed to her friend, Governor Roosevelt, and he sent a very proper but emphatic letter, never meant for publication, giving his opinion, which was and is ours, that the prosperity and usefulness of the Catholic Church in this country rests with those men whom Archbishop Ireland represents. Mr. Roosevelt said in that letter that he would not be justified in interfering in any way with matters at the Vatican, but he was willing to express freely his admiration for the Archbishop. Whether or not Mrs. Storer has since used the President's name in this connection illegitimately we do not know. Certainly it would be still more improper for him now to ask any favors at Rome for Archbishop Ireland, and he would be

justly indignant if he were so represented. But the real offense will doubtless be made public when Mr. Storer's letter of recall is received. This only, we may properly add, that the summary form of this recall is most unusual and humiliating, and the conditions must have been extraordinary that justified it.

The Cardinalial  
Microbe

We do not know that "*Nolo Cardinalari*" is as good Latin as "*Nolo Episcopari*," but we know that it is quite as good morals. It is against all etiquette, good taste, or good morals to seek the office of bishop, and equally so to seek the honor of being made Cardinal. Yet if a Church will have bishops or Cardinals, who are given peculiar honor and dignity, poor human nature will seek the office. Even Protestant conventions and conferences have illustrations of it; and, indeed, the eagerness of candidates for the position of bishop, and the gathering of their ranks to secure the honor, are the chief scandal of these meetings. Ben Jonson says that "Apes are apes 'tho clothed in scarlet," and it makes no man a better or abler man to wear the scarlet hat. It may be that Archbishop Ireland wants the honor of a Cardinal very much—we do not know; and it may be that it would increase his influence in his Church in this country; but we do know that his fool friends, who have talked so much about his being made Cardinal have disgusted the country. We wish we might hear not one word further about the likelihood of another red hat coming to Ireland, or Farley, or Blenk, or any other of the American Archbishops. We understand what the object of the ambition of their friends is, in part personal, and in good part the desire to help a faction in the Catholic Church. The two factions are still very sharply divided, altho they are not quarreling quite as much before the public as they did. Archbishop Ireland is no small politician, and has been one of President Roosevelt's advisers, and has been deeply concerned with the interests of the Catholic Church among our Indians and in the Philippines. Report now says that in his present visit to Rome he has proved a *persona grata* with the Pope.

But we shall think no more of him for being made Cardinal, and stout Republican tho the Archbishop is we do not believe for a moment that the President would directly or indirectly interfere with the ambitions of Ireland's friends, any more than when he was Governor.

**Football** The Football Rules Committee have at last completed their work. They have not yet, however, gone to the root of the matter. To be sure they have lengthened the distance to be gained on four downs from five to ten yards, they have allowed in certain instances a forward pass, and they have increased the penalties for rough play. But the ten yard gain is largely offset by reducing the defensive line from seven to six players, the forward pass is so hedged about by technicalities that it will hardly change the fortunes of any great game, and altho the penalties for rough playing are greatly increased, we can hardly expect the umpires to have any better eyesight than in the past. If next season the players do not voluntarily play a cleaner game, and if the new rules do not work better than we expect them to, football is doomed in this country, and the Rules Committee, the umpires and the college captains, who uphold the existing *regime*, will have no one but themselves to blame. Meanwhile, we are interested to note that the English "socket" game is gaining favor.

**The Return of the Jews** One day last week over eleven thousand immigrants landed in New York, and it was mentioned as a curious fact that very few of them were Jews. The Jews driven out of Russia are by no means all coming to America; a multitude of them are going to Palestine. The Turkish Government has tried hard to keep foreign Jews out of the land, but many considerations combine to generally thwart the purposes of the Government, and the laws making the purchase of land by Jewish immigration societies difficult in Palestine are evidently a dead letter. According to latest reports from Jerusalem immense stretches of

country in the fertile plains of Jezreel now belong to the Jews. In Galilee at least three-fifths of the country belongs to the same people. It is almost a daily occurrence that the Jewish tenants of rich Jewish Pashas crowd out the Arabic agriculturalist. It is confidently announced that the number of Jews who have returned to Palestine in recent years is greater than the entire number who returned from the Babylonian captivity, and now has almost attained the total of one hundred thousand. The "*Hilfsverein*" of the German Jews is particularly active in this work, especially in the establishment of schools. Its most recent foundation of this sort is a higher educational institution which is to solve the problem of a uniform international pronunciation of the Hebrew tongue. This is likely to mean ultimately the substitution of the old Hebrew for Yiddish, for already Hebrew is a living and spoken as well as written language. We have seen how many thousands of Armenians in Turkey, whose parental language was Turkish, have come to speak Armenian, for patriotic reasons. The prophecies which have seemed to anticipate the return of the Jews to Palestine may prove to have the power to create their own fulfilment, and we may yet see a Hebrew commonwealth in Palestine, which will hold its own against the jealous rivalries of Russia, France and Germany to seize the succession to the Turkish rule; for the claim of the house of David to the temple hill of Zion is older than the Christian claim to the Holy Sepulcher.

**Executions in Natal** It is a very serious matter which has involved the new Liberal Government of Great Britain in the execution of a dozen natives in Natal. They had resisted the new imposition of a tax and had killed a police inspector. It was feared that this was the beginning of a rebellion of the Zulus, and the white people were greatly excited and demanded drastic treatment. These twelve men were sentenced to death, but the Home Government granted a reprieve, which was so resented that the Natal Cabinet resigned. Then the British Government backed down, on the

ground that it had since received fuller reports. Immediately on this action, the Natal authorities executed the twelve prisoners. It is not at all clear that this was just, and it looks bloodthirsty, as if the purpose was to inspire terror. We fear the effect will be quite otherwise; it may excite anger and reprisal, and such seems to be the fear in Parliament, where there are those who feel it to be a British duty to protect the natives of Africa against Caucasian arrogance and cruelty. There is always likely to be a big scare when a superior race is holding down another one. The fear of insurrections is not wholly baseless, and it is tantamount to a confession of injustice. This is the reason why in Natal very stringent regulations have been made against the negroes holding even religious meetings unless a white man is present, a condition greatly objected to by the missionaries, as it affects their outstations, and they have no such fear. This is the reason for the regulations against the Ethiopian Church, which really has no political purpose, but is under constant suspicion.

The protective tariff looks almost ridiculous when a man in Michigan asks our Government to put a tariff of 125 percent. on wooden shoes to protect his infant industry. There are people coming in from Holland and other countries who are used to wooden shoes, and they can be imported cheaper than they can be made. In this case it is not likely that a general industry can be built up, and the tariff would probably enrich just one man, to the disadvantage of some hundreds or thousands of poor immigrants. Is it wise?

We have looked over a list of 300 words spelled in two or more ways, made by the Simplified Spelling Board, in which cases it recommends the simpler form. We observe that a large part of them are already so far adopted in this country that no one would notice them as strange, while nearly all of them are in use in THE INDEPENDENT. The exceptions are mainly in the cases of such words as *lookt*, *dropt*, and *stept*, forms which

Shakespeare, Milton, Pope, Tennyson, and others use, but which are not often found as yet in prose.

It is a good report and a good promise that Mr. Ide makes in assuming the post of Governor of the Philippines. He says he will give a business administration and avoid political and academic discussions, and strive for harmonious co-operation. He says that the orderly conduct shown in the recent elections foreshadows the success of the approaching Assembly. This new measure of self-government is of immense hope. Notwithstanding the fights with the Moros, there is a state of unprecedented general peace, which promises a period of prosperity and business activity.

Some months ago a student in Kenyon College was tied by his mates to the railroad track, as a sort of initiation, or hazing. They thought no train was to pass, but one did pass and he was killed. Now, the Ohio Legislature has passed a law making hazing by students a misdemeanor punishable by a fine of \$200 or imprisonment for six months, or both, and it fines also the teachers, who, knowingly, allow hazing. It is a reasonable law, and the penalty is mild enough. Now that the offense is made a legal crime it is to be hoped that students will see that it is no joke.

These are the kind of charges which an inspector sent to investigate our consulates found, and which are reported to the Senate, at points as important as Canton and Shanghai: Gross drunkenness, issuance of fraudulent Chinese certificates, prosecution of an American citizen for revenge, and corruption in office. These consuls are no longer in office. As to the consul at Fuhchau, he says, that he is too old for vigorous work, and is "closely affiliated with missionary interests." He could not be affiliated with safer interests. What we need is a consular system of men trained for the positions. But that would take something from Congressional patronage.

# Insurance

## Insurance Developments

THE spectacular event of the past week in the insurance field was the arrest of George W. Perkins, of the banking house of J. P. Morgan & Co. and former vice-president of the New York Life Insurance Company. The charge was that of grand larceny, based upon the Perkins contribution of \$48,702.50 to Cornelius N. Bliss, treasurer of the Republican National Committee in the campaign of 1904. Mr. Perkins in his reply to the charge has denied any intended wrongdoing and has set forth the fact that no personal profit accrued to him. The Supreme Court hearing subsequently held ended with the announcement by the court that the decision would be reserved, as is usual in such cases. In addressing the court, Mr. William Travers Jerome, New York's District Attorney, held that it was against the public morals and the public policy to contribute to a campaign fund the moneys of the policy-holders of insurance companies.

Cables from London have announced the resignation of D. C. Haldeman, of the London agency of the Mutual Life Insurance Company. The consensus of opinion in London is that the Haldeman resignation was the logical outcome of an impossible situation, and reflects only credit upon the retiring Mutual Life manager. Mr. Haldeman expects to come here as the authorized representative of practically all of the 26,000 British Mutual Life policyholders, who annually pay the company £650,000, and are insured for £15,000,000. He also expects to aid the British Government in devising legislation to protect English people insured in American companies. That the English Government intends to act in this matter was stated in the House of Lords on Wednesday of last week by the Earl of Granard. Other resignations from the Mutual include Elbridge T. Gerry as trustee, and Dr. Gillette and Mr. Granniss as vice-presidents and trustees. Mr. Gerry explained, in his letter of resignation, that he was not prompted by any dissatisfaction with or lack of confidence in the efforts of the present board to reform the company. The two vice-presidents

sent in their resignations on the ground that the way would be clearer and there would be less embarrassment for the Mutual's reorganizers if they retired. The publication of the findings of the Truesdale committee has met with criticism in certain quarters. Samuel Untermyer, counsel for the International Policy Holders' Committee of the Mutual and New York Life Insurance Companies, in particular said of the Truesdale report that it was "farcical and insincere" and he believes that there are depths of insurance corruption under a surface only scratched so far. Governor Higgins, on Monday of this week, affixed his signature to the bill which postpones, until November 15, the annual elections of the New York Life, Mutual of New York, Mutual Reserve of New York, and Security Mutual of Binghamton, all purely mutual life insurance companies. In signing the bill the Governor issued a memorandum sharply criticizing the officers, who, by its provisions, are legislated out of office, and stated that the bill is a useful one. The bill provides that no proxy executed prior to September 15, 1906, shall be valid.

John R. Hegeman, President of the Metropolitan Life Insurance Company, in a recently published letter says:

"Policyholders in this company need not be disturbed at our surplus. The dividends to stockholders are limited to seven per cent. There never has been shown any disposition on the part of the company to accumulate large surplus. The company has kept it down to about ten per cent. of its assets by yearly distributions to non-participating policyholders of the profits made out of their policies. Millions of dollars have thus been paid out to policyholders whose contracts have not given them the right to participation in surplus. The act on the part of the company has been a voluntary one, and the distribution has been made in the manner best adapted to getting the surplus back into the hands of those who built it up. Ten per cent. as a surplus is considered by the company to be only a reasonable margin of safety. It is approximately that which was laid down as a proper surplus by the statutes of the State of Massachusetts before the laws of that State were changed so as to permit the writing by its domestic companies of tontine insurance. The policy in the Metropolitan is a well settled one, and neither policyholders nor the public have any occasion for alarm or criticism as to the disposition of its surplus earnings or the accumulation of unnecessary funds."

# Financial

## Trade With Our Neighbors

TWENTY years ago, imports into Canada from the United States were almost exactly equal in value to those received by Canada from Great Britain. Last year, our share of Canada's imports was 60½ per cent., while Great Britain's was 24 per cent. Our exports to Canada have grown from \$34,500,000 in 1875, to \$140,529,000 in 1905. Since 1897, our exporters have been placed at some disadvantage, in comparison with those of Great Britain, by a preferential reduction of Canadian duties in favor of the mother country—a reduction of 12½ per cent. at the beginning, of 25 per cent. in the second and third years, and of 33 1/3 per cent. since 1900. But this did not prevent an increase of our exports to Canada from \$65,000,000 in 1897, to \$140,500,000 in 1905. In the same period, the increase of imports from the mother country was only \$30,000,000.

Our exports to Mexico are small, in comparison, being only \$45,000,000, but they are 53 per cent. of all Mexico's imports and they have grown rapidly, as our trade with our neighbor on the south has been multiplied by three in the last decade. It is to the investments of United States capital in Mexico, however, rather than to the passage of goods across the boundary, that we must look for evidence of our people's interest in Mexican industry and trade.

These investments were conservatively estimated at \$500,000,000 four years ago, and it is believed that the total has since been increased by \$150,000,000, or even \$200,000,000. This American capital has been accompanied by American energy and skill, which have been foremost in Mexican industrial development. Capitalists from the States are largely interested in Mexican railroads; they own great smelting works and rich mines; they are developing oil deposits in several places; the manufacture of iron, flour and other products is controlled by them; they possess great plantations and are building cars and locomotives; electric light and power companies are in their hands, and they have recently invested large sums in the manufacture of rubber

from the guayule plant. The active prominence of Americans in the industrial life of Mexico has been especially noticeable since the adoption there of the gold standard.

JOHN W. GATES has been elected a director of the National Bank of North America, of which Alfred H. Curtis is president.

....A special meeting of the stockholders of the New York Central and Hudson River Railroad Company will be held on April 18th, to authorize an increase of the capital stock from \$150,000,000 to \$250,000,000.

....It now appears that the Steel Corporation intends to expend \$75,000,000 eventually upon its projected new steel plant and model town (to be called Gary) in northern Indiana, on the shore of Lake Michigan, where it has purchased 4,000 acres.

....Mr. Paul Morton, president of the Equitable Life Assurance Society, and Darwin P. Kingsley, vice-president of the New York Life Insurance Company, are joint authors of an article in the current *North American Review* on "Life Insurance Legislation," in which pleas are respectively made to protect the policy-holders and to safeguard the companies.

....Mr. Horace C. Du Val, well known on account of his connection with the Vanderbilt railway interests, as vice president of the Brooklyn Rapid Transit Company and as a director in other corporations, has formed a stock exchange firm under the name of Du Val, Greer & Co. His partners are William A. Greer and Wallace S. Crane. Mr. Greer is the board member and was formerly assistant treasurer of the New York Central and Hudson River Railroad Company, while Mr. Crane was assistant treasurer of the New York and Harlem Railroad Company.

....Dividends announced:

Minn. & St. Louis R. R. Co. (Pacific Extension), coupons payable April 2d.

New Amsterdam Nat'l Bank (Quarterly), 6 per cent., payable April 2d.

N. Y. & N. J. Telephone Co. (Quarterly), 1½ per cent., payable April 16th.

# The Independent

VOL. LX NEW YORK, THURSDAY, APRIL 12, 1906

No. 2993

## Survey of the World

### The Tariff Issue

In the course of a long speech against the present protective tariff, Representative Rainey, of Illinois, on the 6th inst., in the House, read the following extract from a letter recently sent by Speaker Cannon to a manufacturer of pottery in East Liverpool, Ohio.:

"I am satisfied that there will be no tariff revision during this session of Congress, but it goes without saying that the desire for a change which exists in the common mind will drive the Republican party, if continued in power, to a tariff revision. I do not want it, but it will come in the not distant future."

After adjournment of the day's session, the Speaker gave a statement to the press. He did not object, he said, to the publication of the letter. It was entirely impracticable, he continued, to revise a single schedule, or a few schedules, of the tariff, without taking up all the others:

"In my judgment nothing can be done except by a complete revision of the tariff, which would be a compromise that would command a majority vote of the 386 members of the House and the ninety Senators. The enactment of such a revision and the time necessary to adjust it to conditions would halt production, consumption and commerce for at least twelve months, and when the compromise is enacted as a whole it will probably not be an improvement on the existing law. I do not believe a majority of the people at this time desire to interfere with the present conditions, which are the most prosperous conditions we have had in the Republic to the laborer, to the farmer, to the capitalist, to the producer and to the consumer. That the time will come when a general revision will be entered upon I have no doubt, but for the general interest of the whole country the revision should be postponed as long as possible."

In conclusion, he remarked that if a majority of the people wanted an immediate general revision, they would elect a majority of the House, in November

next, to support such a policy. Mr. Rainey, in his speech, produced evidence to show that the American manufacturers of watches sold watches abroad at prices so much lower than those exacted at home that retail dealers in New York purchased them abroad in large quantities, brought them back to this country, and then, after paying freight and duties, were able to sell them at a profit under the manufacturers' prices for the home market. The Democrats are making tariff speeches in the House for use in the coming Congressional campaign. They are occasionally assisted by a few Republicans. On the 7th one of these, Mr. Perkins, of New York, expressed the opinion that if his party failed to make a revision, the work would be done by others less considerate and less wise. He spoke of the protection enjoyed by the American Smelting Company, saying that it provided dividends for \$100,000,000 of common stock that was water, and that the company's lead was sold in Canada at prices much lower than those which buyers in this country were required to pay. Object lessons of this kind, he added, might be ignored by some legislators, but sooner or later they would affect the minds of the people by whom legislators are chosen.

✕

### The Railroad Rate Debate

As the end of the Senate debate upon the Railroad Rate bill draws near, the discussion exhibits considerable irritation on the part of several Senators. This irritation was shown last week in sharp criticism of the President's conference with certain Republicans concerning the court review amendment which was afterward introduced by Mr. Long.—

At the beginning of the week, a decision of the Supreme Court relating to the Michigan railroad taxes was regarded as indicating, possibly, the Court's attitude toward the question of the unconstitutionality of the pending bill, because of the following passage in the opinion, which was written by Justice Brewer:

"In the nation, no one of the three great departments can assume or be given the functions of another, for the Constitution distinctly grants to the President, Congress and the Judiciary separately the executive, legislative and judicial powers of the nation. It may therefore be conceded that an attempted delegation by Congress to the President or any ministerial officer or board of power to fix a rate of taxation or to exercise other legislative functions, would be judged unconstitutional."

Hearing that this was interpreted as a warning or a hint, Justice Brewer, on the 4th, removed from the decision the entire passage. —After the conference at the White House, several Democrats resented the President's action, not only because he had sought the aid of Republicans only, but also because they had received no notice of the new amendment. These critics were led by Mr. Bailey, who, on the 3d, sharply and sarcastically questioned Mr. Allison and Mr. Long as to what had taken place in the conference. He was assisted by Mr. Foraker. Two days later, Mr. Dolliver said that in his opinion it was as respectable for a Senator to counsel with the President for the purpose of passing a bill for the relief of the people as it was for other Senators to counsel with the presidents of railroad companies for the purpose of defeating such a bill. American institutions, he added, were more liable to be damaged in the Senate by interference from other quarters than by the friendly and patient suggestions of the President of the United States. These remarks led to a somewhat acrimonious interchange of comments.—Some surprise was caused by the speech of Mr. Elkins, who has been regarded as a representative of the railway interests. He was in favor of the pending bill, he said, but it did not go far enough. His own interest on the side of shippers was ten times as great as his interest as a railroad man. The bill should forbid a railroad company to own or sell products which it carried, such as coal; it should compel companies to furnish switch accommodations for pro-

ducers, to make connections for them, and to distribute cars fairly. Independent shippers could not afford to invoke State laws, thereby incurring the hostility of carriers, but should be protected by national legislation. But the pending bill, without adequate provision for court review, would be unconstitutional. Mr. Newlands, in his speech, asked for the national incorporation of railroads, with provisions for insuring employees and adjusting labor disputes. While he saw no financial obstacle to prevent the purchase of the roads by the Government, he suggested that the Government should build and operate an experimental line from the Atlantic to the Pacific. The country would certainly drift to Government ownership unless the existing abuses of uncontrolled monopoly, of over-capitalization, of accomplished union of producing and transportation interests, of railway political control, and of unjust discrimination were done away with. Some newspaper reports say that nearly forty Republicans oppose the Long amendment and are in favor of broad provisions for court review, and that they have the support of Democrats enough to make a majority. Others find a majority for that amendment.

#### Chicago's Street Railways

At the election on the 3d inst., in Chicago, the people approved the proposed issue of \$75,000,000 in Mueller law certificates for the purchase of existing street railways, and also the general policy of municipal ownership of the railways, but failed to give the required majority for municipal operation. On what was called "the little ballot" there were three questions, substantially as follows:

"Shall the city proceed to operate street railways?"

"Shall the ordinance of January 18th, providing that \$75,000,000 in certificates be issued for the construction, purchase, ownership and maintenance of street railways, be approved?"

"Shall the Council proceed without delay to secure municipal ownership and operation of all street railways under the Mueller law, instead of passing the pending franchise ordinances or any other ordinances granting franchises to private companies?"

On the first of these a majority of three-fifths of all the votes cast was required.

The vote was 121,916 to 110,323, the majority falling below the required number by about 17,500. On the second only a bare majority was needed, and this was obtained in a vote of 110,225 to 106,859. For the third, which was merely for an expression of opinion (the decision not to be binding) there was a majority of about 4,000. Approval of the recent increase of the liquor license fee from \$500 to \$1,000 was involved in the election of Aldermen. The supporters of the increased fee were successful, as a clear majority of the seventy members of the new council are in favor of it. Altho party lines were not closely observed, municipal operation of railways was opposed by a majority of the Republicans and by a considerable number of Democrats under the leadership of ex-Mayor Harrison. Majorities on all phases of the question show a considerable decline, when compared with those of a year ago. It is not clear that the new Council is in accord with Mayor Dunne concerning this matter. He appears to be opposed by a small majority of those members whose attitude has been well defined, but the balance of power is held by about a dozen men, all of whom are called "free lances," and several of whom are known as "gray wolves." The Mayor says that the railroad companies should now propose terms for the sale of their property. He will have the validity of the Mueller law certificates tested in the courts. If their validity is sustained, he will proceed to use them in purchasing or constructing railways. Next year, the people will again be asked to vote for municipal operation. Assuming that the city will then be in possession of the railway property, he predicts that the needed three-fifths majority will be given. Estimates of the time required for testing the validity of the certificates ranges between six months and two years. If the people should fail again to approve municipal operation, the Mayor may advise the use of his plan for intrusting operation to a corporation controlled by advocates of municipal ownership and doing business under a short term franchise. It is reported that the discovery of extensive frauds at the polls may reverse the announced result of the vote upon operation.

### The Coal Miners

President Mitchell returned to New York on the 2d, and on the following day the two committees (of miners and operators) were in conference for three hours. Nothing was done. The comments given to the press by President Baer, head of the operators' committee, were not of a conciliatory character. "The miners," he said, "talked at great length, without coming to any point. They indulged in glittering generalities, discussed the brotherhood of man, and set forth the rights of the workingmen, but they proposed nothing practical." Mr. Mitchell gave out no report of what had taken place, holding that the proceedings had been of a confidential nature. Another meeting was held on the 5th. After the miners had set forth again their original propositions as to hours, wages, etc., Mr. Mitchell said that, in view of the great public interests involved, and to avoid a public calamity, the miners felt that it was their duty to make a sacrifice. Therefore he proposed (subject to the approval of a miners' convention) that all differences be referred for determination and settlement to a Board of Arbitration composed of the members of the present Board of Conciliation, with Judge Gray, or some one appointed by him, acting as chairman and umpire; the decision of these arbitrators to be effective for two years, beginning on April 1st, and the miners to continue at work during the inquiry. As the operators desired time, the conference was adjourned to the 9th. On that day, at the operators' request, a further adjournment was ordered, to the afternoon of the 10th. The Board of Conciliation (created by the arbitrators in 1902) is composed of ex-Mayor Connell, of Scranton, president of the Enterprise Coal Company; S. D. Warriner, general manager of the Lehigh Coal Company; W. R. Richards, superintendent of the Philadelphia & Reading Coal Company; and (for the miners) Presidents Nicholls, Detterey and Fahy, the union's chief officers in the three anthracite districts. Recently the miners have complained that the Board was slow and inefficient; on the other hand, the operators have defended it, and President Willcox has spoken of its "admirable record." The operators have held that since the Com-

mission's award there have arisen no new conditions that deserve to be submitted to further arbitration. This is denied by the miners. At the conference on the 10th the operators' counter proposition was that the Arbitration Commission of 1902 should decide whether there has been any change of conditions since April 1st, 1903, to justify a modification now of the original award, but with respect only to wages and the Board of Conciliation; and that any new award should be binding for three years. The operators will not consent, in any circumstances, to collect miners' dues to the union by withholding the money from their pay. They object to the term of two years, pointing out that it would expire in the year of a Presidential campaign, "thus affording a new opportunity to make this great industry the football of politics."—During last week riotous conduct and the use of dynamite were reported at several collieries in the vicinity of Wilkes-Barre. Two non-union men were said to have received mortal injuries.—In the bituminous district of Western Pennsylvania the increase of wages has been accepted by companies producing nine-tenths of the output. At last reports, only a few operators in Ohio, Indiana and Illinois had yielded. Replying to a request from John H. Winder, president of the Ohio Operators' Association, for the appointment of an Arbitration Commission, President Roosevelt said that action on the part of Congress would be required. "As yet I am not prepared," he added, "to say what action I personally will or can take in the matter." Mr. Winder has since proposed to President Mitchell that the differences in the bituminous industry be submitted for arbitration to the anthracite Board of Conciliation, using the words with which Mr. Mitchell's similar offer to the anthracite operators was made. Mr. Mitchell replied that the proposition would be referred on the 17th to the Executive Board.

#### A New Treaty With Cuba

Altho our present treaty of reciprocity with Cuba does not, by its own terms, expire until about three years hence, Mr. Morgan, the American Minister at Havana, acting under instructions

from the State Department, has, in conference with the Cuban Foreign Office, completed the draft of a new one, and this may be submitted to the Senate before the end of the present session of Congress. This new treaty makes concessions on the Cuban side which Cuba was unwilling to grant. They are sought because our Government has become convinced that, under the present treaty, the United States is getting the worst of the bargain. Statements made last week in President Palma's annual message show that we take seven-eighths of Cuba's exports (\$95,330,000 out of a total of \$110,167,000 in the fiscal year 1905), but supply less than half of her imports (\$42,981,000 out of a total of \$94,806,000), Great Britain standing next with \$13,424,000; Spain third, with \$10,356,000, and Germany fourth, with a little less than \$6,000,000. The new treaty reduces the Cuban duties of the present treaty upon a considerable list of imports from the States. The Cuban Government was led to believe that if these concessions should not be granted there would be no treaty of reciprocity after the expiration of the existing one.—In the new Cuban Congress, which assembled on the 3d, the Government has a majority in each branch. This will prevent such obstruction and opposition as the Government encountered last year. For the benefit of agriculturists, President Palma suggested the establishment of mortgage banks and the stimulation of immigration. The number of immigrants last year was 54,219.—Several labor unions declared a general strike at Havana, on the 7th, in sympathy with the street railway employees, who had been on strike for some days. This general strike was to begin on the 9th, but only a few workmen obeyed the order.

**Various Topics** Our Government has said to Russia that the date announced (in July) for the meeting of the second peace conference at The Hague is an inconvenient one for this country and for South America, because the Pan-American Conference is to be held at Rio Janeiro on July 21st. Some delegates to the latter conference may desire to attend the one in Europe, and

questions to be submitted to the meeting at The Hague will probably be considered at the meeting in Rio Janeiro. Great Britain and Germany stand with the United States in desiring a postponement.—Both the Senate and the House have passed bills placing the quarantine service wholly under national control. The vote in the House was 202 to 26. This action was suggested by the conflict of State authorities in the South at the time of the epidemic of yellow fever in New Orleans. The House bill has provisions designed to prevent shotgun quarantines by forbidding local authorities or other persons to interfere with passenger or freight traffic on interstate railroads, if the travelers and freight are protected by certificates issued under the regulations of the national quarantine service.—By a vote of 16 to 2 in the Ways and Means Committee, there has been reported a bill removing the tax on alcohol for use in the arts and industries, if the alcohol is mixed with denaturing material that destroys its character as a beverage and makes it unfit for use in liquid medicines.—The President's nomination of his assistant secretary, Benjamin F. Barnes, to be postmaster of Washington (the salary is \$6,000) is to be considered by a special sub-committee of the Senate Committee on Post Offices. Testimony will be taken concerning the ejection of Mrs. Morris from the White House under Mr. Barnes's direction, and as to the allegation that Mr. Barnes is a native of Nova Scotia. The appointment is sharply attacked by Washington newspapers that have supported the Administration.—Illinois's new primary law has been pronounced unconstitutional by the State's Supreme Court, and a special session of the Legislature has been called for the enactment of a new one. The decision is the result of a test suit brought by the Socialists in Chicago, who were deprived of a party primary by the requirements of the act. Many defects are pointed out by the Court, several of them providing for unjust discrimination.—It is understood that the Sugar Trust, the New York Central and other railroad companies will be indicted at New York on the rebate charges brought by Mr. Hearst.

### The English Education Bill

The most difficult task of the new Liberal Government is to secure the passage of an education act to take the place of the Conservative measure of 1902, which aroused the nonconformists to practical rebellion against the law, in the form of "passive resistance," or refusal to pay rates for the support of schools under the control of the established Church. Mr. Augustine Birrell, president of the Board of Education, introduced the Government bill into the House of Commons with the statement that it was an honest attempt to deal with a difficult problem, but he recognized that it would be hard to frame a measure that would stand against "the icy blasts of sectarian tenets," which hinder progress and peace. According to the new bill, only the schools provided by the local educational authorities will be recognized after January 1st, 1908, as public schools, and not a single penny of public money would be spent on any other schools. The present denominational voluntary schools would, if they received Government grants, have to become public schools, and be satisfied with the same undenominational religious teaching as is now given in other public schools. The local authorities would have power to take over the existing voluntary schools by arrangement with the proprietors, and there would be no religious test for teachers, who would be appointed by the local authorities. Religious education may be given in the schools taken over by the educational authorities, with their consent, two mornings a week, but not by the regular staff and not at public expense. Attendance of pupils shall not be compulsory. The bill provides for \$5,000,000 from the Imperial Exchequer for educational purposes, and proposes the establishment of a national educational council for Wales. Lord Robert Cecil spoke in opposition to the bill on the ground that it was unjust and unworkable, and would lead to the secularization of the schools. James Ramsey Macdonald, speaking for the Labor party, supported the bill, but objected to the proposed teaching of "the skeleton of religion." The Catholics and Nationalists will oppose the bill strongly.

### The Courrières Mine

The exasperation of the people against the management of the Courrières mine for their dilatory rescue work was increased by the discovery of another living man on April 4th, twenty-five days after the explosion. He was not in bad physical condition, altho his sufferings from cold and hunger had been so great that at one time he attempted suicide by opening a vein. Contrary to the generally received opinion, the time that had elapsed since he had been buried had seemed to him much shorter than it really was. He had tried to keep count of the days, but he estimated that eight days

strike for the eight-hour day is likely to be precipitated. Processions, riots and dynamite explosions are of frequent occurrence, and the engineers who are conducting the salvage work are in danger of being assassinated by relatives of the miners, who consider them responsible for the explosion and the delay in rescuing survivors.

### The Eruption of Vesuvius

The outbreak of Vesuvius is approaching proportions which will rank it among the most notable since the first in historic times, that causing the destruction of Pompeii and Herculaneum,

Map of Vesuvius, Showing the Streams of Lava, from the New Crater, which Destroyed Boscoreale, and the Area Covered by the Shower of Stones and Ashes in the Present Eruption.

had passed since the explosion, instead of twenty-five. He had slept ten times. He had lived upon the lunch bags he found, and had taken the clothes from the dead to keep himself warm. Henri Némey, who got out twelve of the miners in safety, was received like a conquering hero in Paris as he drove thru the streets in an automobile, and at Auteuil, where races were given for the benefit of the mine sufferers. The striking miners have rejected the advance in wages offered by the operators, and a general

strike for the eight-hour day is likely to be precipitated. Processions, riots and dynamite explosions are of frequent occurrence, and the engineers who are conducting the salvage work are in danger of being assassinated by relatives of the miners, who consider them responsible for the explosion and the delay in rescuing survivors.

Following closely upon the disastrous earthquakes in Southern Italy, with which it is undoubtedly connected, it has caused great alarm thruout the vicinity. The actual loss of life, altho this may reach several hundred, has been comparatively small, because the lava flow has been so slow that the inhabitants of the threatened villages have in most cases had time to escape. So far as can be determined from the indefinite and conflicting despatches from Naples, the principal or only stream of lava burst

from a new crater on the Pompeian side of the volcano and ran down the slope to Boscotrecase, which it completely destroyed, and then divided, one stream reaching the suburbs of Torre Annunziata and the other proceeding toward Pompeii. Another branch extended toward Boscoreale, and apparently Torre del Greco was also threatened. The streams are several hundred feet wide and cover the ground to the depth of 10 to 40 feet, fresh rivers of melted rock pouring over the earlier ones as they harden by cooling. The soldiers and peasants have endeavored to protect the villages by earthworks in the track and by clearing away vineyards, trees and houses to prevent the spread of fires. Boscotrecase was a town of about 10,000 inhabitants, and is known to tourists as one of the points from which the ascent of Vesuvius may be made on foot. The railroad around the volcano was kept running day and night as long as possible to carry away the fugitives, and after it was destroyed, military carts were utilized; yet many thousands of men, women and children had to walk into Naples and other cities, carrying in bundles such of their goods as they could save. All the villages represented on the accompanying map were either destroyed or greatly injured by the showers of red-hot stones and ashes, which were sent thousands of feet into the air and covered the country for many miles around. The ashes so filled the air as to cause partial darkness, and the people had to protect themselves by goggles and cloths from blindness and suffocation. The steamship "Princess Mafalda," which left the Island of Capri with 1,000 passengers, including many foreigners, was unable to reach Naples on account of the stifling clouds of ashes and poisonous gases from the volcano, which enveloped the vessel when it was miles from the shore. The ground was covered with a gray mantle of fine ashes as far as Naples and the east coast. In Ottajano, Somma and San Giuseppe, the houses are burned and in part buried beneath the stones, sand and cinders. The Funicular Railroad, by which tourists ascend the crater, is completely destroyed. The Church of San Giuseppe was crowded with worshippers, who were striving by their prayers to avert the wrath of

Heaven, when the roof fell in from the weight of ashes, and 49 bodies have been taken from the ruins. The peasants in many places took the sacred images from the churches and carried them in procession to the head of the lava streams to check the disaster which was overwhelming their homes. When the King and Queen were driven thru the stricken district in an automobile they were appealed to to stop the eruption, and to many it seemed that the petition was granted, for the lava flow ceased and the smoke cleared away as the royal party reached Torre Annunziata. Professor Matteucci and his assistant, Frank A. Perret, an American, have not deserted their post at the seismic observatory on the side of Vesuvius, altho they are in imminent danger. The crest of the volcano is almost continuously shrouded in flame and smoke extending miles above it, so it is impossible to tell just what changes have taken place in it, but the old cone, 700 feet high, seems to have been blown off. The ground is so shaken by explosions in the crater as to disarrange the seismic apparatus in Naples. The weight of the cinders which fell upon the Monte Olivete market in Naples was so great as to break down the roof, which in falling crushed over 200 people.

#### The Elections to the Duma

The returns from all parts of Russia indicate that the liberal parties will have an overwhelming majority in the lower house of the new national assembly. So far only two Provinces, Moscow and Tula, have elected Conservatives. The city of Moscow returned a solid delegation of Constitutional Democrats. In the Volga district and central provinces, where the famine and agrarian disorders have been greatest, the vote of the peasants was most radical. In Samara a Socialist was elected by a vote of 86 to 8. The Orenburg Cossacks returned a solid Progressive delegation of four Russians and six Mohammedans. Of the members of the lower house so far elected, 50 are Constitutional Democrats, 26 are Progressives and 13 are unclassified, altho mostly radical. The result of the election has greatly strengthened the hands of Premier Witte, who, it is reported, has again placed his resig-

nation in the hands of the Czar, asking him to choose between Durnovo, the reactionary Minister of the Interior, and himself. The new election law for Finland is very liberal. Suffrage is granted to both men and women over twenty-five years old, except paupers and criminals. There will be a Diet of one chamber, composed of 200 members, elected for three years, and meeting annually for ninety days. The sessions will be public, and both Swedish and Finnish languages may be used in debate. The Diet will elect its own president and vice-presidents, who must take oath to protect the rights of the Emperor as Grand Duke of Finland, and the Diet, according to the fundamental laws of the Grand Duchy. Bills that pass their third reading become laws without the approval of the executive or the Emperor. The action of Russia in standing by France in the Moroccan Conference has resulted in such a good feeling on the part of the French Government and people that the new Russian loan, which the Berlin bankers refused to list on Exchange, will be nearly double what was first proposed. The issue is announced to be \$400,000,000 in 5 per cent. bonds.—General Sleptzoff, Governor of Tver, was assassinated when passing thru the principal street of that city on his way to vote for the election of a member of the Council of the Empire. A bomb thrown at his carriage exploded with such force as to mutilate his body terribly, wound the coachman and break all the windows in the neighborhood. The assassin, a young man, was arrested.

#### The Hungarian Conflict Settled

The deadlock which has existed for fourteen months between the Emperor-King and the leaders of the Coalition of Hungarian parties has at last been brought to a peaceful end. April 9th was the latest date on which the elections for a new Parliament could be held under the Constitution, and the Government was evidently determined to rule the country without parliamentary sanction rather than submit to the extreme demands of the Nationalists of the Coalition. Absolutism would have aroused bitter opposition and futile rebellion on the part of the Hungarian people, so it

was a patriotic act of the leaders of the Coalition to approach the King a few days before the date mentioned with offers of a compromise. These were met in a similar spirit by the Government and an agreement speedily reached. Exactly what are the terms of this compromise cannot now be told, but, to put it succinctly, it may be said that the Coalition leaders are to take office on the condition that they carry out the policy of the former Government. The military question, says Francis Kossuth, the leader of the Independence party, is in abeyance, and he cannot state when it will be settled. Apparently the Coalition consented to an indefinite postponement of the authorization of the use of Magyar words of command in the army, which has been their chief contention. For Premier of the new Cabinet Dr. Alexander Wekerle, president of the Administrative Court of Justice, was chosen. The chief opposition to him came from the Catholic People's Party, on account of the part he took in introducing civil marriage laws into Hungary. It was at first reported that none of the leaders of the Coalition would take office in the Cabinet, but the names, as announced two days later, include all three. Count Julius Andrassy becomes Minister of the Interior; Count Albert Apponyi, Minister of Worship, and Francis Kossuth, Minister of Commerce. The new Government agrees to pass the budget of 1905-6, make necessary military appropriations, secure the recruits needed, and ratify the tariff and commercial treaties with foreign nations. The commercial union with Austria will remain undisturbed until 1917. The present elections will be held under the present system of restricted suffrage, but the Cabinet will introduce into the new Parliament a bill for universal suffrage, and, if this is passed, Parliament will be dissolved and a new election held under this system. It will be remembered that the proposal for universal suffrage, when first brought forward by the Fejervary Cabinet, was opposed by both the Emperor-King and the Coalition. Royal decrees were issued on April 9th, constituting the new Cabinet, convoking Parliament for May 29th, and ordering the holding of elections between April 29th and May 8th.

## Maxim Gorky

On the sides of the portrait are two cartoons of Gorky from Russian periodicals.

MAXIM GORKY, whose real name is Alexey Maximovich Peshkov, is expected to arrive in this country some time this week. Twelve years ago this young man of Nizhni Novgorod was unknown even in his own land. When one of his first stories, "Chelkash," appeared in Vladimir Korolenko's magazine, Russia at once realized that a powerful writer had come to grace her literature. His stories of tramp life and of the proletariat followed one another in rapid succession, attracting ever more attention. Soon France and Germany took him up, and in 1900 one of Gorky's greatest stories, "Twenty-Six and One," translated by Herman Bernstein, was published in this country. In 1901 two versions of Gorky's novel, "Toma Gordeyev," appeared in New York. Maxim Gorky owes some of his great popularity to his remarkable career. The son of a poor upholsterer, he was thrown upon his own resources at the age of nine. He worked as gardener's help, as apple and cider vender, as *ikon* painter, as baker, dock-hand and railroad guard, and at one time attempted suicide. During the past few years he has taken an active part in the revolutionary movement, and it is understood that the purpose of M. Gorky's trip to this country is to enlist the sympathy of the American people and to raise funds for this movement.

# How Many Mutineers Did Paul Jones Kill?

BY EMMA REPPLIER

[The following article, with the previously unpublished letter of Paul Jones, throws an entirely new and unexpected light on the early life of the first American naval commander, and explains what was not before known, the cause of his escape in youth as a disguised fugitive to the American colonies, and his change of name. It is of particular interest in connection with the late bringing of Captain Paul Jones's body to this country for interment at the Naval Academy at Annapolis.—EDITOR.]

IT has happened to the writer of this paper to spend many hours of many days in an old library, reading the yellowing pages of letters whose authors, serious and gay, dull and delightful, are dead these hundred years. People you meet in letters bear a striking resemblance to people you meet out of letters; some of them are distasteful, most of them are tiresome, and just a few you would like "to grapple to thy soul with hoops of steel." It is a great deal to have known in this fashion such people as Franklin, Lafayette, Paul Jones, Arthur Lee and the Comtesse d'Houdetot. Of all this entertaining group, none makes a more vivid appeal, none grips you with greater intensity, than John Paul Jones. He holds you by the force of his hot headed impulsiveness, his tremendous pride, his daredeviltry, his childish vanity, and his beautifully eloquent and oratorical patriotism. If his moral tone is often a trifle more exalted than the occasion seems to demand, his charming ingenuousness disarms criticism. There is no better illustration of this than the following extract from one of his letters:

"It may be said that I have been unfortunate—but it cannot be made to appear that I have ever in the weakest Moment of my Life been capable of a Base or a mean action.—Nature has kindly given me a heart that is highly susceptible to the finer feelings—"

It is to his letters that the despairing student turns in his search for the truth.

Thru one of these letters my attention was drawn to a dramatic incident, hitherto either entirely overlooked by historians, or else confused with another and a similar event.

In all the histories of Paul Jones there appears the same story of his having killed a mutinous seaman, by name Mungo Maxwell, an act which involved him in more or less trouble, tho it ended in

his trial and acquittal. But I have searched in vain for any record of another seaman who, justly or unjustly, met death at Jones's hand. There is no question of the relative importance of these two events. Paul Jones himself refers to the death of the second and unknown seaman as the great misfortune of his life, and its effect on his future career cannot be underestimated when we know that to escape trial he fled to America under an assumed name. Is it not possible to find here not only a reason for his coming to this country, but also one, and perhaps the right one, for his adopting the name of Jones?

The killing of Mungo Maxwell is always treated as a unique incident. The following is an account of the affair, as told by Alexander Slidell MacKenzie in his "Life of Paul Jones."

John Paul sailed from Jamaica to Scotland as a passenger in the brigantine "John," of Kirkcudbright. The master and mate dying of fever, Paul assumed command and arrived safely at Kirkcudbright. The owners of the vessel, feeling grateful to him for the preservation of their property, placed him on board of the "John" as master and supercargo, and despatched him to the West Indies. He made a second voyage in the same vessel to the West Indies, and in the course of it became involved in a difficulty in consequence of his having inflicted punishment on the carpenter of the "John," Mungo Maxwell by name, by flogging him in the customary manner on the back. Maxwell had been guilty of mutinous and disrespectful conduct toward his commander, who had punished him according to the power entrusted to him by the law. Maxwell was subsequently discharged from the "John" and entered on board the Barcelona packet, where he took a fever and died.

There was a report that Maxwell owed his death to the punishment inflicted by his commander.

The following letter, written by Captain Paul to his mother and sisters, gives his account of this affair:

"SEPT. 24, 1772, LONDON.

"I have enclosed a copy of an affidavit made before Gov. Young by the Judge of the Court of Vice-Admiralty of Tobago by which you will see with how little reason my life has been thirsted after. . . . I staked my honor, life and fortune for six long months on the verdict of a British jury, notwithstanding I was sensible of the general prejudices which ran against me; but, after all, none of my accusers had the courage to confront me."

So much for the death of Mungo Maxwell. The following letter and enclosure\* to Franklin will show good reason for believing there was a second and far more important affair.

"L'ORIENT, March 6th, 1779.

"HONORED AND DEAR SIR:

"The mystery which you so delicately mention in your much esteemed favor of the 24th ult., it has been my intention for more than Twelve months past to communicate to you, which, however, I have put off from time to time on reflecting that the account must give you more pain than pleasure; yet had I not, on my sudden departure from hence for Paris, inadvertently neglected to take with me the Original Paper whereof the enclosed is a Copy, I certainly should then have put it in your hands.—The subject at the beginning of the War was communicated to sundry members of Congress, among whom I may mention Mr. Hewes, of No. Carolina, and Mr. Morris, of Philadelphia, and to various other persons in America before and since.—It was the advice of my friends, Gov. Young among others, when that great misfortune of my Life happened, that I should retire Incog. to the continent of America, and remain there until an Admiralty Commission should arrive in the Island, and then return.—I had waited that event Eighteen Months before Swords were drawn, and the Ports of the Continent were shut.

"It had been my intention from the time of my misfortune to quit the sea-service altogether, and, after standing Trial, as I had the means, to purchase some small tracts of Land on the Continent, which had been my favorite country from the age of thirteen, when I first saw it. I had settled my future plan of retirement in 'Calm Contemplation and Poetic ease.'—But the revolution in America deranged everything. . . .

The remainder of the letter does not bear on the present question.

The enclosure mentioned is in Paul Jones handwriting:

"The Master of a West India Ship from London had occasion to ship sundry Seamen at the Island where he loaded,—one of whom in particular behaved himself very ill.—He was a principal in Embezzling the Master's Liquors—He got frequently Drunk—He neglected and even refused his duty with much insolence.—He stirred up the rest of the Crew to act in the same manner and was their avowed Ring-leader.

"As the Master's engagements were of such a Nature that his all depended upon dispatch, he gave his Crew every reasonable Encouragement.—They had plenty of good Provision and were in other respects well used.—Notwithstanding of which one forenoon when the Master came on Board [he discovered] that the Crew had formed or were then forming a plot to desert the ship.—As the Master was walking aft, the Ringleader rushed up from the Steerage, and stopped him with the grossest abuse that Vulgarism could dictate—because, as he pretended, the Master had sailed his ship fourteen Months without paying wages.—The fellow having some time before complained that he wanted cloaths, the Master now gave him Frocks and Trousers, telling him to go about his duty, and to inform himself better—for that what he had said was not so. But mildness had no effect, for while the Master was distributing Cloathing to some of the rest who were also in want, the first conveyed his things into the Boat, and another of the crew was following his example, till observing that the Master had an eye upon their proceedings they Sneaked back into the Ship.—They remained quiet for a short space.—But the Ringleader soon broke out again with Oaths and insisted on having the Boat, and quitting the ship. This the Master Refused, but offered to give up his agreement if a Man could be found to serve in his Room. The disturber Swore with horrid imprecations that he would take away the Boat by force!—and for that purpose actually rushed over the Gangway, bidding the Master the most contemptuous defiance!—Upon the Master's stepping up to prevent this, the man (having thrice his strength) leapt into the Ship and forced him into the Cabin, using at the same time language and attitudes too indecent to be mentioned, and charging him not to show his Nose upon Deck again till the Boat was gone, at his utmost Peril.—The Master searched the Cabin for a Stick, but not finding one, and his Sword by chance being on the Table, he took it up in hopes that the sight of it would intimidate the Man into Submission. The Man had by this time discovered the Gangway within a Step of the Boat, so that it would have been impossible to prevent his Elopement had he persisted.—But he now re-entered the ship breathing Vengeance, and, totally regardless of the Sword, tho within its reach, turned his back towards the Master, ran on the Main Deck, Armed himself there with a Bludgeon, with which he returned to the quarter Deck and attacked the Master.—The Master was thunder struck with surprise, for

\*Neither of these letters has even been published. The originals can be found among the Franklin collection of manuscripts in the possession of the American Philosophical Society, thru whose kind permission I was enabled to have access to them.

he had considered the Man's ravings as the natural effect of disappointed Rage which would soon subside of itself.—But now his sole expedient was to prevent bad consequences by returning again to the Cabin;—and this he endeavored to do as fast as possible by retiring backwards in a posture of defence.—But alas! what is human foresight?—The after Hatchway was Uncovered, and lay in direct line between the Master's back and the Cabin door, but the momentary duration of the attack did not admit of his recollecting that circumstance before his heel came in contact with the Hatchway, which obliged him to make a Sudden Stop.—Unhappily at that instant the assailant's arm being heigh raised, he threw his Body forward to reach the Master's head with the descending Blow—the fatal and Unavoidable consequence of which was his rushing upon the Sword's Point.

"After this Melancholy accident the master went Publicly to a Justice of the Peace and offered to surrender as his Prisoner.—The Justice, who called himself the Master's friend, persuaded him to withdraw and said it was Unnecessary to Surrender before the day of Trial. And the rest of the Master's friends who were present forced him to Mount his Horse. Two weeks before this the Chief Mate had been for the first time in his Life advanced to that Station—and yet unworthy as his conduct had been in it, he now openly Arrogated his Unblushing pretensions to the Command; and to attain it associated with the Crew. The Testimony of such a combination may easily be imagined. Conscious as they were of having embezzled the Master's property they were not likely to dwell on any circumstance that Manifested their own dastardly and undutiful Conduct.—And as the Second Mate, a young gentleman of worth, lay sick, as well as all the inferior officers and best disposed of the crew, in all human probability the truth could not escape the grossest perversion.—Besides the Nature of the Case Subjected it to the cognizance of Court Martial—and there was no Admiralty Commission then in the Government.—For these obvious reasons the Master's friends constrained him for a time to leave the Country."

It is unusual to find so much mildness, gentility and self-control, consistently opposed to such clamorous aggression and rank insubordination. Surely this deserved better of fate than an illness falling simultaneously and exclusively on all the virtuous officers and members of the crew.

In the confession, however, there are several points which completely separate this affair from the death of Maxwell. This ship sailed from London, whereas in the former case the "John" is always quoted as sailing from Whitehaven. The weapon used was a sword, not a belaying pin. If it occurred eighteen months before the Revolution broke out, it was

in November or December, 1773, whereas Mungo Maxwell died in 1770. There is no mention of a trial; on the contrary, his friends advised him to "leave the country, and retire incog. to the continent of America, until an Admiralty Commission should arrive in the island," and he "had waited this event eighteen months before swords were drawn and the ports of the Continent shut." After being master of the "John" he is said to have obtained command of the "Betsy," of London, a West India vessel. It is probable that the unknown seaman's self-inflicted death took place on this ship. MacKenzie says that about 1773 "he, Jones, conceived the project of abandoning the profession of the sea and devoting himself to agriculture by taking advantage of the opening which his brother's estate offered. It is possible that he commenced carrying his project into execution, for two years of his life at this period are unaccounted for by his biographers." It is to this period that he probably referred in his celebrated letter to the Countess of Selkirk. "Before the war began, I had at an early time of life withdrawn from the sea service in favor of 'calm contemplation and poetic ease.'" That Franklin had permission to communicate Jones's confession appears in the following paragraph: "In short, however chequered my fortune may have been, I feel no sentiment in my Breast that can ever make me wish to conceal any event of my Life from persons of Candor and Ingenuity—therefore you are at perfect liberty to communicate my story to whom you think proper."

If it appear odd that so justifiable an action as the killing of a mutineer should have needed so elaborate a defense, it is well to remember that the man of sentiment, whose "heart was susceptible to the finer feelings," wrote that confession. That the man of sentiment could give place to the man of action, the autocratic commander, appears from the following letter to the Marine Committee of Congress about Maxwell's death:

"I do not reproach myself. It is a case to illustrate the truth of what I have already said, namely, that the commander should always impress his crew with the belief that, whatever he does or may have to do, is right, and that like the Sovereign, 'he can do no wrong.'"

PHILADELPHIA, PA.

# Railway Rate Legislation

BY JONATHAN P. DOLLIVER, LL.D.

[United States Senator J. P. Dolliver, of Iowa, after serving several terms in the National House of Representatives, was elected to the Senate as successor to J. H. Gear, in 1900. He is an active and influential member of the Interstate Commerce Committee, Pacific Railroads, Post Offices and Post Roads, etc., and no one is better fitted than he to stand,

as he does, at the head and front of the present fight over the Railway Rate Bill, waging in the Senate. As a clear-headed and accomplished lawyer he has mastered the points at issue, and while he stands on constant guard in the Senate, defending his convictions, he has made time to prepare for THE INDEPENDENT the following consideration of Rate legislation, for the benefit of the public.—EDITOR.]

THE most difficult and at the same time the most important question which has engaged the attention of Congress since the Civil War is now before the Senate of the United States. It involves the business welfare of the whole community, since hardly any article of merchandise enters into consumption without having its price affected by railway charges. The fathers who laid the foundations of our institutions could have had only a dim conception of the extraordinary changes which have been introduced into the social and industrial life of the world thru the building of the modern system of railway transportation. We owe it to the genius of Chief Justice Marshall that our written Constitution has been made equal, by wise interpretation, to the vicissitudes of the national situation. It must be said also, to the credit of our courts, from the lowest to the highest, that not a single opinion has been recorded abridging in any way the power, either of the States of the Union, or the nation itself, each within its jurisdiction, to determine what the charges of common carriers ought, in reason and justice, to be.

The authority which is given to Congress in the Constitution to regulate commerce is exactly the same power which the States of the Union have always exercised in respect to their domestic commerce, and both are exactly the same power which has for centuries been exercised by the Parliament of England and by all other political sovereignties

from the most remote antiquity. It is a curious reflection that this power, this sovereign dominion over the charges of common carriers, had its origin in a rather questionable sense of justice. It is hard to understand how the notion arose that it was necessary for Parliament, two hundred years ago, to protect the people of England against the extortions of the humble individuals who were carrying merchandise for hire on pack horses and clumsy wagons in the rural districts, and passengers in hackney coaches and sedan chairs in London, unless we take into consideration that the England of Queen Anne was a landed aristocracy, and that Parliament merely registered the protests of the agricultural gentry against the helpless part of the community, which was trying to make its living in the lowly occupation of common carriers.

Thus the oppression of one century sometimes creates the weapons by which another defends the inalienable rights of the community; for without the power which that old Parliament, interpreting the avarice and greed of landlords, exercised against wagoners and hack drivers, modern society today would be a helpless victim in the hands of an organized system of transportation which, within two generations, has grown to such proportions that it represents one-sixth of the national wealth; that is to say, one dollar in every six of that accumulated property which stands for the savings of three hundred years of American labor.

If the people of the United States, holding in their hands the power over commerce which is given to their Government by their Constitution, and belongs to them as a part of their national inheritance, allow the American railway system to outgrow the restraints of the law until it overshadows their Capitol and dominates their institutions, it will be a mournful example of political decadence. They have been a little slow in realizing the necessity for action and sometimes awkward in their motions, but they have taken the problem of railway regulation upon their hearts and their consciences, and we can trust our eighty millions to work their way into a permanent control of the instrumentalities through which their business in all its varied forms must be transacted.

It was forty years after the first American railway was built before a bill was introduced into Congress which even purported to deal with any of the problems of interstate commerce, and it required a public discussion for twenty years more before the Interstate Commerce Act of 1887 was placed upon the statute book. That law has been in operation for nearly twenty years, and today for the first time in our national history the public mind is engaged everywhere in the consideration of a single question: "Shall Congress exercise the power to fix the rates charged by interstate carriers for the transportation of persons and property; or shall we go on, allowing the stocks and bonds of our railway systems to be multiplied without attempting to define by law the relation which their assets ought to bear to their liabilities, leaving our children and our children's children to be plundered without remedy generation after generation?" The American mind is naturally conservative. It respects the law of property which we have inherited, and is a stranger to mere prejudice against legitimate business investments. It is difficult to overstate the folly of those who dismiss the public demand for rate regulation as if it were an idle clamor; it is the deep seated resolution of millions of people to save their marketplace from perpetual bondage to the allied corporations which ought to be obedient and faithful public servants.

Now, what is Congress undertaking to do? The pending bill, which passed the House of Representatives with practical unanimity, does not pretend to solve all the problems with which the next fifty years will have to deal. It is no reckless act of oppression or injustice. It does not attempt to fix all the railway rates in the country; indeed it does not attempt to fix any of them. It does not meddle in the business of the railway corporations, and every interference which it suggests is along the broad lines which have been justified by the experience of other countries as well as of our own States.

The truth lies between these extremes. The bill recognizes, on the whole, that the railway rate making of the country should be conducted by the railways themselves with as little interference as possible. It therefore deals only with those cases where a dispute has arisen between the shipper and the carrier in relation to rates. It gives to the Commission the authority and makes it their duty to investigate the merits of that dispute and in case they find that the railway has been overcharging the public or is guilty of discrimination the Commission is required to find the rate which ought to be charged in such cases and to promulgate an order fixing that as the maximum beyond which the charge of the carrier may not go. It leaves the great body of railway rates undisturbed and intervenes only to correct a particular injustice when such injustice is found to be real and substantial.

It would seem that a proposition like that, in view of the powers which Congress could exercise if it desired to put forth the strength with which the Constitution clothes it, would be accepted by the railway world as a legitimate, necessary and advantageous arbitration of a dispute which, in the nature of the case, the Government ought to undertake. Yet that simple proposal, made by the President of the United States, has been received almost everywhere in railway circles as an outrageous impertinence, a species of radicalism new and strange in our affairs. Hundreds of thousands of dollars have been spent in a literary propaganda to disparage and misrepresent the proposed legislation; and now,

in the Senate of the United States, a debate is raging in which the Constitution of the United States and the rate sheets of the joint traffic committees fill the Chamber with a confusion of tongues never before approached in any human deliberations.

The Constitution of the United States says that this power over interstate commerce belongs to Congress. The courts have made it certain that it may be exercised directly thru the enactment of a statute fixing the rates or by an administrative commission charged with the duty of applying the law to particular cases. Yet no sooner is that proposition put in the form of a bill than the learning of the Senate is poured out in an effort to give to the courts of the United States the power which the Constitution has confided to Congress. Mr. Justice Miller, one of the greatest of our American judges, in an individual opinion which has since been approved by the entire court, has pointed out that a rate made by the Legislature, directly or indirectly thru a commission, becomes, when it takes effect, the law of the land.

It does not require a very profound legal faculty to understand this. The power to fix the rate is a power of Congress. Everybody can see that if Congress exercises the power itself it is an act of legislation, that is to say, a law. The fact that a commission is created with authority to apply a general statute to a particular case does not make the fixing of the rate any the less the act of Congress or the rate itself any the less the law of the land. Yet we have the spectacle of great constitutional lawyers solemnly contending that after Congress, acting thru a commission, has fixed the rate, they ought to turn the whole question over to the courts to be re-examined.

Such a thing would be a practical absurdity for this reason: The chief reason for creating a commission to determine these questions is because the questions require the skill of experts. They are not questions of law; they are questions of business policy which require in their settlement the experience and practical knowledge which is a small part of the education and habit of our courts. We know as well as we can learn anything from experience that the enforcement of

laws regulating commerce become ineffective if it is left in the hands of the courts. For nineteen years prior to 1873 the Court of Common Pleas in England, by direction of law, tried to exercise the very jurisdiction which it is now proposed to confer upon the circuit courts of the United States, and the testimony is without contradiction that the railway directors snapped their fingers in the faces of the courts, leaving the whole body of English law for the control of common carriers worthless and contemptible. We have also the recent testimony of one of the most eminent of our own circuit judges, Peter S. Grosscup, whose experience upon the bench and whose profound study of these problems have given his opinion an unquestionable authority, that the Circuit Courts of the United States are the least competent of all possible tribunals to try these questions. And yet, in spite of all, the argument is made that, even after we have clothed the commission with power to fix a rate, their work should go for nothing if a Circuit Court of the United States feels inclined to review its wisdom and accuracy.

If such an anomaly as that is introduced into the law everybody understands that the fight for rate regulation has been lost; or, rather, I ought to say, that the fight for rate regulation has begun in earnest in the United States. To create a tribunal which is competent to decide such a question and then turn the question over to be decided again by the courts is a practical absurdity so glaring as to test the patience of public opinion. It is not only absurd from the standpoint of practical affairs, but it is a legal absurdity unfit for the countenance of constitutional lawyers. The power to fix rates is a power of Congress and the rate fixed by the commission is a rate fixed by Congress. How is it possible to turn over to the courts an act of Congress to be inspected, reviewed and made subject to a decree of approval or disapproval?

What is the relation of the courts of justice to the laws of the United States? A good many mean things are now being said about Congress and especially about the Senate. But it is as true of that great legislative assembly as

it is of individuals that it cannot be written down except by itself. It will survive the hearsays and scandals everywhere directed against it in our magazine literature; but how will it survive the humiliation of deliberately turning over these acts of its own, which Justice Miller declares constitute "laws of the land," to be supervised by a Circuit Court somewhere. Are the courts of the United States appellate tribunals to sit in judgment on the wisdom of Congress? Has the legislative department of the Government fallen so low in its own estimation as to require the help of a circuit judge to reach a decision on a matter expressly confided to the wisdom of Congress? The two Houses will have no difficulty to outlive the storm of calumny which now rages against them, but what escape can there be from the degradation which is here described.

But it is argued "Is this power of Congress to regulate railways without limit?" The answer is that it has exactly the same limits that every other power of Congress has, the limit fixed in the Constitution, which is the paramount law of the land. Every act of Congress may be brought into the courts for judgment, not as to its wisdom or the policy involved in it, but as to its conformity to that supreme law. An act of Congress which, either directly or thru a commission, fixes a rate which is unreasonable and unjust to the carrier, will, if that is shown to a Circuit Court of the United States, be declared void, because it violates the right of property which is secured by the Constitution of the United States. The proceeding in which such an act of Congress is vacated cannot be in the nature of an appeal from the Interstate Commerce Commission or, in any proper sense, a review of its findings. It is an independent action in equity brought by the carrier affected by the order questioning its validity upon constitutional grounds. For such a petition the courts of the United States are open, and they cannot be closed by any device of legislation.

Here, then, we have the line of division in the Senate: those who believe that rates ought to be regulated and that the courts cannot properly be charged with that duty desire to create an im-

partial public tribunal, administrative in character, with authority to apply the standard of "*just and reasonable*" to those railway rates which are the object of complaint; and when that tribunal has found the rate which, in their judgment, ought to be observed as a maximum they desire the order of the Commission to go into effect, subject only to attack in the courts in proper legal proceedings to test its constitutionality. That is the court review which was in the mind of the President when he sent his last annual message to Congress. Speaking before the Iroquois Club in Chicago less than a year ago the President used these words:

"I believe that the representatives of the Nation—that is, the representatives of all the people—should lodge in some executive body the power to establish a maximum rate, the power to have that rate go into effect practically immediately, and the power to see that the provisions of the law apply in full to companies owning private cars and private tracks, just as much as the railroads themselves. The courts will retain, and should retain, no matter what the Legislature does, the power to interfere and upset any action that is confiscatory in its nature."

With clear vision, the President has cut thru the undergrowth of technicality which surrounds this question and marked out a straight road for every man who desires Congress to exercise the power which the Constitution gives it. It is a vain expectation that anything less will answer the questions which millions of his countrymen are now asking. The American people know exactly what they want; they know exactly what they are entitled to. If this Congress gives them something less, if it undertakes to swindle them with vague and cunning phraseology, appearing to do one thing and actually doing another, let no man be deceived by the expectation that such proceedings have settled this question. For instead of bringing this aggravated controversy to a settlement such an abdication of the power of Congress in favor of a department of the Government to which, under our institutions, no part of the business of regulating commerce is committed, will create the largest and most far reaching national issue with which present generation will be called to deal.

## The United States Senate and the People

BY GEORGE C. PERKINS

[The Hon. George C. Perkins, United States Senator from California, now in his third term and the only man who has represented California in the Senate for more than two terms, is distinctly a self-made man. He went to California from Maine, as a sailor before the mast, entered successfully into mining, rose thru the State Legislature to be Governor, and came to the Senate as one of its very rich members, but a man distinctly free from the faintest shadow of any taint or suspicion, social, financial or political. He had large interests in Hawaii, large shipping interests on the Coast, large railroad interests, but in assuming the responsibilities of Senator he disposed of every holding, and publicly stated that he came to Washington without one interest that could be affected by legislation or one claim that could influence him. This position he has since held, receiving the unquestioned confidence and respect of all partisan associates. This article is especially valuable as expressing the honest convictions of one of the rich men of the Senate, against whom the finger of suggestion, even, has never been pointed.—EDITOR.]

IT seems to have become fashionable lately to criticise harshly the United States Senate. It may be said that there appears to have arisen a literary habit of condemning the Senate for what it has done or for what it has not done; for what writers im-

agine it may do or may not do; for views that may be attributed to it or for action that it is predicted it will take. It is charged that the Senate as a body favors in legislation monopolies or great corporate interests as against the welfare of the whole people, and it is alleged that

nearly all of the Senators were elected thru the influence of corporations or monopolies or by the improper use of money. It has also been asserted that the Senate is a "Millionaires' Club," the members of which assemble to conspire against the best interests of the people and to promote the aims of vast aggregations of capital with which they are supposed to be connected directly or thru sympathy. I am aware that these flings at the United States Senate seem to meet with wide approval, and that the imputation of unworthy motives to Senators who do not accept the popular view on vital economic questions appears to be received with satisfaction by the masses. These are facts which cannot be ignored, however much they may be deplored by earnest, unprejudiced and thoughtful Americans, but it is certain that the time will come when the hysteria which is now epidemic will have passed away, and then it will be recognized that the Senate has stood an immovable barrier against tendencies which threaten the very existence of the Republic and the liberty which it has been our proud boast that we possess.

It is as certain as that the sun will rise tomorrow morning, that the course of the Senate in connection with the great issues of the day will be approved by the impartial historian. A sincere and earnest effort to discover the truths underlying important measures of necessity precludes the hasty acceptance of proposed legislation involving fundamental interests, where a mistake in action will precipitate disaster whose extent we cannot foretell. If there ever was need of deliberation and careful study of proposed legislation, that time is the present, and the Senate would fail in its duty to the people were it to enact laws without first determining their scope, their effect and their constitutionality. And I think that the present Senate will stand forth in history as one which has exhibited in the highest degree the qualities of fairness and impartiality, a determination to arrive at the truth, and a courage to maintain the truth as found against the popular demand for hasty and inconsiderate action.

I think that the attitude and action of the Senate on the greatest questions

which have come before Congress for many years completely refute the charges that have been brought against it. Its action has not been that of a club of millionaires, banded together for selfish purposes. As a matter of fact, there are not more than ten Senators who possess a million dollars, and leaving out of consideration one Senator, the average possessions of eighty-nine members of the Senate will not exceed the average accumulation of the business man, manufacturer, farmer or professional man of the New England or Middle States. Indeed, as is well known, very many members of this body have only their official incomes for the support of themselves and their families. Neither is the Senate's action that of a body elected thru the influence of monopolies or by the misuse of money. It is well known that the great majority of the members of this Chamber were elected by direct popular vote, so far as that choice is possible under existing law, for the people at primary elections, in county and State conventions, gave expression to their wishes which the State Legislatures simply made effective. In the same manner are selected the Presidential electors, who carry out the instructions of the people as expressed at the polls, in voting for the President and Vice-President of our country. I do not believe there is one member of the Senate who, in aspiring to a seat therein, was influenced by any other motive than to secure the honor attaching to membership in the most distinguished legislative body in the world; and a man who desires such honor as may be there gained must and does know that he will fail of his object unless he performs his duty honestly, conscientiously, fairly and fearlessly.

A seat in the United States Senate has been sought by some of the most eminent lawyers, scholars and thinkers of our country, and there are always found there men of that mold, who impress their stamp upon that body. No important question can there arise which does not bring to the front great minds, which guide us toward the truth of things and give to the Senate of the United States a dignity and authority which are recognized around the world. Of the many great men who have influenced the

course of events in their time I will refer to only four, with whom I have been officially associated during the last decade. They have since passed away, but their lives and records are a part of

Indiana. Where is there a thinking man today who does not believe that their earnest efforts to arrive at truth voiced the conservative spirit of the Senate, and that they performed inestimable

George C. Perkins.

the history of our country. I refer to Senator George F. Hoar, of Massachusetts; Senator O. H. Platt, of Connecticut; Senator E. C. Walthall, of Mississippi, and Senator D. W. Voorhees, of

service to their country in defeating such measures as the so called Force bill, the bill for the free and unlimited coinage of silver and other ill digested and ill understood measures? Men like

these, of absolute impartiality, of strict honesty, of unswerving loyalty to the principles which they believed would best redound to the welfare of the Republic, could not be driven into hasty action or blinded to the necessity of viewing proposed legislation in all lights. They were statesmen in the truest sense of the term—men who looked to the interests of the whole people for the present and for the future, and who realized that a refusal to uncover and make clear the truth concerning great measures would render them recreant to their trusts. It is men like these who set the standard of the United States Senate, and who render that body a truly deliberative one, which must, as long as our Republic shall endure as our fathers created it, consider all measures brought before it in all lights and under all aspects, and determine as far as human intelligence can what such measures mean and what their effect will be. Where, except in the Senate, have we heard such warning words as these, which were uttered there only a few days ago:

"Is the relation of the courts to government by the people forgotten? The courts are an integral and vital part of our Government, and it would be a sad day for American civilization if their function were degraded or weakened. They are the balance wheel and check in our system between contending passions and policies."

This is not idle rhetoric.

"It is the sober truth that the courts are the guardians of our right and liberties. It is high time that the people should remember this and should soberly reflect upon the current heresies. It is high time that public sentiment and conviction should loyally support the judicial power, recognize the patriotism and good faith of the courts, and maintain their authority and independence."

Do we hear such sentiments from the critics of the Senate, who are accustomed to charge such men with being the tools of monopolies? Two of my predecessors in the Senate from California—Senator Stanford and Senator Hearst—were thus characterized, with what injustice all who knew them well know. Senator Stanford, as every one is aware, made a great fortune thru the first transcontinental railroad that was built. The courage, pluck, confidence and energy required to push that vast

work to completion had their just reward in great riches. But these riches were administered while he was living, and every dollar went toward the foundation and maintenance of a great university where poor boys and girls can obtain a collegiate education without money and without price. There are now on its roster the names of students from every State in the Union.

Senator Hearst was one of the very rich men of the country whose wealth was dug from the mines which he developed to the vast benefit of the mineral resources of our country. And of this great fortune he, like Senator Stanford, planned to devote much to the cause of science and education, and to charitable and benevolent purposes. Death, unfortunately, deprived him of the satisfaction that Stanford had in seeing his ideas take form; but his widow is now carrying out those ideas, and hundreds of thousands of dollars are being yearly devoted to purposes which make glad tens of thousands of hearts.

Critics are numerous of men like these—men who in the struggle of life have, thru ability and force of character, garnered more of the earth's riches than the majority of people, and who distribute with lavish hand for the benefit of the less fortunate that which they have acquired. The mere fact of possessing large fortunes seems to be justification, in the minds of many writers, for charging them with conspiracy against the well being of the people; and when the Senate refuses to adopt without consideration measures hastily formulated, and apparently in disregard of justice and in violation of the fundamental principles of our system of government, Senators are charged with partnership with trusts and monopolies. It is a fair question to ask whether the courses advocated by such critics would lead toward the enlargement of our liberties. Is it not true, rather, that the precipitate action which they urge would soon bring down upon us the great fabric of our free institutions?

Questions of national importance affecting every man, woman and child in our great country, cannot be disposed of with a wave of the hand, as the Senate is urged to do from many quarters. No

measure offered to the Senate for adoption, from whatever source it may come, can be passed there without the most careful scrutiny, on pain of opening a free road to the "Man on Horseback." The country has had reason to congratulate itself that the Senate was not swept from its feet by the free silver flood; that it did not plunge headlong into the free trade morass. Without the careful examination of the Senate, to what vast sums would not the Government expenditures extend? It would be easy to bankrupt the country thru internal improvements alone were there no restriction upon the plans and propositions brought forward. And in the matter of our treaties with foreign nations, into what dangerous complications should we not be entrapped were it not for the careful scrutiny of the Senate? Such scrutiny is a part of its duty, and when it ceases to perform it and refuses to ascertain and act upon the facts which it is able to secure, then we may be sure that this great bulwark of the people's liberties has become too rotten to with-

stand the torrent which will bring destruction to the Republic. I believe that in the end the people are always right, but they are right only at the end of a period of careful study and deliberation, and their sober judgment always justifies the deliberation which has prevented the hasty action that would have brought mischief in its train. The very critics who now bombard the Senate with denunciatory articles will, a few years hence, be glad to acknowledge that they were wrong. Some of them doubtless unintentionally misrepresent the Senate's action or policy, but others appear to do so deliberately. But in whatsoever manner the misrepresentations are made, they will not swerve the Senate of the United States from doing its duty to our whole country. Its members fully realize the great responsibility resting upon them in their obligation to support the Constitution, and it is the safety of the Republic that they will not shirk it, but will bear the burden imposed upon them, even the burden of unjust denunciation.

WASHINGTON, D. C.

## Easter Dawn

BY FRANK CRANE

O DAY dawn, O gray dawn,  
Why are you standing there,  
So still, so still, behind the trees,  
With your arms outstretched in prayer?

O day dawn, O pale dawn,  
Why is your face distressed?  
Have you, too, had a little child  
To die upon your breast?

O day dawn, O cool dawn,  
Touching my fevered head,  
At my window I've waited all night for you,  
Watching beside my dead.

O day dawn, O strange dawn,  
And is it *true* what they say,  
That you'll come at last to the sweet, sweet  
dead,  
And will you to mine some day?

WORCESTER, MASS.

Racing Car.

# The Conquering Automobile

BY GEORGES DUPUY

AMERICAN CORRESPONDENT OF THE PARIS "L'AUTO."

I SHALL always remember, in the year of 1886 or 1887, I was in the Bois de Boulogne, in Paris, on a glorious Easter morning, in company with my uncle, and both were riding bicycles. We were quietly enjoying our ride under the lofty green trees when we

Two Horseless Carriages.

heard, in the distance, an unusual noise, like that of a pair of cymbals struck at rapid intervals. We thought the Salvation Army was somewhere in the vicinity; a little further on an offensive smell of burnt petroleum made us discover, standing at a turn of an alley, a remarkable thing. It had the shape of a country buggy, set on immense outstretching springs and four huge iron rimmed wheels. There were two small seats on

enormous wrenches. They were in shirt sleeves, arms tucked up to the elbow, with dirty, greasy hands and sweating faces. I also remember very well a little crank, or piston rod, full of trickling dark oil, that would run fore and aft at a terrific pace; possibly that was the trouble. My dear old uncle, who ever possessed the greatest inventive imagination and could always give me judicious explanations on any subject on

"Seeing New York."

the top and a bicycle handlebar in front. The strange machine was quivering all over like a suffering beast, smoking like a chimney, while something inside of it was all the time cymbaling, hiccougging, hiccougging, cymbaling enough to break the windows of the whole capital.

A lot of inoffensive but puzzled walkers surrounded that mechanical orchestra, as two elderly gentlemen, one French, the other a German, were bent over it, each armed with hammers and

earth, told me that there was something wrong with the "boiler," and that they should unscrew some "blast pipe" he knew of, to fix it, etc.

Meanwhile the two men—two old friends, I could judge—were addressing each other in terms that were much to be regretted indeed, on such a beautiful morning. The German would call his partner a "*pouce l'impézile* (an imbecile) with his indescribable national accent, inflicting on his comrade the re-

Armored Motor Car.

Latest Model of High Speed Motor Boat.

sponsibility of the accident. In fact, the conjuncture was amusing enough. The unfortunate pioneers of the horseless vehicle could neither stop their motor or cause the machine to move an inch!

These two persevering engineers, who, after much toil and drudgery, succeeded in pushing their noisy, grass-hopper-like affair toward the gates of Paris, at the rate of eight miles an hour,

said that many fortunes and many hopes were lost, many lives sacrificed. Speed and Death are two lovers walking hand in hand, and our "daring devils," Oldfield, Jenutzy, Fournier, Chéry, Lancia, Marriott and others, could tell of their thrilling sensations on that subject.

The progress accomplished in the construction of motor cars for the last ten years is almost incredible and far more

Motor Sleigh Said to Be Capable of Making 35 Miles an Hour on Snow and 90 Miles an Hour on Ice.

Courtesy of the Scientific American.

were: the German, Mr. Daimler, and the Frenchman, Mr. Levassor, the two great geniuses to whom the world owes nowadays the powerful, noiseless, comfortable, swift and easily driven motor car.

Science, labor and marvellously organized brains have produced, at the present, a machine perfectly adequate to the modern man's intense life and ambitions. To reach that ideal, it must be

rapid than that of the railroad locomotive. In 1896 three intrepid French autoists, driving a sixteen horse power Panhard-Levassor, covered the distance of Paris to Vienna—about 600 miles—in 32 hours, an extraordinary performance for the epoch. In 1901, Henri Fournier went from Paris to Bordeaux—310 miles—in 5 hours and 40 minutes, in his sixty horse power Mors. This year Demogeot covered five miles

in 2 minutes 37 seconds in Florida in a 200 M. P. Darracq. and Fred Marriott, the famous driver of the Stanley steamer, broke the mile record, the next day, in the most wonderful time of 28 seconds.

The automobile is the idol of the modern age. Affection, love, ill will, deception, envy crawl around it. The man who owns a motor car gets for himself, besides the joys of touring, the adulation

interest those who are in any way connected with farming. Side by side, with the old fashioned and familiar farm utensils, one sees gasoline engines applied to pumps, plows, hoists, threshers, etc. It is only the sight of the cow sheds and sheep pens that reminds the visitor that this is really an agricultural and not a motor exhibition.

Santos-Dumont, the uncontested king of the air, has, for more than four years,

Motor Skates.

of the walking crowd, and the daring driver of a racing machine that bounds and rushes and disappears in the perspective in a thunder of explosions is a god to the women.

Now the advantages of the gasoline motor, at both industrial and sporting points of view, are numerous:

There is an exhibition of agricultural implements worked by motors which is at present taking place in Paris at the Galerie des Machines, and cannot fail to

used gasoline motors to propel his cigar shaped airships. Now he has abandoned the inflated balloon for the flying machine, and is actually building in Neuilly St. James, near Paris, a big "helicoptere" fitted with large wings and propellers. With it the little Brazilian hopes to realize Jules Verne's dreams and go to the North Pole in one flight from some point of Norway. His new engine is a 45 degree eight cylinder, water cooled, with exhaust valves placed at the

top of the breeches to insure a perfect balance when in motion. It develops thirty-two horse power at a normal revolution of 700 to 900 turns a minute, and weighs, with a 40 centimeter flywheel, only 110 pounds. Santos-Dumont says he will reach a speed of at least 60 miles an hour by calm weather and fly against any wind.

A few weeks ago, at a meeting of the New York Motor Club, the intrepid

The only obstacle to the absolute possibility of all that is the congelation of the oil at temperatures reaching 60 degrees below zero and more. Industrial alcohol will probably render better services as a fuel.

Fancy has also claimed its rights in the new industry, and we have in France now the "motor skate," invented by Alphonse Constantini. Each roller skate is fitted with a  $1\frac{1}{2}$  M. P. motor, air

Motor Ambulance.

American explorer, Walter Wellmann, told the assembly of his intentions of also reaching the Arctic point in an airship. Mr. Wellmann's dirigible balloon will be propelled by an engine built on the very same principles and even lighter than that of Santos-Dumont. He will also take along light automobile sleighs fitted with long screw propellers that will plow the snow or bite the solid ice.

cooled. The gasoline tank, which holds three-quarters of a liter of fuel, is carried on a girdle around the waist of the motor skater. This amount of gasoline, it is said, allows a distance of 75 kilometers to be covered. The little tank also carries, attached to it, the coil, the accumulator and the levers for controlling the speed of the engines.

Holding the throttle lever in his right

hand and having closed the battery circuit, the motor skater merely pushes off one foot, as an ordinary skater does, and as soon as he hears an explosion he starts the second foot in the same way. Constantini says he can attain a speed of forty miles an hour, and, encouraged by his first success, is now building skates of less power in order to popularize the new sport. The invention is all right, but—this is a personal suggestion—suppose, for some reason or another, one of the engines should stop. Can you imagine the motor skater on one leg, the other off the ground, with a dead motor hanging to his sole?

A more interesting application of the gasoline engine is the motor boat, which is already used in many countries as a light, swift and safe transporter on rivers and lakes. On the wild Amazon River, in South America, the speedy little motor boat carries the raw india rubber that will be turned out into tires for the motor car. It is also a charming instrument of sport.

I am extremely fond of hunting, and had last year, in the great Eastern woods, some delightful sensations with a small, noiseless gasoline launch. His royal highness the moose likes the stillness of the forest in the fall, the calm, shaded river banks or lake shores, where he can peacefully gnaw the bark of the silvery birch tree, where the silence is hardly disturbed by the chirping voice

of the woodpecker. With an old French Canadian, who knew the ways of the animal, we once approached a big bull moose on a New Brunswick lake. It was by the dim twilight; as soon as we perceived his glimmering form, perched on an overhanging rock and browsing some high foliage, we stopped the little motor—the boat was noiselessly gliding on its acquired propulsion. Pang! pang! pang! three successive shots awakened the echoes, a mass fell in the water, and a few minutes later, having restarted the engine, we were pushing to the shore, armed with poles, the big brown moose with his great horns half sunk, and the blood of the beast would blend with the glittering gold and purple bands spread by the setting sun on the still surface.

And now the last application of the automobile will sadden the soul of the philanthropist. In several countries of Europe powerful blinded war cars have recently been built and satisfactorily tested.

In the future battles it will happen that a treacherous bullet fired by a sixty-shot Hotchkiss or Maxim, manœuvred from inside the swiftly going *Mitrailleuse*, will kill a young officer who had been himself a faithful subject of "Queen Motor Car" for many years. "The Conquering Automobile!" Is not there some involuntary irony in the title of this chronicle?

NEW YORK CITY.

## "Gentlemen by Profession"

BY THOMAS WENTWORTH HIGGINSON

**O**PENING, the other day, in a branch of the Boston Public Library, a somewhat well worn copy of Darwin's "Voyages." I came upon this remark on a South American province:

"In Entre Rios the Salla [or governing body] consisted of only six representatives: one of them kept a common shop and evidently was not degraded by the office. All this is what would be expected in a new country; nevertheless, the absence of gentlemen

by profession appears to an Englishman strange."

A chance glimpse at this passage gave the keynote to this paper. Darwin, who has been thus quoted, was personally one of the simplest of men and was essentially unworldly. He was not here arguing a case, but simply noting casual facts, and it is worth following up his suggestions to see how far it helps us toward a key to that undefinable stand-

ard which still, in a degree, separates English from American society.

Dr. Johnson, in that first edition of his dictionary, published in April, 1775, whose eccentricities caused it to be greatly modified in later issues, defined an English lawyer as "a new species of gentleman." Burton had, however, written in his "Anatomy of Melancholy," fourteen years earlier (1761), speaking of a profession quite distinct from the law, "Cookery is become an art, a noble science; cooks are gentlemen." The word may doubtless be traced to equally unexpected sources, but as to the legal profession, we may learn from any English novel that it is only its higher walks which there constitute, even now, a claim for anything that would in America be viewed as social recognition. The same limitation applies in England to physicians, and even to the dissenting clergy; while a similar embargo is placed not merely upon mechanical, but on mercantile pursuits. Except with certain limitations growing out of public functions, no English merchant, it is said, can be presented at court, altho in regard to American applicants this point is not raised. So thoroly is this standard, however, engrained in the British mind, that I heard only this last week from an English lady that her father, a major general who was born in 1789 and died in 1869, left an express provision in his will that any son of his who became a merchant should forfeit his share in the family estate.

So far as this country is concerned, we find the matter best summed up in that keen saying attributed to Howells—the best bit of social analysis I know—that the upper class may look down on the lower class as much in America as in England, but that, in this country, the lower class does not look up. A remark almost precisely corresponding to this is mentioned by Gen. Adam Badeau as having been given by himself to an English lady in 1885, or thereabouts, perhaps before Howells had ever used the phrase. As Badeau states it, a woman of rank said to him: "Do you really mean to say that in America a great merchant's daughter does not look down on the little grocer's daughter!" "Perhaps," said Badeau, "the great merchant's daughter

does look down, but very certainly the little grocer's daughter does not look up." "And the whole company," he adds, "was horrified at the idea of such a country." It is certain that men so able as Froude and Lecky have written to advocate the advantage of this system of hereditary rank, and Mr. Gladstone once declared that the love of an Englishman for freedom is hardly stronger than his love for aristocracy. Sir William Molesworth, indeed, asserts that this feeling in England has the force of a religion. We are all waiting now in wonder to discover whether the recent overthrow in the composition of the House of Commons is really one of the great historic events in British history, as it certainly appears, but I cannot help remembering that I have seen in a radical public meeting in England an admirably clear headed and agreeable speaker, making a speech of moderate length and wholly to the point, who was put down by the cry of "time" all over the audience, which was impatient for the voice of a titled speaker who could scarcely be heard, after all, and when heard, could scarcely put two sentences grammatically together, because of blundering and stammering. Thus deep and potent is still the feeling of extreme social distinctions in the English mind, even after the mode of government has practically become what Motley has defined as a "plutocratic democracy."

If the question be raised how an American with bad manners can still be received in English society—a fact quite unquestionable—the answer is very simple, that those whose own position is absolute and undoubted may sometimes rather welcome this ungracious quality as a relish. They may even enjoy the stir produced, in the midst of established order, by flashes of independence. This did not escape that acute social observer, Lady Eastlake, who writes in her journal, after criticising the manners of the artist, Landseer:

"He is in very 'high society,' but I have seen enough now to know that they care not for smooth manners like their own, but even like vulgarity, if it be but new. Sir Francis Palgrave was right in saying that a person who would set up to say rude things would be sure to take in London."

I was told much the same thing by a

lady whose great social successes in England surprised Boston and New York, many years ago, and who herself assured me, as explaining them, that what the English higher classes liked best in an American woman was that she should hold her own and disregard their traditions.

Turning, on the other hand, to the American point of view, and to one who surely did not win his social standing by rudeness, it is to be noticed that Motley, when staying with the Sheridans on their beautiful estate in the picturesque village of Frampton, was obliged to say to his wife:

"I am most sincere when I say that I should never wish America to be Anglicized, in the aristocratic sense. Much as I can appreciate and enjoy esthetically, sentimentally and sensuously the infinite charm, refinement and grace of English life, especially country life, yet I feel too keenly what a fearful price is paid by the English people in order that this splendid aristocracy, with their parks and castles, and shootings and fishings, and fox huntings, their stately and unlimited hospitality, their lettered ease and learned leisure, may grow fat, ever to be in danger of finding my judgment corrupted by it."

Sumner and Ticknor, who disagreed in most things, agreed with Motley on this point; and perhaps the only great American who was thoroly and essentially Anglicized was Cooper, the novelist; and the unhappiness of his life was because in this respect he was so alone. He spoke often of the "gentry of America," Mr. Lounsbury, his biographer, tells us: "as if there were or could be here a class of gentlemen outside and independent of those engaged in professions or occupations. . . . His contempt of trade and of those employed in it had frequently about its expression a spice of affectation."

If there is one lesson more than another which Americans learn from English society it is this, at any rate, that in America there are two paths to the highest social position, where in England there is but one. In England the one path still lies thru ancestry; while in America there is a second path quite as important, that of having had no ancestry to speak of, and yet to have done something without them. Hereditary aristocracy possesses the great interest of belonging to the past and at least representing its tendencies in the present; while democracy has the greater interest of exhibiting the actual present and the

possible future. Even that delightful Tory, Sir Walter Scott, admitted in his preface to "The Abbot" that the greatest family must descend from some mean man, using the word in its purely social sense; while he who founds a conspicuous family has before him the yet higher ambition of laying the foundation of a future line into which no meanness may ever come. When Slender, in "The Merry Wives of Windsor," claims that his cousin Shallow is a gentleman born and may write himself "armigero," he adds proudly: "All his successors born before him have done it, and all his ancestors that come after may," Slender really builded better than he knew; and probably most of the applications at Heralds' offices, whether in New York or London, are based on much the same principle. It was thus, at any rate, that Gilbert Stuart gratified a newly enriched Irishman who bought an English castle, by painting for him at his suggestion the ancestors which he ought to have had. What a relief it is to turn from these petty ambitions to such a simple title deed for gentlemanhood as is contained in this plain speech by a man who has just declined renomination for the Governorship of Massachusetts, when he quietly says:

"As a workman at the bench, I was a member of all the organizations of my craft, and since becoming an employer have always felt that my employees had the same right to belong to labor organizations that I had."

A man who can simply and truthfully talk like that need have no solicitude as to his claim to the title of gentleman.

Tried by this standard, we begin to understand a little better the point of view occupied by even so calm and just a man as Mr. Darwin. What the more fastidious would call descent in America would at its utmost imply a parentage among professional men, and yet, as we can easily see, this ancestry would count in England for nothing. To have kept a common shop, in Darwin's phrase, would amount to less than nothing; and even an uncommon shop with uncommon profits would be little better, nor would the highest public office make material difference. This habit of mind was not wholly extinct in this country a century ago. So far as mechanical employment

went, I myself knew in Boston an old lady who was accustomed to speak of the elder President Adams as "that cobbler's son," his father having been accustomed, like most American farmers of that day, to have a shoemaker's shop for winter occupation.

Thus much in regard to the claim of social rank, and as to the manners which denote it, we must bear in mind that much which we think essential to high breeding is merely a matter of habit, varies greatly at different periods, and might just as easily, had it so happened, have become habitual in the opposite direction. One of the simplest instances of good manners would seem to be, for instance, that a man should uncover his head while eating his dinner with his household; yet it is pretty certain that the first gentlemen of England, two centuries ago, habitually wore their hats during that ceremony, nor is it known just when or why the practice was changed. In Pepys's famous "Diary," which is the best record of manners for its period, we read, under date of September 22d, 1664:

"Home to bed, having got a strange cold in my head by flinging off my hat at dinner, and sitting with the wind in my neck."

In Lord Clarendon's essay on the decay of respect paid to age, he says that in his younger days he never kept his hat on before those older than himself, except at dinner. Lord Clarendon died in 1674. That the English Members of Parliament sit with their hats on during the sessions is well known, and the same practice prevailed at the early town meetings in New England. The presence or absence of the hat is therefore simply a conventionality, and so it is with a thousand practices which are held, so long as they exist, to be the most unchangeable and matter of course affairs. This is even more true of women than of men, because the position of woman has been more shifting as well as her headdress, and far more slowly determined. Every change made in it, from the unveiling of the face to the emancipation of the brain, has been won for her against conventionalities a thousand or two years old.

It was said, many years ago, after a scandal case in English high life, that

his Royal Highness, who had not yet inherited the crown, "went into court and perjured himself like a gentleman." There have been abundant instances where the popular feeling in England has seemed, not only to recognize and forgive, but actually to admire such inconsistency. It is something to know that we have, on the other hand, the testimony of one of our best dramatic critics, Mr. Bronson Howard, that a Bowery audience in New York is far more ready to put down improprieties on the stage than any of the more fashionable theatres. One advantage of the self-trained race also is that there is a far larger body of them. Every school, for instance, among us is, or is supposed to be, a school for gentlemanliness, or for well-bred womanhood, as well as for knowledge. Every town or city in America abounds in social clubs, secret or open, each of which is, in its way, a school of proper manners. Parliamentary law is a handbook for gentlemanliness.

There is in Hamerton's series of epistles called "An Intellectual Life," a remarkable book, too little read since its author's death, a very interesting group of letters on the influences of money, one of them addressed to "a student in great poverty." In this he maintains that the two houses of the British Parliament are almost all rich men, at least by comparison; that "the English have always recognized the natural connection between wealth and culture," and that "the narrowness of men's ideas is in direct proportion to their parsimony in expenditure." "A family," he says, "which has been for generations in the habit of spending four thousand a year will usually be found to have a more cultivated tone than one that has only spent four hundred." This is said not the least in a snobbish way, but as a fact of observation, and his view is therefore all the more to be considered, when he in a manner retracts this at the end, and says:

"I used to believe a great deal more in opportunities and less in application than I do now. Time and health are needed, but with these there are always opportunities. . . . If you are reading a piece of thoroly good literature, Baron Rothschild may possibly be as well occupied as you—he is certainly not better occupied. When I open a noble volume I say to myself, 'Now the only Croesus that I envy is he who is reading a better book than this.'"

It is doubtless in respect to personal manners and social proprieties that the absence of what are called early advantages tells the most strongly. Even here, however, there are some advantages in inexperience, so far as it guarantees simplicity. I remember dining at the house of the late Professor Horsford with two chiefs from the Pueblo Indians who had never sat at the table of a white man before, and I remember the admiration afterward expressed by every guest at their untaught propriety. In that capital book for children, called "William Henry's Letters," by Mrs. Diaz, the schoolboy, begging off from the dancing school, is told by his mother that this discipline is necessary in order that he may know how to enter a room. "I told 'em," he writes with some indignation, "that I didn't see anything so very difficult about entering a room. I told 'em, just walk right in," which clearly states the best foundation for all good manners. Thus I well remember that when I was traveling among the White Mountains in the old stage days, as a boy, the family party of which I was a member stopped for the night in a little village, since conspicuous, but then having only a few hundred inhabitants. During the evening the hostess of the small hotel came in, and politely asked leave to exhibit to her own guests the traveling bonnet of the young lady of our party. "Some of our most fashionable ladies," she said, "happened in this evening, and I should like to show it to them." The bonnet was promptly lent, and was returned with a favorable verdict from the local fashionables—not the Four Hundred, but the four or five. That is true American society—a local self-respect, a local standard, joined with perfect willingness to take whatever comes by the way of suggestion from elsewhere. There must be small social circles, for the continent is quite too great to be confined to any general one, however large. Of course these circles vary in importance, but they all have some weight. So far as parentage is their standard, one may live anywhere and possess a grandfather; it is one of the most transportable of commodities.

Nothing is surer, on the other hand, than that mere social experience and wide knowledge of the world are by no means

the equivalent of good manners. I was once the fellow citizen of a very distinguished man, not now living, who had had the benefit of very wide experience. He had been for three years Minister to Great Britain, then for seven years to Germany, had received half a dozen of the highest foreign degrees, and remained to the last without what I should call gentlemanly manners. For instance, I remember to have gone with him on board a school ship at Newport to address the boys, where he sat, while others were speaking, in a chair tilted back and with both legs up on a table placed in front of us, in a manner that made the boys point at him and titter among themselves. I remember that my strongest temptation, but perhaps equally ungentlemanly, was to kick over the table and let him go sprawling.

The utmost that we can safely say, in summing up all this, is that manners, like features, sometimes show the influence of inheritance or occupation, and quite as often fail to show it. The first ingredient in good manners is probably self respect, and the second is that unselfish considerateness for others which is unconsciously learned in a happy home. Beyond these, as a third ingredient, lies the wide range of merely conventional good manners, which may vary absolutely in different communities. Tennyson sums it up well enough in his "Princess":

"Kind nature is the best: those manners next  
That fit us like a nature second hand  
Which are indeed the manners of the great."

A man who could write like that might be trusted in the House of Lords, and it was precisely this naturalness of manner which Queen Victoria used to enjoy, it is said in our fellow countryman Lowell.

Merely artificial manners or even excessive manners defeat themselves, where character is strong. As Goethe says in "Wilhelm Meister," if an oak be planted in a flower pot, it will be worse in the end for the flower pot than for the tree. But we must be content, in this country, with nothing less than that all men should be gentlemen; nothing can be more unsatisfactory than that any class should be gentlemen by profession alone.

CAMBRIDGE, MASS.

# Back to Mother Earth

BY L. W. C. TUTHILL

As a boy it's very likely I was pretty much like all boys; went to school "thru the woods," found the first wild flower, fought with "rooster violets," and even left the wood pile on Saturday afternoon and crawling thru the gap in the back yard hedge skipped off with our neighbors' daughters after hazel nuts (or was it hazel eyes that allured me?). When I arrived at manhood, and entered the rush of city life and its relentless demands, the woodsy smell and that delightful arm swinging freedom was obliterated; taking myself seriously was the principal occupation when not at work. It took me many years to find out that the spring note in life is the only thing really satisfying—that "Back to Nature" is the only sure cure.

E. P. Roe's "Driven Back to Eden" was too idealistic for conviction, the margin of safety between fact and fancy too apparent. The "Country Life" magazines came along with their "back yards in the city made beautiful"; how enthusiasts grew cucumbers, strawberries and sweet potato vines from holes in barrels filled with "well pulverized, worked soil" ("mulched"), but I was still skeptical.

Then the "Making of a Country Home" came into print, and its author crossed my path, frankly confessing his figment of the brain, but bringing to life again, incurably, that trait which used to take me from the wood pile. It was not a case of "abandoned farm" or a fine old house fixed up a bit, but simply a

A Two Compartment House for Raising Flowers Requiring Different Temperatures. The Author's Greenhouse.

A Single Compartment Greenhouse With Cold Frame, Really Adding an Extra Compartment to the House.

small plot of ground, a story and a half house with a lean-to shed. I am not sure that shed, rather than the agent's persuasive way, was not responsible for my closing the bargain. It was just the place to shelter a wheelbarrow, hoes, rakes and all kinds of digging tools that a man buys at such times—and never uses. It was my determination to have growing things the whole year round. On speaking to the oldest inhabitant about putting up a snug little greenhouse he completely discouraged me; said "the glass was always breaking," that you "had to get up in the middle of zero nights to stoke the fire," that "they were damp, unhealthy traps, anyway." So I contented myself temporarily with a four sash cold frame that was also used as a hotbed part of the year. These frames did not quite meet the possibilities set forth so alluringly in the catalog, but my determination for a greenhouse became the firmer rooted. If a man with cold frames and hotbeds and an hour or so a day can have out of season lettuce, radishes, spinach, violets and pansies, besides endless setting out

things for both the kitchen garden and Molly's flower bed, then what would not a greenhouse do? Well, the greenhouse won out and now for some of the don'ts my little experience has proven.

Do not try to conjure up a house from sash and the superior knowledge of the local carpenter. Go to greenhouse builders and have them erect an iron frame house. The conditions of variable moisture and dryness in a greenhouse are extremely destructive. The house should be built of special materials with an exact knowledge of plant requirements. Then there is the matter of location and the kind of things you want to grow, which must be considered. My first idea was that, like mother's old bay windowed plant room, one could grow anything, perhaps even adding to its capacity by placing tiers of shelves along its side, but such a thing with any kind of result is entirely out of the question.

If possible, always locate your house running east and west, then you have the full power of the sun along your entire house thruout the day. Remember that every bit of light you shut out

means just so much less plant bloom results, which is another strong argument for the iron frame house. It is the lightest construction made, being almost a bubble of glass in its freedom from shading members, but still is wonderfully enduring.

The question of ventilation cannot be one of a hinged sash here and there in the roof. Plants require a uniform distribution of air in constant circulation and free from drafts. A continuous line of sash at the ridge, operated by a simple worm and gear apparatus with hand wheel located at a convenient point insures perfect and easily adjusted ventilation. Now, above all things, do not believe the local steamfitter that any hot water boiler will "do all right"; it won't. The conditions in the greenhouse being just the reverse of those in heating dwellings—more heat being required at night than during the day—and also the vitalness of rapid water circulation, freedom from night stoking or frequent attentions which the ordinary boiler requires. Buy a boiler made for a

greenhouse; it will save time, expense—and then you can grow plants.

Have installed with the boiler a little water heating device for use in spraying the plants. This spraying is of great importance in keeping down the insect pests, especially with roses, when nothing else will kill as effectually the red spider.

Do not make the plant beds of any kind of rough lumber; use cypress only. This is the most lasting of woods for this purpose. The instant you detect any decay rip it out, for it forms a splendid harbor for the germination of insects.

Cement walks are their own best argument for the few extra dollars' cost.

Carnations demand a temperature of from 45 to 50 degrees to thrive well, while roses 60 to 70 degrees, so it is impossible to grow them in the same compartment with any kind of success, but along with each you can grow all sorts of plants thriving in that temperature.

My house is 50 feet long and 18 feet wide, divided into two compartments of

A Lean-to House That Can Be Constructed with Every Appliance for \$500.

25 feet each. The potting room, with its green shingled roof, chocolate sides and white trimmings, is most attractive. Here is located the potting bench, with shelves above to keep pots. Under the bench is always a supply of "finely worked, thoroughly mixed with well rotted manure or leaf mould soil." that we read about at the beginning and ending of all "How to Grow" things.

In the cellar is the round hot water boiler—a perfect heating plant, as compact and dependable as an Elgin watch.

My house cost just \$1,500 four years ago. My little account book shows that \$1.80 in repairs, and that for glass broken by hail, is all that end of it has cost.

The first year, with the usual "fool luck of the beginner," we raised vegetables and potting plants enough to pay for the coal, besides the purchase of \$75 worth of orchids, on which mysterious flowers Molly might be called a crank.

Christmas Day we had tomatoes and string beans to smack our lips over, while in the center of the table was a glorious bunch of carnations, and each

of the ladies wore an exquisite purple to white orchid—all from our greenhouse. Last Easter the white and golden eyes of a marguerite plant with 110 blooms greeted me on coming down to breakfast. In the library on our low top bookcase stood an azalea in all its regality of color. Last January we planted hollyhocks in little pots, which early in May were set out along a disagreeable looking line fence, and the 1st of August were in a riot of bloom. A flower for your buttonhole every morning is another "own your own greenhouse" joy. I almost forgot to state that the window boxes were supplied with blooming geraniums from the very start. Somehow I do not like this idea of waiting a month or two for your window boxes to look like anything.

Now for results on the greenhouse question: First, I not only have ceased to take myself seriously, but Molly thinks growing things and books more comforting than theaters and new hats. An hour or so a day the whole year round with the sun pouring down on

The Curvilinear Palm House, Especially Adapted for Tropical Plants.

Interior of Typical Greenhouse.

one's back (perhaps it is zero outside), while you dig and potter with your plant blooms, is the most soothing, strengthening thing possible for one's nerves. I do not crawl thru the gap in the hedge any more, but I do play hooky from the office once in a while a day,

and I am sure the next day's extra accomplishments more than balance matters—besides, the office boy does not get on my nerves so much. By all means have a greenhouse; it does not begin to cost as much as an automobile, and is a comfort and a joy the whole year thru.

NEW YORK CITY.

## Love and Fate

BY JAMES S. BOYD

THE snows melt into the river;  
The river flows into the sea.  
My soul melted into love,  
And the love flowed out to thee.

But where, oh where, is the snowflake  
That fell on the mountain side?  
And where, oh where, is the river  
That merged with the ebbing tide?

They are lost in the fathomless ocean,  
'Tis the plan of a law divine;  
And my soul and my love are blended  
For evermore with thine.

ST. JOSEPH, MO.

# Taboga and the Chagres River

BY GARDNER RICHARDSON AND EDWIN E. SLOSSON

[In this, the fifth article of the series on Panama by members of the editorial staff of THE INDEPENDENT, some comparatively unfamiliar scenes in picturesque Panama are described. The concluding article in our next issue will present the labor question from the standpoint of one of the laborers.—EDITOR.]

**A**N American engineer in Panama remarked that the greatest need of the men on the Isthmus was a second Coney Island. Although there is not yet a full fledged isle devoted to unadulterated amusement, there is an em-

and at present is the sanitarium for convalescents from yellow fever and malaria.

While in Panama we spent a day in running over to Taboga for a visit. Communication with the island is main-

A. Group in Front of a Native House with Corrugated Iron Roof at Taboga.

bryonic playground at Taboga, an island situated about ten miles south of Panama city. At present the pleasure parties are limited to a Sunday excursion boat, which carries the canal employees to an enchanted spot, where they can walk on the beach and plunge in the surf. The most important feature of the isl-

ained by the diminutive launch "Petite Louise," which leaves early in the morning and returns late in the afternoon. The trip down is made in about an hour and a half. The course lies by Flamingo Island, where the Pacific mouth of the canal is to be, and where the large steamers now stop. The waters around

Panama are too shallow to permit the approach of any boat except of light draft.

Making the point of Flamingo, the white beach and green hills of Taboga appear in the distance like a paradise. The launch lands the passengers on the beach, and they make their way slowly across the hot sands into the cool shade of the trees. A short path leads to the sanitarium, a large white building, against which the tall green palms stand out in sharp relief. There is a wide veranda all around the building and broad halls running the entire length. The rooms are large and airy; the wood-work spotlessly clean. From the veranda there is a splendid view of the Pacific, reaching from one's feet clear away to the dancing horizon, beyond which lie Ecuador and Peru, lands of mystery and possibility. Standing on the veranda the hot and dusty streets of Panama are in the forgotten past.

To this place the convalescents, who are out of danger and in need of rest and quiet, are transported. The ones

most benefited are those whose recovery seems to have reached a stationary point. Many of the men brought to Taboga, tired and listless, in a week or two are bathing on the beach and voraciously devouring the government rations. In a month they return to take up their work on the canal with renewed vigor.

Great credit for the work at Taboga should be given to Superintendent James Randall, who has had wide experience with tropical fevers, both in Brazil and on the Isthmus. He is one of the few medical men who have had yellow fever, which is not only a valuable experience, but also enables him, as an immune, to study the disease more carefully. From thirty to forty patients receive individual care, and almost every one is put on his feet. In fact, the sanitarium has become a land of Lotus Eaters, forcing the authorities to adopt stringent rules to guard against "fakes." Men who have been there once are especially liable to contract that tired feeling which needs a Taboga rest cure.

Wash Day on the Chagres River.

A stroll over the island is most interesting. The difference between the people of Taboga and the mainland is as great as if the island were a thousand miles to sea. The islanders have a much lighter complexion, and many girls have

dred years old, filled with interesting shrines and paintings. The inhabitants are religious, moral and hardworking. They are chiefly engaged in fishing, when not away on long cruises.

Another interesting region, somewhat

The Principal Street of Las Cruces.

light hair. Some claim that this is due to the fact that for many years Scotchmen lived on the island, in charge of the water tanks at which Pacific liners called. The accompanying photograph of a Taboga belle shows the great variance from the negro and Indian types. The islanders are very proud of this difference, and the greatest compliment that can be paid a girl is to call her a typical "Tabogana."

The streets of the little town are narrow and steep, with here and there a sign of the Spanish occupation in short stretches of cobblestone. The houses are substantial, built mostly of sun-dried mud, and many roofed with corrugated iron. In the center of the village stands a quaint Spanish church, over one hun-

off the usual line of travel, is the territory above Bas Obispo, thru which the Chagres River flows. Surveys have been made for about forty miles up the river, but beyond that the region is unexplored. It is known to be practically uninhabited. As Mr. James Gilbert, the poet of the Isthmus, says:

Beyond the Chagres River  
Are paths for'er unknown,  
With a spider 'neath each pebble  
A scorpion 'neath each stone.

The only means of travel on the Chagres is by cayugas or native canoes. They are hollowed out of tree trunks with great labor and are extremely heavy and very unwieldy. One man paddles in the bow and another poles from the stern. The progress they make in this

way is fast, and they overcome the swiftest rapids in the river. We chartered a cayuga, with two boatmen, and started from Bas Obispo early in the morning. The river there is deep and runs quietly between high banks. Except when we encountered rapids, the boatmen skirted the shore, where the pole could be used to better advantage and where the shade made work more tolerable. From the overhanging trees, vines and hanging mosses reached down almost to the water. To the same branch white orchids of three or four varieties were clinging. The hum of flies filled the air. Out in the stream big tree trunks floated slowly down toward the sea, as they do on the Missouri. On some of them blue and white kingfishers

that it looked like the artificial decoration at the end of a ballroom.

About two miles from Bas Obispo is the little village of Las Cruces, consisting of ten or a dozen palm-thatched huts. We landed and walked up Main street to take in the sights and see the citizens. Except for the village church there was not much of interest. This edifice was evidently of Spanish construction, and is no longer in use. There were large gaps in the walls and no floor. The stone altar, elaborately decorated, was still well preserved, and in a room adjoining were some wooden saints as grotesquely carved as Aztec or Indian statues. The roof of the church was of the inevitable corrugated iron. Even the little dock at which we landed was of the same mate-

Floating Down the Chagres River.

were perched, watching alertly for floating fish that had escaped the dynamite, used, in spite of the law, to kill the fish.

Occasionally we passed a sloping bank so covered with grass, vines and flowers

rial. If the tropics were to have a coat of arms the background should be of corrugated iron.

After a brief stay we started on up the river. Our seats in the boat consisted of barrel staves laid across the

craft a few inches from the bottom. This space was soon filled with water, and keeping dry became impossible. When we were struggling against the rapids the water came in with great rushes. Our duty was to bail it out with cocoanut shells.

The dry season was not yet over, and the Chagres was running in its narrowest bed. We could see on both sides the wild ravages it had made during the

edge doing their washing, while the children frolicked in the water. At one of these villages, Juan Mina, we stopped off for our midday meal. We inquired at one of the nearest huts if we could get something to eat, and were cordially invited to come in. The walls of the hut were of reeds, with the usual thatched roof. There were two rooms, one a family bedroom, the other a general parlor and dining room. It was

Palm Thatched Hut in the Jungle of the Upper Chagres.

rainy season, when it is a turbulent and ungovernable torrent. The soft banks had been eaten into deeply, and in some places the river had overrun a whole section, tearing all the vegetation and surface earth away and leaving a stony waste.

Picturesque villages were situated every two or three miles along the bank, usually in a sharp bend of the river. They consisted of a few palm thatched huts and about twenty inhabitants. The women were usually down at the water's

fitted with a hammock, chairs and table, and was papered with well known American illustrated weeklies. From the ceiling hung bundles of rice, which were allowed to dry before the old men were set to work pounding them in a mortar. Strings of dried iguana eggs were stretched from wall to wall. The floor was of native earth.

Immediately adjoining the hut was the kitchen, a walled space of about eight feet square, with a thatched roof supported on four stakes. The cook-

The Patriarch of Juan Mina Threshing Rice in a Wooden Mortar. Razorbacks Waiting for the Chaff.

The Residence of Our Host and the Al Fresco Kitchen.

ing was done on a piece of corrugated iron, propped up by stones. The utensils used were an old spoon and a machete. The kitchen was also used as a place to set hens and turkeys. In and out of the house chickens, dogs and razorback hogs were scattered in happy profusion. Our lunch consisted of baked yams and fried and raw bananas, served on plates, which by their newness looked as if they were used only on state

leather leggins a malignant breed of insects, popularly known as "chiggers," attack one's ankles until they look like relief maps of the Canal Zone in red. And once there, they come to stay. Only carbolic acid will induce them to let go their hold on the human cuticle. Our progress was very slow, but we wandered far enough to find a ripe wild pineapple, which we severed from its roots with a jack-knife and devoured. We also got a

In the Background are Palms and on the Side of the Hut are Cages of Green Canaries.

occasions. We drank Chagres water cooled in a red earthen jar. When we had finished we attempted to pay our host, but were referred to his wife, with whom we settled. We later tried to obtain her photograph, but she was unwilling because her best clothes were in the wash. The eternal feminine is in evidence even in the tropics.

After our repast we wandered into the jungle, and it was unnecessary to go very far to satiate our desire to get off the beaten path. If one goes into the underbrush without high shoes and

green cocoanut, after some labor, and drank its contents. Everywhere our path was obstructed by tangles of vines, trees and roots. In fact, anywhere on the Isthmus if one steps off the line of the canal or away from a river, a few hundred yards, impenetrable undergrowth is encountered, where only the full swing of a machete, wielded by a strong arm, can cut a pathway.

We returned to the Chagres and boarded our cayuga. Going down stream the man in the stern paddled, while the one in the bow warded off

rocks with his pole. For the most part they let the river carry us along. At one point we drew up along shore and went in swimming. The crew warned us beseechingly against alligators, but we took a chance. The current was so swift we could make little progress against it. We were more successful in making our way along the bank and

feet was too far away for an automatic Colt, tho the dust jumped around him. He hesitated long enough for several shots, but then plunged into the underbrush. Our men were more disappointed than we, for they were already smacking their lips in anticipation of a feast, for these ugly green lizards are esteemed a great delicacy in Panama.

They Have Secured a Good Dinner of Iguanas.

swimming down with the current. By the way the river banks flitted by it seemed as if we were establishing new natatory records. The boatmen were greatly impressed, as the Panamans are not swimmers.

While drifting down stream we spied a beautiful green iguana, looking like an overgrown lizard, fully three feet long over all, clinging to a high bank. Forty

We reached Bas Obispo late in the afternoon. We had been gone about nine hours and had accomplished fourteen miles of river navigation. To sit with one's feet straight out in front for most of the time is giving an invitation to racking cramps, so we were glad, in spite of our interesting voyage of discovery, to get on shore and walk to the Government mess for a hearty supper.

# Literature

## The Waste of Childhood

THE horror of modern industrial life reaches its most ghastly phase in the ruthless sacrifice of childhood. The privation of men and women is pitiful, but it fades into comparative nothingness before the frightful privation of the helpless little ones. The waste of actual life is enormous, the waste of potential life—of the possibilities for a full development of life—is yet greater. On all sides, thruout all lands where industry is highly developed, young life, warm and lusty, full of capacity, full of an eager desire for fulfilment, is being starved into death, or stunted into moral and physical deformity. And the world goes on in its heedless way, pursuing its interests and its pleasures, deaf and blind to this prevailing horror.

Something of the extent of this awful sacrifice Mr. Spargo relates in his recent book.\* No one fit to be called human can read it without the stirring of pulses that have never stirred before. Plainly and simply, supporting itself with all the trustworthy evidence that is available, and only now and then interjecting an emotional appeal, the account proceeds. It is an account of the starving and stunting of babies, of school children and of work children, thru our planless, chaotic methods of production and distribution, which compel multitudes to suffer in order that a few may reap enormous wealth.

The blighting of human beings begins at birth. Despite a popular conviction to the contrary, the children of the rich and poor are born virtually equal. The testimony of the most eminent obstetricians on this point is well nigh unanimous. But with the first breath of its separate existence the child of poverty begins a struggle against conditions which powerfully handicap it in the race. Poorly nourished mothers cannot give their babes the needed nutrition; working mothers cannot give them the needed care, and the helpless beings die like flies. Wolf, in his studies of the vital statistics of Erfurt, Germany, finds that

505 out of every 1,000 children born to working class families die during their first year, while among the middle classes the proportion is but 173, and among the "higher" classes only 89. Drysdale, in London, from his experience at the Metropolitan Free Hospital, declares that while the death rate among infants of the rich averages not more than 8 per cent., that among the very poor often runs as high as 40 per cent. There are diseases, such as measles, which are rarely fatal among the infants of the rich, but among the infants of the poor reach a fatality of from 20 to 30 per cent. It is all a question of nutrition and care; and to the infants of the poor—and particularly of the very poor—both these are wanting. Probably 80,000 infants under one year of age are needlessly sacrificed in the United States yearly.

Those children who survive this Herod-like slaughter to the age of six are usually sent to school. If their earlier years have been particularly hard they are by this time endowed with frail and rickety bodies. They are prone to diseases of all kinds, are nervous, irritable and incapable of sustained effort, mental or physical. The hunger whose acquaintance they made at birth persists with them, and few of them are ever decently fed. Mr. Spargo has made careful investigation of the question of underfed children in the schools. In cases personally examined by him, or by teachers acting under suggestions given by him, he has found that of 12,800 children, 2,950, or more than 23 per cent., had either no breakfast or a miserably inadequate breakfast of bread or crullers or crackers (with or without tea or coffee) on the morning examined. He has also summed up the results of other investigations made in New York city, Philadelphia, Buffalo and Chicago, which show that of 40,746 children, 14,121, or 34.65 per cent., had gone to school breakfastless or with a breakfast of no more than bread with tea or coffee. For the whole country he estimates that no less than 2,000,000 children between the ages of five and fourteen are

\*THE BITTER CRY OF THE CHILDREN. By John Spargo. Illustrated. New York: The Macmillan Co. \$1.50.

the victims of chronic underfeeding. The working child is also considered at length. The horrors of child labor in the factories are graphically depicted. The census gives 1,752,187 as the number of children under sixteen employed at gainful occupations, but the figures are believed to be considerably short of the real number. The worst exploiters of child labor are probably the Southern mills. Children of nine and ten years are largely employed by them, both for night and day work, while babies of sev-

well give a boy to the devil at once as send him to a glass factory." "And that is the spirit in which most of the men regard the matter," adds the author. Thruout all the processes of industrial life the Moloch of competitive production calls for its yearly tribute of children; and despite all attempts to limit the sacrifice the demand is generally fulfilled.

The author frankly avows his belief that the collective ownership of the means of production and distribution is

JOHN SPARGO.

en, six and even five years are not infrequently found at work. In the cotton mills of Alabama 30 per cent. of all employees are under sixteen years of age, while the proportion for the whole cotton textile industry of the South is 25.1 per cent. The glass factories of the North are well nigh as bad. More than 13 per cent. of their employees are children, and the work they do is cruelly hard and wearing. "I'd sooner see my boy dead than working here," said a workman in a factory at Glassborough, N. J., to the author. "You might as

the only possible solution of the problem. But looking at the long years which must elapse before so revolutionary a measure can be accomplished, the need of immediate help prompts him to offer some suggestions for remedial measures. What these are the reader may discover for himself in the book. It may be doubted if any humane being can read the revelations herein set forth without reaching a conviction that the most drastic remedies suggested are all too mild for the rectifying of this hideous and far reaching wrong.

### The World Today

THERE is a large and well defined class of books for which there is no suitable name. We mean those dealing with the present condition of various countries. "Travel and Description" is the cum-

rography" to surveying, so both these words, which by derivation would be applicable, cannot be used.

These books bulk largely in our public libraries, and have a great sale, for they appeal to two classes of readers, those

A Street of Constantinople. From "The Mediterranean Traveler."  
Copyrighted, By Fleming H. Revell Company.

brous title usually given to the group, but some of the best of them are not by travelers, but by residents, and description is a vague word. "Geography" is too scientific for them; "demography" has been by usage confined to statistics, and "cho-

who want to know something about the country because they expect to visit it, and those who want to know something about it because they do not expect to visit it. There are so many of these books published during the year that

their detailed review is impossible, and to pick out only the best writers, as we do of novels or poetry, would be unjust, because the reader wants to know what books he can get describing a certain place, and he cares little for style. Consequently the most helpful thing that can be done is to group and briefly appraise them every few months.

The very comprehensive list of such books included in Guerber's *Handbook*<sup>1</sup> is one of the most valuable features of this traveler's guide, but these bibliographies would have been more useful if

with the cities of the African, European and Asiatic coasts. It has many illustrations, but is a heavy and cumbrous volume, decidedly inferior to Baedeker's in compactness and arrangement. Mr. Amelung's guide to *The Museums of Rome*<sup>2</sup> must also be criticised for its weight, which is due to the coated paper used for the numerous half-tones. It gives an interesting, detailed discussion of the most important antique statuary in Rome. The second volume describes the buildings of Rome.

The point of compactness and light-

price, publisher and some indication of their relative value had been given. Besides the usual elementary advice about clothing, money and food, the little volume contains some convenient chronological tables, lists of saints and their "hall-marks," and of architects, artists and musicians.

Many tourists now go directly to the Mediterranean, and for their convenience Mr. Lorenz has prepared the *Mediterranean Traveler*,<sup>3</sup> a guide book dealing only

ness is worth attention in the case of such books of these which are to be carried in the hand or the pocket. How convenient they can and should be made is shown by the new edition of Hare's *Sicily*.<sup>4</sup> It is a thin, light volume, packed as full as the traveler's trunk of historical and practical information, with good half-tones,

consists necessarily of stories often told before, but it will be convenient for some to have the history connected with each palace told in a separate chapter or page. Seventy-seven palaces are described, and of many of them there are pen sketches by Adelaide Marchi.

This ends our list of what may be called guide-books. We make this definite statement because the Rev. Mr. Passmore emphatically repudiates that designation for his study of the Grand Duchy of Luxembourg.<sup>7</sup>

"It speaks rudely of cherished tourist ideas. It revels in things that any self-respecting guide-book would pass over in silent contempt. . . . It assumes, in the reader, legs and heart for walking, a love of unspoilt, uncrowded sweet earth-corners, an open mind about other people's religious notions, and even the capacity to think a little occasionally in a dreamy way."

Mr. Passmore's knowledge of this little and little known province has been so thoro, his archeology is so well digested, and his style so pleasant and humorous, that this book will differ from most of those we have before us in that it will be enjoyed by many who were never before interested in the place it pictures. It is likely to attract many tourists to the Grand Duchy, which, as he says:

"has enjoyed so far a tolerable immunity from these trying hordes, possibly by reason that the excellent Baedeker, who conscientiously mirrors every feature of every place in the world, except its spirit, passes over this region in half-a-dozen pages."

We have heard much of the British expedition into Tibet from official and semi-official sources, but the "other side" had not been given by anyone who also had a personal knowledge of the country until the publication of Lieutenant Crosby's *Tibet and Turkestan*.<sup>8</sup> Since he is an American, he did not, of course, have an opportunity to visit Lhasa with the British troops, but he made in 1903 a journey thru Chinese Turkestan and the northwestern corner of Tibet. This gives some weight to his denunciation of "the Younghusband raid"; his exposure of the triviality of its pretexts and futility of its results. There is much of interest in the narrative of his trip, eight weeks

of travel at altitudes from 15,000 to 18,000 feet, and in his observation on the life of the people of these high plateaus. Many of his views are quite novel, especially his favorable opinion of the working of Tibet's peculiar matrimonial institution, polyandry.

Among our professional globe-trotters there is none more useful and readable than Mr. Curtis.<sup>9</sup> By keeping always "on the go" he maintains a continual freshness of eye, so he is most apt to see and tell about those things that are most striking and peculiar in each country, and, therefore, most interesting to the outsiders. Writing so voluminous and hasty as that of a correspondent of a daily newspaper must be, is, of course, superficial, and those who are really familiar with the countries he visits find in his articles many little mistakes and some big ones. But for the most part he gives us what we often need, recent and reliable information about distant lands.

A still more lively account of Egypt than that of Mr. Curtis is given us by M. De Guerville.<sup>10</sup> With true French wit, both as to quality and choice of subjects, he describes Egypt from Cairo to Khartoum, and gives us, with the aid of 183 admirable photographs, a picture of foreign and native life as it exists today. He devotes a disproportional amount of attention to dancing girls and society scandal, but otherwise it is a commendable book, particularly as giving a new view of the peculiar and rapidly changing conditions prevailing there. As a Frenchman, we might suppose that he would be antagonistic, or at least critical, of the English administration, but on the contrary he admires everything they do, even going so far as to take their side in the Fashoda affair. His account of the rapid advance of civilization into the Sudan will be as surprising as it is interesting to most readers.

The penetration of the Dark Continent by the way of the Sudan is exclusively political and commercial, but the interior of Africa is being reached by a very different method, the evangelization

Mrs. Fisher at Toro, and his journey thru Uganda and down the Congo would have been much more dangerous if it had not been for the Christian influences which have been exerted over African tribes.

In connection with the Congo we must mention the publication of the official re-

port<sup>14</sup> of the commission appointed by King Leopold to investigate the conditions in his big rubber plantation, and its English translation.<sup>15</sup> We publish a synopsis and discussion of it from the cabled abstract, but the complete report shows that it was not such a "white-washing commission" as it was feared it would be. Many of the worst charges of abuse of natives are admitted. For criticism of the Congo administration the reader must consult the *Official Organ of the Congo Reform Association*, which will be sent on application to J. Richardson & Sons, Pall Mall, Liverpool.

Now that the question, are we to have an Isthmian Canal is settled in the affirmative, and the question, how are we to get it, is on the way to a solution, the third question, what can we do with it, comes to the front. Mr. Pepper answers this in a comprehensive volume of mixed statistics and journalistic impressions of the West Coast of South America.<sup>16</sup> He does not pay much attention to the canal itself, for, no matter what it costs or how long it will take to complete it, he believes that the growth of our South American trade will be so immense as to make the original investment an insignificant factor. The book is a useful one for its descriptions of the countries and people which we ought to know much more about than we do, and for the trade and industrial facts and figures it contains, but his easy and optimistic conclusions will be received with doubt by many who are directly concerned in the matter. It is not safe to prophecy how far down the coast the canal traffic will extend before it meets the opposing European current around Patagonia, nor how successful the Americans will be in ousting the Germans and the English from the fields we have neglected. He makes no close calculations of the effect of such important factors as the completion of the Tehuantepec railway, the time of transit

thru the Panama Canal, and the increasing size of ocean vessels, upon all of which the problem of the distribution of international trade is dependent.

Four hundred years after Columbus we, like him, are discovering the West Indies. The money maker, the health seeker and the scientist are beginning to go there more frequently than they used to, and now that the American Government has taken to collecting tropical islands, our statesmen find it necessary to devote some study to the way other governments manage them. The *Bahama Islands*<sup>17</sup> have been made the subject of special study by the Geographical Society of Baltimore, and the results are published in a large and handsomely illustrated volume that is an honor to American scholarship and bookmaking. It is the most complete and authoritative work that has ever been published on these islands. It will be consulted not only by those who are interested in the Bahamas themselves, but by the physician for the latest theories on leprosy and mosquito contagion, by the ethnologist for new facts on the effects of amalgamation of races, by the meteorologist for its weather charts and tables, by the agriculturalist for the descriptions of useful plants, and by the geologist, zoölogist and botanist for new scientific data. The general reader will not fail to find many things of interest to him, also, no matter what he is interested in; at least he will enjoy looking at the fine color plates of strange fishes and flowers.

As we began this review with the countries most easily reached by the tourist, we can appropriately end with the most inaccessible portion of the earth's surface, the Antarctic regions. For this a good guide is Dr. Mill, who, tho not an explorer himself, has made a careful study of the history of exploration, and includes in one small but comprehensive volume an account of all the attempts to reach the South Pole from Captain Cook in 1775 to Nordenskjöld in 1903.<sup>18</sup> It is convenient for reference and also very readable as a narrative of heroic endeavors and many failures.

a full and exhaustive investigation of the interior decorations, the pulpits, doors, crosses, candlesticks and other work in wood, bronze and silver of the Missions.

**Cowardice Court.** By George Bare McCutcheon. New York: Dodd, Mead & Co. \$1.25.

This is a long short-story in Mr. McCutcheon's popular style; altogether absurd in incident and psychology, but

Stone Arched Doorway, Santa Margerita Chapel. From "The Old Missions of California." By George Wharton James. Little, Brown & Co., Publishers, Boston, Mass.

proves that the Franciscans really invented a new style, remarkable for its boldness, originality and diversity. The numerous illustrations, reproduced from photographs made expressly for the present volume, show also that, while these structures had a general similarity, they were severally marked by characteristics which gave each one of them a distinct individuality. The author has also made

decidedly readable and engagingly romantic. The pages have marginal decorations by Theodore B. Hapgood, and there are some tinted illustrations which are pretty to look at, but rather confusing to the reader, for they represent the heroine's hair as sometimes yellow and sometimes purple. We have known this to happen in real life, but never before in pictures.

## The Miners' Strike

SINCE the anthracite coal strike of 1902 the American people have anxiously awaited the expiration of the Commission's award, fearful lest the result might be another long and bitter struggle between the miners and the operators. That their fears are to be realized seems evident, if the present situation is to be taken as indicative of future developments. With all the members of the United Mine Workers' Union ordered out by President Mitchell, stubbornly demanding an advance in wages and a general betterment of working conditions, with the bituminous and anthracite operators determined not to concede a single point, and with both sides effectively equipped for the fray, we have the stage settings for the greatest industrial battle ever fought in the United States.

For the first time since the organization of the United Mine Workers, all anthracite and bituminous agreements terminated upon the same day, April 1. This had been so arranged by the officials of the miners in order that not only the operators, but also the public might be drawn into the conflict. Whether it is to prove more effective than the methods of former years remains to be seen. Thus far it has only resulted in more than 300,000 men quitting employment, and in creating a great deal of confusion in the coal industry because of the action of the Union in trying to fight two entirely different groups of employers at the same time and under different conditions.

As has been customary for the past eight years, the miners and operators of the bituminous coal fields met at Indianapolis in the latter part of January for the purpose of drawing up an agreement for the coming year. In 1904 the miners had accepted a wage reduction of 5.5 per cent. because of poor trade conditions. This year they asked that the 1903 scale be restored. These and other demands were refused by the operators, with the result that the conference adjourned amidst threats of a strike on the one side and of a lockout upon the other. President Roosevelt, ever eager to main-

tain industrial peace, suggested that another attempt be made to get the miners and operators together and another conference was called at Indianapolis in the early part of March. The miners refused to recede from their demand for the 1903 scale, and since a majority of the operators still held out, a strike was called to begin April 1. Following this, the miners rescinded their former resolution that no contracts be signed in any district until a settlement in all had been obtained, and agreed to treat with any operators willing to pay the advanced scale. The Union, however, has not been able to force its members to work for all of the operators who have signed the agreement, and this lack of discipline may prove to be the deciding factor in favor of those operators who refuse to sign.

In the meantime the officials of the Union had conferred with the anthracite operators, but to no avail. The latter absolutely refused to grant an increase of wages, the eight hour day, or the recognition of the Union. They would listen to no compromise, were unwilling to arbitrate and seemed eager to force the fight. Pending the settlement of the difficulty, on the termination of agreements, President Mitchell ordered out all the men in the coal fields concerned, and one of the most titanic struggles known in American industry was begun. The anthracite miners responded almost to a man, but in some parts of the bituminous fields the agreements already signed permitted work to be resumed.

The duration of the struggle is now the only matter of uncertainty. Both sides have been looking forward to the strike for some time past, and have been arming themselves for the conflict. Following the award of the Coal Strike Commission in 1903 declaring for the open shop, the membership of the union in the anthracite fields fell off more than 70 per cent. It was to recoup their strength and present a formidable front to the operators that the mine officials have been actively reorganizing this portion of the coal industry during the past summer. In the bituminous fields, how-

ever, no falling off in membership has been noticed. This has been due for the most part to the "check off system," whereby the operators deduct the dues of the miners from their wages and pay the same over to the treasury of the union. In addition to the work of organization, an enormous strike fund of over \$3,000,000 has been collected, and all necessary preparations made for a long and severe contest with the operators.

On the side of the operators, the situation is somewhat analogous. In the anthracite fields the mines have been running to their fullest capacity, and this, with an unusually mild winter, has enabled the operators to store up more than 15,000,000 tons of coal. This precaution has been taken in order that the price of coal shall not be raised to the public, as was the case in 1902. By this means it is hoped that much of the radical agitation of four years ago may be prevented, even tho the strike should last for many months. It is also the purpose of the operators to prolong the struggle, with the hope of finally exterminating the miners' Union, since, with their impregnable monopoly based on railroad discrimination, they do not need the support of the Union to maintain prices of coal. But with the bituminous operators the situation is different. They realize that the Union is necessary for their own protection, because it equalizes competitive conditions and prevents that cutthroat struggle which characterized the market prior to 1898. At the same time they are now suffering from serious overproduction brought about by the great demand and high prices of soft coal in 1902 and 1903 when the supply of hard coal was cut off by the strike. This makes it at present impossible for them to pay the advance demanded. True, the largest operator, the Pittsburg Coal Company, has conceded the demand and has signed an agreement for two years, but this company sells 40 per cent. of its 20,000,000 tons of annual output on a sliding scale based on the mining price. Consequently, to that extent it is able to throw the increase upon its gigantic customer, the United States Steel Corporation. As far as the other bituminous operators are concerned, they are placed in the dilemma of not being able to shift the increase

to the consumer, and yet of depending on the Union to keep up the existing prices. The decrease in wages which would follow the break-up of the Union would be as disastrous to the operators as would the increase which the Union demands. They did not profit even by the reduction of 5.55 per cent. gained two years ago, for upon that reduction the railroads, which consume nearly one-third of their output, demanded and secured a reduction of at least 10 per cent. in the prices of coal. This dilemma makes it quite probable that after two or three months the associations of soft coal operators will again meet with the representatives of the Unions and agree upon a scale. These associations control 90 per cent. of the coal output, and the Union has no prospect of making serious inroads upon them. The reports of operators signing the scale must be taken with allowance, for these are mainly small operators not members of these powerful associations. The associations are standing intact and are able to do so for some time.

It is yet too early for the Union to expect any help from the public. Indeed, it is almost certain that they cannot expect such help as they had four years ago. The scarcity of coal will not appear until cold weather, and the struggle will certainly be decided before that time. All that can be expected from the public in any event is some form of compulsory arbitration.

## An Easter of the People

THE word Easter comes from the Anglo-Saxon *Eastre*, which, in turn, was derived from the Old High German *Ostara*, a goddess of light and spring, whose beautiful festival was celebrated in April. It was a pagan ceremonial occasion, not of mere rejoicing in the return of spring, as so many half-informed persons suppose, but rather, like the festivals of May Day and Midsummer Day, of propitiation and enchantment, to win from nature the bountiful crops and the fertility of flocks and herds upon which the life of man depended. Its fires alight on every hilltop, and its processions of peasants about the fields, were survivals of that imitative magic which was one of

man's earliest attempts to improve his economic condition. He thought that by sprinkling the earth with water he could bring down rain; that by setting fires he could compel the sun to yield light and heat, and that by carrying blossoming boughs about the fields he could bring forth flowers and grains from the earth.

The Roman Christian Church tried to stamp out many of the old heathen festivals, but for the most part it succeeded only in partially changing their character and significance. For the nature festival of Easter it partially substituted the celebration of the Resurrection. It never, however, completely exterminated the old ideas and practices, especially among the country folk of Central and Southern Europe. Within the last few years the migration of thousands of these people to the New World has brought into our American cities numerous reminders of old beliefs, which our earlier Puritanism had forgotten. On all the streets where the foreign born now live, the shop windows are filled with toy rabbits, pigs and eggs, the simple pagan emblems of natural fertility.

Since Easter is thus an occasion full of symbolism, whether we conceive of it in the pagan or in the Christian way, it may be worth while to observe that there is something deeply significant in this curious resurrection of old popular ideas and customs. We shall be obtuse if we do not see in it both a symbol and a proof of the inextinguishable life of the common people. Like natural vegetation, the people may apparently for a time lose their vitality. Chilled by adversity, they may stand thru long seasons, patiently enduring the frosts and icy blasts of their winter, like leafless trees. But now and again their spring time comes, and they awaken to a new and larger, a rich and more beautiful life.

It is well to remember, too, that the avowed mission of that founder of Christianity, about whose life and death the myth makers and the theologians have woven and shaped their marvelous creations of dogma and ceremony, was to quicken this new life of the common people. He was born among them. He lived with them. He worked for them. He told them that he had come to save them. He assured them that the vast

wrongs and oppressions which had been heaped upon them by the exploiting Roman plutocracy should not endure forever. And like the simple peasant folk from which he was sprung, he drew his lessons from the fields and the sky. He told his neighbors that the sunshine and the rain were for them; that, like the birds of the air, they should be cared for, and that, like the lilies of the field, their lives should be arrayed in beauty.

Little by little the world is coming back to an understanding of the great, the deep and the simple truths that ages of ecclesiasticism and of sordid worldly struggle have obscured. The human mind itself has its winters and its vernal days. There are a thousand signs at this present hour of an awakening of perceptions and of conscience to things of infinitely greater significance than our gigantic industries and our stupendous wealth. The awakened interest of the sociological historian in the primitive modes of human thought and expression has revealed to us the essential beauty and the truth of a thousand ideas and ceremonies in those old pagan festivals that the system-making element in the Christian Church attempted to extinguish. The tremendous struggle of the classes in modern society, which is shaping the destinies of that great democracy that shall one day give over the earth and its fulness to the humble millions of mankind, is calling our attention back to that earliest message of the Christian gospel which has been too often ignored by the great Churches that have fought with one another for their cults and creeds. The world is awakening to a new life of appreciation of those things that are most broadly and deeply human.

Year by year the spring time will come, the sap will stir in the trees, the blossoms will start forth in the sun-warmed glades, and the world will rejoice. But a greater awakening than this always will be the recurring awakening, each time to a larger and a richer life, of the common people; the common people, who have always heard gladly every new and true message of life and hope that has been sincerely meant for them.

When that Aprille with his showres swoote  
The drought of Marche hath perced to the  
roote,

And bathed every veyne in swich licour,  
Of which vertue engendered is the flour;  
Whan Zephirus eek with his swete breeth  
Inspired hath in every holte and heeth  
The tendre croppes, and the yonge sonne  
Hath in the Ram his halfe cours i-ronne,  
And smale fowles maken melodie,  
That slepen al the night with open yhe,  
So priketh hem nature in here corages:—  
Thanne longen folk to gon on pilgrimages.

Not merely in procession about the fields carrying boughs of enchantment, and not merely with blazing fires to encourage the sun in heaven, but rather in the spirit of those awakened folk moved to restless enterprise of whom Chaucer sang, will the people in their Easter tide set forth on all the pilgrimages of the mind and in the comradeship of wide democracy.

### Vesuvius

To an astronomer of imagination, who has been watching and studying new stars, and has seen the mighty collision when two worlds hit each other and burst into sudden gaseous flame, the mere blowing off of the top of Vesuvius is a very small matter. What is the loss of a few hundred feet on the top of a mountain, and the overflow of two or three streams of lava for two or three miles, in comparison with the tremendous and sudden force that every little while we see displayed in the heavens. And not astronomers alone, but geologists, look upon this outbreak, which does no hurt to Naples, a dozen miles away, as a very small affair in comparison with what they are used to considering—the eruptions that took place when the world was young, and when the foldings of the earth's surface, like the ridges on a baked apple, created great mountain chains, like the Appalachian, the Andes and the Himalayas, and concluded one and opened another geologic period. To us, in this term of the aged world, when inner forces are nearly extinct, and Enceladus is too exhausted to do more than turn a little in his senile weariness, a Mont Pelee or a Vesuvius seems the highest expression of material force; and so it is from the point of view of human power. But it is the merest bursting bubble of power as compared with the quiet force which never ceases to move the tides of the ocean, or that

drawing which holds the earth in its course about the sun, or that utterly impalpable power which drives our world on its ceaseless movement of nineteen miles in each second.

The cause of volcanic eruptions is still a matter of study, related, as they are, to earthquakes. But this seems to be settled, that they are not caused by any disturbance of the central molten matter in the earth, if such a central molten mass there be. While volcanic vents are local, the effect of earthquakes may extend over a large area, and their vibrations will be discovered by means of scientific instruments all over the earth. Students of seismology are now inclined to suppose that the cause of volcanic outbursts is chemical, and of a sort that would not be imagined by the non-scientific man.

Let us suppose that, by means of fissures in the earth's crust, such as earthquakes have caused, reaching far down, the water of the ocean has access to the rocks at a great depth. There we know that there is a very considerable heat which will help chemical action. If these rocks are anhydrous—that is, have no water in their composition, the water having all been driven off by heat when they were solidified, just as the water in limestone is driven off in making quicklime—it may be that they will absorb water by a chemical combination called a hydrate. We are familiar with this when water is put on quicklime, and the quicklime expands by taking in the water and yet is perfectly dry. At the same time it gives off heat, for heat is always the accompaniment of such chemical combination.

Now, let us suppose that something similar takes place far down in the earth. To be sure, we have not quicklime, but there are other anhydrous rocks which, already heated as they are, will combine with water. This will necessarily give out heat, altho slowly; but this heat cannot escape. It must increase until the rocks are melted, and the expansion that follows, with the production of an enormous mass of steam at the highest tension, will shake the crust of the earth and find vent in volcanoes for the molten matter. But these are the local outbreaks of an aged and decrepit world,

fortunately for us, and not like those terrible bursts of inconceivable power which, when the world was young and the crust was still comparatively thin, could create great chains of mountains, with their succession of volcanic vents, which, with their cracks reaching under the sea, still show their occasional violence. For volcanoes are generally near the seacoast.

Very likely the center of the earth is still molten, and we may conjecture what the result would be if one of these earthquake fissures should reach thru the fifty or one hundred miles of the earth's crust once more to the central fire and let in free access of the ocean. Would we have another mountain chain? Vesuvius on a large scale, covering and devastating a continent, to be followed by a new earth, if not a new heaven? Who knows? Indeed, who knows but that some time or other our solar system may take its turn in the creation of a new star?

### Unrealized Vitality

ALL the world was shocked by the announcement last week that twenty-five days after the accident in the mines in the North of France, in which a thousand miners were entombed and supposed to be hopeless of rescue, a survivor was found still alive, and, considering all the circumstances, in excellent physical condition. During the preceding week a number of other survivors had been found whose lives had been completely despaired of, and the search for whom had been practically abandoned some ten days before. It is no wonder that the newspapers report murmurings, and even serious disturbances, among the people in the neighborhood, since it is very evident now that sufficiently persistent efforts were not made to rescue possible survivors and proper precautions were not taken to supply the men who might have been alive even a week after the accident with such quantities of pure air at least as would have maintained vitality. Searching parties, after the end of the second week, constantly came upon the bodies of victims that showed evidence of having been dead, at most, but a day or two. There is no doubt that proper

energy in the prosecution of rescue attempts would surely have saved many of these, tho for more than a week supposed experts in such disasters and in mining affairs generally had declared it impossible that any of those within the mine could still be alive.

This experience in North France is not unique. On a number of occasions, in the history of mining in England and America, during the past half century, such unexpected survivors have been encountered many days after all hope had been given up. On at least one occasion men were still alive who had been confined in a mine, apparently in a hopeless condition, for nearly thirty days. On a number of occasions survivals have taken place beyond twenty days and falsified the prophesies of mining men of long experience. The lesson, however, of prosecuting the search in such cases with sufficient energy and for a properly prolonged period has not been learned in spite of these unfortunate experiences. It is time now for the world to realize that where men are in reasonably good health when an accident happens, even tho they may be without food, they will surely survive for ten days, and very often for more than twenty days, if they can only obtain a supply of water. If the temperature of their place of confinement is equable, as is usually the case in mines, if their supply of air is reasonably good, and if they are not tempted to make efforts beyond their strength to effect their own rescue, survival for at least two weeks will be almost the rule.

The lesson thus emphasized would seem to have been taught before by the demonstrations of the professional fasters, who have shown the possibility of life for forty days or longer when there is an abundant supply of water and no special anxiety. Not only is the possibility of life definitely acknowledged under such circumstances, but even the amount of suffering that is undergone is not near as much as would ordinarily be expected. Professional fasters generally show an increased irritability, but scarcely more, and as a rule their sleep is not disturbed by the absence of food, except during the first few days of their attempt. This comfortable phase of the starvation problem is usually not realized, but has re-

ceived renewed demonstration by the experience of this latest survivor in France. He tried to keep track of the days during which he was confined, and as his only method of reckoning was by counting the number of times that he had slept since the accident he had come to the conclusion that his term of actual imprisonment was much shorter than it really was. He had slept about ten times, he thought, and, therefore, concluded that he had not been imprisoned in the mine for more than half as long as was really the case.

This curious survival has another lesson that is of significant general interest. It illustrates the possibility of maintaining life without that imperious necessity for food that is usually considered indispensable. In many of the minor affections, especially those which involve the digestive tract, abstinence from food is the most important indication, and this simple measure alone would often prove eminently curative. Most people, however, are persuaded that such abstinence would so weaken them as perhaps to encourage the further progress of their ailment. As a consequence, the digestive tract is asked to continue its labors when it sadly needs rest for reparative purposes. Perhaps the fact that food is not a primal necessity for days, if there is good reasons for abstention, may thus be brought home to sufferers, who, during the summer especially, could often effectually treat their ills by a little courageous fasting.

### A Lesson From Japan

As early as 1872, when missions in Japan were young, when Dr. Verbeck, of the Reformed (Dutch) Board, was the leader, a few missionaries—Presbyterian and Reformed—met in a convention with the native brethren, about the time of the organization of the first church in Yokohama, and voted that it was undesirable that there should be rival Christian denominations in the islands, and to secure union of method and effort they took this action:

"We therefore take this earliest opportunity offered by this convention to agree that we will use our influence to secure as far as possible identity of name and organization in the

native churches, in the formation of which we may be called upon to assist, that name being as catholic as the Church of Christ, and the organization being that wherein the government of each church shall be by the ministry and eldership of the same, with the concurrence of the brethren."

That was in 1872; a sunny promise of spring, but an early frost blighted it. In a paper read before representatives of the various missions in Japan, on January 17th of this year, and issued by the Methodist Publishing House at Tokyo, the Rev. G. W. Fulton, a Presbyterian missionary, says that, "Owing to various misunderstandings, this good resolution failed to be carried into effect, and the divisions of Christendom have, with few exceptions, been brought to Japan by the Churches of Europe and America." Mr. Fulton expresses the fact mildly. As we remember, the mission boards at home, Presbyterian and Reformed, could not consent that their much loved names should be dropped by the converts in Japan. They insisted in keeping up their distinctions, so that their mission churches should not be fused and confused. It was one of those cases in which officers and committeemen at home meddled and muddled instead of trusting their workmen on the field.

Now, after thirty-four years, they wish to correct the old blunder. Mr. Fulton's paper urging union has been ordered printed in English and Japanese and distributed widely. Meanwhile something has been done. Half a dozen Presbyterian missions have done what was urged in 1872 and form one organization. But there have come in since the Congregationalists, Methodists, Episcopalians and Baptists and various other denominations, which together far outnumber the united six. Why can they not all be united under one name in one organization? It is time now for the native churches themselves to do this, with or without the sympathy and consent which we believe they would now receive from both missionaries and the home boards. We observe that already the Japanese churches are throwing off all control, much to their advantage. With the 1st of January this year a native Japanese missionary society took over all the forty churches hitherto controlled by the American Board, and will administer any aid

given for their support by the Board. The American missionaries will be honorary but not voting members of the Japanese Missionary Society. The missionaries are highly praised for their generosity, and a Japanese paper speaks of them as "all Japonicized," and that with them "race distinctions have melted away."

Now, this indicates what it is time should be done by all the Protestant churches in Japan. They count their members by the tens of thousands. They have many self-supporting and strong churches. They should throw overboard the foreign names and break down the foreign barriers between them. An attempt by four Methodist boards in America to unite their missions in Japan has just failed. Perhaps it is well, for the union should take place in Japan and be accomplished by the Japanese themselves; and it should unite all the denominations—at least, all that do not depend on the rule of bishops. It would be a vastly stronger body which should include the two great Presbyterian and Congregational Churches in Japan, and add to them the Methodist and Baptist, and, if possible, the Episcopalian; and it should take its designation, not after any Western name, but should be known as the Church of Christ in Japan. That is what they now have in view and hope to achieve. And this is the way that Japan is teaching us a lesson here in an older Christian land.

#### The Indian Schools

There has been a hot and unjust attack made upon the Indian Office for a supposed attempt to support Catholic schools out of tribal funds against the will of Congress. There has been an actual modification, by order of the President, but by no means what was charged hastily by Bishop Hare and Dr. Riggs. The Commissioner's annual report proposed that the cost of the Government schools should first be deducted from the total tribal trust fund annuity and the balance divided equally among the tribes, then each Indian petitioner for a sectarian school would divert his remaining share (or part of it, if all should not be needed) to the support of that school, and the supporters of the Government

school would have their shares undiminished. Take an imaginary example: A tribe of 500 Indians has an annual fund of \$50,000, or \$10 each. The Government school costs \$15,000. Deducting this there remains \$35,000, which gives each Indian \$7 and the petitioners for a sectarian school must pay its expense out of their \$7 shares. The plan of distribution, since accepted by the President, is this: Say 500 Indians ask for a sectarian school. Their shares, aggregating \$5,000, are set off. The \$15,000 which the Government school costs is next set off. That leaves \$30,000 to be divided among 4,500 Indians, or \$6.66 2-3 per capita, and the petitioners for the sectarian school pay its expense out of their \$10 shares. Thus the 4,500 Government school petitioners get 34 cents each less than they would under the Commissioners' original plan, and the 500 sectarian school petitioners also get the full \$10, instead of \$7 shares, out of which to support their sectarian school. If that school costs only \$4,000 each petitioner will have \$2 coming to him for his own use. Thus *all* the tribe is affected by this method of setting off the funds for the sectarian petitioners. But tho the per capita difference is small, the Commissioner was determined that no one should be deceived, even to the extent of 34 cents. Hence, his telegram to the Indian agent, which has become notorious, the language of which was not so carefully drawn that it was not susceptible to hostile construction. It is purely a question of policy. The Attorney General decided that the President could use these trust funds as he thought best for the education of the Indians. He could have gone on and repeated what was done before Commissioner Leupp came into office and could have made the school contracts, petition or no petition, council or no council. That he refused to do, and said that it was thru a misunderstanding of his directions that contracts were made as they were before Mr. Leupp became Commissioner. As already said, the plan in Mr. Leupp's annual report was to take out the cost of the Government schools and divide the balance among the Indians per capita. The President felt that having started out as he did he ought to do it in the most liberal way that he could

lawfully. So he said that he would not take out the Government school first, but would prorate the entire amount and each Indian might indicate how he wanted it used. Every Indian who does not sign a petition in favor of a sectarian school is assumed to be a petitioner for a Government school, for the treaty itself is a petition for Government schools and indicates the wish of at least a majority of the tribe. In a personal letter the Commissioner says the following:

I hope I have made this matter clear, so no one can hereafter be misled as to the meaning of my telegram. I wished to set forth the worst possible side of the whole business in order that no one might hereafter rise and say that he was misled as to the effect of a petition. It was for my extra precautions to insure publicity to all that we were doing that I have been subjected to a great deal of rather vigorous censure and to some inexcusable misrepresentation.

#### Municipal Railways in Chicago

Last week's election in Chicago proves that a majority of the people there still demand both municipal ownership and municipal operation of the street railways. But the majority voting for operation was not large enough to determine the course of the city as to this branch of the question. Three-fifths of all the votes cast were required, under the law. A sufficient majority may be obtained, however, at next year's election, and before the city is ready to operate the railways by means of its own employees. Here is the situation: franchises covering hundreds of miles of streets have expired, and the companies may occupy these streets only until the city proceeds to buy their tangible property; the mileage thus subject to the city's action is essential to any system of railway communication; franchises covering the remaining fragments of the present system will soon expire; but the city, being unable to issue bonds for the purpose, can buy only with the certificates authorized by the Mueller law. These certificates will be a lien upon the tangible property purchased, but a considerable part of their value will lie in the provision that, in case of default and foreclosure, the holders of them will receive a long term franchise for operating the roads. Before the \$75,000,000 of them, which the city is authorized by the

recent vote to issue, can be marketed (in order that funds for buying the roads may be available), their legal standing must be determined beyond doubt by test suits. This would have compelled delay—of not less than a year, probably—even if the required three-fifths majority for municipal operation had been given at the polls. The test will be made as quickly as possible. New franchises to private companies will not be permitted by the people, and so the railway system must come into their hands, if the certificates are sustained and can be marketed at satisfactory prices. When the people obtain possession, they may lease the roads, or (if they shall so decide at the polls), they may operate them. We are assuming that they will not change their minds as to the main issue. There are many complications and some obstacles to be considered. On account of these, it may be that the people will eventually decide to make new contracts with the existing companies, contracts requiring thorough reconstruction of the property and large annual payments to the city. But the popular tendency is not now in that direction.

#### The Kenyon Dr. Washington Gladden Initiation writes us:

COLUMBUS, Ohio, April 6, 1906.

Will you permit me to correct an unintentional error of yours respecting the accidental death of a student at Kenyon College? You say that "this student was tied by his mates to the railroad track, as a sort of initiation or hazing. They thought no train was to pass, but one did pass, and he was killed."

This report was widely published in the newspapers, and it was positively confirmed by statements of the coroner and of the prosecuting attorney of the county, who conducted the examination at the coroner's inquest. These officers unhesitatingly declared that the young man had been tied to the track. Some of us, relying upon these official statements, made severe comments upon the conduct of the students.

It must now be said, however, that the testimony taken before the coroner's jury has been published, and that there is not a particle of evidence that the young man was tied to the track; nor does it appear that anything of the kind had ever been done by the students of this college.

The amazing thing now is that public officials should make statements so utterly without foundation.

Then what killed him?

### The Philadelphia Ring

At last the city of Philadelphia has sought, by legal process, to recover a part of the money stolen by the ring whose power was taken away by the reform movement of last year. Boss Durham, the McNichols, Mack, and two ex-Directors of Public Works are defendants in a suit calling upon them for something more than \$5,000,000 fraudulently obtained by them in connection with contracts for the filtration works. This suit immediately follows the disclosure by Mayor Weaver of the fact that, just before the beginning of the reform revolt, the ring was planning to get possession of the water works. The news came to him from Boss Durham, who had delayed the filtration work, at the cost of many lives, in order that he and his partners might procure the contracts from a friendly city government. When the gas lease was beaten, this other job was laid aside with it. But for that uprising of the people the ring might now, we presume, own the City Hall and the parks. It is unfortunate that none of these Philadelphia thieves has been forced to wear stripes. Mr. Bell is still District Attorney. He has been counsel for the McNichols, who are defendants in this civil suit, and for the firm of contractors in which Durham and one of the McNichols held an eleven-twelfths interest. Some months ago he was preparing to represent, professionally, one of the McNichols, if the city and the Mayor should sue to recover any of the money paid to this contractor. No one could expect that such a District Attorney would exhibit a consuming desire to procure the indictment and punishment of the members of the ring.

### A Southern Candidate

Judge Parker says, and others agree, that it is time that the South should have the Democratic Presidential candidate at the next election. But who should it be? The *Mobile Register* says that Senator Tillman would be the man, as he better represents the South than any one else, and other papers quote with a sort of approval. They say he is not an ideal candidate, but he is courageous and outspoken and patriotic, if not always wise. It would be a sad nomination. Think of

putting up a man to represent the South whose only idea for the South is to keep the negro down. The South must have many larger ideas than that, many larger interests, and the danger from the negro is infinitesimal. A very wise article on this subject is to be seen in the last number of *The South Atlantic Monthly*. But while we would be pleased to see a cultivated and liberal man from the South nominated by the Democrats, we presume that prudence will still require the convention to look again to the North, and, very likely, again to Mr. Bryan, whose third time might be hoped to win.

### The Hague Conference

The Hague Conference, called by Russia for July, will be postponed for the reason that it interferes with previous engagements of the whole Western Continent. It is extraordinary that such a blunder should have been made, for inquiry should have informed the Russian Government that all the American nations would just then be busy with a Pan-American Conference. As it was the United States, no negligible nation, that took the first step to call this second conference of The Hague, and President Roosevelt courteously withdrew in favor of Russia, it is the more surprising that consultation was not had, and an agreement reached. We will not consider the suggestion that this was purposely made to prevent America's attendance, for that is too preposterous. When the Conference meets it will demand the fullest attention of the entire world, while our Pan-American Conference concerns mainly our own Continent.

### Senatorial Consultations

This is a free country, and just as free for Senators as for any one else. If a Senator desires to get information as to any matter on which he is to vote he has the right to call on the President of the United States, or the president of a railroad company, and ask questions and learn all relevant facts. It is to be assumed that he does this honestly and not corruptly. We are therefore surprised that any Senator should be closely questioned by his associates as to whether he has talked with President Roosevelt

or President Somebody-else, and should be more careful to deny than to resent the inquisition. If the Senator's moral character is a matter of reasonable suspicion, that is another thing; but we are not to assume that he visits the President of the United States to solicit or receive a bribe in the way of patronage to give a corrupt vote; or that he interviews a railroad president for some other corrupt purpose. He can fairly seek such information as is needed to give him facts as to a railroad rate bill, and ought to be influenced just so far as the facts will warrant. The decision of a great question like that now before Congress requires all the information that a Senator can get from every source, and the question is so difficult a one, and so many points are involved, both constitutional and commercial, that men may honestly differ, and the assumption that one who seeks information or consults with one who knows or has interests, is not to be lightly made. So Senator Bailey does not need to avoid going to the White House for fear that he should seem "influenced." The President has the right to use influence and to press measures, he being himself a legislative as well as an executive officer, and having the further right of any citizen to express his opinion.

The Philippines  
Not for Sale

In a late sermon Dr. Parkhurst quotes Secretary Taft as saying: "The passage of the Philippine Tariff Bill will be a test of American sincerity." In that sermon Dr. Parkhurst makes the distinction between the American people and the American nation. The people, he says, wish well of the Chinese, but the nation is his enemy. The people feel kindly to the "little brown men" of the Philippines, but this is not true of the nation. He says:

"This nation as a nation does not care a row of silver-headed pins for them. And if so long as it supposed the islands were going to be a source of revenue it regarded their falling into our hands as an act of providential interposition, it would now with tenfold seriousness consider it an act of providential interposition if somehow or other they could fall out of our hands, relieving the political party in power of an embarrassing and dispiriting incubus, and easing the National Treasury of what has been estimated to be something like two hundred millions a year. President McKinley had something besides a financial interest in the

islands; so we believe has his successor, but nationally considered it is a matter purely of tobacco, sugar and the Dingley tariff. As between the American nation considered as a nation, and the Philippine Islands it is as much a matter of dollars as it used to be a matter of dollars between the Southern planter and his slave-gang."

Just where that "two hundred millions a year" comes in, it would not be easy to say. We presume it includes pensions and naval expansion and other things which would not be affected by withdrawing from the Philippines. It does look a bit as if Dr. Parkhurst were right in saying that the nation, as a nation, has no care for those islands, for Congress, which represents the nation, or at least the Senate, has refused to pass the Philippine bill, a most selfish and outrageous piece of cruelty. But we refuse to believe the reports that our Government wants to get rid of the Philippines, and that Governor Wright goes as Ambassador to Tokyo for this very purpose, that he may pass the islands over to Japan. We do not believe that Congress would consent, or that the American people, who are looking forward to the approaching organization of a Philippine legislature, wish to give up the noble experiment of teaching self government, on republican lines, to an Oriental people.

It is evident that the Russian Duma will be controlled by an element that wishes liberal constitutional progress, and that the conservative obstructionists have been decidedly defeated. This means, we judge, that Witte will be supported as against Durnovo and the Grand Ducal cabal. This success may explain the report that Witte threatens to resign if Durnovo is not removed from the Cabinet. The prospects are hopeful that the Duma will work for Russian freedom, notwithstanding the fears of the revolutionists.

It looks as if Dr. Dowie were getting actually insane. His passionate outbreaks and his strange extravagance in money matters, with his absurd imaginative schemes, are such as appear with progressive senile softening of the brain. We have had one such case that nearly wrecked one of our railroad companies a few years ago. In this case the colossal conceit was itself enough to be a form of insanity.

# Insurance

## The Insurance Situation

THE insurance situation has recently furnished a subject for discussion in the British House of Lords. According to the *London Times*, the Earl of Onslow called attention to the recent disclosures as to the management of certain insurance companies in this country whose branch offices are located in various English cities, and to the existing laws of other countries and colonies affecting foreign insurance companies. He asked the Government whether they would take any steps to require that foreign companies conducting business in England should keep in that country such a proportion of their assets as would suffice to meet claims made on them by English policy-holders. The Earl stated in the upper house that it had been shown that, in addition to the face value of all the policies, there was a reserve of something like £12,500,000 sterling for deferred bonuses. The three great companies carrying on business in England are the New York Life, the Mutual and the Equitable. These three institutions have absolute possession of money or property to the extent of £200,000,000 sterling, and a ready cash surplus of almost £40,000,000 sterling. This sum is greater than the combined capital of the four greatest institutions in Europe—the Bank of England, and the Banks of France, Russia and Germany. The business done by the giant insurance companies named is increasing so rapidly that it is estimated that if it went on at only half its present rate of increase, they would in twenty years have £800,000,000 sterling to deal with, but, notwithstanding the present solvency of the companies, there is now no security that the policy-holders would not wake up one morning to find their assets dissipated. He closed by urging upon the Government the importance of introducing legislation along the lines of that in force in other civilized countries, and which would provide for the suitable deposit of approved assets sufficient to meet any liabilities to the British policy-holders.

We referred briefly last week to the fact that life insurance legislation is discussed by Paul Morton, president of the Equitable Life Assurance Society, and

D. P. Kingsley, vice-president of the New York Life Insurance Company, in the current *North American Review*. Mr. Morton's plea is to protect the policyholder. He grants that laws must be passed providing for more thorough inspection. He holds that security is essential, but investments should yield an income, and sets forth that strict economy is now the watchword of the American insurance companies. Mr. Kingsley, on the other hand, urges the need of safeguarding the companies. He strongly disapproves of the limiting of the amount of money that may be paid for securing new insurance in any year, and sees in such a provision a substantial curtailment of the insurance business, if, indeed, it be not brought to a standstill. He states that some of the proposals of the Armstrong Committee, in the interests of the State, should be radically modified.

Samuel Untermeyer, counsel for the International Association of Policy-holders in the Mutual and New York Life Insurance companies, made public this week a letter written by him to Thomas H. D. Berridge, of London. In it he charges that Charles A. Peabody, president of the Mutual, is the nominee of the Standard Oil-J. P. Morgan-Harriman interests in the Mutual Life; that he knows nothing of insurance; that the suits the Mutual has brought against the McCurdys are not to be pushed, and that an attempt is being made to deceive the public.

Mr. Berridge, as counsel for the English policy-holders in the Mutual, is associated with Mr. Untermeyer. The Berridge letter was given out by the latter as a rejoinder to the letter written by President Peabody to D. C. Haldeman, the Mutual's manager in London, in which he denies that he is the Standard Oil's choice.

In reply Mr. Peabody has referred to Mr. Untermeyer as Lawson's lawyer.

Seth Low and Charles E. Hughes jointly discussed the insurance situation on April 8th before the Ethical Culture Society. Mr. Low said that what was needed in insurance circles was a higher conception of trusteeship. If men will not give the time to serve others as trustees, they ought not to become trustees.

# Financial

## Mr. Hill's Canadian Project

THIS year's most interesting news in the field of railway construction is the authoritative statement that James J. Hill, president of the Great Northern, is about to parallel the Canadian Pacific from Montreal to Vancouver. His civil engineers have been at work for a year, it is said, and they have found a route thru the mountains much more favorable for traffic than the one which the Canadian Pacific uses.

Unlike the builders of other transcontinental lines in Canada, he asks for no assistance in the shape of subsidies, bond guarantees or land grants. His friends predict that the line westward from Winnipeg will be finished in a year and a half. Twelve branches, running to oil lands or mining districts, or connecting the new main line with the Great Northern, have been planned. About 4,000 men are already at work, and contractors say that "rush" orders have been given. There is a hint as to Mr. Hill's motive in a dispatch which says that the greatest possible speed in construction will be attained "unless the Canadian Pacific calls a halt on its American extensions." If it does call a halt, perhaps Mr. Hill's plans will be modified. Thus far, nothing has been said about the attitude of the Dominion Government, which cannot be expected to be wholly indifferent as to the welfare of existing or projected roads in which it is more or less directly interested. The story will not be complete until we hear from Ottawa.

ZOHETH S. FREEMAN,  
Cashier Merchants' National Bank, New York.  
Copyright, 1906, by Pirie MacDonald, Photographer of Men, New York.

....Zoheth S. Freeman, formerly in charge of the credit department of the Hanover National Bank, has just been elected cashier of the Merchants' National Bank, of which R. M. Gallaway is president. Mr. Freeman has had a banking experience which cannot fail to make his services valuable to the Merchants' National. The Merchants' has a capital of \$2,000,000, surplus and undivided profits of over \$1,400,000, and total resources of \$22,387,686.

....The Franklin Trust Company, of Brooklyn, of which George H. Southard is president, proposes to increase its capital stock from \$1,000,000 to \$1,500,000.

....Henry Dimse, cashier of the Citizens' Central, has been elected president of the Northern National Bank, of New York. Mr. Dimse was for ten years with the Sixth National, and was assistant cashier of the Twelfth Ward Bank. Henry A. Belden, who has been connected with the Stuyvesant, National City and Commercial banks, of Brooklyn, will continue as cashier of the Northern National Bank.

....The withdrawal of John D. Rockefeller, Jr., and E. Parmalee Prentice, his brother-in-law, from the Missouri Pacific board is regarded as additional evidence of the purpose of Rockefeller interests to sever their relations with the Gould properties.

....Dividends announced:

U. S. Rubber Co., quarterly (1st Preferred), 2 per cent., payable April 14th.

U. S. Rubber Co., quarterly (2d Preferred), 1½ per cent., payable April 14th.

No. 2994

## Survey of the World

### The President Criticises Muck-Rake Men

At the laying of the cornerstone of the new office building of the House of Representatives, in Washington, on Saturday last, President Roosevelt made a long address, in which, after referring to Bunyan's "Man with the Muck-Rake," he criticised, in some measure, the writers who have recently attacked men in public life, and then, turning to "the problems connected with the amassing of enormous fortunes and the use of these fortunes in business," predicted that we should ultimately have to consider the adoption of a national progressive tax upon "all fortunes beyond a certain amount," a tax designed to prevent the owner of an enormous fortune from "handing on more than a certain amount to any one individual." The man who never did anything but scrape up filth with the muck-rake, he said, and who never thought or spoke or wrote of anything except his feats with the muck-rake, became not a help to society, but one of the most potent forces for evil:

"There are, in the body politic, economic and social, many and grave evils, and there is urgent necessity for the sternest war upon them. There should be relentless exposure of and attack upon every evil man, whether politician or business man; every evil practice, whether in politics, in business, or in social life. I hail as a benefactor every writer or speaker, every man who, on the platform, or in book, magazine, or newspaper, with merciless severity makes such attack, provided always that he in his turn remembers that the attack is of use only if it is absolutely truthful. The liar is no whit better than the thief, and if his mendacity takes the form of slander, he may be worse than most thieves. It puts a premium upon knavery untruthfully to attack an honest man, or even with hysterical exaggeration to assail a bad man with untruth. An epidemic of indiscriminate assault upon character does no good, but very great harm. The

soul of every scoundrel is gladdened whenever an honest man is assailed, or even when a scoundrel is untruthfully assailed."

Some could not understand, he continued, that denunciation of mud slinging did not mean an indorsement of whitewashing. He pointed out that indiscriminate assault upon men in business or in public life invited a reaction which would tell powerfully in favor of scoundrels who ought to be put in the penitentiary:

"Gross and reckless assaults on character, whether on the stump or in newspaper, magazine, or book, create a morbid and vicious public sentiment, and at the same time act as a profound deterrent to able men of normal sensitiveness and tend to prevent them from entering the public service at any price. As an instance in point, I may mention that one serious difficulty encountered in getting the right type of men to dig the Panama Canal is the certainty that they will be exposed, both without, and, I am sorry to say, sometimes within, Congress, to utterly reckless assaults on their character and capacity."

His plea, he said, was not for immunity to, but for the most unsparing exposure of, the politician who betrays his trust, or the business man who makes or spends his fortune in illegitimate or corrupt ways. Every such man should be exposed and hunted out of the position he has disgraced, but the attack should not be made "in sensational, lurid and untruthful fashion." The men with the muck-rakes, often indispensable to the well being of society, should know when to stop raking muck, and to look upward to the celestial crown above them. If they paint the whole picture black, the people eventually come to suspect both the assailant and the assailed, and can then be stirred neither to wrath against wrongdoing nor to enthusiasm for what is right:

"There is any amount of good in the world, and there never was a time when loftier and more disinterested work for the betterment of mankind was being done than now. The forces that tend for evil are great and terrible, but the forces of truth and love and courage and honesty and generosity and sympathy are also stronger than ever before. It is a foolish and timid, no less than a wicked, thing, to blink the fact that the forces of evil are strong; but it is even worse to fail to take into account the strength of the forces that tell for good. Hysterical sensationalism is the very poorest weapon wherewith to fight for lasting righteousness. The men who with stern sobriety and truth assail the many evils of our time, whether in the public press, or in magazines, or in books, are the leaders and allies of all engaged in the work for social and political betterment."

We were passing thru a period of great social, political and industrial unrest. This unrest was to be welcomed as a sign of healthy life if it took the form of a fierce discontent with evil; but it would have significance only for evil if it should turn into a mere crusade of appetite against appetite, a contest between the brutal greed of the "have nots" and the brutal greed of the "haves." Evil should not be condoned, whether in the man of capital or in the man of no capital:

"The wealthy man who exults because there is a failure of justice in the effort to bring some Trust magnate to an account for his misdeeds is as bad as, and no worse than, the so-called labor leader who clamorously strives to excite a foul class feeling on behalf of some other labor leader who is implicated in murder."

#### Suggests a Tax on Great Fortunes

Mr. Roosevelt then took up the subject of great private fortunes and the use of such fortunes in business. We should discriminate in the sharpest way, he said, between fortunes well won and fortunes ill won; between those gained as an incident to performing great services to the community as a whole, and those gained in evil fashion by keeping just within the limits of law-honesty. "Of course, no amount of charity in spending such fortunes in any way compensates for misconduct in making them." Immediately after these words he made the following statement, which has excited much comment thruout the country and abroad:

"As a matter of personal conviction, and without pretending to discuss the details or formulate the system, I feel that we shall ulti-

mately have to consider the adoption of some such scheme as that of a progressive tax on all fortunes, beyond a certain amount, either given in life or devised or bequeathed upon death to any individual—a tax so framed as to put it out of the power of the owner of one of these enormous fortunes to hand on more than a certain amount to any one individual; the tax, of course to be imposed by the National and not by the State Government. Such taxation should, of course, be aimed merely at the inheritance or transmission in their entirety of those fortunes swollen beyond all healthy limits."

To deal with the far reaching evils of overcapitalization, he continued, the National Government must, by license or otherwise, exercise supervision over corporations engaged in interstate business. We were making a beginning in the direction of serious effort to settle some of the economic problems by the railway rate legislation. This legislation would amount to something of itself, but it would amount to a great deal more insofar as it should be taken "as a first step in the direction of a policy of superintendence and control over corporate wealth engaged in interstate commerce." The first requisite in the public servants who are to deal in this way with corporations would be honesty. They must protect the rights of the public against the misdeeds of the corporation, and also defend the corporation itself against wrongful aggression. In addition to honesty, sanity was needed. These public servants must not be timid or foolish; they must not be hotheaded zealots or impracticable visionaries:

"The men of wealth who today are trying to prevent the regulation and control of their business in the interest of the public by the proper Government authorities will not succeed, in my judgment, in checking the progress of the movement. But if they did succeed they would find that they had sown the wind and would surely reap the whirlwind, for they would ultimately provoke the violent excesses which accompany a reform coming by convulsion instead of by steady and natural growth. On the other hand, the wild preachers of unrest and discontent, the wild agitators against the entire existing order, the men who act crookedly, whether because of sinister design or from mere puzzleheadedness, the men who preach destruction without proposing any substitute for what they intend to destroy, or who propose a substitute which would be far worse than the existing evils—all these men are the most dangerous opponents of real reform. If they get their way they will lead the people into a deeper pit than any into which they could fall under the present system."

In his closing words, the President urged the importance of the development of the broadest sympathy of man for man. Materially, we must strive, he said, to secure a broader economic opportunity for all men. Spiritually and ethically, we must strive to bring about clean living and right thinking.

#### Conviction of Greene and Gaynor

Benjamin D. Greene and John F. Gaynor were found guilty by the jury in the Federal Court at Savannah, on the 12th, of embezzlement and of conspiracy to defraud the United States. On the following day each of the two men was sentenced by Judge Emory Speer to be imprisoned for four years and to pay a fine of \$575,749.90. Each had been charged with defrauding the Government of this sum. Altho an appeal has been taken, this is probably the end of a celebrated case. The frauds were committed in connection with harbor improvements at Savannah, and the officer of the Engineer Corps under whose supervision the improvements were made was Capt. Oberlin M. Carter. He was a fellow conspirator with Greene and Gaynor. Having been convicted by court martial, he was sentenced to be dismissed dishonorably from the army and to be imprisoned for five years. Greene and Gaynor were first indicted in 1899. They resisted extradition from New York to Georgia, and, losing their case, fled to Canada, each forfeiting bail in \$40,000. In Canada, for several years, they successfully opposed extradition proceedings. At one time they were kidnapped in Quebec by detectives and taken to Montreal on a tug, but by the favorable decision of Judge Caron, of Quebec, they regained their liberty. Our Government appealed to Great Britain, and in February, 1905, the British Privy Council reversed Judge Caron's decision. A few months later the two fugitives were brought to Savannah.

#### Coal Miners and Their Employers

Negotiations between the anthracite miners and their employers have practically been suspended, but they may be resumed. As we said last week, the operators, replying on the 10th to

the miners' proposition that all differences should be referred to the Board of Conciliation for arbitration, submitted a counter-proposition that the Arbitration Commission of 1902 should be asked to decide whether there had been any change of conditions sufficient to justify a modification (but only with respect to wages and the Board of Conciliation) of the terms of the award of April 1st, 1903. In an accompanying statement they declined to reopen fundamental questions, asserting that these had been passed upon by the Commission, which had even provided for changed conditions, so far as wages were concerned, by adopting the sliding scale. The Board of Conciliation, they added, was disqualified, because its six members were already committed to one side or the other of the pending controversy. If all the demands of the miners should be granted, they also said, the selling price of the domestic sizes of coal would be increased by \$1.20 per ton. They would not admit that there had been a change of conditions sufficient to call for a change in the terms of the award, but they were willing that the Commission should examine this question under the limitations which they had prescribed. On the 12th this counter-proposition was rejected by the miners, who submitted again their original proposition relating to an increase of wages, a reduction of hours, etc., but with two modifications, the first being that the proposed agreement should be made with all the miners, instead of the miners' union, while the second was that the operators should collect the union's dues only from employees who authorized them to do so. If this proposition should be unacceptable, the miners continued, they would agree that it should be laid before the Commission of 1902, together with the operators' first proposition that the terms of the award of 1903 should be observed for three years more. Responding promptly, the operators rejected this proposition and declined to modify their proposition of the 10th. A written reply is to be prepared, and it will be sent to the miners this week. In conversation, the operators said that the proposed modification concerning the collection of union dues from miners was not less objectionable than

the original demand, for the permitted discrimination would simply draw the line openly between union and non-union men and invite union pressure against the latter. President Mitchell left New York on the 14th for Indianapolis, to attend a meeting, on the 17th, of the union's Executive Committee, before which will be laid the bituminous operators' proposition (in the very words of the one made, on the 5th, by the anthracite miners) for arbitration by the Anthracite Board of Conciliation. But operators representing more than half the bituminous output in the central competitive district have granted the desired wage increase of 5½ per cent. The anthracite operators are disposed to give the miners' committee all the time they may require for reaching a final decision, but there is no indication that they will recede from their present position. All the members of the Arbitration Commission of 1902 are living and all are in good health except Bishop Spalding, of Peoria, who has been partly disabled by a stroke of paralysis. But he says that he will serve again if required to do so. In the mining districts of Pennsylvania a strike is expected. Preparations for defense have been made at the collieries. Owing to the destruction of the water pipes and steam pipes of two or three mines by dynamite, and to attacks upon the few men remaining at work, there have been several arrests.

#### Strikers Killed at Windber

At Windber, 8 miles from Johnstown, Pa., on the evening of the 16th, four men and a boy were killed and several men were wounded, in an engagement between a party of sheriff's deputies and a mob of 5,000 miners who had been employed at the Berwind-White Company's mines, but were on strike. The miners, while attending a mass meeting, saw a deputy named McMullen and pursued him until he sought refuge in a house. They were tearing the house down in their efforts to reach him when Sheriff Bigley and an armed force drove them back, placing twenty under arrest. Two hours later, 5,000 miners attacked the jail in which the arrested men were confined. After defense with bayonets and by water from fire hose had failed, the deputies used their rifles. The leader

of the mob and three of his companions were killed, and Chief Engineer Delaney, of the coal company, who was fighting on the side of the deputies, received fatal injuries.

#### Negroes Lynched in Missouri

Three negroes were lynched in Springfield, Mo., on the night of the 14th. They were hanged from an electric light tower that is surmounted by a statue of the Goddess of Liberty, and their bodies were burned in the public square, near the foot of this tower. The first to be lynched were Horace Duncan and James Copeland, who had been arrested and placed in the county jail, charged with having committed an assault upon a young white woman named Mabel Edwards, after they had attacked and disabled her escort, a man named Cooper. But they were innocent, as the woman had failed to identify them, and an alibi for them had been established by their employer. A mob of 3,000 persons stormed the Sheriff's residence, broke the doors and windows, and got the key of the jail. They then dragged out Duncan and Copeland and lynched them. Before morning, the mob found another negro victim, William Allen, who was charged with the murder of a farmer named Rouark. He was hanged and burned as the others had been. In getting possession of Allen, the rioters so wrecked the jail that fourteen other prisoners escaped. Probably Allen also was innocent. It is thought that he told the truth when he said, just before his death, that he was not guilty and that the murderer of Rouark was one Kane, another negro prisoner and one of the fourteen whom the mob unintentionally released. On Easter Sunday the three charred bodies were lying in the public square, where they could be seen by persons on their way to church. The Sheriff had been warned, but had taken no precautions. Governor Folk sent six companies of militia to preserve order, denounced the lynchers, and directed that every possible effort to identify them and bring them to justice should be made. A special Grand Jury has been summoned, and by the Governor's orders an Assistant Attorney General will aid the local authorities in the inquiry.

**Buffalo Politicians  
in Trouble**

Several prominent politicians have been indicted in Buffalo for their interest in frauds alleged to have been committed when Erie County (in which the city is situated) bought the old and abandoned North Street Cemetery as a site for a new regimental armory. Those indicted on the 16th were Frederick Greiner, Postmaster of Buffalo for the last four years; Frederick O. Murray, recently appointed Collector of the Port, and three former Supervisors of the county. Ex-Auditor Neff and other supervisors were indicted some time ago, together with Rowland J. Conover, a contractor, who removed the bodies from the cemetery. Conover was to receive \$15 for each body removed. By calling each bone or handful of bones a body he increased his receipts by more than \$100,000 which he is said to have shared with county officers who assisted him in thus robbing the county. Conover, recently convicted, told the whole story to the Grand Jury. Greiner was the cemetery company's attorney, who obtained a large fee for the sale of the property to the county at what is said to have been an excessive price. He is charged with bribing the Supervisors. Murray, held for grand larceny under seven indictments, was County Treasurer, and is implicated in the fraudulent transactions with Conover. Owing to the prominence of several of the accused men in the Republican party, it is thought that the political situation will be affected by what has come to light.

**Various  
Topics**

The Russian Government promptly responded to the suggestion of our State Department that a later date than July should be chosen for the Peace Conference, and the meeting has been postponed until the latter part of September. Any date later than the 20th of that month will serve the convenience of the United States. —It was decided by the Supreme Court, on the 16th, that a divorce vadic in other States cannot be granted by the courts of a State in which only one party to the marriage resides. Four of the nine Justices dissented, Justice Holmes asserting that the Court was reversing

its own decision of 1901, in the Atherton case. It is said that the decision of the 16th affects the legitimacy of about 20,000 children, the offspring of marriages which followed divorces granted in South Dakota and other States in which both parties were not residents at the time. —The bill removing the tax from denatured alcohol to be used in the arts and industries was passed in the House, last week, by a vote of 224 to 7. —The House Committee on Elections has reported favorably a resolution for Constitutional Amendments providing for the election of Senators by direct popular vote and making the term of members of the House four years instead of two. —It is reported in Washington that the President has expressed a desire to be a Senator from New York after he leaves the White House in 1909. Mr. Platt's term and that of the President will expire on the same day. —The President sent to Congress, on the 17th, the report and recommendations of the recent insurance convention, with the bill of its committee providing an insurance code for the District of Columbia. He expressed an earnest hope that Congress would enact this bill into law, saying that "we are not to be pardoned if we fail to take every step in our power to prevent the possibility of a repetition of such scandals as were disclosed by the Armstrong Committee."

**Latin  
America**

President Castro and his Cabinet have resigned. There is much conjecture as to the meaning of this action on the part of President Castro, but he is said to be weary with affairs of State and wants a rest. He has left for the interior as a private citizen, paying his regular fare on the railroad, and Mme. Castro has gone in another direction, on what is said to be a diplomatic mission. It seems that President Castro's brother, General Celestino Castro, is Governor of the State of El Tachira, in the western part of the Republic. General Cipriano Castro has sent ammunition to his brother in case of a possible revolution in some other part of the country, but the brother has been

appropriating the alcohol tax instead of forwarding it to Caracas, and when the money was demanded from him by his brother, Celestino, relying on the ammunition, telegraphed a reply which sounded very much like a challenge. It is this family controversy that Madame Castro will try to settle. All the members of the Cabinet which has resigned have taken passage for Paris, the final home of most oversuccessful Venezuelans. In this connection it is interesting to read

will return in a short time.—The preliminary prospectus of the Pan-American Conference, to be held in Rio de Janeiro next fall, is announced. The Conference will convene on the 21st of July, and is not expected to last much longer than the 1st of September. The topics for discussion will relate to arbitration and codification of International Law, public and private; commercial treaties between the American republics; the improvements of rapid communica-

VISCOUNTESS AOKI  
GERMAN WIFE OF THE FIRST  
JAPANESE AMBASSADOR

the statement, published in the *Herald*, of a presumably well informed but anonymous gentleman, who has just left Caracas. He says that First Vice-President Gomez gets graft from all the cattle raisers; that Second Vice-President Velutini has a rakeoff on the water rates; while the rum, cigarettes, match business and many others have all been monopolized by Castro's favorites. The provisional President of the Republic is General Gomez. Whether he will seize the reins now that Castro is away, or not, remains to be seen, but probably Castro

tion between the different nations; laws relating to customs and consular matters; patents, trademarks and copyrights; sanitation; international railways, and the exercise of the liberal professions.

#### The British Education Bill

The Education Bill introduced into Parliament by Mr. Augustine Birrell, President of the Board of Education, has been the theme of hot controversy during the Easter vacation. It is avowedly a compromise measure, and as such is

severely attacked on both sides. The Labor members are in favor of abolishing all religious instruction in the public schools, and will attempt to amend the bill in the direction of secularization, but they will probably stand by the Government measure in any case. The bill, of course, does not suit the Roman Catholics, but is not regarded by them as worse than the present law or than any attainable substitute. The Nonconformists in general are satisfied with it. The Established Church is divided over the question, the evangelical wing favoring it, and the High Church party fighting it. The former party pleads expediency; the latter stands for principle. The arguments follow the old familiar lines. The Bishop of Ripon, in a letter to the *Times*, appeals to both denominationalists and undenominationalists to moderate their claims and accept the compromise as the only means of averting secularism. He asks:

"Is it quite reasonable to affirm that religious teaching which does not include teaching about worship and the Sacraments is not worth having? Is it no gain that children should be taught the words of our Lord, the story of His Life and Death? Would it not be a real advantage if every child were given the opportunity of learning that God was its Father, and Christ its Redeemer, and the Spirit its Helper? Can any Christian man think that secularism is preferable to such Christian teaching?"

The Bishop of Carlisle argues in a similar way against insisting upon teaching denominational doctrines in the day schools, and says:

"I will not sacrifice on the altar of my denominational doctrine, however sacred and sublime to me, the spiritual hope of the nation and the religious training of hosts of children, whose only opportunity of learning of God and their own Divine origin and destiny is in the day school. To do otherwise is, in my judgment, not only a great national betrayal, but moral and spiritual infanticide on a stupendous scale."

On the other hand, the opponents of the measure point out the impossibility of defining the "undenominational religion" or "fundamental religion" which is to be taught. The tenets peculiar to one denomination, therefore, which would be excluded from the schools, are just the ones which that denomination considers as most "fundamental" and important. As one *Times* letter puts it:

"What Nonconformists ask is that the Bible interpretation in the schools should aim at

their goal, that the foundation should be so laid as to make Church membership and sacramental life unessential, or even unimportant. But why should we be presented with the choice between this one kind of Bible teaching or none at all? Our objection goes deeper than the question of doctrinal differences. We think that we are being asked to make our choice between secularism and a form of religious tyranny; and it is no blind partisanship that compels us to say that we will have neither."

It is also argued that the clause providing that no religious test shall be required of teachers is fallacious, for either infidel teachers will have to teach what they do not believe in, or be required to submit to the test of the unwritten creed of an indeterminate "fundamental Christianity." Attention has been called, however, to the fact that a very similar compromise measure has been in effect in the State of West Australia since 1893 and has given general satisfaction. At a meeting of thirty-two bishops of the Church of England, a resolution was passed that the bill "must be met with unhesitating opposition." The bill allows denominational teaching two days in the week, if not given by the regular teachers and not during school hours. In towns of over 5,000 inhabitants, if the parents of four-fifths of the children desire it, denominational teaching is allowed daily by the ordinary teachers at the cost of the denomination.

#### Strikes in France

The strike of the miners in the coal district of Pas-de-Calais is not yet settled, and outbreaks of violence are becoming more numerous. The houses of non-union miners have been dynamited, and a train bringing Belgian miners into the district was stopped and attacked. After a sharp debate in the Chamber of Deputies, led by M. Basly, Deputy from Pas-de-Calais and a former coal miner, the Chamber voted not to appoint a commission of investigation, but to await the action of the Government, which has promised to fix the responsibility, punish the guilty parties, whoever they may be, and to adopt such measures as may be necessary to protect the miners in the future from such catastrophes. It was shown by M. Basly that the company operating the Courrières mine had violated the mining laws in many particulars. They had not provided a ventilating shaft for each

working shaft, as required by law, and the walls and doors cutting off different parts of the mine were not of sufficient thickness and stability. If the legal precautions had been taken the loss of life from the explosion would have been much less. There are now three inquests in session—a judicial inquiry to fix the responsibility for the catastrophe, an administrative investigation upon the conduct of the rescue work, and a judicial inquest into the responsibility incurred by the State engineers in charge of the rescue work.—In the city of Fres-senneville (Somme) the workmen in the lock factories struck on account of the dismissal of two of their leaders. The strike rapidly took a revolutionary form, and a mob of several hundred, singing the *Internationale* and the *Carmagnole*, marched to the houses of the proprietors and pillaged them from garret to cellar, throwing the furniture out of the windows. One of the houses, which had been recently bought for \$50,000, was then burned to the ground.—Great inconvenience to the public was caused by a strike of the postmen in Paris and Lyons. Those who handled printed matter and served the newspaper offices refused to deliver the mail, but the letter carriers, who are better paid on account of the New Year presents from their patrons, amounting to \$200, refused to follow their example. The Minister of Commerce, M. Barthou, at once telegraphed to each postman that if he did not return to work on the following morning he would be discharged, and sent soldiers out with the mail.—A general strike is feared on May 1st. The French labor leaders claim that, altho money is plentiful in France and the savings banks are full, wages are being reduced and the number of the unemployed was never so large as now. Out of a total of 8,000,000 workmen in France, 750,000 are unemployed because they cannot get work.

#### The Eruption of Vesuvius

Mt. Vesuvius has been comparatively quiet during the week, and there is no probability of a renewal of the eruption at the present time. The mouth of the crater has probably been stopped, as nothing but fine sand and ashes has been emitted during the last few days.

But Professor Matteucci, who knows most about the volcano, since he has lived on it for many years, refuses to make any predictions as to its future action. Professor Matteucci remained at his post in the observatory, on the spur of the cone, during the entire eruption, with his assistant, Frank Alvord Perret, of New York, and describes the scene as terrible in the extreme. The electrical phenomena were extraordinary, and seriously interfered with the operation of the recording machinery of the seismic apparatus, which were also inadequate for recording the heavy earthquake shocks. The eruption began with the overflow of lava, forming the stream which destroyed Bosco Trecase. On Sunday the great jagged cone on the interior of the crater was blown off, and stones fell in all directions, cutting the roof and breaking the windows of the observatory. Thruout the day many enormous blocks of stone rose to the height of 2,500 feet from the crater, while ashes formed a tree-shaped cloud, spreading much higher. The eruption is equal in violence to those of 1631 and 1872, altho inferior to that of the year 79, when Pompeii and Herculaneum were buried. The lava stream which destroyed Bosco Trecase is from 30 to 35 feet in height and 150 to 450 feet wide. For a distance of many miles about Vesuvius the ground is covered with ashes and fine sand to a depth of from half an inch to two feet on the level, but in the ravines and valleys reaching a depth of several feet. In Ottajano the ashes are piled up to the windows of the second stories of some of the few houses still standing. The work of salvage is very difficult on account of the tangle of debris of the fallen houses and churches. Sixty-six bodies have been taken from the ruins of Ottajano and 115 from San Giuseppe; 100 or more have probably not yet been reached. Some of the bodies of the women, with their faces protected by their arms and their hands full of jewels, remind one of the plaster casts in the Naples Museum of those who perished in Pompeii. Five days after the eruption two families, comprising ten persons, were dug out of a cave at Ottajano, where they had been buried by the ashes.

On the following day two old women were unearthed beneath the house which had fallen in. They had been protected by the rafters, and had lived upon a little food that they had in their pockets. Several thousand houses have been destroyed in the district and the immediate financial loss is over ten million dollars. It will require some years to restore the farms and vineyards, even supposing that the ashes will not perma-

ine and exposure, altho subscription lists made up by the King and the Pope are open for relieving their immediate wants.

### The Natal Rebels

The insurrection of the natives in Natal was not quelled by the capture and execution of the twelve men, which caused a conflict between the Imperial Government and the Natal authorities.

Evidently the imposition of the new poll tax has caused very deep seated resentment among the natives. The measure was adopted because the hut tax, which now puts 16 shillings upon each native, but did not reach the young men, who, not being married, had no huts to tax. Chief Bambaata, who was deposed as Regent of the Greytown district, has declined to acquiesce in this action of the Government. He kidnapped his successor and uncle, Chief Magwababa, and went on the warpath with some 200 followers. An expedition under Colonel Mansel was sent to the rescue of some colonists, including several women and children, at Keate's Drift. On the way back they were ambushed by a body of Zulus, who dashed in between the vanguard and the main column. The vanguard fought their way back to their comrades, and the column succeeded in returning to Greytown, keeping up a running fight for six miles. The Zulus continued the pursuit to within a mile of Greytown. Four of the British troops were killed and five wounded. The British column, consisting of five officers and 146 men, was marching without flankers and might have been completely destroyed. The colonial authorities called out the militia, which numbers 3,000 men, and surrounded and shelled the kraals at Bambaata's headquarters. All four of the men killed by Bambaata's attack belonged to the firing party which executed the twelve natives on the 2d of April.

Dr. Alexander Wekerle, Who, by Becoming Premier, with a Coalition Cabinet, Has Broken the Political Deadlock in Hungary.

nently injure the land. King Victor Emmanuel visited Ottajano, going as far as he could in his motor car, and then on horseback thru drifts of ashes many feet deep. In Naples for over a week the people have gone about in the streets wearing transparent masks and carrying umbrellas to protect them from the falling ashes. The refugees from the stricken district are suffering from fam-

## The "Dreadnaught" Scare

BY PARK BENJAMIN

THE Navy Department is an amusing institution to any one who takes the trouble to watch its divagations over fairly long periods of time. It runs, and has been running for years, on the theory that an individual educated in his youth at the Naval Academy and for the ensuing quarter century kept at the usual routine work of a naval officer, whether of the line or in a staff corps, somehow or other becomes sanctified with a supernal sort of intelligence which inherently fits him to take instant charge of a great bureau of supply, to deal wisely with the conflicting claims and wiles of contractors, inventors, lawyers and politicians, to spend providently millions of dollars per year, to discern infallibly the true path of progress and keep in it, besides seeing what is under the horizon a long way ahead, and now and then selects him, not because he has shown any special ability for the task, but for any other reason which for the moment may have brought him into notice, including the negative virtue that everybody else on his particular "list" is more obviously unsuitable for the job. The consequence is that while he assumes his Rear Admiral's stripes and faces the future with more or less innocent jocundity, a few months' experience, metaphorically speaking, usually converts him from the blithesome and fearless sea bird into something very much akin to the mud turtle. At all events he seeks safety in closing his shell as tightly as possible, burying himself far deep in the mire of conservatism, and alike oblivious to the storms and progress overhead, emits occasional thought bubbles from his inner

consciousness, until an explosion throws him gasping into the open air, and shouting for civilian help.

The "Dreadnaught" scare is the latest upheaval of this sort. We have a so called Bureau of Intelligence in the Navy Department, whose business it is to find out what other nations are doing in the way of creating new war material, and to keep the General Board, whose present chief function now seems to be to wrangle with the supply bureaus concerning things in general, fully posted. The Intelligence Bureau "fell down" (this is idiom, not slang), in finding out about the "Dreadnaught," and the General Board thirsted long for information more intelligible than that provided by the daily papers, and, naturally, the designing of the battleships "Michigan" and "South Carolina" perceptibly hesitated. Meanwhile, some time previously, the Secretary had got himself into trouble anent the old "Constitution," by making remarks derogatory to the small fragments of the ancient ship, which still remain imbedded in the hull, tied up in Boston; and as this suggested that Old Ironsides was again encountering the peril of having her "tattered ensign" torn down, with, alas, no Dr. Holmes here to prevent it, public interest waxed warm. Gradually the formidable qualities of the sudden "Dreadnaught" began to filter over here; 18,500 tons, twenty-one knots speed, four screws, two rudders, ten 12-inch guns, turbine engines, oil fuel carried in the double bottom, and all built between October and January. The inevitable American demand for "something bigger" rose portentous. The name "Con-

stitution" matched it. Nothing, of course, is more necessary than to build the biggest thing afloat around that name, whether we repair the old craft or not. And here we are; while from the ruck and riot of the explosion, even now begins to arise the cry of the departmental talent charged with the contriving of the thing, for outside help.

Now it may well be asked, what do we want of a single monster which merely exaggerates the existing type, and why should we be scared into building it? It is not precisely correct to say we are scared; perish the thought! It is rather this way: For some time past we have been listening to an argument between two sets of naval tacticians, the "Flexibles" and the "Inflexibles," and just as we got our mind down to the fine points of it, Togo jolted it all endwise in the Sea of Japan. Hardly had we recovered from that, when along comes the "Dreadnaught," followed by a burning desire in ourselves to settle the thing right off. The "Flexibles" gallantly led by Captain Mahan, have all along insisted that fleets of battleships of moderate tonnage—hence more easily handled, more flexible as teams, are what we need, and point to Togo's effective reserve fleet ready to pursue and capture the flying Nebogatoff, after the main fight was over. They dwell also upon the relatively less cost of such ships, upon their superior ease of docking, and diminished size as targets. The "Inflexibles," whereof Commander Fiske is the naval Henry of Navarre (because he is rightfully the chief glory absorber for all the glory there is in it), answer the Togo argument by remarking that Nebogatoff would never have been permitted to fly at all, if the force applied had been sufficiently crushing, that a big ship takes less men than two small ones, is cheaper to run, and, above all, accommodates everything anybody could possibly desire to put into her. And the last is the gist of it. If we must have the heaviest armor and the most powerful battery, and the most formidable torpedo array, and carry the most coal and keep up the highest speed for the longest time, all in one ship of the sort we know, it does not need Commander Fiske's ability to convince us that everything translates it-

self ultimately into displacement, and that it all simply comes to the homely truism that if a man has a big family to house he must have a big house to house it.

Well, after we get her, what? One more addition to our \$92,000,000 worth of twenty-seven assorted battleships, of which no group of similar units includes more than three. Another isolated variant of the existing type alone in its class after the fashion of the "Iowa." Until somebody devises a vessel powerful enough to settle a war all by itself, ships have got to work together. Team play is the present mode of exerting great force. One vessel different from all the others cannot work with them to the best advantage, nor they with her, and whether it be in ships or guns, or tools or watches, modern experience has taught us the value of uniform and interchangeable parts, and standard sizes. We aroused the risibilities of the world by the floating museum of marine freaks which we sent to bombard Porto Rico—5 knot monitors yoked with 21 knot cruisers. The lesson still holds.

The cost of building this new ship is estimated at \$10,000,000. The yearly interest at 4 per cent. on this outlay alone would be ample to maintain an efficient naval reserve instantly available in time of need. We now have none. That she will be less vulnerable to the torpedo than the smaller battleships is not clear. And the latest torpedo, which we are making over in Brooklyn, can run 4,000 yards at a speed of 37 knots per hour. One of them, well planted, could sink the "Dreadnaught," or even a still bigger vessel. And why construct this giant rather than replace the ships now known to be inefficient. A considerable proportion of the crews of the "Kentucky" or the "Kearsarge" is required to man the fourteen 5 inch guns on the casemate deck: ludicrous little guns of about as much use in a modern sea fight as so many pretty flowers. One melinite shell exploding there would probably dispose of every soul. The place is not armored and it is axiomatic that 25 per cent. of the crew killed means demoralization of all. Witness the "Orel," in Togo's action—a slaughter house hit forty times in the

superstructure and surrendered; yet in floating power wholly unimpaired. Last year's repairs on the "Kearsarge" figured about \$50,000, and those on the "Kentucky," \$100,000. And if 20 or 21 knot speed is really an important factor in battleships—and there is high tactical authority disputing it—what is the precise present value of the far slower "Massachusetts," or "Indiana," or "Iowa," or "Alabama."

The General Board of the Navy and the Board of Construction each favored the authorization of three additional battleships this year, and, as usual, differed; the former advising ships of the "Dreadnaught" type and the latter adhering to the proposed design of the "Michigan" and "South Carolina." Despite the projected new Colossus, the Construction Board has not only advertised for bids for the last named vessels, both 16,000 ton ships, but has expressed the opinion that they will be more efficient than the "Dreadnaught," especially in that they will have better armor protection and be less vulnerable while having a battery fully as effective. This is as it may be; some people are having qualms about four turrets in line with the 12 inch guns of the two inner ones overlapping the roofs of the outer ones, when aimed directly ahead or astern, and wondering what will happen to the crews of the latter when the time for firing arrives. But this is a detail. Accepting the foregoing statement as fact, have we not already overtopped the "Dreadnaught," and if so, why pile Ossa on Pelion? Why insist on building in addition one 20,000 ton ship, when, to quote the editorial opinion of the *Army and Navy Journal*:

"Nearly all the officers at the Navy Department would rather have two more battleships of the "Michigan" type, so that there would be, when all four vessels were completed, a unit of four 16,000 ton battleships of the same general characteristics. That such a unit would be most desirable is conceded everywhere."

My italics; and note the argument for team play. Certainly it would seem that "the biggest thing afloat" is not merely an anomaly, but that we can go ahead and make ample progress so far as present battleship types go without the aid of it.

But beyond all this, if we must con-

struct a vessel calculated to astonish the foreigner, why in the name of American invention can we not do something, not only new, but original? The battleship of today is at best a purely empiric structure, not an evolution; not even a legitimate deduction from the environment which progress in war material and war methods of the last few years has established; a mere patchwork of this thing, that thing and the other, hitched on to the fundamental monitor type as occasion demanded; a logical product neither of the times nor of inventive men living in them, and relatively speaking, for its epoch, not a whit more formidable than the towering iron plated lofty sparred "Warrior" or "Minotaur" of fifty years ago, whereof the advocates had nothing but contempt for what they called Ericsson's cheese box delusion. Why should we want to improve on the "Dreadnaught," or what is the same thing, why again indulge in our latter day practice of bringing up the tail of the British procession. The idea of a great big "Constitution" calculated to thrash the "Dreadnaught" as effectually as the old craft of the same name belabored the "Guerrière," may be inspiring to those who forget that the days of single ship duels have long gone by, but others will remember that the old "Constitution" won her victories, not because she was big, not because her people were any braver than their adversaries, for surely Dacres made a splendid fight, but because she was a brand new product, the first great triumph of Yankee invention in the art of marine war. She imitated nothing. She was as legitimate and direct an advancement beyond the snub-nosed tubs where-with the British ruled the seas, as the mind can well suggest. They copied her, for she revolutionized the frigate model. And that was not all. She proved the efficacy of new guns—long guns, fired straight at the water line, and the shot got there. This while her antagonists were throwing rigging-chopping projectiles from short carronades laid level, and trying to get the "Constitution" into their danger area, the very place which her speed and handiness were expressly designed to keep her out of. She demonstrated that naval fights were thereafter

to be won by steady, cool shots that bored in at or below the water line, not by winging one's adversary aloft and then grappling with him bull-dog fashion because he could no longer run away. The British copied that, too.

Are not we as wise in our generation as our great grandfathers were in theirs? Do we not want now as much—perhaps more than we ever did—something just as American, just as original, just as revolutionary as the old ship whose memory we honor? If the Navy Department, or better, Congress, will realize that all the intelligence in naval construction is not concentrated in the Bureau of Construction and Repair, or even in the Navy, that the favorite official argument “no one can criticise an egg unless he lays it” has its exceptions; that our inventors are taking out now about 800 patents a week for new things, and are paying \$40,000 a week in Government charges into the National Treasury, and then announce that a wholly new type of warship is wanted, and that a substantial reward will surely be paid for the successful design (coupled, perhaps, with a promise that the inventor will not be sent to die of old age trying to collect it in

the Court of Claims), is it not a wholesome faith to believe that it will be produced? Might it not be better, therefore, to let the Navy Department go on and develop existing ideas and team work in the “Michigan” and “South Carolina,” and, perhaps, more like them, and appeal to the country for the something wholly original. Then make the single new ship the embodiment of the new thought as completely as possible, and try her out. If she be good don't seek to adapt her to existing types, but build and adapt the fleet to the new pattern. Is not there a certain patriotism in this?

The only reason why we were not attacked in our weakness long ago was not because of our lack of “preparedness,” which Mr. Richmond P. Hobson and all the other “big navy” extremists so dolefully bewail, but because of a sound, healthy, well grounded judicious and altogether commendable fear of what the Yankee inventor might do—and in an emergency certainly will do. But why wait for the emergency. Why not now stop shivering over the “Dreadnaught,” and give him an independent chance?

NEW YORK CITY.

## The Watchword

BY CLINTON SCOLLARD

“HERE let us pause,” he said.  
At peer of dawn;  
“Nay, comrade, let our tread  
Lead up and on!”

“Here let us pause!” he cried.  
When noontide shone;  
“Nay, comrade, let our stride  
Lead up and on!”

“Here let us pause!”—his gaze  
The night upon;  
“Nay, comrade, let our ways  
Lead up and on!”

“Here let us pause!”—O heart.  
Till life be gone,  
Ever the braver part  
Leads up and on!

CLINTON, N. Y.

# The Duma

BY PRINCE MICHAEL TRUBETZKOI

[Prince Michael Trubetzkoï is a cousin of the late Prince Sergius Trubetzkoï, Rector of the Moscow University, and great Liberal leader, and nephew of Count Scheremetjeff, who is a member of the Imperial Council and one of the richest and most powerful men in Russia. Prince Michael, who some time ago, broke with his family, owing to the views he held, is now one of the leaders of the Revolutionary Party, working outside of Russia in support of this organization. We are very glad to see that the results of the elections for the Duma, now being held in Russia, do not justify the pessimistic view of the possibilities of the Duma in this article. It is fortunate for Russia that most of the Liberals did not follow the advice of Prince Trubetzkoï to boycott the elections, for in spite of the handicap of the intentionally cumbrous electoral machinery, they have succeeded in getting control of the Duma by a large majority.—EDITOR.]

THERE have been times in the history of Russia when the rulers of the country called together the representatives of the different classes of the people in order to obtain their advice and support for the welfare of the nation. Such assemblies were called State Dumas. The Duma which has been called at the present moment is for the purpose of pacifying the dissatisfied. The reason for this dissatisfaction is to be found in the wretched condition of the peasants and the workmen, who are almost entirely without any rights, and the non-existence of any kind of a legal guarantee for the educated classes. For it is the educated classes who most feel the need of freedom of the press, of speech, of faith, and of assembly. This dissatisfaction has taken hold of all grades and classes in the country and found expression in agitations, protests, strikes and assassinations, especially during the late unpopular war. There are three Revolutionary groups whose tendencies and aims are totally different. The first of these are the representatives of the peasants, who have also included in their program the labor question. These are the Socialistic Revolutionaries. The second group are the representatives of the workmen, or Social Democrats, whose aims are on a par with the Social Democrats of Germany and France. The third group, which is called the Liberal party, cannot boast of being a united party, as it includes among its members all shades of Liberals and Radicals.

As the Duma is not based upon an equal vote by ballot, but only extends

the right to vote to the landed classes and to the highest taxpayers in the towns, there can be no possibility that in this very strange Parliament a people can have any real representation. Owing to these peculiar conditions a very large part of the peasants, the entire working classes, and the majority of the "Intellectuals" of the country are excluded from voting. Equality does not exist in this system for the reason that there are several classes of voters. For instance, the vote of a few dozen or a hundred estate owners has as much weight in the election of a member of the Duma as the vote of several thousand peasants. An adequate idea can be formed of the average amount of persons who are permitted to vote when we find in the census that out of the million and a half inhabitants of St. Petersburg, only 9,000 can take part in the elections, and out of 410,000 inhabitants of Odessa only 7,000 have a right to vote. In addition to this, the interests of the population of a city are represented by a small number of persons who must necessarily belong to the moneyed classes. The elections are also managed in a very peculiar manner. For the representatives of about twenty towns and for the great land owners there is a double system of voting; that is, they first choose their electors and these vote for the representatives of the Duma. The peasants have a quadruple system. First, they vote in the village; then the representatives of the village vote in the district, where they choose two representatives, who in turn choose the department assembly electors, and these

electors choose the representatives of the Duma. It should be remarked that the Government officials are free to exercise pressure at the elections of the Zemstvos.

The peasants are not adequately represented, either in number or in property, when compared with the representatives of the great landowners. Of course, it would be possible to alter somewhat the defects of this system by a protest from the elective body, but this the Government does not permit. I must add here that the law of the 19th of August neither suppresses the bureaucratic *regime* nor does it contain a new political principle. In fact, this law only gives more power to the bureaucratic *regime*, which is more of an obstacle than a furtherance to the healthy development of a country. The natural consequence of this new law has already been revealed, on the one side by weakening the strength of the Oppositionists, and on the other side by giving the Government the opportunity to prove clearly that Russia is not fitted for a Constitution. The Radical elements of the Opposition, of which I am a part, demand the summoning of a Parliament on the basis of an equal, general, and direct vote by ballot, with a preceding guarantee of freedom of speech, of the press, and of assembling. In this way the influence of the opposition would be better distributed. At the mass meetings it would be possible to explain to the voters to what results such a representation could lead. I can appreciate the

fact that a number of obstacles will naturally present themselves in giving the people, of which such a large percentage does not know how to read and write, equal and direct vote by ballot. Still it will be possible for us to explain to the peasants that we really can lessen their sufferings.

Russia's condition can only be improved if the economical circumstances of the great masses of peasants are bettered, and lighter taxes are imposed. In twenty years from today Russia may take a place among the civilized nations of the world, and become a healthy, normal State. We do not want a Socialistic State, we only demand legal guarantees and better chances for the progress of the entire population.

As the Liberal party has missed the great political moment when in the name of the people it could have made demands upon the Government and received them, so the Radical element must now try to save what is possible. This can only take place by actively boycotting this election system, and by enlightening the masses that they have been deceived. The last means would be an armed uprising thruout the country. This would probably be the most forceful argument to persuade the Government to give the people better voting privileges, and thereby not only save Russia from bankruptcy, but also from the possibility of the approaching reaction.

MOSCOW, RUSSIA.

## From Cell to Song

BY ADDISON BALLARD

AND what, I said, is this to me,  
Who doubt the life it comes to teach,  
But a stray pebble from the beach,  
Worn smooth and oval by the sea?

The tiny prison-house, one morn,  
In ruins lay, a shattered shell;  
But joyous out from heaven fell  
A sky-lark's song, and Hope was born!

PITTSFIELD, MASS.

# The New Majorities in Parliament

BY JUSTIN MCCARTHY

ONE of the most significant and, indeed, one of the most important events in the history of the new Parliament and the new Government, is the acceptance by the Prime Minister of the principle that members of the House of Commons ought to receive payment for their services to the public. A resolution was brought forward a few nights ago by a member on the Ministerial side of the House, embodying and maintaining that principle. The Prime Minister delivered a most interesting and encouraging speech, in which, while he explained that in the present state of the public finances and for some time to come it would not be possible to add to the expenses of the State the large additional sum needed for the payment of members, the Government fully recognized the necessity for such an arrangement and hoped to be able to carry it into effect at the earliest opportunity. This marks an era in the progress of

political equality in this country, and is, indeed, a natural and necessary result of the large introduction of workingmen to the benches of the House of Commons. In far distant days a member of the House was entitled to claim some remuneration for his attention to parliamentary business, but those days are so far removed from our own that more recent generations have forgotten all about such a practice, and in modern times the House of Commons has always seemed to feel a special pride in the fact that its members were magnanimous enough to give their services for nothing. The praise for such magnanimity was, however, very easily earned in all modern generations. The House of Commons was, for the most part, occupied by men who could well afford to spend large sums of money on the obtaining of their seats and the liberal maintenance of their public dignity. There was, in fact, and not very long ago, a "property qualification" which prevented any one from obtaining or even contesting a seat in the House who could not prove that he was already possessed of a revenue large enough to maintain him in becoming dignity as a Member of Parliament. I can well remember the existence of that system myself, and I knew many instances during my younger days in which men obtained, by the favor of their family or their friends, the property qualification necessary to entitle them to a place in the House, if they could obtain it at an election. The property qualification, however, became abolished, but its abolition did not do much to enable even the most rising and promising young men, who had no private means of their own and no rich relatives or patrons, to find the means of carrying on a parliamentary career. The result of such a state of things was that, until very lately, the House was, for the most part, occupied by members of aristocratic or wealthy families and had little or no representation of the classes who have

Ford Madox Hueffer.

to make a living by their personal earnings.

I need hardly say that in all or nearly all foreign parliamentary assemblies the payment of the members has long been an established system. Not only do the United States act upon that principle, but it is adopted also by most or all of England's colonial parliaments. Again and again motions have been brought forward by advanced reformers in the English House of Commons in favor of the adoption of such a principle, but up to the present such motions have always been rejected by an overwhelming majority of votes, the votes of men who did not require any addition to their income, and thought it quite beneath the dignity of a Member of Parliament that he should have to acknowledge himself poor enough to accept any State remuneration for his public work. Many of the Irish Nationalist members have always, I need hardly say, been poor men, and the necessary result of this fact was that the Irish Nationalist public, in other words, the vast majority of the Irish people had themselves to find the funds with which to maintain in the House of Commons many of the men whom they knew to be especially qualified for upholding in Parliament the Irish National cause. When, however, it became apparent lately that the laboring classes in England were determined, and were becoming more and more able, to send a large proportion of their representatives into Parliament, it soon made itself evident to most of us that a time for a change in the system must be close at hand. The debate in the House of Commons a few nights ago has put it beyond doubt that the new era in parliamentary history is to come very soon. The resolution proclaiming the principle of payment for the members of the House of Commons was carried in that House by an overwhelming majority. The Prime Minister has pronounced, on behalf of his administration, the Government's approval of such a principle, and Sir Henry Campbell-Bannerman and his colleagues can command a majority, the like of which has not been known in our representative chamber for the greater part of a century. During that time the Government, Liberal or Tory, was consid-

ered strong and safe so long as it could count on a majority of fifty, and we have now a Government which can count its majority by hundreds. No change which seems possible to ordinary human foresight can therefore prevent the House of Commons of the future from being the representative of all ranks and classes here at home who recognize the rule of the British sovereign.

Quite an epoch of the new session was the first appearance of Mr. Arthur Balfour, in companionship with Mr. Chamberlain last Monday, at the opening of the great debate on financial policy. It was Mr. Arthur Balfour's first appearance in the House this session after his rejection by his own constituency, East Manchester, and his subsequent election for the city of London by the favor of a self-sacrificing Conservative, who resigned the seat in order to make a vacancy for his leader. It so happened that in the early part of the session Mr. Balfour and Mr. Chamberlain both became victims, at the same time, to the extreme severity of the weather, and both were laid up with heavy colds. The debate in fact had to be put off for some nights, because it seemed an utter absurdity to carry it on in the absence of

FORD MADOX BROWN.

Ford Madox Hueffer.

the two Conservative leaders, one of whom, Mr. Chamberlain, has absolutely and deliberately identified himself with the policy of Protection; while the other, Mr. Balfour, has more or less submitted himself to identification with that highly unpopular policy. The most amazing rumors were in circulation as to the absence of the two men. According to some authorities who professed to know all about the matter—we have such authorities on the newspaper press and in the lobby of the Commons here—Balfour had taken cold because he did not want to be identified with Chamberlain, and Chamberlain had found himself similarly afflicted because he would not submit to his leader's leaving all the responsibility on his shoulders. It was found, however, that the debate could not be postponed indefinitely, and a day was accordingly fixed for it, the day I have already mentioned. Thereupon, both the Conservative leaders were fortunate enough to recover a fair amount of health, and both took part in the debate. Balfour was looking unwell and thin and wasted, and he has indeed always been a man of delicate frame and delicate nerves. Chamberlain, on the other hand, has ever, within my recollection, been remarkably active and vigorous, and tho he is now in his seventieth year seems to have all the energy and working power of his prime unimpaired. The chief difference between the two men as regards their political action merely is that Chamberlain always appears to see his way in everything, while Balfour seems hardly to see his way in anything. Whatever Chamberlain wants to do he wants to do "right out," if I may thus venture to paraphrase the immortal words of the Latin author. Balfour, on the other hand, never seems quite to know what he wants to do where any political question is concerned. The perversity of fate has hardly ever brought together in divided leadership any two men less qualified for joint understanding and harmonious action. Balfour is essentially a thinking man, a meditative man, a scholar, a reader, a dreamer; while Chamberlain is the very embodiment of a parochial and a parliamentary agitator. Balfour seldom changes his political opinions so far as he has formed

opinions on any political subject, while Chamberlain has passed, and will, in all human probability, repass from one extreme of the political field to the other.

The question, therefore, which has lately been almost absorbing the interest of the British public was whether Balfour had resigned himself to the dictatorship of Chamberlain or whether Chamberlain had made up his mind to go his own way and do without the co-operation of Balfour. I may, perhaps, say that the two men represent two different classes of English society. Balfour belongs to what is still called the upper class, has had the usual university training common to men of that class, while Chamberlain is characteristically a man of the middle class, brought up to business and to steady work. The speeches of the two men on the opening night of the debate do not appear to my mind to have carried us any farther toward the decision of the question as to which of the two men is, if I may use an expression which I think I have heard occasionally used in the United States, to "boss the show." Just at present it really does not much matter so far as the political situation is concerned, for the Government majority makes it of little importance to the outer world whether the Conservative party holds together as it now is or splits still farther asunder. The motion on which the whole discussion arose was, in fact, brought on by a supporter of the Government with the almost avowed purpose of compelling the Opposition to show their hand and after a debate lasting for nearly two sittings the Government had a majority of 376, a sort of majority concerning which I can only say that it was absolutely unknown to any other Government during recent generations on any question of party politics.

The literature of historical romance has just received a distinct addition to its successes. This addition takes the shape of a new volume, "The Fifth Queen: and How She Came to Court," by Ford Madox Hueffer, and published by Messrs. Alston Rivers. The novel is founded on the life story of Katharine Howard, the fifth wife of Henry VIII. It has been received with cordial and

even enthusiastic praise by all the reviewers whom I have had an opportunity of reading. I have not yet read it myself, but I know that its author has already given to the world some brilliant romances, and that he is a most accomplished master of picturesque description, even where only the familiar and commonplace scenes of life have to be brought under our attention, and I hope in my next article to give the readers of *THE INDEPENDENT* my own ideas as to this, his latest production. I am anxious, in the meantime, to say something about the author himself. Ford Madox Hueffer is the son of a German literary man, Franz Hueffer, who came over to London in 1869. He was a musical critic as well as a writer of books, and he became a close associate of that gifted group of painters, poets and romancists who were known as the Pre-Raphaelites, and who wrought a deep impression on the literature, art and culture, not only of England, but of the whole civilized world. Ford Madox Brown, the famous painter, was one of the leaders, and was in fact the actual founder of the school, and Algernon Charles Swinburne, William Morris, Dante Gabriel Rossetti illustrated it in

poetry or in picture, Rossetti illustrating it alike in poetry and in picture. Franz Hueffer married a daughter of Ford Madox Brown and became the father of the Ford Madox Hueffer, concerning whose latest work I am now writing. I had the great honor to be one of the intimate friends of Ford Madox Brown, and I met at his London home many or most of those who made that home a center of literature and art. Among these I came to know Franz Hueffer, and we were close friends. Franz Hueffer died at a comparatively early age, but the son had inherited many of his father's artistic gifts and soon proved that he had literary endowments entirely his own, and he has already been recognized for some years as a rising author, sure to win a distinct and an enduring name in literature. His name is associated for me with some of the brightest recollections of my own life, and in writing a review of his latest novel I must put the best restraint I can upon my personal inclinations in order that my stern duty as a critic may not yield to the unprofessional influence of my old friendship with his father and of that father-in-law, two of whose names he bears with honor.

LONDON, ENGLAND.

## A Little Weather Prophet

BY LAURA CAMPBELL

WHEN I woke up this morning, oh! the rain was pourin' down,  
 Drip, drip, drippin' from the eaves;  
 'N' the storm wind was a-callin' with a little sobbin' soun',  
 Swish, swish, swishin' thru the leaves.  
 'N' then I knew, because the wind was callin' *just that way*—  
 I knew that it would rain 'n' rain, 'n' rain 'n' rain all day!

'N' when the dark came down at six, the rain was drippin' yet,  
 Pit, pit, patter on the pane;  
 'N' I looked thru the curtain, out at all the shinin' wet,  
 'N' I heard the storm wind callin' once again.  
 'N' then I said when Daddy came 'n' carried in the light—  
 "It's goin' to rain 'n' rain, Dad, 'n' rain 'n' rain all night!"

YONKERS, N. Y.

# Miss Chapter

BY JAMES H. WILLIAMS

[Our old sailor friend, Mr. Williams, who has just come back from an adventurous voyage, tells us that this is "a true story of true love," and the only love story he has ever written or expects to write. Mr. Williams expects to stay ashore now for a few months attending to his enemies, the crimps, and helping in the organization of the Sailors' Union. —FETTER.]

"Because"—the brown eyes lower fell—"because—you see—I love you."

ONE of the most useful and best handled articles among the furniture of a well found ship is the hand lead.

It is a sixteen pound lead attached by a leather thong to a small but stout manila line, and we use it to learn what depth we are sailing in when we don't know anything else.

The lead line up to twenty fathoms is divided and subdivided into nine "marks" and eleven "deeps." A "deep" is any fathom which is not marked, and a fathom is six feet.

One is a deep because it goes furthest down; two, three and five are marked by strips of leather of varying shapes; the intermediate marks are shown by strips of cloth of different colors and textures.

Thirteen and fifteen are "marks," red, white or blue. Eighteen and nineteen are "deeps," and twenty fathoms is indicated by a small cord irrevocably spliced in between the lays of the line and bearing a double knot.

When we are drifting about a lee shore or driving along a strange coast in thick weather an able seaman is always lashed in the chains to keep the hand lead alive and let us know what soundings we are in.

To throw the lead properly requires a good deal of practice. The seaman gets a good swing on the lead by waving it back and forth a few times just above the water line; then he pays out and whirls the lump of lead in a two fathom circle around his head and lets go as far forward as possible to keep up with the momentum of the driving ship.

Then he hauls in the slack of the line

and calls out to the officer of the watch, in a long drawn singsong tone, what depth he has found and casts his lead again.

In the daytime the marks are easily discernible; but in the darkness of night we cannot distinguish them by color, and therefore we must go by touch.

It is easy to tell by feel whether you are testing a cotton rag, a woolen clout or a strip of bunting.

But it often happens that our fingers become so thoroly benumbed by frost and cold that there is no longer any feeling in them.

Then we clutch the dripping line and kiss the nearest "mark," and the sensitive breathing lips will instantly tell what depth we are in.

What has this got to do with a love story? Read on and you will see.

There are three creatures on this earth I utterly and absolutely despise, and they are these:

A man that won't work, a lion that can't fight and a woman that don't love.

They constitute a trio of impostors that should be exterminated.

Some years ago, that is to say, when I was about seven years old, my good mother decided, in deference to public opinion and the austere laws of a Puritanical State, to send me to school. It was not a necessary proceeding at all, but the law said it *must* be done. We have all heard or read Bumble's opinion of the law, and in so far as my own particular case was concerned I quite agree with him.

But, however, one fine morning, in the month of April, 1871, I started out with a group of half grown children to find the schoolhouse.

The schoolhouse in question was sit-

uated in the after end of a big paddock, and was also surrounded by a big stone wall, just like any other prison.

When we reached this secluded institution of learning, I discovered, to my infantile joy and to my subsequent happiness and eternal misery, that the primary division was full and that I should have to attend school in another district.

I was accordingly sent to the other district with a note—a letter of introduction, or something of that kind—and a boy about twice my size to show me the way.

The other school also set back some distance from the street and was faced by a white painted picket fence, with a broad rail box along the top to prevent the vaulting youngsters from being impaled.

Our ring at the front door bell was promptly responded to by the Lady Imperial, a certain Miss Hickory, a long geared, angular, scrawny looking dame, with a nose like a molly hawk and an eye like a codfish, who wore goggles, and had evidently been on earth some time.

Miss Hickory read the note and invited me in, but it appeared to me like a "spider and the fly" game, and I strenuously objected.

"I won't go in," I screamed lustily, as she seized me by the arm to expedite matters. "I want to go to the other school, where the big stone wall is!"

We clinched in the first round. She pulled and so did I. I flopped down lengthwise on the top step and pried obstinately against the door jamb.

The contest seemed destined to develop into a draw. Neither could prevail until reinforcements appeared on the school side in the person of Miss Chapter, Miss Hickory's understudy, the very sweetest and prettiest lady I had ever seen.

A bright, glorious young woman, about nineteen years of age, plainly but becomingly dressed in the fashion of the period, with an abundant shock of beautiful auburn hair, red, rosy cheeks and wonderfully sparkling hazel eyes that looked down, half sympathizingly and half amusedly into mine, as I crowded my small body in stubborn defiance against the door frame.

That was Miss Chapter as I regarded

her then, from my lowly station on the door step; so I have often loved to think of her from my exalted station on the skysail yard and so I remember her still.

She brushed Miss Hickory impatiently aside and flew past her as tho I was the only thing on earth she wanted.

"Oh, what a dear, nice little boy!" she exclaimed rapturously, taking me by the arm to raise me up. "Don't you want to come to school and be in my class and learn your lessons out of my primer?" she went on, when with her gentle assistance I had regained my feet.

"Yes, ma'am," I answered promptly; "you're a pretty lady and I'll go."

Miss Chapter brushed the loose dust from my jacket with her hand, and then led me triumphantly into juvenile captivity in the schoolroom.

"He's an obstinate little wretch!" shouted Miss Hickory in a vixenish tone as we swept thru the corridor, but we did not notice her.

When we reached the schoolroom Miss Chapter at once assigned me to a vacant seat, and forthwith proceeded to record my name and pedigree in the school register.

I told her my name with great clearness and exactitude, just as my mother had told it to me; but by some unfathomable perversity of the feminine mind she persisted in rechristening me "Jimmy Wilson"; and so I was called thruout the term and so it remains on the archives of June Street school unto this day.

Our schoolhouse, tho quite a large one, was not an imposing structure, whether regarded from an architectural or ornamental standpoint.

As seen from without it always reminded me of an old hen trying to brood too many chickens, and its interior appointments raised an unalterable conviction in my young mind that this must have been the "Schoolhouse by the Road," which Whittier wrote so feelingly about: For there was the "warping floor, the battered seats, the jack-knife's carved initial," and all the other descriptive marks in detail.

To be sure the schoolmaster was missing; but then, I argued, "he may have died."

We sat behind the green painted, double decked desks, two children in a seat;

and my seat-mate was one Tommy Green, an Irish-American boy, who could draw pictures and fight.

During my three first weeks in school Miss Chapter did not call upon me either to read or recite. She evidently did not know me yet, neither does anyone else.

I used to troop into the recitation room regularly with the rest of the primer class, but I never was given anything to do.

The children learned their lessons by sounding the syllables phonetically, as they were divided in the book, and then forming the fragments into articulate words.

One day, when the little girl who stood next to me—her name was Rosa Springer—was reciting, I burst into an abrupt and uncontrollable fit of laughter that stirred up the whole class.

"Why, *Jimmy Wilson*," demanded Miss Chapter, authoritatively, when I had subsided, "what were you laughing at." "At her," I answered, pointing to Rosa and trying hard to suppress a fresh outburst, "She can say ba, just like a sheep; I never learned to read that way."

"Can you read, Jimmy?" asked the teacher, regarding me intently.

"Yes, m'am," I answered, looking back.

"What can you read," she inquired again, interestedly.

"I can read the Testament, and 'Gulliver's Travels,' and 'Pilgrims' Progress,' and 'Robinson Crusoe,' and Baron Munchausen," I enumerated proudly, "and, oh, ever so many more."

"Jimmy," she said, quietly, "you may remain after class, I want to hear you read."

After the rest of the scholars had absconded with rampant feet across the well worn door sill, and resumed their seats on the deal benches in the main schoolroom, Miss Chapter returned with me alone to the little recitation room, and taking down a book from the glass showcase, she opened it, seemingly at random, and requested me to read. The book was "Hilliard's Fourth Reader." I remember the name now because it sounds much like "halyards."

Whether by accident or design I cannot say but she placed the book in my hands, open to the dismal story of the

"Wreck of the 'White Ship,'" and ordered me to proceed.

I had never seen the dreary tale before, but somehow it appealed to my nature, and I read it thru, from clew to earring, with great animation. How, "in the year 1120, King Henry the First, of England, went over to Normandy with his son, Prince William, and a great retinue, to have the prince acknowledged as his successor by the Norman nobles, and to contract a marriage between him and the daughter of the Count of Anjou."

On the very day of the royal departure from Normandy, the King was approached by one Fitz Stephen, a sea captain, who earnestly craved the honor of transporting him and all his royal company in the "fair 'White Ship' manned by fifty seamen of renown."

"I am sorry, friend," the King replied, "that my vessel is already chosen and that I cannot, therefore, grant your request; but the prince and all his noble retinue shall sail along with you in the fair 'White Ship.'"

"Shortly afterward the King embarked, and after sailing all night with a fair and gentle wind, arrived upon the coast of England in the morning.

"Early in the morning, while it was yet dark the people in some of those ships heard a faint, wild cry come over the sea and wondered what it was."

I continued to read aloud, entirely oblivious now of my surroundings or audience.

The yarn went on to relate in detail how a few hours after the departure of the King and royal fleet, the young prince set sail in the "White Ship," commanded by Fitz Stephen, and accompanied by 300 souls.

How that bitter winter's night the gay company of noble lords and ladies, clad in rich furs and merry with wine, danced in the moonlight on the deck of the "White Ship" until, "Crash, a terrific cry broke from 300 hearts; it was the cry the people in the King's ships had heard coming faintly over the water! the 'White Ship' had struck a rock, was filling, going down . . . and of all the brave 300 noble or common, the poor butcher of Rouen alone was saved."

When I had finished reading I looked

up with brimming eyes and handed back the book. Miss Chapter grasped it as tho it were endowed.

"Who taught you to read so well, Jimmy," she asked in astonishment.

"My papa," I answered proudly.

"And where is your papa now?" she inquired with renewed interest.

"I've got none," I returned sadly, preparing to blubber; "he died one day."

"And have you no brothers or sisters, child?" she continued in a tone of tenderest pathos.

"I have got a little sister," I replied, "but she can't come to school; she is only two years old. My twin brother died when the smallpox was here."

"And your poor mother, Jimmy?" quavered my pretty school mistress, eyeing me with tender regard. "What does she do; how does she live?"

"She works," I said simply.

"You dear, darling, little boy," sobbed Miss Chapter impulsively, as she folded me in her arms. "I love you more than any of my scholars!"

The next week I got my fighting streak on and determined to fix my personal status among the crowd of youngsters on the school campus. I was just polishing off my third victim in the rear of the schoolhouse, when Miss Chapter raised the window and called out:

"Jimmy Wilson, if you don't stop pummeling those little boys I shall have to turn you out of school; your conduct is disgraceful."

I turned shamefacedly away, for I could not bear to be publicly reproved by my beautiful teacher.

Just as I reached the front corner of the building I met Tommy Green coming down the wide steps. He had been kept in ten minutes during recess for missing his lessons; a common occurrence in his case.

The allusions he made concerning Miss Chapter's personal character I would not quote in "Tiger Bay," but they filled my soul with horror, with loathing and disgust.

I had never heard such vicious language before, but somehow I intuitively realized its import; so I waded into Tommy without further notice and planted him one in the jaw that must have taught

him manners. In the middle of the mix-up which followed Miss Chapter suddenly appeared on the scene and drew us apart.

"Why, Jimmy Wilson!" she cried, shaking me severely by the arm. "Don't you know it is wicked to fight?"

"Yes, ma'am," I answered, making an interrupted lunge at Tommy Green, "and it is wicked to say naughty things about our teacher."

"What did he say about me?" she asked sharply, holding Tommy out at arm's length and subjecting his features to a critical survey. "Tell me what he said!"

"I can't tell you," I answered, struggling to get away, "but I can lick him if you let me go."

Miss Chapter led us both up the board walk, me by the arm and Tommy by the ear, and I suspect, judging by the wry expression on his face as we walked along, that she was indulging in a little private revenge on her own account.

That afternoon Tommy drew an outline picture on his slate which he alleged was a horse, but I asserted that it looked more like a pig.

"It don't look like a pig!" he hissed in an angry whisper.

"It does, too!" I hissed back with equal venom; "and you look like a pig, too," I added, disdainfully. "You've got squint eyes and a turn-up nose."

That was more than Tommy could stand for, so he turned half round in the seat and made a vicious drive at me, but I dodged backward and eluded it. Then I came back with a facer that fairly made his head swim. Tommy clapped one hand over his bleeding nose, and raising the other aloft as a signal of distress, cried out:

"Miss Chapter! Jimmy, he pasted me!"

"Why, Jimmy Wilson!" exclaimed Miss Chapter from her exalted station on the schoolroom poop. "Are you fighting again already! I must punish you. You are a disgrace to the school. Come forward."

I arose and went forward at the word of command.

Miss Chapter grasped her ferrule and led me into the recitation room to receive my wages due.

I suppose that from the noise I made

the other scholars thought I was getting it hot and heavy, and Tommy Green must have felt a great deal of personal satisfaction over my sufferings.

As a matter of fact, however, I never received a single stroke.

Miss Chapter and I wrestled vigorously around the room for about ten minutes in great haste; but she plied her two foot ferrule in vain, for she could not hit me. By the end of that time she was obliged to call a truce and haul off for repairs.

"Jimmy," she panted, pleadingly, "will you let me strike you one little tap on the hand. I won't hurt you, but I *must* whip you for the good of the school."

"Yes, ma'am," I answered eagerly, looking up at her beautiful face with all my eyes. "Yes, ma'am, I will if you'll let me kiss you."

"Why, Jimmy, you queer little boy!" she exclaimed with a strange little laugh. "What do you want to do that for?"

"Because you are so lovely and I—I love you," I stammered.

I was very short in those days, about as broad as I was long, and Miss Chapter had to stoop down to keep her end of the tacit compact; but she delivered the goods all right and I received them with great enthusiasm.

I grasped her pretty picture between my chubby little paws and kissed and re-kissed it several times; then I let go, saying: "You can whip me now; I won't be naughty any more."

Then Miss Chapter stood erect again and kept her word.

I stuck my hand out stoutly to receive the promised blow, and she struck me a gentle little tap that would not have harmed a fly, but I can feel it yet.

So we were "up sticks," as sailors say; she had had her satisfaction and I had also had mine.

After Miss Chapter had set up her dismantled rigging and overhauled her headgear before the little mirror in the corner, she took me by the hand and led me back to the schoolroom.

She left the ferrule lying on the settee in the recitation room, and, to the best of my knowledge and belief, it lies there still.

I was in some respects an odd child. I never took much delight in the games

usually played by schoolboys. Whenever I played "hookey," which I am sorry to say was not seldom, the truant master, old Peleg Reed, always knew about where to find me. I would invariably be found either on board some schooner at the coal docks, in swimming below the lumber yards, or making my fiftieth tour of the flying rings at the public gymnasium.

I disdained all manner of manufactured sweets, but was abnormally fond of all manner of fruits, greens and vegetables. I suppose I was unconsciously storing up against the coming days when I should have to subsist almost solely on a regulation sea diet of old horse, old hog and hardtack.

Miss Chapter soon discovered this infantile peculiarity of mine and provided accordingly. Nearly every morning I found an appetizing favor on her desk—an apple, an orange, a peach or a pear.

But one morning she gave me—oh, joy of my heart—a tin whistle!

That tin whistle was the most appealing organ I ever heard. In fact, it was the only musical instrument, except a fog horn, I ever learned to perform on properly.

I could play any tune I wanted to on that whistle—to my own satisfaction, at least.

Whenever any of the big scholars made a miss in reciting, a long, shrill, derisive note from that tin whistle would promptly set the school in an uproar, and cover the culprit with more confusion than ten fathoms of foolscap.

Miss Chapter took it away from me a dozen times, but she always relented and gave it back. Perhaps she appreciated its usefulness. Some time after I joined the school, Miss Hickory got transplanted, or whatever they call it when a school teacher gets fired, and Miss Chapter was promptly promoted in her stead. I was just as promptly promoted to the first class for having an influential friend in high places.

Miss Chapter's gentle influence over me worked a complete metamorphosis in my character, and a wonderful change in my personal appearance and conduct.

I had always been a wild, wayward, untamable child—not wicked or vicious, but most mischievous and troublesome.

My poor mother had long since abandoned all hope of controlling my wilful nature, for flogging only made me worse, so she practically decided to let me run wild and come up like Topsy.

My personal appearance had long been town talk. My hair had not been combed for years, and my round, chubby face could only be washed by force. As for putting a paper collar on me—you might as well try to harness a zebra.

But after my acquaintance with Miss Chapter began and especially after my promotion to the first class—I really began to take some pride in myself.

I never could get my personal makeup good enough to suit me.

I would lay my woolly head in my mother's lap every morning and submit to a quarter of an hour's torture from the tedious head rake with Spartanlike indifference. Then my shoes must be polished, my clothes brushed and my choker adjusted—even tho it cut my throat—and I would start off for school as proud as a little lord, looking neither to the right hand nor to the left, for my "choker" would not let me.

But one morning the blacking bottle got misplaced and could not be found. I was almost in agony over that simple incident, for how could I go to school and appear in the presence of my divinity with my shoes unpolished. I cried with vexation, but my mother only remarked that I "must have a girl in school" and left me to my own resources.

When I appeared in school that morning and walked boldly to my seat with the uppers of my copper-toed shoes shining resplendent in a brand new coat of *stove* polish, even the teachers were obliged to relax their austere gravity for once and join the general uproar.

The other boys dubbed me Miss Chapter's beau. At first I resented this levity of expression and got into several fights over it. But Miss Chapter told me not to mind them, and advised me whenever I got angry to pause long enough to think of her and count ten.

This plan worked pretty well while we were in school or on the playground, but whenever any of the boys made any jeering allusions to "Miss Chapter's beau" after we got outside that white painted fence I seldom found time to count one

or to think of anybody except the offender.

When examination day came our parents all turned out and crowded the school platform to hear us recite.

My poor mother was there as well as the rest, clad in a delaine dress and a little poke bonnet, to hear her young hopeful do his stunts. In spelling and arithmetic I was nothing extra, but in geography and promiscuous reading I easily led the class.

When it came my turn to mount the platform and read aloud Miss Chapter handed me that special copy of "Hilliard's Fourth Reader," open to the story of the "White Ship."

I promptly slapped the open pages together and, striking the correct attitude, I held the closed book as though I could see through the binding, and read—or rather recited—the dismal story through from end to end without a fault, until I reached the final episode in that unfortunate marine disaster enacted 750 years before: "And the King fell to the floor like a dead man, and never afterward was seen to smile."

When I raised my eyes and turned to restore the book, an awed silence seemed to have settled over the whole school.

The scholars were hushed and quiet, my mother was weeping softly and Miss Chapter looking at the school committee with a defiant: "How is that for high!" air.

The committee said I was a prodigy, and perhaps they were right, for love makes prodigies of all creatures—human beings or wild brutes.

The chairman of the school committee undertook to present me with the class prize, a beautifully bound copy of the "Song of Hiawatha," but he never got a chance, for pretty Miss Chapter brushed him aside and handed me the book with the dignity of an empress.

"Here, James," she cried exultantly. "I present this book to the scholar who knows his lessons best." Some months later Miss Chapter got married and went to live in one of the Western States. I never heard her husband's name, but, whoever he was I do certainly admire his choice.

Of course, Miss Chapter resigned and a new teacher reigned in her stead.

The day she was going away she came to the school, dressed in a brown traveling suit and wearing sable furs.

She made a neat little speech from the platform, commending us in general for our good behavior during her administration as chief preceptress.

Then she stepped down to greet the eagerly crowding children who flocked around her with tearful eyes, for no teacher was ever more popular with her pupils.

When our ten minutes intermission was over all the other children resumed their seats at the word of command, but I still stood disobediently to the front, unnoticed and alone, waiting for her to descend from the platform again.

After bidding our new teacher a cordial good bye, she came gracefully down the steps and then noticed me for the first time.

"Why, Jimmy," she exclaimed with a radiant smile, tripping lightly to the deck, "Are you here still; why don't you go to your seat."

"Because I love you," I spluttered brokenly, "and I don't want you to go away."

"But, Jimmy," she muttered softly, leaning over to caress me with the fondness of a mother, "I *must* go; we cannot always be together. But, you will be a good boy, won't you?" she went on fondly, holding me out at arm's length, "and you will stop fighting and try to be obedient and orderly for my sake?" I nodded vigorously. I was too full for articulate speech.

"And, Jimmy," she urged tenderly drawing me closer, "will you promise to always love and remember me?"

This request was a little too much for my ardent nature, and in response I could only clasp her beautiful neck and seal the compact with an uncontrollable torrent of childish, but heartfelt tears.

My grief was so bitter and unconsolable that Miss Chapter arose, hastily throwing her handsome furs negligently aside in the action, and raising me in her arms, before the whole astonished school, she carried me bodily into the little recitation room where she had led me to receive a flogging a year before. I only wish she had kidnapped me for life.

She sat down on the forsaken settee

and raising me to her lap she allowed me to lie in her arms and weep until my tank ran dry.

When my youthful passion had at last subsided, and my crying had degenerated into an intermittent snuffle, Miss Chapter restored me to my feet and regarded me with earnest regard.

"Jimmy," she said coaxingly, "won't you try to be a little man, for my sake, and stop crying,"

"Yes, m'am," I answered, almost fiercely, digging my pudgy fists into my rebellious eyes.

"And now," she added, rising hastily from her seat, "I must go and leave you. But I want you to try and follow my advice. You are a talented boy and ought to succeed, and should we never meet again, I hope always to hear good accounts of you.

"Be attentive to your studies; faithful in your duties; correct in your habits and obedient to your teachers, and you will grow into a good and useful man that will be a credit to your home, an ornament to society, and, perhaps, an honor to your country."

What a man I might have become had I only taken her gentle, heartfelt advice.

In all my wanderings around the world I have never found another true friend, except my mother, who ever loved me so sincerely or wished me so well.

Miss Chapter led me back into the schoolroom and kissed me a last affectionate goodbye in the presence of all hands. Then she went away and I have never seen or heard from her since.

But in imagination I sometimes picture her as a happy, beautiful matron.

I often think of her on stormy nights when we are reefing the frozen sails, and wonder whether, when her children's children cluster about her knee and crave an ancient tale, she ever tells them of the mischievous little urchin who loved her so devotedly "in school days."

In after years, when we hunted the big black bowheads across the wide Atlantic; when we had flapped our way lazily across the torrid equator and rushed pell mell thru the Roaring Forties; when we had driven helplessly before the raging sou'westers way down to "sixty south"; when we had emerged from the frigid clutch of the swaying ice

floes and dodged the frowning icebergs—more by good luck than good management, and beat our tedious way back to the rugged cliffs of the desolate Horn; when the storm wraith wailed angrily thru our straining rigging and the icy spray swept in spiteful showers across our frosted decks; when Saint Elmo's glowing lights danced fitfully about our swinging yard ends, and the pestering hailstones rattled merrily against my frozen oil skins like a swarm of Mauser bullets against an armor plate; I glanced astern, down the swirling streak of our

glistening wake and kept warm by thinking of my pretty schoolmarm, Miss Chapter.

Boys, remember the lead line!

If you ever happen to know a very nice girl in whom you are deeply interested and of whose soundings you are in doubt, just apply the test in the dark, as the sailor does with his lips, and you can tell in a moment whether she is a "mark" or a "deep."

But beware of the double knot at *twenty*. That is all I know about love, ladies or lead lines.

NEW YORK CITY.

## The Dream of Dowie—and the Awakening of Zion

BY WILLIAM E. BARTON, D. D.

PASTOR OF THE FIRST CONGREGATIONAL CHURCH, OF OAK PARK, ILL.

IT was my good fortune to be present in the Auditorium in Chicago on the Sunday afternoon when John Alexander Dowie proclaimed himself the re-incarnate Elijah—if it can be called good fortune to sit where one must see some thousands of his fellow men led blindly into error. It is my privilege now to be spending a night in Zion, where much that Dowie foretold on the previous occasion has come to pass—and some things in addition. According to the calendar the two occasions lie not very far apart, but the former one, which was June 2, 1901, seems as if it belonged to the time when I was on earth before. Dowie said he would build a city on the prairie beside the lake, and have it free from drugs and doctors and pork and oysters and tobacco; and the city is here. He further said, that in that city he would establish and perpetuate a theocratic rule, reigning as the representative of God in the spirit and power of Elijah; he did it, and until within a week his word has been law in Zion. Tonight the theocracy is on trial for its life.

Is Dowie insane? He has the same

kind of insanity which he has manifested all along, a little more developed. And that is the same kind of insanity which the thousands of people have who blindly have followed him.

One of Dowie's highest overseers has just explained to me one point in Dowie's theory which had not been clear before. It is a point which has not yet been fully brought out in Dowie's public teaching, but on which, mentally, he lays great stress—his own alleged royal descent.

In the sermon in which he proclaimed himself Elijah, Dowie said: "The first Elijah was a prophet. The second Elijah, John, the son of Zachariah, was also, by hereditary right, a priest. The third Elijah will be prophet, priest and ruler. And I will rule you. Will you be ruled?" And all the people said they would; and they have been.

Why did Dowie suppose himself authorized to add the third title to his list? By what authority did he become a ruler? And what kind of ruler? Dowie believed himself a king, both by human lineage and divine authority.

In the Pulpit Commentary, I am in-

formed, is a paragraph, probably on the verse "If you will receive it, this is Elijah, which was to come." Dowie assured himself that in the Greek the verb is "is," and maintained that the third Elijah was, therefore, future when Christ spoke. In the Commentary referred to is a sentence affirming that the third Elijah must rise to this three-fold dignity, and be not only prophet as the first Elijah, or prophet and priest as the second, but prophet, priest and king, reigning till Christ shall come.

I am sorry not to be able to verify the reference. We cast one eye round the library, with its richly bound books, but the overseer said the volume was at Dowie's home; but that this, substantially, was what it said, and that the idea had been long in Dowie's mind.

Why did he think himself a king?

When Dowie made his disastrous excursion to New York, and failed to convert the city, one of the New York papers accused him of cruelty to his father.

Then Dowie, in a sermon which cost him some humiliation, made known that the elder Dowie was not his father, but had married his mother two months before John Alexander's birth. Some humiliation attached to the publication of this statement; yet it was not all humiliation. It was a matter on which Dowie had brooded long. Who was his father? Dowie believes him to have been a duke, and has a story of a morganatic marriage with his mother, and the death of the duke, which left his mother with her child unborn and with no paternity, by reason of which condition she married the elder Dowie to save disgrace.

It is that duke to whom Dowie looks to sustain his title to royalty. He has his coat of arms, which he does not display very publicly, and he studies his ancestral tree with satisfaction. He has made himself rich vestments, and dropped his surname; for who calls a king by his surname? The world knows nothing of Mr. Albert E. Wettin, of London, but calls him Edward VII., so he determined that the world should forget John A. Dowie, and remember John Alexander, prophet, priest and king.

Thus it was not wholly a humiliation to Dowie to acknowledge that Dowie was not his father. He had prepared himself

for this revelation, and has other revelations up his sleeve as corollaries to this affirmation of another parentage.

Dowie won his following, not by extraordinary magnetic power or graces of oratory; he possesses neither. He is a man of ability, and is a forceful and convincing speaker. But he is wearisome, awkward, disgustingly egotistical and intolerably discursive. His power as an orator is his uncompromising dogmatism, which breaks down all opposition by its unhesitating assurance, and his outspoken condemnation of things manifestly evil. Fearlessly and straightforwardly he rebuked sin, taught a repentance that was effective, and made men believe in his message because their own consciences echoed it.

Then, Dowie did a mighty work as a healer. After all has been said that can be said about nervous disorders as the stock in trade of the professional healer, there is no escaping the argument of disused braces, crutches and trusses which garnish his immense tabernacle. Both there and in Roman Catholic shrines they must be accepted as proving something, whether that something be the divine authority of the healer or not. On the day Dowie preached the Elijah sermon, he called on those who had been healed to rise; and they rose all about me, by hundreds. Whether he was Elijah or not they may not have known, but one thing they knew; or thought they knew—they had been lame, sick, broken down, and were in health, and had strength to stand on their own feet and witness for Zion.

There was another element of power in Dowie. He believed in a new social order. Democracy had failed, he declared. The government of the people, for the people, by the people, was merely the government of John Jones for John Jones by John Jones. Christ's Gospel was a gospel of the kingdom, and a kingdom on earth. Before Christ could come, Elijah must restore the theocracy—a government of the people by a representative of God—prophet, priest and ruler.

This meant little by itself. But it involved another element which appealed to practical men. Such an institution would have its own industries. They would be a source of revenue, enabling

the Church to maintain itself and grow. What was equally important, they would afford occupation for converts, and a safe environment for the tempted. The penitent man would not be cast upon the street without means of earning a livelihood; nor would he be sent back to work among blasphemous and obscene companions, or compelled to make his way home at night past brothels and saloons. There would be a safe environment for all converts till they could stand alone; and Zion would be a commercial and industrial power, and that power would be righteousness.

This appealed to two classes of men, the capitalists and the converts.

With one of the latter I have just talked. He was a lost man on the streets of Chicago, penniless, diseased, a helpless slave of drink and lust. He went to Zion after his conversion and dug in the ditches; then he worked in the lace factory. Then he rose to the head of a department in the engraving works for *Leaves of Healing*, the Zion paper. In my presence he talked with one of his associates, who asked, "Has he not robbed you? Have you not been begging for payments of 50 cents to buy bread for your family, while he owes you a hundred dollars and is spending it in luxury for himself?" But the man answered, "I will not lightly cast away a man who has done so much for me."

As for the capitalists, they said that if this was a good thing at all, it was good financially. A guaranteed profit of 10 per cent. was worth considering. A community that had no wants for rum, tobacco and frivolity could produce cheaply and pay good dividends; and if it was doing good also, that certainly was no disadvantage. Indeed, there were not a few rich men who cared little whether it paid them anything, if only it made righteousness pay expenses. And this it seemed likely to do. Dowie had a large personal acquaintance with rich men, who thought him a man of large business ability, and were willing to trust him. They wanted to trust him. If they retained for themselves any power of control, they must share that power with

others whom they could not trust. But they could trust Dowie to pay their dividends and earn besides a good net revenue for righteousness. It was a beautiful dream—the Gospel freed from its perpetual bondage to the contribution box—Godliness profitable, actually profitable, for the life that now is. So the money poured in.

Then Dowie's vanity grew with his prosperity. He established himself as a king. He purchased for himself wholly needless extravagances. And the capitalists saw that he had money enough.

Moreover, he was selling stock, so called (which strictly was not stock) to pay 10 per cent. on stock dividends on stock already sold; and it cost 10 per cent. more to sell it. And Zion, again and again, brought near to the brink, at last looked into the chasm of bankruptcy.

It might have gone on longer if Dowie had remained on the ground. But his health compelled him to leave, and his absence compelled him to give someone power of attorney. He brought Voliva from Australia to manage affairs in Zion, and Voliva came in February, fully trusting Dowie. What Voliva found was disheartening. The bank was drained. Credit was gone. People were unpaid and hungry, and yet there was nothing to do but to compel them to pay more, to support Zion, and now and then Dowie drew on them for funds.

Voliva supposed himself the discoverer of this condition. But he found that all his associates knew it and had been powerless. Any word from them of revelation or of protest would have resulted in their instant excommunication. But things were different now. Voliva held a power of attorney from Zion. By a brilliant coup he transferred all Dowie's interest to a deposed overseer, Granger, who now holds it in trust for the people. This night, a conference of 300 officers voted to stand by Voliva and fight it out; and a very pretty fight it is likely to be unless all signs fail. For Dowie is more than a dreamer of dreams, and if Zion is not already awake, it will awaken very soon.

ZION CITY, ILL.

# Two Panama Life Stories

BY EDWIN E. SLOSSON AND GARDNER RICHARDSON

## The Story of a Jamaican Carpenter

[It was a hot Sunday afternoon in February, as we were strolling thru the negro quarter of Culebra, that we met the two men whose portraits we give here. We were anxious not to leave Panama without a life-story of a workman on the Canal to add to the series of brief autobiographies of undistinguished people which has been a special attraction in THE INDEPENDENT for several years. So, finding our new acquaintance a man of unusual intelligence and experience, since he had been on the Isthmus for twelve years, under three different canal administrations, we asked him to tell us the story of his life. He kindly consented, and, sitting on a dry goods box

underneath the stilted floor of one of the old French houses, while around us the laborers from the West Indies were cooking their yams and plantains in kettles on the outdoor fires, we took the notes from which this narrative is written. Both this and the following story are, as nearly as possible, told to the reader as they were told to us, but since we could not give the narrators a chance to hear and revise them in their completed form, according to our custom with such life stories, we are not authorized to sign their names as authors. As an additional human document in the field of Jamaican psychology, we append the following characteristic application

Jamaican Carpenter and Mechanic. The One on the Right Told the Story.

Jamaican Laborers Cooking Among the Old French Houses at Culebra.

for a raise in wages from a laborer at Paraiso, C. Z.:

Please most honorable boss I your obedient servant J Conrad Graves has beg you sir to the uttermost to recommend him to get a little more money than what he am getting. My dear boss our wages are very small I can scarecely see my way through my dear master I have to buy food so dare clothes & books and that been for the border of seven months working here at Paraiso only and during the time no falt has never been found of me.

Thank God my dear master I may not be pleasing to your eyes but dear sir I beg thee to pardon me for it so dear boss grant me that kindness for Christ sake.

May the lord bless you sir and be with you always and may he get you on both healthy and wealthy through his dear name and mercy sake

I your obedient Servant  
J. CONRAD GRAVES.

We have not seen the reply to this respectful epistle, but we know in substance what it was. It must have said that Uncle Sam was not rich enough to pay more than 10 cents an hour for ditch digging, no matter how diligent and faithful, and that even the offer of 13 cents an hour formerly given for extra efficient service had been withdrawn.—E. E. S. and G. R.]

I WAS born in a grass thatched hut in the little village of St. Mary's, back in the mountains of Jamaica. My father was a tailor, and I had eight brothers and sisters. I went for four years to a Wesleyan school in the next parish. I wanted to work with my brains, instead of my hands alone, so I learned the carpenter's trade. But I couldn't get any business as a carpenter, so I had to support myself doing odd jobs, and lived on what I raised on my half acre of land.

Cultivation makes a man more independent, but he does not get much money. A carpenter gets four shillings a day. But I could raise plenty of yams and bananas. It is cheap living there. What a shilling gets in Jamaica a dollar wouldn't buy here.

Cocoa and tobacco are the principal products raised there. The cocoa is spread out in the sun to dry, and if a shower came up it would mildew. Now, they have steam drying. Sometimes a hurricane comes and blows down all the cocoa trees flat. The banana trees too. The bananas grow again from the roots, but for a time the steamers can't get a

lunch. They make rum out of the sugar cane, and it is very cheap. You can get a quart of good old Jamaica rum for two shillings. But the law won't let you buy much rum at one time. The women drink mostly ale and porter.

We had three holidays, Easter, Christmas and Independence Day, August 1st, when slavery was done away. We went on excursions, on foot, or on horseback or with two-wheeled carts and had sports and dances and social times with

ery Sunday and three times a week, evenings. Many Jamaicans go to that church. Many of them are Baptists. Most of them go to church somewhere, but some are blackguards and take too much rum.

I first came to Panama in 1894; not to Colon, but to Bocas del Toro, a long way up the coast, in the banana country. I worked as a common laborer on a banana plantation for a year. It was a hard life and board was rough, and

New Type of Bachelors' Quarters for Laborers.

cake and lemonade. These and going to church with the girls were our chief amusements. I became a Catholic. They have a grander service than the Wesleyans and more rules. A priest comes around every little while and tells you what to do.

Here I go to the Church of England, because in the Catholic churches they speak Spanish. There are two of their churches here—one for Americans, one for blacks. And they have services ev-

we only got thirty cents a day. We slept ten or twelve together in one house, open with a palm roof. We were given rice, codfish and sour beef to eat. Bananas, too, of course, ripe and green. A green banana, properly cooked, eats well. It was hot and rainy and hard work cleaning out [weeding] all day. I was glad to get back home.

Those that came back from the canal told us that we could get better things to eat there, so I came to Colon. When

a man leaves Kingston he has to pay twenty-five shillings down. He gets it back when he returns to Jamaica. The Government learnt that lesson from the first French Canal, because when that failed they had to send a boat to the Isthmus to get the Jamaicans left there, and it cost a lot of money. The Government don't want people to come to the Isthmus, but they can't help it. We are free people. Besides this deposit you

day; now they get 80 cents. Under the French there were a lot of market gardens here. The Americans exclude them from the Zone and they go into the bush. Pork was  $12\frac{1}{2}$  cents a pound then; now it is 25. Fresh beef was  $12\frac{1}{2}$  cents; now 20 cents; bone, 5 cents. You could get sixty yams for a dollar then; now you get sixteen.

Under French rule, the men had to work ten hours a day; now they work

Group of Canal Laborers Near Paraiso, Mostly Martiniquians.

have to pay twenty shillings in advance for deck passage from Jamaica. I was seasick all the way; passage was very rough. I was not vaccinated, as I had had smallpox in Jamaica. When I came to Empire there were about a thousand men working in the great Culebra Cut, coming and going all the time.

Things were very different in those days. The French did not pay as much wages as the Americans, but living was cheaper. Then laborers got 60 cents a

eight, but much harder, and there is no chance to make more money by task work, as there used to be. Under the French, we could take work by contract—so many cars, so much. Sometimes two men would make \$75 in a fortnight this way. They would get  $7\frac{1}{2}$  to 10 cents a car, filling it with pick and shovel and shoving the car out by hand and dumping it.

Besides, the blacks had more chances of promotion under the French. They

could get to be timekeepers and checkers then, but they can't now. But there is not so much sickness as in French times. The best thing the Americans have done is to stop bad language and gambling, which leads to quarrels. There is a big fine and prison for gambling. In the French days there used to be cock fighting, and drinking, and shooting, and dancing all the time. Now it is all stopped. If a man shoots off a gun now, the police catch him and jerk him up to the prison so fast that his feet don't have a chance to touch the ground.

In Jamaica a constable is peacemaker. Here he just hits a man with a stick. And the colored constables are worse than the white.

In Jamaica we used to have a barrister and a good long trial. In the Canal Zone you have no barrister. You just come before a judge and he shouts out: "You're right, you're right; you're wrong, you're wrong," and that is all there is to it. In the American prison a few months ago they used to put men in the stocks and use the whip on them, but the man who did that is not on the force now.

The workmen are more afraid of the Americans than of the French. The French talked much and went this way [gesticulating]. The Americans keep very quiet until they get vexed, and then they make things stand around. They've got to, to get things done. The Americans are too much of schemers to waste time or money. There are no loafing jobs now, such as there used to be. It is like running a race all the time. You don't mind it for a day, but you can't keep it up.

Nobody can stay in one of the Commission buildings after 7 a. m. unless he is sick. The watchman goes around then, and if he catches a man there it means a fine of \$2 or three days' pay. At 11 the men can come back and get dinner; then they have to leave for work from 1 to 5 again. If a man is sick he goes to the doctor and gets a paper to show to the watchman. If he isn't sick and wants to get off he has to hide in the woods or lie around a China shop.\*

\*The Chinese have a practical monopoly of keeping stores and distilling rum along the canal. There are fourteen distilleries on the Zone.

The China shops ought to be shut up, at least on Sundays. A man must be in his place ready for work the first thing in the morning, tool in hand, and when the whistle blows it is "all right, boys," and off it goes. The timekeeper comes around every two hours, making a dot in his little book every time; four dots make a day's work.

For the last six months I have been working on the new buildings here. I can do any carpenter work from framing to finishing. The bosses of the carpenters are all kind gentlemen. None of 'em treat me bad. Carpenters get 20 to 25 cents an hour.

I was pretty nearly laid up for half a year by getting shot in the revolution of 1899. The Liberals were at Culebra and the Conservatives at Empire. Neither party dared go where the other was, but they fired at each other all night at long range. We shut ourselves up in the houses and kept dark, but it was not safe then. A man was killed in the next house, and I was shot thru both feet. I was standing in the middle of the floor, and a ball fired by the Conservatives passed thru the wall and slew down and struck my feet. I did not feel it; did not know I was hit until I felt the blood running down and the wound began to burn. Nobody could get to me to help me, so I bandaged it as well as I could and waited till the firing stopped in the morning. They only fought at night. Next morning I was taken to a doctor in Panama, and stayed at Ancon Hospital for three months and eleven days. The company paid for it. When I got out of the hospital I had to go and tend switch, for I could not walk around much. That was an easy job. There were only three trains of dirt a day.

Anybody can get something to do here now, but it is hard getting along, because living is so expensive. The Jamaicans work six or eight months, and then go home to spend a few months with wife and children. If they starve themselves, they can save a good deal. If they are well fed they don't save. Out of 80 cents a day it takes 50 cents to buy food, and then there are washing, clothing, etc., besides. Some of the men try hard to save; buy 2 cents bread, 2 cents sugar, and go to work all trembly and can't lift

a thing. About the best way is to get a Jamaica woman to keep house for you. You pay her \$10 to \$12 when the pay car comes around every fortnight, and buy her dresses and things. But some of the women don't know how to cook. They just fix up some little foolishness—fish balls and the like of that. A man can't work on such stuff.

The I. C. C. (Isthmian Canal Commission) is serving messes now at 30 cents a day, but they don't give the men what they want. Things don't taste right; they cook the life out of it. Some Jamaicans don't like rice and won't eat potatoes. It makes the men discouraged, not getting their pay when they want it. Pay day is irregular, always two weeks behind, sometimes more. It is best living in the married quarters on the hill.

There is no privacy or quiet in the old bachelor buildings, thirty or forty in a room. Some of the men are noisy at night and have no sense of decency. There ought to be cots instead of bunks on the sides, where the men have to sleep on top of each other. But the bathrooms are good, and most of the men use them. There is no sense in putting so many different races together—Jamaicans and Bims [Barbadians] and Martiniques in the same room. It is not right. What use are the Martiniques, any way? They don't understand English, and when the boss tells one to pick up a stick he will pick up a stone. They ought to get all Jamaicans and pay them better. I hope they will decide on the right kind of a canal, because it will be a great boon to all the nations of the earth when it is completed.

CULEBRA, CANAL ZONE.

### The Story of a Martinique Girl

[To appreciate the following narrative the reader should not read it in cold print, but should hear it, as we did, when we sat one evening on the wire-screened veranda of the doctor's house at Bas

Obispo, overlooking the Chagres River and the deep rock cutting thru the hill where we hope some day to see the Canal flow. From the negro quarters below, among the palm trees, came the French

Gabrielle.

songs of the Martinique laborers, for it was Mardi Gras, and they were devoutly joyful. Gabrielle's story was told partly in the *patois* of Martinique, partly by expressive gestures of the hands, head and shoulders, and was frequently interrupted by showers of giggles when some question of ours struck her as unusually absurd. She wore a red dress, with a train; a string of gold beads was about her neck, and her head was adorned with a gaily colored and artistically tied kerchief.—E. E. S. and G. R.]

YES, I like it very much better here than at Martinique. Many people are leaving there now, for we are all afraid, since the great mountain burst. And it is hard to get a living there. Some people are starving. I was born in Trinité, but my father was from Fouchin; he was a *propriétaire*. I am twenty-five years old now. I cannot read or write, as I was only at school for six months when I was nine years old.

When I was eleven I was confirmed. It was a grand sight. There were fifty of us walked in procession thru the streets to the big church, all carrying lighted wax candles. The girls were dressed all in white and the boys wore black coats and white *pantalons*.

I was brought up by my sister, for my mother died when I was very little and my father when I was seven. My sister was a dressmaker and she taught me the trade. I made dresses for ladies at 4 francs apiece. And hats—the colored ladies in Martinique have many beautiful hats for Sundays and *fête* days, but other days they wear turbans, tied like mine.

When I was sixteen I was married. My husband was a wheelwright and used to make 4 francs a day when he could get work. But he died when I was twenty-three, and I was left alone. My sister had married and gone to live in St. Pierre, and she and her husband and her little girl were all killed when the rocks and ashes buried the city. I had gone once to St. Pierre to see my sister and my niece; that was the only time I was outside my native town until I came here. I did not want to go to St. Pierre after the eruption, because it was too sad a place.

Trinité is a long way off from Mont Pelée, as far as Culebra is from here, so nothing but ashes fell there; but in St. Pierre big, red-hot stones, as big as I could hold in my two hands this way, came down and killed all the people there. We had always been afraid of Mont Pelée; it smoked and shook the ground, but we did not know the danger was so great. But when the top of the mountain blew off, we in Trinité were very much frightened. We did not know but the whole island would blow up. Some hid in cellars, some went out to sea in boats. Lots of people tried to escape on land by running. I stayed in the

The Island of Taboga.

house except that I went to church with the others and prayed every day. For two months we were afraid every hour. The mountain rumbled like a thousand thunders. Then the earth would shake and the white ashes would fall all around like clouds of birds.

Ever since that first dreadful morning\* people have been anxious to get away from Martinique, so when an

\*On May 8th, 1902, at eight o'clock in the morning occurred the great eruption of Mount Pelée, which destroyed within a few minutes the 30,000 inhabitants of St. Pierre.

A Group of Martinique Women in Front of Company House at Culebra.

American came and told us that we girls could all get good wages in Panama, and that he would take us for nothing, a lot of us wanted to go.

The trip over was very interesting, for I had never been to sea before, and I was not a bit sick, tho most of the others were. We slept on canvas cots on deck. There were many people on board, men and women; I don't know how many. Some were married and some were not, but most of them were as young as I. I only saw three or four over thirty, but you can't always tell, can you? We were five days on the ship and we all had to be vaccinated before we landed at Colon. We got to Colon in the morning, and in half an hour we were off the ship and on the train. They put us off at different places and gave us board for a few days. They put off ninety of us here, but there were only places for sixteen to work. No; I don't know what became of the rest of them. I don't go gadding around asking people questions.

I saw some of the Martinique girls last night at the Mardi Gras ball. It was a *bal poudré*, and we had a grand time. We have some *fêtes* here, but not so many as at Martinique. Then on Christmas and July 14th we would feast on turkey and French wines, and dance all night. But I like living here very much. I am getting \$10 a month and *M'sieu le Docteur* is very kind to me. Before I got this place I got a living by washing. We were living in one little 6 by 10 room at Chagres. Who was with me? Oh, that was my brother. Didn't I tell you about him? His name is Paul, and he came to Panama with me.

I am never going back to Martinique if I can help it. I am going to forget French and learn English, because if I do that *M'sieu le Docteur* says that he will surely take me with him when he goes to live in the great city of New York.

## Finality of the Christian Religion

THE Presbyterians and Congregationalists used to have a preponderance of distinguished and influential heretics, as witness the names Barnes, Bushnell and Briggs, but of the present disturbers of doctrinal tranquillity, Professor Mitchell is a Methodist, Dr. Crapsey is an Episcopalian, while three are Baptists—Dr. William Newton Clarke, Professor Nathaniel Schmidt and Professor George Burman Foster. It will doubtless be no surprise to Professor Foster that his book\* is criticised severely by conservative theologians and religious journals, and even by those moderately liberal. For this, as is often the case with heretics, the manner is in part to blame. A man who refers to miracles still reverently accepted by the great majority of Christians as "such stories," and who says that an intelligent man who believes them "can hardly know what intellectual honesty means," ought not to be surprised to have some pretty hard names strenuously expedited in his direction. It must be said, however, that it would have been impossible in any manner to present views so divergent from the ordinary without giving violent offense, and one is reminded that there is good authority for letting one's yea be yea, and his nay, nay.

Professor Foster's purpose is not at all destructive and anti-Christian, but rather apologetic and conserving of the real truths of the Christian religion. He is as sincere in his desire to promote Christianity as Luther was when he wrote "The Freedom of a Christian Man," or Calvin when he elaborated his "Institutes." His subject is the finality or perfection of the Christian faith, and his thesis is that the religion which Jesus taught and which the Churches are trying to preach is the ultimate, the consummate religion, which can never be transcended, because it is the absolutely pure expression of the religious idea.

This is not a heterodox thesis; and Professor Foster argues, not academically, that there can never be a better religious cult than the Christian, but rather practically and religiously, that the sympathetic disciple of Jesus has all that any one can attain from religion. He holds that the essential elements of the religion of Christ are of permanent worth and force; that its "divine values are original and organic in the natural and historical order—nay, that they are indigenous to the soil and substance of reality itself."

It must be regretted that the author did not give more attention to exposition of this principal proposition, and that he has not shown more clearly what the "divine values" are which give finality to the religion of Jesus. One might do considerable reading in these 500 pages without suspecting that they were expounding a final religion; and, indeed, he could hardly be blamed for the impression that he was reading the history of the overthrow of some God of an elder day. It is the gravest defect of Professor Foster's work that he has so much to say by way of approach to his subject, and so little, in proportion, on the subject itself. The history of the growth of authority in religion and its decay, the discussion of the naturalistic and religious views of the world, of the sources of the life of Jesus and the essence of the Christian religion, are able and valuable, but all the more disappointing is lack of thoro treatment of the title of the book.

Undoubtedly the chief interest in this work is in its attitude toward the miraculous and the supernatural. In this matter the author is unusually frank and outspoken; and if in places he is blunt and cruel, in others it is evident that he has come to his present position only thru bitter struggle. He denies the miraculous, as ordinarily understood, absolutely, declares that it is the modern thinker's foremost duty to disengage religion from supernaturalism, and speaks of seeking to understand the Biblical accounts of miracles as "poesies." The

\*THE FINALITY OF THE CHRISTIAN RELIGION. By George Burman Foster. Chicago: University of Chicago Press. \$4.00.

virgin birth, the stilling of the sea and feeding of the thousands, the turning of water into wine, the resurrection, the ascent into heaven and return on the clouds, are all to him alike incredible.

"If these things constitute the Christian religion, that religion is already an antiquated affair, a relic that is worthless to the cultivated classes."

More serious still is the author's admission that Jesus was mistaken in many respects in his ideas about devils and angels, and his notions about the causes of sickness, in his expectation of an immediate return and a cataclysmic beginning of the kingdom of God. It is maintained that Jesus was but a child of his time in his theoretical apprehension of God and the world, and that his natural and metaphysical ideas are not authoritative and final. On the other hand, his religious relation to God is held to be valid for all time.

It will have to be admitted that, in his interpretation of the thoughts and concepts of Jesus, Professor Foster follows the lead of scholars who have made out a very strong case for their views. In details, such as the question of Jesus's Messianic claims, there is divergence of opinion, but for the general position, that even the Synoptic Gospels were written for edification of the Church and were strongly colored by ideas prevailing in the decades after Jesus, the argument is very strong. So also there can be no doubt that the whole trend of thought and feeling for years has been in the direction of the attitude toward miracles taken in this book. No one can doubt that miracles are increasingly a stumbling block in the way of faith, for those inside the Church as well as outside it. It is probably true that hundreds upon hundreds of good people have had suspicions and inklings of inaccuracies and impossibilities in prevailing Christian beliefs such as Professor Foster confesses with startling plainness. What shall be done in the premises? Shall apologists again take up the cudgels for interpositions in the natural order? Or try to stay the hand of criticism at the end of Malachi, denying the rights in the New Testament which have been admitted in the study of the Old? Or shall they open the New Testament without reserve

to the freest criticism, and then, standing out boldly in the open, seek to find justification of the religious idea in the very constitution of man and the universe? The latter is Professor Foster's procedure, and his idea of wise tactics for present defenders of the faith. He counsels severance of Christianity from "Messianity," the separation of the essential truth of Jesus from local and accidental admixtures, and he believes that such a Christianity can conquer the world. He argues in behalf of a religious view of the universe, as against naturalistic materialism, and for an evaluation of Jesus not less high, as far his spirit and central teaching are concerned, than that of the fathers of orthodoxy themselves. He confesses for himself the "faith which the gospel requires—faith in God the Father, in his fatherly grace in forgiving sins, and in an eternal life." Such a man ought not to be berated and damned, but corrected where he is mistaken, disproved where he is illogical, and followed without fear where he declares what has been found out to be true.

### Trade Restrictions and Philippine History

TWELVE volumes, XXI. to XXXII., of the historical series of documents and reprints translated into English, entitled *The Philippine Islands, 1493-1898* (Cleveland: The A. H. Clark Co.), were published during the year 1905, and the work goes on to its completion in fifty-five volumes, despite the fact that it is a money losing venture. The volumes of 1905 are, all in all, the best edited and most carefully arranged and translated of the series thus far, tho perhaps the interest of their contents is not so great thruout as that of various volumes which have preceded them dealing with spectacular events or reproducing valuable old relations of the conquest period. The twelve volumes in question cover chronologically only the years 1624 to 1640, and thus, strictly considered, relate still to the conquest period; but the editors have in some instances continued the early relations republished with later writings, and, notably in their "ecclesiastical appendix" (comprising most of

volume XXVII.), have grouped by subjects documents drawn from almost all periods of Spanish rule, thus bringing us forward into the eighteenth century, and in the one case cited into the nineteenth century. Nevertheless, the question of distribution of space arises; for we have left only two-fifths of the total space for two centuries and a half of Spanish rule, while the years 1565-1640 have occupied the better part of the thirty-two volumes already issued.

Of the volumes of 1905, XXV., XXVI. and XXVII. must be regarded as the most important, for the light they throw upon Spanish commerce in the Orient, Spain's commercial policy in her colonies, Philippine finances, etc., in the first half of the seventeenth century. First place among the numerous documents bearing on these questions would go to the memorials of Juan Grau y Monfalcon, procurator of the city of Manila, presented to the Council of the Indies in 1635 and 1637, and especially to the latter of the two documents. The very interesting quarrel between Governor-General Corcuera and the Jesuits on one side and Archbishop Guerrero and the monastic orders of Manila on the other (conceded rather too much space, despite its "human interest"); the accounts of Corcuera's campaigns against the Moros, notably in Jolo and the Kotabato region of Mindanao, but involving also the first entry of the Spaniards into the Lake Lanao region in 1637; and the innumerable documents relative to the perennial contest between civil and ecclesiastical states in the Philippines, to the missionary efforts, now noticeably slackening, to the relations of Filipino customs, to the forced labor and other abuses of the natives, to the revolt of the Chinese in 1639 and the virtual massacre of thousands of them, etc.—all these documents are mainly but supplementary to data already available to the student of Philippine history, while some of the documents regarding Spanish commerce and colonial policy are not only of prime importance, but have hitherto been practically inaccessible, in a few cases also unknown. Spain's policy of restriction of colonial trade in favor of home interests, the poor trading character of the

Spaniards as compared with the Dutch and their own kinsmen, the Portuguese, and official and mercantile corruption resulting from the mainly military character of their settlements and the policy of state absorption or control of activities, are already having their result in a decline of Spanish power in the Orient, in a loss of the enterprising and *hidalgo* spirit of the conquest period, and in a drain upon the Mexican treasury to support the Philippines, which are in turn drawn upon to support unproductive conquests and settlements in the Moluccas and Formosa. A vigorous governor like Corcuera can only temporarily check or combat these tendencies to decline, and runs counter at every moment to the multiplied checks and harassments of a system of bureaucracy. Yet Spanish optimism is, as ever, undaunted as well as flamboyant, and the king is presented anew with the old reasons for preserving and extending his spiritual and commercial conquests in the Orient, and is urged to see that the Philippines are "the key to the commerce of the Orient." When the artificial commerce of Manila as a trade depot between China and Mexico is declining thru the various reasons cited above, Grau does not venture, in behalf of his Manila merchant clients, to attack the system of trade restrictions or to outline the prospect of developing the resources of the Philippines themselves. Instead, he recognizes the futility of any attack upon the artificial system of trade restriction, and only asks for the Philippine traders a "square deal," i. e., their chance to reap more of the benefits of the legal restraints upon trade (which, he naïvely explains, all were evading by fraud, hence it would be better to condone part of the fraud, and to be no more harsh with the Manila lawbreakers than with others, in the Americas and Spain). Note this early statement by him of the policy of colonial trade preferences and restrictions (volume XXVII., pp. 146-7):

"Although commerce ought to be free, and was in the beginning, when kingdoms and seignories were less powerful (for, as they had narrower territories, so they had fewer matters to which to attend), as the monarchies increased and extended it became necessary to limit the commerce in part, prohibiting it

with some in order to oblige or cause it to be maintained or increased with others. If that of the Philippines with the Indies were free and absolute, as it was immediately after their discovery, it is evident that they would enjoy the greatest prosperity; while New Spain would have greater abundance of what was necessary to it, and Peru of what it lacked. But the commerce of Spain, which would perish and be ruined, was opposed to that; for, since the goods sent thence to the Indies were dearer than those of the Philippines, if merchandise entered from both ports without restriction, it would be to the advantage of the consumers to seek that from the Philippines [Chinese goods, *i. e.*] rather than that from Spain. . . . Accordingly it was right and proper to restrain the one that the other might endure."

**Counsels and Ideals from the Writings of William Osler.** Collected by C. N. B. Camac, Boston. Houghton, Mifflin & Co.

A pupil of Dr. Osler has made this collection of extracts from the master's lectures and addresses in order to share the best things with others. Needless to say, Osler's ideals are the loftiest possible, and his counsels will help many besides his medical brethren. As he says: "Not that we all live up to the highest ideals—far from it, we are only men—but we have ideals which mean much, and they are realizable, which means more." He insists particularly that the best work of the medical profession may have "nothing to do with potions and powders, but with the exercise of an influence of the strong upon the weak, of the righteous upon the wicked, of the wise upon the foolish." "Fully one-third of the work you do," he says to graduates, "will be entered in other books than yours. Courage and cheerfulness will not only carry you over the rough places of life, but will enable you to bring comfort and help to the weak hearted, and will console you in the sad hours when, like Uncle Toby, you have 'to whistle' that you may not weep." Some of Dr. Osler's counsels are surprising. For instance, it is usually thought that a physician should marry as early as possible, yet Osler says: "So truly is a young man married is a young man marred"; and then finishes his sentence surprisingly enough with: "Is a woman unmarried in a certain sense a woman undone?" Just how the contradiction is to be neutralized he does not say. How thoroly practical

some of these counsels are may be gathered from such expressions as: "As to the method of work, I have a single bit of advice, which I give with the earnest conviction of its paramount influence in any success which may have attended my efforts in life. Take no thought for the morrow. Live neither in the past nor in the future, but let each day's work absorb your entire energies and satisfy your widest ambition." "Throw away in the first place all ambition beyond that of doing your day's work well."

**The True Story of Paul Revere.** By Charles F. Gettemy. Boston: Little, Brown & Co. \$1.50.

A properly proportioned history of the United States, in several volumes, would give but a line or two at the most to Paul Revere, but the patriotic sentiment which has grown up about his name has created an interest which perhaps warrants writing a book of nearly 300 pages concerning his life. This is especially true when the book proves to be a plain, tho well written, record of a patriot of humble origin, exemplifying the traits that have from the earliest colonial days formed the basis of the civilization which has conquered the American wilds. Moreover, the book is a fine example of acute historical criticism, not cynically applied to overthrowing the basis for a healthy patriotic sentiment, but good naturedly correcting the facts, while leaving the sentiment intact. The author shows how Paul Revere was rescued from the common lot of oblivion by the witchery of Longfellow's imagination, which seized upon the theme of Revere's ride eighty-eight years after the event. But for Longfellow's simple, tuneful ballad few persons today would know about Revere. Neither Palfrey nor Hildreth mention him. Bancroft (1858 ed.) barely mentions the incident of the ride. Barry and Austin, in their histories of Massachusetts, tell the story in two lines, and very incorrectly. Fiske gives it five lines, but makes the same mistake that Longfellow made about Revere's waiting for the signal from North Church, which Revere's own story and other proofs show to be untrue. Lossing, in two different accounts, is as inaccurate as usual. As the true history of the event

shows, Revere did not need the signal, for he already knew what the British were about to do, and the lights were hung out of the old church tower at his suggestion as a warning to others, who might know by that signal the necessity of arousing the country themselves in event of his capture, while he

"Silently rowed to the Charlestown shore," under the guns of the British man-of-war, the "Somerset." Besides a correct version of this famous episode, Mr. Gettemy has given us an interesting account of Revere, as the patriotic engraver, the "citizen and soldier," and the man of business after the war. The book contains eleven interesting and really historical illustrations.

**Recollections.** By William O'Brien, M.P. New York: The Macmillan Company, pp. 518. \$3.50.

Much of the ground over which Mr. William O'Brien, M. P., travels in his *Recollections* has already been covered in Mr. Justin McCarthy's "An Irishman's Story," and Mr. Michael Davitt's "The Fall of Feudalism in Ireland," as well as in Mr. Barry O'Brien's "Life of Parnell," which long preceded Mr. McCarthy's and Mr. Davitt's recent volumes. Mr. William O'Brien's book has none of the quiet charm of Mr. McCarthy's "An Irishman's Story." No one who is familiar with the careers of the two men would look for any such characteristic in Mr. O'Brien's *Recollections*; for these two Irishmen have little in common except that both began their work-a-day careers on the *Cork Press*; both were journalists, and both were of the Nationalist party in the House of Commons. Mr. O'Brien's book also lacks the historic value which attaches to Mr. Michael Davitt's "Fall of Feudalism," a value due to the enormous care which Mr. Davitt took in assembling the data of the great movements in Ireland in which he had so active a part. Mr. O'Brien's story comes down only to his election for Mallow in 1883. Consequently, it contains nothing about the enormous increase in the strength of the Parnellite party after the Irish peasantry were enfranchised in 1885; nothing concerning the two Gladstone Home Rule Bills of 1886 and 1893; and no account

of the internecine troubles of the Irish Nationalists which grew out of Parnell's moral breakdown in 1890. It covers only half the story of Irish Nationalism, and leaves untold by far the more interesting half. Yet, as the story of the life of an Irish agitator, it has its interest; while as regards Irish history, its chief value lies in the chapters which deal with the No-Rent Manifesto of 1881; with Forster's troublesome tenure of the office of Chief Secretary to the Lord Lieutenant in Gladstone's 1880-84 Administration; and the Kilmainham Treaty, to which Forster objected, resigning rather than becoming a party to it. Mr. O'Brien was in Kilmainham with Parnell and the other Nationalist leaders responsible for the No-Rent Manifesto. He had Parnell at close range for several months and gives some most interesting side lights on Parnell's character.

**The Coal-Mine Workers.** By Frank Julian Warne. New York: Longmans, Green & Co. \$1.00.

The contemplated strike of the coal miners this coming spring makes timely the appearance of this little book. It is a descriptive and historic account of the United Mine Workers and of the various methods with which this union deals with the operators. It might also be described as a miniature encyclopedia, so full of information is it and so readily does it answer the questions that occur to one regarding the miners and their employers. The author, Dr. Frank Julian Warne, has previously shown his knowledge of this field by his book on "The Slav Invasion." The two books are indispensable to one who would know the relations of capital and labor in the mining districts. It is interesting to note that tho the union can claim but about one-half of the 595,000 workers in the thirty-one coal producing States, yet probably more than three-fourths of these workers are subject to union regulations and wage scales, and that tens of thousands of the non-union workers act in concert with the union men in times of labor disputes. The number of men actually belonging to the union does not, therefore, furnish a real test of the numerical strength of the union in times of stress.

**Some Trinitarian Forgeries.** Stated by a Methodist. 16mo, pp. 101. New York: The Grafton Press.

This is a bad booklet, bitter and ignorant. Its purpose is to show that the passages in the New Testament relied upon by Trinitarians are "forgeries," or in part such. The author is not satisfied with discussing the cases in which the original text has been corrupted, as in the case of the insertion of "the three witnesses," but he even makes a forgery out of what he regards mistranslations. Thus, utterly ignorant of the Logos doctrine, he declares that the first verse of John's Gospel should be translated, "In (a) beginning was the word, and the word was with the God, and the word was (a) god," and the usual translation he calls "a coarse forgery." The next passage discussed is 1 Tim. 3:16, in the Old Version, "God was manifest in the flesh," and in the Revised, "He who was manifested in the flesh" (not *manifest*, as this careless author quotes it). He says there is only one manuscript that has *theos*, *God*, while all others have *hos*, *who*; and that in this one manuscript the word for *who* had been changed to *God* with blacker ink, and that this marred manuscript was used by the translators to justify the insertion of the word *God*." All this is absolutely untrue, the cursive manuscripts, and most of the uncials have *God* and not *who*. The change from *hos* to *theos* was made very early. This is the ignorance which does not hesitate to address the Christian Church generally as "veneered heathenism."

**The Autobiography of Samuel Smiles, LL.D.** Edited by Thomas Mackay. Pp. xiii, 452. New York: E. P. Dutton & Co. \$4.00.

Dr. Smiles's work was done many years before his life came to an end in April, 1904. The last words of his autobiography were written towards the close of the summer of 1889, when age was already making itself felt, and the book, which has been waiting for fifteen years, is now presented to Dr. Smiles's readers and admirers. Had it appeared when it was written, these admirers might have been more numerous, for Dr. Smiles belongs to a past generation, and the days have gone when his readers were num-

bered by the hundreds of thousands. There are, however, still many living who for the sake of his past popularity will welcome this new and latest volume of his work, and the memories of a man who could recall the rejoicings over the victory of Waterloo, and who lived thru all the vast changes of Queen Victoria's reign cannot be without value even for those who have no associations with "Self-Help" or the lives of the self-made men whom Smiles loves to honor. The first part of the book, which describes Dr. Smiles's early life and his part in the development of English railroading, is full of interest, and there are some pages descriptive of the bad old days of the Corn Laws and dear food for the people, which might have been used as electioneering literature in the recent struggle in England over Chamberlain's fiscal proposals. Dr. Smiles, at the time of the Corn Laws agitation, in the early forties, was editor of the *Leeds Times*, and in this capacity came into association with Cobden and other leaders of the movement for repeal. From newspaper work, Dr. Smiles turned to railroading, and we have a picture of the slow and halting policy of the early English railroads, and also some very pronounced *obiter dicta* as to the evils of unrestrained railway competition. After the close of Dr. Smiles's connection with the South Eastern Railway the book loses much of its vigor and interest, and the latter part is little more than the good-natured prattle of an amiable old man indulging in reminiscences.

**The Prisoner of Ornith Farm.** By Frances Powell. New York: Charles Scribner's Sons. \$1.50.

To invest the shores of the Hudson with romance is Miss Powell's specialty. *The Prisoner of Ornith Farm* follows "The House on the Hudson" and "The By-ways of Braith," in each of which country houses on the shores of New York's noble river are the stage and setting for most romantic dramas. These tales must surprise the Hudson River farmers—if they read them. Ornith farm is haunted by many birds, hence its name, and it also harbors huge Danes and a pink eyed bulldog, a few black horses, a fiendlike cat, and as strange a collection of human creatures as the im-

agination of a novelist ever got together in one house. The girlish heroine has adventures enough to suit the most exacting seventeen year old taste. Such stories are usually described as "readable," and Miss Powell has the storyteller's art of awakening interest in plot and characters, which is unsatisfied until the denouement is reached.

### Literary Notes

... *Audubon's Western Journal, 1849-1850*, recounting an overland journey with a party of gold-seekers from New York to Texas and thru Mexico to California, will be issued this spring by the Arthur H. Clark Co., Cleveland. The Journal is of great historical value, as well as an interesting traveler's record. Miss M. R. Audubon and Prof. F. H. Hodder have supplied a biography, introduction and adequate annotation.

... An interesting example of the working of our present copyright law is mentioned by the American Library Association Committee on Book Buying. Miss Hapgood's translation of *Turgeneff* in sixteen volumes is printed by De Vinne, in New York, but it is sold in New York at \$32 and in London for \$24. An American library can, therefore, buy them cheaper *via* London than at the place of printing. Apparently the volumes take the sea voyage for their health.

... The Troutsdale Press, of Boston, Mass., has lately been making a specialty of publishing books relating to book-plates. Many of these volumes have been in limited editions and all of them have been characterized by a refined and chaste typography. A number of the illustrations have been from the original coppers. Among the more recent publications of the Troutsdale Press have been "*A Descriptive Checklist of the Etched and Engraved Book-Plates by J. Winfred Spenceley*," "*Book-Plates by Frederick Garrison Hall*," "*The Book-Plates of Edmund H. Garrett*," and "*The Book-Plates of Ludvig Sandoe Ipsen*."

... Ten years ago there was good promise of the development of an independent literary center in Chicago, chiefly due to the success of Herbert S. Stone in bringing forward unknown authors of ability and in publishing the works of Europeans of originality and unconventionality, such as Maeterlinck, Shaw, Ibsen, Wells, Hichens and William Sharp and his double, "Fiona McLeod." But publishing houses gravitate irresistibly to New York, and now the books and plant of Herbert S. Stone & Co. are merged into Fox, Duffield & Co., a young and enterprising firm of New York.

... Sixteen of the brief autobiographies, which have been a prominent feature of THE INDEPENDENT for several years, are published this week by James Pott & Co., New York, in a single volume at \$1.50, under the title of *Life Stories of Undistinguished Americans*. The stories selected for publication in book

form are those of "A Lithuanian in the Stockyards of Chicago," "A Polish Sweatshop Girl," "An Italian Bootblack," "A Greek Peddler," "A Swedish Farmer," "A French Dress-maker," "A German Nurse Girl," "An Irish Cook," "A Farmer's Wife," "An Itinerant Minister," "A Negro Peon," "An Indian," "An Igorrote Chief," "A Syrian," "A Japanese Servant," and "A Chinaman." The book is edited by Hamilton Holt, the Managing Editor of THE INDEPENDENT, and contains an introduction by Edwin E. Slosson, the Literary Editor of THE INDEPENDENT. We will publish a review of the book next week by Rebecca Harding Davis.

### Pebbles

NINE out of ten men who go into a cigar store steal matches.—*Atchison Globe*.

"So Smithson deserted Miss Barkus at the altar. Did his courage desert him?"

"No, it returned."—*Smart Set*.

BILL FUNK, who caught cold last Tuesday, as announced exclusively in this paper, is no better.—*Concordia Kansan*.

RETIRED PUBLICAN (explaining details of his new mansion)—I'd like to 'ave two statues at the foot of the stairs.

Architect—What kind of statues would you like?

Retired Publican—I'd like Apollo on one side and Apollinaris on the other.—*London Tatler*.

HAVING advertised as a widower in search of wife No. 2, a man of St. Gall, Switzerland, showed the fifty replies and photographs which he had received to his wife, and, stating that if she did not want him there were others who did, he effectively cured her of her "nagging" habits.—*Le Petit Parisien*.

AN OLD FASHIONED AMERICAN.—Forty years ago Robert E. Lee was offered the presidency of a Northern insurance company at a salary large enough for those days. He wrote that he hadn't the ability or the experience to command such a salary. He was told that his name was worth it. "What influence I have with the Southern people is not for sale," said Lee. That ended the negotiations.—*New Orleans States*.

A COMMERCIAL traveler tells the following of a little social gathering in Eastern Ontario:

"Dinner was a little late. A guest asked the hostess to play something. Seating herself at the piano, the good woman executed a Chopin nocturne with precision. She finished, and there was still an interval of waiting to be bridged. In the grim silence she turned to an old gentleman on her right and said:

"Would you like a sonata before going in to dinner?"

"He gave a start of surprise and pleasure as he responded briskly:

"Why, yes, thanks! I had a couple on my way here, but I could stand another."—*Woman's Home Companion*.

## Daffodil Days

THE daffodil is the queen of the garden in early April. It is eminently a social flower. One daffodil alone looks lonely. A lady who wished to buy a few for a daffodil dinner, or something of that sort, was asked how many she would need. She replied only a few, about as many as you can hold in this way, extending her arms and touching the tips of her fingers. "Will one hundred do?" "Oh, dear, no, but possibly five hundred—unless you can let me have more!" That woman not only knew her business, but she understood the daffodil. You cannot overmass them. A single daffodil is not peculiarly handsome; in fact it lops over its head in a wobbly way, and the closer you get to it the less satisfactory it is. The glory of the flower is only discovered when it covers a great patch of earth.

Now you have it as pure gold. Just why Nature stepped out of her custom, in this one case, and gave a brilliant yellow in early spring is not easily explainable. Spring color is blue, shading into delicate lilac or possibly pink; into peach blossoms and apple blossoms and syringas. The blue ray is associated with germination; the yellow ray is associated with growth, and naturally belongs with summer. But here we have the yellowest of yellow flowers—nothing more so all thru the year, except dandelions, buttercups and golden rods; and you see that all these also come in immense profusion. The dandelion covers acres; the buttercup fills pastures; and golden rods fill all the river bottoms and line all the creeks. Why does Nature act so profusely in all these cases? The dandelion is a food—a rare, excellent one; and from the golden rod the bees make honey—lots of it; but the daffodil is poisonous, and the buttercup is not very far from it, with its acrid juice. Only the exigencies of the case, however—just the necessity of proving a point, would have led us to preach on the daffodil, and tell of its dangerous qualities. Yet there are good reasons why some things should not be wholesome for

food. The glory of a bed of daffodils would be very quickly destroyed if cows or hens enjoyed the flavor of the plant. We think meanly of poisons; but it is only a means that some plants have for self-protection, like thorns. We are transforming everything on earth into something to eat. We are looking, with Burbank, for the time when "every weed will be entered in the economic catalog of herbs or foods"; then to be improved and exalted, from the simplicity of beautiful life, to serve in the category of esculents. Thank Mother Nature, she is not so lacking in the esthetic. She keeps a class of plants for beauty alone. Beauty is enough. It is the basis of truth and of goodness; at least the companion. Yet we must confess that the potato, as well as most of our choice vegetables, and some of our fruits, were poisonous.

Nearly everything has a fitness to the day of its development. The brown buds of the maples are just breaking into leafage, and not a sign is there, anywhere, of rest. We are on the road to a whole new year's blossom and fruitage. That is why this great yellow bank of glory seems untimely. The wind flower is all right; the spring beauty is as fragile as the hour; and the squirrel corn looks as short lived as it really is. Only the daffodil puts on full dress, taking time about it; sits down heavy, cannot be hurried, and stays a long while. When it is thru blossoming it has nothing else to do, and that is the last of it for a whole year. "Just look this way," it seems to say. "Here is substantiality. I despise triviality." Then it leans over and looks down on the snowdrop and crocus with a patronizing air. It is the dowager duchess among flowers.

The reason why the daffodil pleases more people than any other form of narcissus is largely because of its luxuriant foliage, its very deliberate, not-in-a-hurry atmosphere. Most of our spring flowers are only half dressed; some of them, like the squirrel corn, look like dancing girls—just a fringe, an apology of clothing. Even the poet's narcissus

has very few leaves, and these stick out at odd angles, or he flop on the ground. They look like clothing half pulled on, while the flower, to be enjoyed, must be picked and closely examined. Its delicate white veins; ah! that is what you are to look at—like a baby in a crib—the more naked the better. Some flowers are of this childlike sort; but not such the daffodil. It gets its foliage well on, and pulls it up around the blossoms. In fine, it is not only dressed, but well dressed. We do not like the figure, and are trying to get away from it; it is unseemly to compare green leaves to coats and frocks. But what can we do about it? The truth is always better than poetry, and the truth about this gay flower is that it is rather bold and aggressive—queen of the spring. It is not in such a hurry to blossom that it comes half naked. And now, really you will see that it is not the gold, the color alone, that has been so pleasing to you; but it is also the soft, moist and abundant green leaves that wrap the flowers and hold them up.

Now kindle your bonfires. When the daffodil has blossomed the new year is fairly opened. Clean up the lawns, gather the sticks, throw in the rubbish heaps and sweeten the world of every accumulation of ill odors. The smoke rises in big rolls and bluffs, and tumbles about in the air, as the boys that have kindled the flames turn somersets on the ground. New sounds everywhere! You hear the sugar tappers abroad in the groves. The woodpeckers also are tapping the orchard. Oh, pshaw! What has philosophy to do with spring? Take the year as it comes! These are daffodil days! Hurrah for a frolic!

## Muck and Money

OF course President Roosevelt's address on the Man with the Muck Rake had to be a sermon—there was nothing else to be done with the subject. Excess in hunting scandals is excessive; evils should be hunted and exposed; yet merit should not be ignored; to represent all as bad when all is not bad is bad—these are undisputed things that must be repeated in a solemn way; and we are glad the President has said them in an ef-

fective manner. The man who brings perfectly plain duties to the attention of the people does a good service—that is the chief business and benefit of preaching; and President Roosevelt is by nature a preacher of sermons, as well as a doer of deeds. Perhaps the two greatest living preachers are Theodore Roosevelt and the Emperor William.

To be sure, the muck rakers have, in their time, done a great deal of good. There would be no call for rakers if there were no muck; and muck must be raked up. A main part of the legislative branch of Government is to forbid the deposition of muck; while that of the judiciary is to point it out, and that of the Executive to remove it. The muck rakers of the magazines, whom Mr. Roosevelt had in mind, are useful, if sometimes officious, bystanders who look on and encourage and spur the officers of Government. When looking for pay they may get too zealous, and may spatter some foulness on clean linen; but on the whole they usually do more good than hurt, and we push them aside when they do too much damage to clean reputations.

But the palpable veracities which belonged to the sermonic portion of the President's address are not its important feature, but the episodic paragraph in which he gave it as his personal and private opinion, not yet ready to be made a distinct party policy, that extravagant wealth should be limited by progressive taxation of incomes and inheritances; and that this should be by Federal and not State legislation. Graduated taxation is now impracticable, because not within the province of the national Government under our Constitution as interpreted by the Supreme Court, but it is by no means a novel theory. Various States tax inheritances, and Great Britain and other nations adopt the principle of progressive taxation of incomes, by which a man with the income of a half million dollars pays a larger per cent. than one whose income is but five thousand dollars. This is a doctrine that has been stoutly defended by political economists elsewhere, and by advanced theorists in this country. It is what we have been familiar with from Socialists and Populists, who have put the graduated tax in their platforms; but it is not what would have been

anticipated from the head of the Republican party in the country, of the party which has been called the capitalists' party, and whose leaders have been pictured with dollar marks all over them.

But Mr. Roosevelt evidently believes in educating his party. He has led it in the matter of the control of the railroads, so that not a few so called magnates regard him as more dangerous than Mr. Bryan. We doubt if in a Presidential election in which Mr. Roosevelt and Mr. Bryan were the opposing candidates, the insurance and trust companies would be as ready as they have been to pay their hundreds of thousands into the Republican treasury. Yet Mr. Roosevelt is right, and his "personal conviction" will be that of many others; and one of these days it will be embodied in national legislation. It is the conclusion which the civilized world is coming to.

Thomas Jefferson anticipated even in his day the danger of colossal wealth, and his remedy was not special and unequal taxation, which he regarded as unjust, but the equal division of large estates compulsorily between the heirs. This would accomplish its effect in a civilization which expects large families, like those of Jefferson's day, and has not heard of race suicide. In these days it might be necessary also to limit the amount that could be bequeathed to any one heir. The effect of such a law would be the increase of bequests for the use of the public. We know of no better legal way to limit the growth of fortunes such as the President describes as "swollen beyond all healthy limits" than that approved by Mr. Roosevelt and practised in other countries.

## Gorky as Author and as Revolutionist

GORKY the author came to America about four years ago in his books and was at once recognized as one of the foremost writers of the age, second only to Tolstoy among living Russian writers. Gorky the revolutionist now comes to America in person, and his reception is dubious. This is due more to the time and manner of his coming than lack of sympathy with the cause of liberty. The American people are fond of revolutions;

that is, in foreign countries, and especially in Russia. In their dramatic way of conceiving foreign events the American people have, from childhood, been accustomed to regard the Czar as personally responsible for the woes of his subjects, and many would have been ready to applaud his annihilation by a bomb as a pious act of patriotism.

But of late even our national taste for Russian melodrama has been sated, and we would like to see a new play put on the boards. We are beginning to suspect that there are other things more needed in Russia just now than the guns and dynamite we are asked to buy. Nor does the recognition of Gorky's genius as a painter of social evils give us reason to believe that he is the man to cure them. As the herald of a coming co-operative commonwealth he comes before us in a new rôle.

One would not, from his writings, regard him as a Socialist. His stories offer much to support the old fashioned idea that every man is the creator of his own destiny. His "creatures that once were men" do not lay the blame for their degradation upon unjust social conditions, but very frankly expose their own faults. It is possible for the most extreme individualist to read Gorky's stories without being shaken in his philosophy of individual responsibility, for he can always find, in the vices and unreliability of the outcasts he described, an adequate reason for their misfortunes. The only ray of light that penetrates that strong, strange play, "The Night Refuge," is Luka, the Pilgrim, who, by personal influence and cheering illusions, revives the spark of ambition, self-respect and decency left in the breasts of each of the wretches who have shelter there. To depict social rottenness without giving cause or cure seems to be the sole object of his writings.

Gorky himself became dissatisfied with being merely the man with the muck rake, the pathological photographer. He said in 1898:

"I discovered in myself many good feelings and desires—a fair proportion of what is usually called good; but a feeling which could unify all this, a well-founded, clear thought, embracing all the phenomena of life, I did not find in myself."

This fundamental thought, the lack of which he so distinctly realized, he may be supposed to have found since in the philosophy of Socialism, but he has not given it literary expression in such works of his as have been translated, and it remains to be seen whether he will trot well in the socialistic harness. What part he played in the disturbances of the past year is not, of course, known to the public, but it is safe to say that he is not to be regarded as one of the managing leaders of the revolutionary party. The Government appears to have looked at him rather as an embarrassment than a danger. He was too conspicuous as a revolutionist to be allowed at large and too conspicuous as an author to be effectively punished. Accordingly, he was imprisoned without conviction and released without acquittal.

It is apparent that he was brought over here to gain a hearing for the Russian cause, while the real work of organization and financing "the spring revolution" was to be carried on by such men as Tchaykovsky, Narodny and Maxim, now in New York. But they should have known that he would not be received as a *persona grata* by the American people when he came with his mistress, a Russian actress, instead of his wife. When it became known who the lady was who was with him the lion-hunters of the city ceased to struggle for him and he was turned away from three hotels in New York within twenty-four hours. The conventional and respectable ladies who used to press their money upon the Russian committees with the stipulation that it be used for dynamite, were much shocked by his conduct. They were anxious to aid and abet murder, but they could not countenance matrimonial irregularities. They were willing to help to overthrow by violence the institutions of a foreign country, such as the autocracy of the Czar and the orthodoxy of the Church, altho the Russians consider these as sacred and as necessary to the stability of society as we do marriage, but no man, not even a genius, is allowed to slight one of our own institutions.

Gorky's first week in New York was an exciting one, for he was a bone of contention between many parties, who wanted to use him for their diverse in-

terests. The Russian party wanted to avail themselves of his literary prestige to secure funds from the rich and fashionable, the American Socialists wished to exploit him as one of the great intellectuals of their party. All the papers were after him for contributions, and when it became known that he had given one of them a monopoly of his stories, the others took delight in "exposing" and denouncing him. As a result of this amusing strife, his usefulness to all parties is impaired. The announcement of the list of distinguished literary men, headed by Mark Twain and W. D. Howells, which was to constitute his American committee for the collection of funds, has been indefinitely postponed.

But we do not regret the blunder in tactics which has checked the efforts of the Russian revolutionists to collect money in this country to renew their struggle. They have had their chance, a good chance, and they have failed. Failed, that is, in accomplishing what was and is still their object—the overthrow of the Government—tho it is not to be denied that their efforts were an important force in obtaining the great concessions which the Russian people are now utilizing. It does not matter how slight are the nominal powers granted to the Duma by the Czar, it will get as much as it can use. There is a chance now for the peaceful and orderly evolution of Russian institutions, and we believe that the work can be better carried on by such a liberal as Miliukov rather than a revolutionist like Gorky.

In that remarkably acute piece of self analysis to which we have already alluded, Gorky points out emphatically that the school of writers to which he belongs is destructive rather than constructive. Gorky puts into the mouth of "a reader" the following criticism of his own stories, which we quote from Kropotkin's "Russian Literature":

"Wrath, hatred, shame, loathing, and finally a grim despair—these are the levers by means of which you may destroy everything on earth. What can you do to awake a thirst for life when you only whine, sigh, moan, or coolly point out to man that he is nothing but dust?

"Can you create for men ever so small an illusion that has the power to raise them? No! All of you teachers of the day take more than you give, because you speak only about faults—you see only those. I doubt whether God

has sent you on earth. If he had sent messengers, he would have chosen stronger men than you are. He would have lighted in them the fire of a passionate love of life, of truth, of men.

"Oh, for a man, firm and loving, with a burning heart and a powerful all-embracing mind. In the stuffy atmosphere of shameful silence, his prophetic words would resound like an alarm-bell, and perhaps the mean souls of the living dead would shiver!"

## Railway Monopolies and Rates

DURING the progress of the great debate in the Senate upon the Railway Rate bill, much fresh evidence to support the arguments of the friends of the bill has come in thru various channels. Most of it has been furnished by producers and shippers who have suffered by reason of the oppression and unjust discrimination of the allied or combined railroad companies which now control the distribution of bituminous coal thru-out the region east of Pittsburg and north of North Carolina. This control is maintained partly by railway combination and partly thru the possession of mines by the railway companies or their officers. To the evidence thus obtained is now added the results of the first few days of the Commission's investigation, under the Tillman-Gillespie resolution.

All this evidence shows how a change of railway conditions in the last eight or ten years has given support not only to those who demand some additional legislation for the prevention of rebating and other forms of discrimination, but also to those who insist that the Commission shall be empowered to correct general rates which are not just or reasonable. The Commission ascertained last week, from the testimony of the railway officers themselves, that the several railways traversing the Eastern bituminous district, all of them now under the authority of the Pennsylvania and the New York Central, control the bituminous coal trade in the Northeastern States by means of four associations, which allot the traffic and fix rates. This, as we understand it, is done in violation of law.

The Commission also ascertained, in the same way, that these companies "discourage" the opening of new mines not owned by themselves; that stock in many existing coal companies is owned by

prominent officers of the railway companies; and that the latter have been paying to such companies higher prices for coal than has been paid to others with which the officers were less intimately associated. It is quite plain that, under such conditions, and owing to discrimination in supplying cars and other facilities, the independent mine-owner must make way for a railway coal monopoly. It is easy for the combined railway companies not only to "discourage" the opening of new mines along their lines, but also to "discourage" the profitable operation of old ones in which they hold no stock.

In the anthracite district, the so called independents now produce but a small percentage of the output. In all parts of the country the railways are obtaining possession or control of the coal deposits. A purchase of \$14,000,000 worth of coal mines and coal lands by one of them in the Southwest was reported last week. There is evidence that rates have been "adjusted" for the benefit of the railway coal properties and to the disadvantage of other coal holdings; also, that the establishment of control of the output has been followed by increases of freight rates which have largely increased the profits of transportation.

The disappearance or decline of competition, notably during the last eight or ten years, has led to abuses in the fixing of general rates. We still think that some confusion would have been avoided if the provisions of the pending measure had been set forth in two bills instead of one. Those designed to amend and perfect existing laws against discrimination affecting individuals or corporations might well have stood by themselves. Some of these provisions place clearly under the prohibition of the original statutes all the various devices—such as side tracks, private terminals, and private car lines—by which discrimination has been disguised. But the most important of them is that which opens the railway books and traffic accounts for official inspection and thus enables the Government to detect the offense of rebating, which is so easily concealed. A bill dealing with discrimination and nothing else could have been passed long ago. Few, if any, of our national legis-

lators would have dared to oppose it. As to that part of the bill which relates to the fixing of general rates, however, there is room for earnest and honest argument, especially with respect to the constitutional questions involved.

Such argument has been made, and for some time past it has been concerned almost exclusively with the extent to which the courts should or must participate in the final rate decision. It has been useful, but it should not be permitted to divert attention from the main reason on account of which a Government agency ought to have that power which the bill would give to the Commission.

This reason is the recent concentration of railway control and the consequent disappearance of competition in large fields of traffic. Where competition has ceased to regulate rates, and they are determined (for certain products, at least) by the managers of what is virtually a monopoly, they should be subject to the just supervision of officers representing all interests, those of the public and those of the carriers as well. Only by such supervision can general rate discrimination on a broad scale, affecting industries and large groups of consumers, be prevented where railway competition is dead.

### Echoes of Tuskegee

It is of interest to observe how the Southern papers take the unusually significant meeting of so many distinguished men at Tuskegee's silver anniversary. Altho the utterances were clearer than usual for full equality of rights for the negro, the Southern press is generally kindly, and, in a measure, sympathetic, with the exception of some like that leading South Carolina paper, which insultingly calls it the "annual junket to Tuskegee" of men who are "all more or less prejudiced against the white South," and "filled with fantastic theories as to the best method of developing the negro race." The men thus described include Secretary Taft, President Eliot and Mr. Carnegie. And they went beyond the usual laudation of industrial education, and actually declared for equal political rights! Said President Eliot:

"The Republic desires and believes that all competent men within its limits should enjoy political equality, the tests of competence being the same for all races."

Said Mr. Carnegie:

"The day cannot be far distant when such men as Tuskegee and Hampton have produced and are now producing will enjoy the suffrage everywhere because educated and capable of performing the duties of citizenship."

Secretary Taft declared for impartial qualifications for the exercise of the suffrage, and would have the negroes divide their votes, just as white people do, and added:

"Such a gradual acquisition of political power will secure more real political power and ability to help the negroes in their development than when their right of suffrage was unrestricted. . . . I cannot put myself among those pessimists who regard the settlement of the political question in the South as beyond hope."

And that noble Southerner, Bishop Galloway, declared that there must be equality of all races before the law, or our nation cannot endure as a republic. And all this was in line with what Dr. Booker Washington had himself said with greater freedom than is usual to him, and at some length:

"If this country is to continue to be a Republic its task will never be completed as long as seven or eight millions of its people are in a large degree regarded as aliens, and are without voice or interest in the welfare of the Government. Such a course will not merely inflict great injustice upon these millions of people, but the Nation will pay the price of finding the genius and form of its government changed, not perhaps in name, but certainly in reality, and because of this the world will say that free government is a failure."

It was fitting, at such a time, that Mr. O. Garrison Villard should give to the Tuskegee endowment the sum of \$150,000 in memory of Mr. William H. Baldwin, Jr., and we venture to add, in honor of his grandfather, William Lloyd Garrison. The *Charleston News and Courier* sneeringly says:

"Nobody ever heard of a trainload of multimillionaires coming South with the object of relieving the destitution among the white people of the South."

But not only does what helps the negro help the white South, but millions of Northern money have been given for white education in the South. The work of the Education Board, of which Mr. Ogden is president, is mainly for the white people. Our missionary societies

give hundreds of thousands of dollars for this purpose; and where has Vanderbilt University got its money, and a dozen smaller colleges?

## The Administration of Administration

THE President's wish to cut out unnecessary red tape from the Government service is an item to his credit. The almost incredible wastefulness and folly that administrative methods too often degenerate into is not unfairly illustrated by the story detailed in the newspapers a few days ago of a broken water main in Brooklyn:

"The break in the main was reported to the policeman on post, who reported it to his Sergeant in the station, who reported it to his Captain, who sent a formal report to Deputy Commissioner Bingham, who, being uncertain about the duty of his department in the matter, referred it to the Corporation Counsel for an opinion. The Corporation Counsel turned it over to an Assistant Corporation Counsel, who, after mature deliberation, referred it to the Water Commissioner, who sent the report over to Deputy Commissioner Cozier. And in less than twenty minutes thereafter the Deputy Commissioner had men from his department repairing the break. All this red tape unwinding had taken fifteen days, the escaping water in the meantime doing great damage. 'If the break had been reported to us immediately, as it should have been,' said Mr. Cozier, 'it would have been repaired in half an hour.'"

Such possibilities suggest not only the desirability of a better administration of administration than we commonly enjoy, but the imperative necessity of directness and simplicity in governmental work if we are ever to solve the great practical problems of social democracy. Probably ninety men out of every hundred who read the foregoing account of Brooklyn circumlocution remarked: "Wouldn't it be great to extend that sort of thing to all business? Big thing, socialism!" If Government ownership meant bureaucracy we might well be appalled by reports of the strides which such socialism is making in all countries. Happily, socialism will never be bureaucratic, and administration is not necessarily of the modern Brooklyn or bureaucratic type.

The President, in presenting his ideas to the Keep Commission, told the truth when he said: "You have literally an unparalleled opportunity for useful work,"

for the duty with which the Commission is charged is that of studying the business methods of the several departments of the Government with a view to systematizing their work, and, at the same time, reducing their red tape to a minimum. The President rightly says that just such an effort has never before been made in this or in any other country.

Whatever the Commission may report, however, the fact will remain that there is just one way to maintain direct, economical and otherwise business like methods in governmental departments, whether national, State or municipal. It is the way that private business interests understand and adhere to. The private business manager studies system by what the scientific man calls "the comparative method." Wherever he travels and with whatsoever business acquaintance he talks, he keeps his eyes and ears open, and picks up all the good points that he runs up against. Applying new ideas, thus acquired, in his own work, he continually cuts out antiquated forms and wasteful contrivances.

Government functionaries, even heads of departments, are seldom first rate business men to begin with, and they do not continue their education as the business man does by going about in the world and noticing what his keen witted competitors are up to. They sit in their bureau and venerate its traditional formalities, until these become to them more sacred than an ark of the covenant.

Yet it does not follow that governmental methods cannot be brought up to date and maintained at the efficiency of the best corporation service. The mountain stays put, but Mohammed may be sent to the mountain. Every now and then the most able and up to date managers of corporate business should be summoned to Washington and required to look thru the departments and make suggestions to the President. It would then be up to him and his Secretaries to put their house in order. And it should be so put in order that it should serve as a model to all commonwealth and municipal administrations.

If objection be made that the department Secretaries are often drawn from the ranks of business men, and are

changed once in four years, and that if new ideas are not by this means brought into the service, they cannot be brought in at all, there is a sufficient answer. However competent an administrative manager may be, it is wholesome for him to know that his management is subject to inspection and criticism, not merely by official inspectors or inspectors of inspectors, but by his own expert equals. That is what keeps private business management up to the mark. Private business men and private corporations have their eyes on each other. We must get our Government departments thrown open to a freer and sharper observation, at unstated times and from unexpected quarters. Then we must bring to bear upon them the practically continuous inspection of the very best private business administrative talent. That is the way to administer administration, and it will kill bureaucracy!

### Seth Low on Heresy Trials

If the laymen are going to enter the field of discussion, it will be sure to help the cause of liberality, or latitudinarianism, if one chooses to call it so, in the case of Dr. Crapsey and the Episcopal Church. Mr. Low publishes in *The Churchman* a letter of some length, which is in the same direction as the late quieting letter of the Dean of Westminster on the main issue involved, which is that of the Virgin birth of our Lord. Mr. Low's contention is that one should not be deposed from the ministry of the Church who is "a man of godly life, of Christlike character, of multitudinous service to men," simply because he accepts the Apostles' Creed in a modified sense. This is the way he puts it:

"There ought to be room enough in the ministry of the Church, as well as in its membership, for any one to whom the Creed is the historic form of making the confession that St. Peter made: 'I believe that Thou art the Christ, the Son of the Living God'; whether such an one accepts the Creed literally, or interprets it spiritually."

He remarks that the Creed is no more sacred than the Bible, and that we have ceased to accept the biblical account of creation. He says:

"A man may cling to the spiritual significance of what is stated as a fact, when he

can no longer accept the fact so stated. This is precisely what has happened with the first chapter of Genesis. . . .

"Is belief in Christ, as manifested by a life devoted to His service, an insignificant equipment for the ministry of the Church, as compared with certain beliefs about Christ? The religious wars of the past show that in days gone by the letter was allowed to kill; but are we not, today, living in an age in which the Spirit may be permitted to give life?"

Mr. Low's conclusion may be right, but we are not quite satisfied with the form of his argument. We do not understand the meaning of "spiritual significance," or interpreting the Creed "spiritually" as against "literally." We take it that creeds were meant to be taken literally, and that to interpret them in any other way is to misinterpret them. We do not interpret the first chapter of Genesis otherwise than as it says, but we say that the six days is not historically true, but was the mythic element, or poetic element, which was needed at the time the book was written, and which clothed the great religious truth recorded. So we say of Adam's rib and the Flood. Just so of the Creed. We have the right to distinguish in old formulas the true from what is not true. Statements used to be believed, and were put in the creeds to be believed, but we have discarded them. We do not "spiritualize" them so much as we drop them; and we would do well to treat our creeds with great frankness, and not seem to believe what we do not believe, and not put new significance into plain words. If we do not believe in the resurrection of the body, let us change it to "resurrection of the dead," or "immortality of the soul," or something equivalent. And so, if one does not believe that Christ was "born of the Virgin Mary," let him leave out that clause; it cannot be spiritualized away.

### The Mayoralty of New York

Mr. Hearst has decided to test in the courts Mr. McClellan's right to hold the office of Mayor of New York. Legal proceedings of this kind involve considerable delay, but the contestant has applied in vain to the Legislature for a recount of the votes cast in November. The Recount bill was recommitted (and thus virtually smothered) in the Assembly by a vote of 86 to 47, and 60 of the

86 votes were cast by Republicans. In our judgment there ought to be a recount, and a bill providing for one should have been passed some weeks ago. To prevent a recount is to increase the number of those who believe that Mr. Hearst was really elected and has been robbed of the office to which he is entitled. The testimony of the four ballot boxes that were opened tended to support Mr. Hearst's claims, and it is said to have been reinforced by discoveries in another box, which was opened by a legislative committee a few days before the rejection of the bill for a recount. The action of the Legislature appears to have been a denial of justice. Mr. McClellan's attitude has been disappointing to many. He should have welcomed a recount and facilitated the proceedings by which one was sought. By counsel, however, he effectively opposed those proceedings, and he has been content to hold an office his right to which has not been conclusively established, and which is denied by many thousands of his fellow-citizens.

**Fewer Marriages** The steady decline in the birth rate is shown in the census reports just gathered in Great Britain; and equally there is a decline in marriages. The birth rate for 1904 was 27.9 per thousand, the lowest on record; while the marriages have fallen off 19 per cent. in thirty-five years. Since 1872 the decrease in the number of marriages of bachelors has been from 61.7 to 52.8 per 1,000; of spinsters from 61.7 to 52.8; of widowers from 65.8 to 38; and of widows from 21.1 to 12.5. This shows an increasing disinclination on the part of both bachelors and widowers to take on them the matrimonial bonds and a most unhappy condition it is. It is the business of social economists to find out what is the reason. We are in the habit of supposing that the increasing reluctance to marry is due to the greater expense of supporting a family, and the social demands which women expect to have supplied in marriage. Doubtless this has something to do with the case, but on the other hand must be considered the loose conditions which seem to make marriage, with its responsibilities, less desirable to men of

easy virtue. There are sure to be the most marriages—and early marriages—where there are the fewest attractions outside of marriage.

### Sweating Images

The eruption of Vesuvius gave occasion to observe the persistence of pagan superstitions. We are told that in the destruction of Boscotrecase the cemetery was spared, and the people ascribe this to the Madonna, whose image, which dominates the cemetery, sweated copiously, they say, before and during the approach of the lava. They mopped the image assiduously with towels and handkerchiefs. The Madonna rewarded their attentions by preserving the resting place of the dead from desecration. This is a very old notion in Italy, which was recalled by Milton, who, in his "Hymn to the Nativity," tells of the terror and flight of the pagan deities on the birth of our Lord:

"And the chill marble seemed to sweat,  
While each peculiar power foregoes his wonted seat."

Milton borrowed this from abundant classic sources. Cicero, in his treatise on "Divination," tells of the sweating of the images of Apollo and Hercules and other gods (*"Herculis simulacrum multo sudore manavit."* *"Deorum sudasse simulacra nunciatum est"*). The Latin poets are familiar with the same prodigy, and it is interesting to learn that the Virgin Mary has the same way of showing sympathy that helped the faith of the worshippers of Apollo and Hercules.

### Hungarian Nationalities

Now that peace has come between Austria and Hungary, it may be well to observe that this agreement gives disproof of the charges made against the Hungarian leaders that the Magyars have themselves attempted to rule in Hungary, while only a minority of its population. This is by no means true. The Magyars are about 52½ per cent. of the total population, the remainder being divided among several nationalities. Among the educated classes the Magyars are a still larger proportion, probably about 75 per cent. But it is not true that the other nationalities are opposed to the Magyars,

or that the Magyars fear giving them the widest suffrage. The immense majority of the Croats is with the Magyars, led by Count Apponyi and Francis Kossuth. Croatia is also crushed under the foot of arbitrary power, and expects her emancipation in the same way as do the Hungarian Coalitionists, and the people of Croatia give their hearty support. This has been felt at Vienna as the severest blow that befell the policy of the Court. Then there are 2,000,000 Germans in Hungary, who are as ardent Hungarian patriots as the Magyars; also the 600,000 Servians, and over half of the 1,500,000 Slovaks, and 1,000,000 out of the 2,500,000 Roumanians. So 2,500,000 out of 20,000,000 is the total population (including Croatia) among whom can be found sympathy with the conservative Vienna court party. The rest are firm and staunch in support of the Hungarian cause. Nor is there any political reason why the non-Magyar population should not be in sympathy with their Magyar brethren. The cause means for them the same amount of liberty as for the Magyars. Every citizen enjoys the same rights, irrespective of race or religion. He has the same use of his native language in schools, township, and, to some extent, county administration. Magyar is, it is true, the official language of the State, as it is of the majority of the people, just as English is here. The schools provide that those can learn Magyar who wish, and they can rise to the highest station. There are American States which will not give the right of franchise to those who cannot read English; Hungary is more liberal. There perfect equality reigns in law between citizens of all races, melting them into one nationality.

The Emperor William has deftly covered up a slungshot in the bouquet he sent to the Austrian Count Golochowski, in thanks for Austrian support at the Moroccan Conference. He makes Austrians angry at his assumption of patronizing the Empire, and by his promise to help Austria in return he distinctly threatens Italy. He is angry because Italy, as one of the tripartite Powers, did not support Germany at Algeiras. But are nations in such a *Dreibund* obliged to follow any one of them wherever it may

lead? Just as individuals, so nations ought to act on their best judgment of what is right, and no alliance with Germany for mutual defense was any reason for opposing France. We do not doubt that the German Emperor intended to threaten Italy, just as his telegram in support of the Boers was intended to irritate and injure Great Britain.

The case of divorce settled by the United States Supreme Court this week was this: A man married in New York, remained there with his wife three months, then went to Connecticut to live, and there got a divorce on the ground of desertion, no service of the petition having been made on her except by publication, and she not being represented before the court. Later she sought a divorce from him in New York, not recognizing the Connecticut divorce, and the question before the Supreme Court was, whether, under the Constitution, New York was obliged to recognize such a Connecticut marriage. The court says no. It is good in Connecticut, but not elsewhere, for the wife had not deserted New York, and had no part in the divorce, and is still under New York guardianship. This will be serious news to not a few divorced persons, in whose cases one of the parties only has gone to Dakota to get a constructive residence. It is in the direction of making divorces more scandalous and less easy.

Mr. Robert Watchorn, Commissioner of Immigration, in an address last week, told some plain truths that will not please those narrow people who are afraid Americans will get crowded out of their jobs by the immigrants. Now, when ten thousand are coming in on one day, he said that we need all the able bodied immigrants that we can get, and that it is the European countries that have to grieve that they have lost 4,200,000 able bodied men and women between the ages of fourteen and forty-four years, and not we who have gained them. It is in bad business years that immigration falls off. In the panic year of 1873 fewer immigrants entered all our ports than reached New York last month. Mr. Watchorn himself came as a steerage immigrant twenty-six years ago.

# Insurance

## Insurance Legislation

FOUR additional insurance bills, three of which were framed by the investigating committee, have passed the New York Senate and Assembly. This action took place last week, and the bills went thru unanimously, no changes having been permitted. The bills passed included those prohibiting corporation contributions to campaign funds, making it a misdemeanor for an officer or employee of an insurance company to render false statements, permitting a policy-holder to be elected a director of an insurance company without being a stockholder, and prohibiting lobbying. The chief interest in the insurance bills has centered in the general bill, sometimes designated the "big bill." This bill completely revolutionizes the insurance laws of this State. It has been widely known all along that the so-called giant life insurance companies were most anxious to secure certain modifications of this bill, and it narrowly escaped amendment in the Assembly. The Masonic Relief Association, of Buffalo, was strongly arrayed against the provision which prohibits the future organization of assessment insurance companies and prevents foreign assessment companies from entering into and doing business in this State. A futile effort was made to limit the amount of salary that could be paid to the president of a life insurance company to a sum not exceeding \$50,000 a year, with not more than \$30,000 per annum for any other officer.

In connection with the insurance legislation now pending, there has been and still is going on a lot of quiet self and other investigation of insurance companies. In the supply department of the Mutual Life Insurance Company, formerly controlled by Andrew C. Fields, there has been brought to light many odd vouchers. These included the traveling expenses of Richard A. McCurdy and Robert H. McCurdy, which in some cases ran as high as \$500 a week. Other interesting vouchers were drawn for sums aggregating about \$150 a year for several years on account of "furnishing plants for the court," by which is meant, according to the understanding of things

at the Mutual Building, the interior court of that structure.

Summer excursions for the women employees of the Mutual were, according to recent discovery, also financed thru the Mutual's supply department. Some of these excursions were conducted as recently as the summer of 1905.

President Charles A. Peabody, of the Mutual, in reply to recent questioning regarding London affairs as relating to his company, gave out this week for the first time an authoritative statement of what the English policy-holders want:

"It is suggested," said he, "that an English actuary come here and examine the reserve liabilities that have already been computed by the Insurance Department of the State. To this we have no objection.

"Second, it has been suggested that we elect one or more English trustees. This I think the board would gladly do, and it would be glad to have names suggested by the English policy-holders.

"Third, it is suggested that we turn over the whole English business of the company to a new company, to be formed in London, delivering at the same time the total reserve held against the English policies. We see no way of lawfully doing this, and for that and other reasons we do not consider it practicable. The legal questions involved are now being examined by Mr. Choate."

The despatches from London said that the policy-holders in England are satisfied with the financial condition of the company, but demand a change in the management, desiring particularly the retirement of the trustees who were closely associated with the McCurdy trustees. Mr. Peabody said that no such demand had ever been made on him.

Mr. Peabody said further that he knew of no such trustees as "the McCurdy trustees." The names of several of the present trustees who were very close to the McCurdys in the old days were mentioned to Mr. Peabody, but he was of the opinion that none of the present members of the governing board could be included in such a classification. Mr. Peabody was certain, however, that if the English policy-holders named any of the trustees who in their opinion ought to retire these men would either resign or give reasons why they did not feel called on to get out.

The Equitable Life Assurance Society is making efforts to restore policies that were allowed to lapse during the last year. Over 27,000 policies of \$1,000 or under so lapsed, and it was mostly the small policy-holder who had suffered because of the insurance agitation.

The charges against the Washington Life Insurance Company are still pending, but indictments are expected soon.

# Financial

## New York's Mortgage Tax

THE bill repealing New York's mortgage tax law (enacted last year) and substituting for the annual tax of  $\frac{1}{2}$  of 1 per cent. a recording tax of  $\frac{1}{2}$  of 1 per cent., has been passed by the Legislature at Albany and is now in the Governor's hands. It should be understood that, under this bill, the tax specified is paid at the beginning once for all. The passage of the measure was obstructed in the Senate by various parliamentary devices, but final action could not be prevented, and the vote in its favor was 36 to 13. There are small communities in which a few persons lend money on real estate. It frequently happens that these lenders, sometimes because they are hard-hearted, are regarded with hostility. It seems to us that last year's tax law must have had its original support in such communities, where it was believed that the lender could not avoid paying the tax. The truth is, of course, that the borrower has paid it. This was clearly proved before the legislative committees by a convincing array of statistics. The average interest rate on real estate mortgages has been increased by not less than the amount of the tax, which has thus been shifted to the borrower by the lender. Some say that Governor Higgins will veto the bill. We cannot think that he will make such a blunder.

THE Coal and Iron National Bank, of which John T. Sproul is president, has increased its capital from \$300,000 to \$500,000.

....The Hamilton Bank, of New York city publishes an interesting little pamphlet (written by the cashier, Jesse C. Joy), in which, under the title *Olde Haarlaem*, leading events in the history of the northern part of Manhattan Island are illustrated by appropriate woodcuts. This bank, which was named in honor of Alexander Hamilton, is distinctively a "Harlem" institution, and has three branches in the northern part of the city. Its resources exceed \$5,000,000.

....The Night and Day Bank will be open and prepared to transact a general banking business at its banking house,

Fifth avenue and Forty-fourth street, on the evening of the 30th inst. Oakleigh Thorne is president, G. L. Wilmerding, night manager, and Harrison K. Bird, secretary.

....Samuel S. Campbell, late cashier of the Merchants' National Bank, has been elected vice-president of the United States Mortgage and Trust Company, of which George M. Cumming is president, to fill the vacancy caused by the resignation of Clark Williams, now the vice-president of the Columbia Trust Company. The capital of the company is \$2,000,000; the surplus and undivided profits are \$4,705,529, and the total assets are over \$48,000,000.

....Miles M. O'Brien, who has just been elected president of the New Amsterdam National Bank, of New York, was born in Ireland and came to the United States in 1864. He was in the mercantile business in Baltimore for a year, and then entered the house of H. B. Claflin & Co., in New York, where he remained until 1901, when he was elected president of the Broadway National Bank. When that bank was merged with the Mercantile, Mr. O'Brien became vice-president of the Mercantile National Bank. For twenty-two years Mr. O'Brien has been a member of the Board of Education, and was the first president after the consolidation of the different boroughs, and was re-elected for a second term. Mr. O'Brien has been interested in free lectures and free baths for the pupils in the public schools, and built and established the High School of Commerce. Andrew Carnegie and the late Abram S. Hewitt assisted Mr. O'Brien in laying the corner stone of the School of Commerce. The New Amsterdam Bank was started as a State institution in 1887, and in 1901 became a national bank. Its capital is \$500,000; its surplus and undivided profits exceed \$618,000; and its total resources are \$9,164,531. The other officers of the bank are C. W. Morse, vice-president; G. J. Baumann, vice-president; E. O. Eldredge, cashier, and J. G. Hemerich, assistant cashier.

....Dividends announced:

Electric Bond and Share Co. Preferred (quarterly),  $1\frac{1}{4}$  per cent., payable May 1st.

VOL. LX

NEW YORK THURSDAY, APRIL 26, 1906

No. 2995

## Survey of the World

**San Francisco Destroyed by Earthquake and Fire** Fire, following earthquake shocks, destroyed the greater part of San Francisco in the four days beginning on the morning of Wednesday, the 18th inst. The area laid waste by the conflagration is seven square miles, or 4,480 acres, which may be compared with the 2,124 acres covered by the great fire in Chicago. San Francisco's burned district is about as large as that part of New York which lies south of Central Park and Fifty-ninth street. The actual value of the property in San Francisco assessed for taxation was in the neighborhood of \$750,000,000. The loss of property probably exceeds \$250,000,000. How many lives were lost no one knows. More than 500 bodies have been found and buried. The entire number of the dead appears to be somewhere between 1,000 and 3,000. In the area covered by the conflagration were all the great public buildings, banks, theaters, newspaper offices and department stores, many noted mansions of the rich, and the district known the world over as Chinatown.—At 5.13 a. m. on Wednesday the first of the two earthquake shocks was felt. The effect of it, and of the second shock (which occurred at 8.15 a. m.) has been obscured by the work of the flames. Fire broke out in several places ten minutes after the first disturbance of the earth. The injury caused directly by shock was to be found mainly in lower Market street (the city's "Broadway") and the district south of it, occupied mainly by warehouses, tenements, lodging houses and hotels of the cheaper class. Much of this district is "made" land, reclaimed from the bay. Hundreds of lives were lost in the lodging houses and small hotels of flimsy construction which were wrecked by the earthquake. Some large fissures appeared in the streets. In the fine business district on Market street, the great hotels were severely shaken, but the steel skyscrapers suffered but little, beyond a loss of parts of their stone work. The outlying portions of the grand City Hall fell into the adjoining streets. The ruin of this structure was afterward completed by fire. Guests who fled from the great hotels describe the swaying and grinding of the walls and the terrifying noises by which they were awakened and driven to the streets in their night clothes. But only the smaller hotels and lodging houses, some distance south of Market street, collapsed. The chimney of the California Hotel fell thru the roof of an engine house and killed Fire Chief Sullivan, who was sleeping there. It was in their effect upon the water and gas supplies, and the furnaces, that the shocks were most damaging. Gas pipes were broken, furnaces and stoves were upset, and the water mains were ruined near the source of supply, at San Mateo. So it came about that many fires broke out at once, and that there was no water to be used against them. By 10 o'clock in the forenoon the flames were raging thruout a large district south of Market street, and there was no hope of staying their progress except by dynamite.—Elsewhere, the earthquake shocks caused much loss of life and property. The main axis of disturbance extended from points about 100 miles north of the city to places about the same distance south of it, but railway tracks were depressed for miles east of the great bay. Punta Arenas lighthouse, 110 miles north of San Francisco, is gone. At Santa Rosa, about 50 miles

north, all the prominent buildings at the center were wrecked. Here fire followed shock; more than 100 lives were lost, with \$5,000,000 worth of property. Workmen are still taking bodies from the ruins. In the beautiful city of San José, about 50 miles south of San Francisco, 19 persons were killed and many buildings were wrecked. Not far away, the insane asylum at Agnew was shaken and then burned. Here 107 patients and several physicians were killed, and many demented persons were released, to roam about the fields. Thirty-three miles south of San Francisco were the beautiful and costly buildings of Stanford University. Here the memorial church, the library, the gymnasium, the arch, the power house and other structures were so damaged by shock that \$4,000,000 will be needed for a restoration of them. One student and a fireman were killed. Nearly all the towns of the Sonoma Valley report losses; the Santa Clara Valley's loss is \$15,000,000. Los Angeles escaped, but the small town of Brawley, a long distance south of it, was wrecked. The Lick Observatory was not injured. Vibrations extended across the continent, and even further. At Washington, D. C., the seismograph was so violently agitated that the marking pen passed off from the recording sheet. This was at 8.19 a. m. on Wednesday.

**Progress of the Flames** At 10 a. m. on Wednesday a large district south of Market street was blazing, and the fire had reached a group of the city's finest buildings on that street—the banks and trust companies, the *Call* or Spreckels skyscraper (highest building on the Pacific Coast), the offices of the *Examiner* and the *Chronicle*, the Grand Opera House, the Palace and Grand Hotels, the Academy of Sciences, and others. At the foot of Market street, the great ferry house, so well known to overland travelers who have entered San Francisco by crossing the bay, had not been touched. At last reports it was still intact. Dynamite was used freely, but to no purpose. Clearly, the heart of the city was doomed. The newspaper men, driven from their offices, crossed to Oakland, where, on the following morning, they were to unite in issuing one sheet

of four pages. The city was in the hands of the regular army. On the great Presidio reservation there had been stationed 3,000 soldiers, under General Funston. He took command, and he has been highly commended for his work during the days of fire. At midnight on Wednesday the outlook was most discouraging. Many of the great buildings were gone or standing merely as shells. The City Hall, covering a site of three acres, and erected at a cost of \$7,000,000, was in ruins. So was the famous Palace Hotel. The finest church of the Jesuit order in the world, that of St. Ignatius, was gone. With the burned Grand Opera House, the Metropolitan Opera Company, of New York, which had just begun in San Francisco what promised to be a most successful season, had lost all its scenery. Mme. Eames, Mme. Sembrich and other famous singers, driven from hotels by fright, were missing. All of them subsequently escaped in safety, but with much loss. Mme. Sembrich left behind \$40,000 worth of costumes and other property. Signor Caruso, the great tenor, repelled by soldiers when he sought a resting place in one of the small parks, gained admission only after he had shown a photograph of the President, upon which Mr. Roosevelt had written words of praise to accompany this gift. There was no artificial light, except that of the flames. On Thursday morning the wind turned and blew the fire westward, up the slopes of the hills. It was seen that the mansions of San Francisco's multi-millionaires of an earlier day, on Nob Hill, must go. Before night they were gone. Here were the Stanford place, owned by Stanford University since Mrs. Stanford's mysterious death in Honolulu; the Mark Hopkins mansion, which had become the Art Institute of California University; the magnificent Huntington and Crocker houses; the residence upon which Flood spent a million; and, surmounting the hill, the new Fairmount Hotel, erected by the heirs of Senator Fair. But this hotel suffered little injury. To save some of the paintings in the galleries of the houses, soldiers cut the canvases from their frames. It had not been possible to save in this way the contents of the Academy of Sciences, or the rare

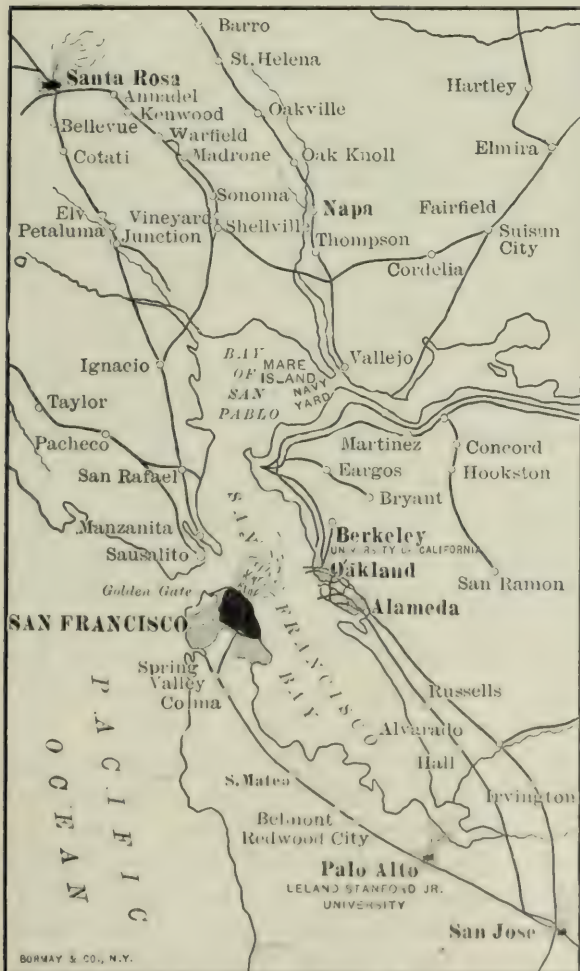

Mexican manuscripts of the Sutro collection, which had been stored in a warehouse. In the afternoon of Thursday an attempt was made to save the fine residential district of the heights further west by battering down the houses of millionaires on the east side of Van Ness avenue. The supply of dynamite was running short. Field pieces were brought from the Presidio and trained upon some of the grand residences, while dynamite lifted others in the air, to fall in shapeless masses of rubbish. In this work, Lieutenant Pulis, of the artillery, was mortally injured. But the fire crossed the avenue in two or three places, and was diverted from the heights only by a change of wind. When night came there was not much left east of Van Ness avenue. In Golden Gate Park 200,000 people slept, or tried to do so; other thousands of the homeless had gone to Oakland, or were seeking shelter under the trees of the university campus at Berkeley. There was no water, even for the weary fire-fighters to drink. All that

could be found was saved for the hospitals. The soldiers shot a thoughtless man who washed his hands in a pailful reserved for better uses.

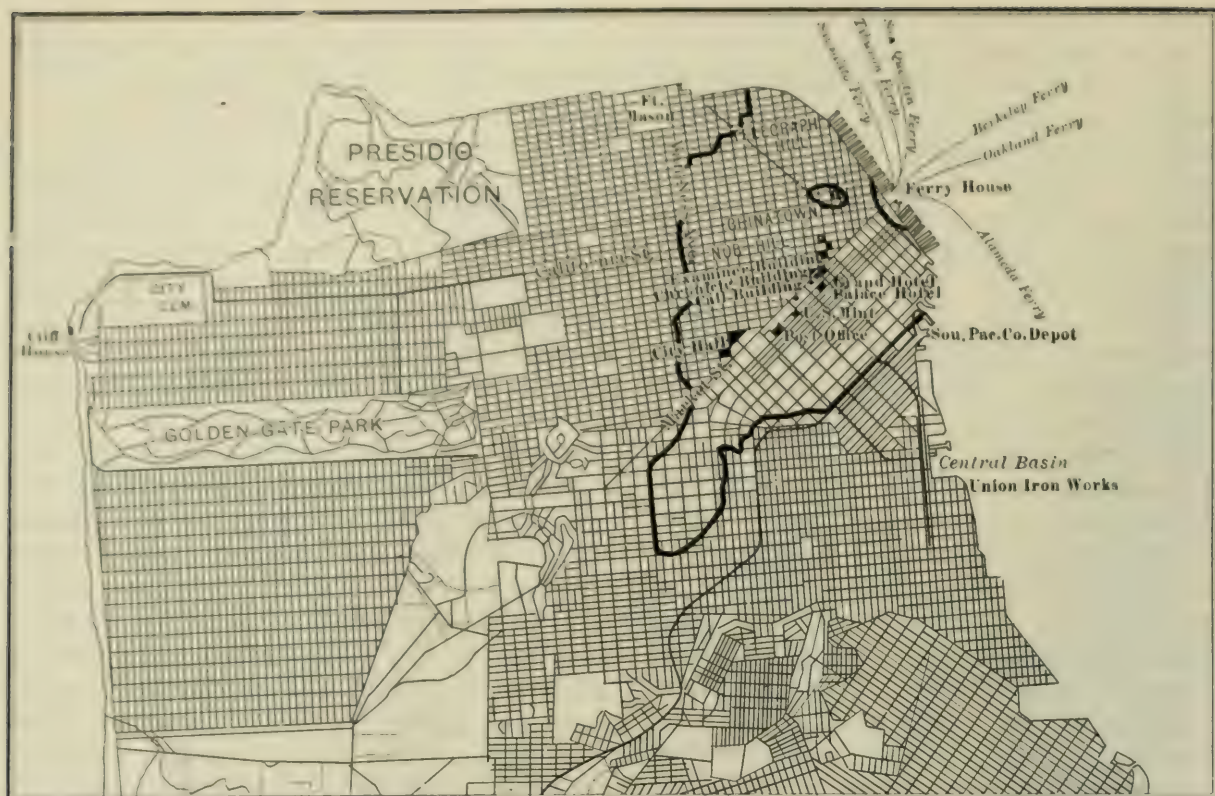

### When the Fire Died Out

On Friday morning, when it seemed that the fire must sweep over the heights, and even the park which lay between these and the ocean, the wind changed and began to blow eastward. One branch of the conflagration then moved toward Fort Mason and North Beach. From Nob Hill, another threatened what had thus far escaped in the neighborhood of Telegraph and Russian Hills. Chinatown had been swept from the face of the earth. This notorious district had covered ten blocks, and at the time of the first shock it had nearly 20,000 inhabitants. The fire which utterly consumed its flimsy structures revealed a curious lot of caverns and underground passages which they had covered. In some places there had been three stories beneath the surface, and in one or two instances the inhabitants had burrowed to the depth of 100 feet. Subterranean passages had connected buildings and cellars on one side of a street with those on the other. It is thought that a considerable number of Chinese perished in the underground retreats. During Friday and Saturday the fire, turned eastward or northward by the wind, consumed such trifles as had been left untouched in the area north of Market street and east of Van Ness avenue, sparing, however, a few isolated places and a fringe on the water front. On Saturday it had almost burned itself out, and on Sunday it was possible to examine a large part of the district in which it had raged without restraint. About 75 per cent. of the city had been destroyed; 300,000 people were homeless, many of them completely destitute. From 50,000 to 100,000 of these residents had gone to other places. Those remaining were living in the parks, taking Government rations and cooking over improvised fire-places. Order was maintained with an iron hand by the soldiers, assisted by the police and special officers. Estimates of the number of persons killed by these guardians range from 20 to 100. Orders once given to

This Map Shows San Francisco and the Region North and South of It Affected by the Shocks.

The Heavy Black Line Marks the Boundary of the Burned District. A Few Blocks Spared, North of Market Street, are Indicated by a Circle. It Should Be Understood that Large Parts of the Plotted Sections Untouched by Fire are Vacant Land or Very Thinly Settled.

persons who appeared to be breaking the rules were not repeated. Disobedience was summarily punished by a rifle shot. Probably several innocent men perished in this way. The most prominent victim was H. C. Tilden, a member of the Relief Committee, who was shot to death without warning in his automobile, which bore the Red Cross flag because it had been used as an ambulance. Some were shot because they refused to give up bottles of liquor which they had taken from saloons or groceries; others for the reason that they were robbing the dead.—At last reports, about 600 bodies had been found. These were hastily buried, a majority of them without identification. Probably some bodies were consumed by the flames; many others may be discovered when the ruins are carefully inspected.—The United States Mint, whose vaults held \$40,000,000 in coin and bullion, was saved by the long continued and heroic exertions of its employees and a few other men. Capitalists will not be prevented from erecting more of the tall steel frame buildings. Those of recent construction in the heart of the business district have suffered little injury

and can easily be repaired. All the banks but one were destroyed, but their vaults are safe. The city's records were preserved, the Custom House escaped, and, to the surprise of many, the old Mission Dolores was not burned. On the Pacific beach, the Cliff House, reported to have been thrown into the sea, is in good order.

#### Relief Work and Funds

At first there seemed to be danger of famine, for refugees in the parks had no supplies. In various ways, however, the demand for food was partly satisfied until supplies could be received from other parts of the State. There were rations at the Presidio, and all the accessible stores of the groceries were impounded by the soldiers. In the meantime, long trains loaded with food, tents, bedding, etc., were on their way from the Mississippi and Missouri valleys, and shiploads of provisions were approaching from the north. On Sunday, fifty express freight trains were moving toward San Francisco on the Union Pacific alone and there was no charge for transportation. This has been the rule with all the railroad companies. The trains first to ar-

rive were from Los Angeles, Stockton, Sacramento and Seattle. On Saturday it was announced that all the refugees had been fed. There was a lack of bed clothing in the parks, but the weather was favorable until Sunday night, when rain caused much discomfort. In Golden Gate Park thirty babies have been born. On Monday it was officially reported that a few cases of smallpox and scarlet fever had been found in the camps. Owing to the breaking of the sewers and the presence of dead bodies in the ruins, great efforts were made by the authorities to enforce sanitary rules. The water supply for the western district was restored. —A great relief fund has been raised by popular subscription. As early as the second day of the fire, New York's offering exceeded \$500,000; at the beginning of the present week it had been increased to more than \$2,000,000. Other cities, large and small, were equally generous in proportion to their population and means. Boston sent \$500,000 and promised that Massachusetts should give \$3,000,000. Chicago has given \$500,000 and intends to add as much more. The \$1,000,000 originally appropriated by Congress has been increased to \$2,500,000. At the beginning of the present week the relief fund thus made available exceeded \$10,000,000. Canada's Parliament voted \$100,000, Mr. Carnegie gave \$100,000, and so did John D. Rockefeller, the Standard Oil Trust and the Steel Corporation. E. H. Harriman's contribution was \$200,000. Theaters have given benefit performances, and in a great many churches on Sunday last collections were made for the people of the burned city. President Roosevelt asks that all contributions be made thru the Red Cross Association, which has sent Dr. Edward T. Devine, of New York, to San Francisco, to be its representative and agent there.

#### Coming Trust Prosecutions

Charles E. Hughes, who conducted the investigation of life insurance companies in New York, and Alexander Simpson, Jr., a prominent lawyer of Philadelphia, have been employed by the Government as special counsel to consider the evidence as to railway combinations in the bituminous and anthracite

coal industries. It is expected that the railway companies will be prosecuted under their direction for violation of the Sherman Act.—Edward T. Sanford, of Knoxville, Tenn., has been retained as special counsel, and it is reported that he will conduct the prosecution of the Virginia-Carolina Chemical Company, sometimes called the Fertilizer Trust, whose main office is at Richmond. This company, which is capitalized at about \$50,000,000, is said to represent a controlling combination of the manufacturers of phosphate fertilizers and of cottonseed oil.—At Chicago, on the 20th, Judge Bethea imposed fines upon the Chicago, Burlington & Quincy Railroad Company and two of its officers for granting rebates to the Steel Corporation. The company was required to pay \$40,000, and each of the two officers \$10,000, one of them being Darius Miller, vice president and traffic manager. A violation of the law had been admitted by the defendants, whose counsel said that the company had been patriotic enough to make a special low rate to Vancouver for the Steel Corporation's tin plate, in order that the Corporation might compete abroad with the manufacturers of Great Britain. Judge Bethea remarked that the law would be more useful if the penalty provided by it were imprisonment instead of a fine.

#### The Anthracite Operators' Reply

A written reply to the latest proposition of the miners' union was sent by the operators to President Mitchell on the 17th. It reviews the union's original proposition as to an increase of wages, a reduction of hours, etc., asserting that the desired increase would be 21½ per cent., and would add \$1.20 per ton to the selling price of the domestic sizes of coal. All the questions involved, the operators continue, those relating to wages and the Board of Conciliation excepted, were settled three years ago by the Arbitration Commission. These two questions the operators were willing, and had offered, to lay before the old Commission, together with the question whether there had been a change of conditions sufficient to warrant a change of the terms. But the union (said the operators) rejected this offer and sought to have every subject already settled by

arbitration reconsidered and every issue retried that was settled three years ago. No reason for a retrial of them had been suggested:

"You are responsible for the suspension of work. There was no good reason for ordering the men to stop work pending negotiations, which had been delayed by you, especially in view of the fact that we were willing to continue to pay the wages fixed by the Strike Commission.

"We have no other suggestions to make than those contained in our former propositions, and we regret that you have declined both of them. We have nothing further to offer."

It is understood that those former propositions have not been withdrawn. Mr. Mitchell and the district presidents will meet this week to consider the question. Extensive preparations for defense have been made by the railroad companies at their collieries.

#### The English Education Controversy

The more the education bill proposed by the Government is discussed the more violent becomes partisan criticism to which it is subjected. As a compromise measure, necessarily intricate, inconsistent and arbitrary in its details, it is not heartily liked even by the Nonconformists, who framed it, and it is furiously attacked by all the minority parties, from whose schools all public funds are to be withdrawn. The Roman Catholics threaten, not merely "passive resistance," but active. The Archbishop, in his Lenten Pastoral, states that "a Catholic education implies three things: Catholic schools, Catholic teachers, effective Catholic oversight of all that pertains to religious teaching and influence." The Catholic *Tablet* calls it "a new penal law," imposing upon them a double educational tax as their fathers had to pay a double land tax, avowedly because they were Catholics. On the other hand the *Methodist Recorder* says, "it looks remarkably like a new State endowment for the Roman Catholic Church," for their schools will, in Catholic communities of over 5,000 inhabitants, remain as they are, taught by nuns and members of foreign religious orders, while the State pays rent and maintenance. A series of parish meetings, under the auspices of leaders of the Established Church, are

being held all over England to protest against the passage of the bill. One of the provisions most sharply criticised is that authorizing the trustees of the voluntary schools to disregard any provisions of the charter or deed of trust which prevent them from turning over their school buildings to the local authorities for public schools, as provided in the bill. According to this even a school which was founded for sectarian education and expressly providing for sectarian instruction may be made into a public school in which only the undenominational elements of Christianity, which its opponents have nick-named "Birreligion," may be taught. To prevent any locality from being left without schools during the transitional period the local authorities have power to seize and carry on any of the voluntary schools that are about to be closed. In defense of the right of the State to convert private schools into public schools it is argued that

"the State, by long continuance of a subsidy to voluntary schools far exceeding the voluntary contributions to them, has fairly bought out all private claims to their use and is entitled to regulate them as it likes."

*The Labour Leader*, while disliking the retention of any religious instruction in the public schools, is chiefly concerned lest the discussion should postpone more important measures.

"We fervently hope that this education controversy has not been thrown among us by the devil to give landlordism, capitalism and militarism yet another half generation of joyous prosperity, while we bang the Bible at one another."

#### French Labor Riots

The great strike in the mining region of Pas-de-Calais is assuming a more riotous and even a revolutionary form. There are 46,000 miners now striking, and the numerous concessions in the matter of wages, hours and treatment which have been made to them by the operators have served rather to exasperate than to conciliate them. M. Clemenceau hoped by his personal influence to keep the strike peaceable, but in this he has failed, and his reluctance to employ the troops effectively has given the rioters the impression of weakness in the Government which

they are taking advantage of. Where M. Clemenceau has failed no one else would have been likely to succeed, for he is a pronounced radical, so strongly in favor of individual liberty as often to have been classed as an anarchist. For thirty years he has been a valiant champion of the laborer and the common people. He made two visits in person without escort to the headquarters of the most violent wing of the strikers at Lens, speaking under the red flag and amidst revolutionary shouts and songs. He promised them that no troops should be sent to the district as long as the strike was peaceable, and assured them of sympathy. Instead of dealing with the strike at long distance from Paris, he has made his headquarters at Lens, the center of the disturbance. He has been obliged to bring in the troops for the maintenance of order, but so far they have not fired upon the mobs, but have cleared the streets by cavalry charges against the crowds and barricades. The troops have shown remarkable composure and discipline under the most trying conditions, as they have been subjected for hours to insults and showers of bottles and bricks without retaliating. Many soldiers have been severely injured and one officer has been killed. There are now 12,000 troops in Lens and 30,000 in the district. The soldiers are very much disinclined to act as police in this way, but there has been no general mutiny. A soldier who, in Toulon, refused to march against the strikers and was punished for it, received a resolution of thanks from the union for his courageous stand. The resolution censures the officers for punishing him, stating that it is evident that "justice in the army is merely a matter of caste," a remark that receives its point from the fact that the courts martial of the officers have recently acquitted those of their number who refused to obey orders to invade the churches for taking inventories. Depredations of the strikers have been chiefly in attack and maltreatment of non-union miners and those who persisted in working, and in pillaging grocers', bakers' and butchers' shops to secure provisions. The streets of Lens and other cities have been several times barricaded and obstructed by wire entanglements, preventing the movements of cav-

alry. The telegraph and telephone wires have been pulled down, the railroad broken up in many places, and a railroad bridge destroyed. A general strike is ordered for May 1st to secure the eight hour day for all trades without wage reduction, suppression of all overtime, the recognition of the unions, and, in particular, the right of Government employees to form unions and to strike. The recent strike of the postal carriers in Paris and Lyons was quelled by M. Barthou, Minister of Public Works, who dismissed the three hundred newspaper postmen who first struck and filled their places, but the question is not yet settled, for the workmen in the national arsenals are incensed by being deprived of their right to strike, and the Government employees have the support of all the labor unions with which they are now affiliating. The postal rate in France is reduced from 3 cents to 2, and the postmen objected to doing an increased amount of work, which this will entail, without having their wages raised. The chief difficulty with the strike situation is the fact that the general elections are to be held on May 6th, and no party wishes actively to offend the laboring class at this time.

#### Russian Conditions

A great relief was felt by the world when the Russian Easter came and passed without the massacre of the Jews which had been fully prophesied. On the other hand, the Czar did not, as was also expected, improve the opportunity to issue any proclamations of amnesty, or make further concessions to the people. He did not even leave the Tsarkoe-Selo to go to the Winter Palace to make the customary announcement, "Christ is risen," but received his Cabinet and other officials who were brought from St. Petersburg by special trains. So far the appointed and elected members of the Council of the Empire, or the Upper House of the new Parliament, seem to be well chosen, and do not confirm the forebodings of those who held that the Upper House would be so strongly reactionary and bureaucratic as to prevent any good which might result from the Duma. — Since the control of the

national purse has been found to be the chief means by which Parliaments can increase their power, it is regarded as a serious blow to the Duma that the Czar by a recent proclamation has taken away from it the power to decide on loans and monetary questions, and placed these in the hands of a special commission. Following is the wording of this important measure:

"We find it useful to exclude from the competency of the Council of the Empire and the lower house of Parliament the right to determine the times and conditions of loans and to consign the same to a Committee of Finance, which is also charged to study all questions relating to the credit of the Empire and the monetary system. At the same time we reserve the right to submit to the preliminary examination of the committee financial matters, such as the Budget, which must go before Parliament."

The chief revolutionary movement of the week was the assassination of Abramoff, a Cossack officer of Tamboff, for the abuse of Maria Spiridonovo, the seventeen year old girl who shot the Chief of Police of Tamboff, and was sentenced to twenty years' imprisonment. Abramoff and another Cossack officer tried to induce her to confess her accomplices by kicking her about the cell, dragging her by the hair and burning her flesh with cigarettes. When this was exposed he was tried by court martial and acquitted.

—The disappearance of Father Gapon remains a mystery, two very opposite explanations being given; one is that he is imprisoned by the Holy Synod for violating his priestly vows, and the other that he was hanged by four revolutionists as a Russian spy. Father Gapon was the priest, who, in full canonicals, marched at the head of the workmen in the streets of St. Petersburg when they were fired upon by the military. He has, however, never had the confidence of the Russian leaders, as it is proved that both before and since that time he has been in the pay and acted as a tool of the Government.—Twenty-five Russian officers, headed by Chirikov, author of "The Drama of the Chosen People," which has been played in this country by the St. Petersburg company, have published a resolution condemning the Americans for their treatment of Maxim Gorky, in the following words:

"The American authors represented by Mark Twain have offended Russian authors in the

person of Maxim Gorky and Russian womanhood in the person of Madame Andreiva by interfering with their private affairs. We Russian authors are amazed at such disregard of the principles of privacy recognized by every civilized country, and hereby express our deep indignation."

#### The Turko-Egyptian Frontier

Owing to the construction of railroads in Arabia and the competition for the control of the route to Mecca, the possession of the Peninsula of Sinai has become of importance, therefore the dispute between England and Turkey for the town of Tabah is worthy of attention. The Ottoman Government has been for some months strengthening the garrison at Akabah, a port at the head of the north-eastern arm of the Red Sea, and has placed troops in the neighboring town of Tabah. This town is claimed by Egypt, and Great Britain, as the protector of Egypt, protested against the occupation. The Sultan replied that Tabah is included in the district of Akabah, and that even if it were Egyptian territory the Turkish troops would have a right there, as Egypt is still a vassal state of Turkey. The British Government replied by sending the cruiser "Diana" up the Gulf of Akabah and demanding the evacuation of Tabah within twenty-four hours. The Sultan in reply stated that he had sent a commission to examine into the boundary question and asked for delay until he could receive their report. This was granted. On their return to Constantinople the commissioners reported that Tabah is Turkish territory and the British Government was so notified. Great Britain refused to accept this decision, but has not yet taken any aggressive action. In the meantime the Turkish authorities are marking the boundary line thru the desert according to their own ideas. It is reported that the Porte claims possession of the whole Peninsular of Sinai as far as the Canal, and intends to construct a railroad from Akabah to Suez. Since the Sultan is under the influence of the Kaiser it is probable that Germany is the inspiring cause of the new Turkish movement. In Morocco, in Algiers, and in Egypt, the Kaiser is looked upon by the Mohammedans as their defender against French and English aggression.

The most important event as also the most interesting incident connected with the celebration of the two hundredth anniversary of the birth of Benjamin Franklin, last week, has been the gracious and graceful restitution to this country by Albert Henry George Grey, fourth Earl Grey and Governor General of Canada since 1904, of the portrait of Franklin carried away from Philadelphia by his great-grandfather, Major General Sir Charles Grey, in 1778, as one of the spoils of war, when the British evacuated that city. Franklin's house was the quarters for several officers, including Major André. André was an aide on Grey's staff, and Grey doubtless was quartered there also. After the British left Philadelphia, Franklin's son-in-law, Richard Bache, wrote to him, July 14, 1778: "A Captain André also took with him the picture of you which hung in the dining room. The rest of the pictures are safe." It now would appear that if André did take it, he only took it for his commanding officer, as it was carried to England and has hung, for more than a century and a quarter, in Howick House, the Northumbrian home of the Greys. Earl Grey announced his intention to restore the portrait to this country at the Pilgrim Society dinner in New York on March 31. A week later it was shipped from England by the American Ambassador, Mr. Reid, directed to the President, and reached New York April 14th. It was sent at once to Washington and immediately reshipped to Philadelphia, where it arrived on Monday, the 16th, the day preceding the bi-centenary commemorative services and was placed on exhibition at the Pennsylvania Academy of the Fine Arts. The portrait is signed in the lower right hand corner, "B. Wilson, 1759." This signature confirms two opinions expressed by me in my articles on "The Life Portraits of Franklin," in *McClure's Magazine* for May, 1897, when I said it was without doubt the Wilson painting that André has the odium of having carried off from Franklin's house, and also that the portrait that had belonged to Edward Duffield, one of Franklin's executors, now owned by Franklin's great-grandson, Dr. Thomas Hewson Bache, and supposed to have been done by West, is a copy of the Wilson portrait, whether by West or some other painter; and it is, plainly, not a very good copy of this Wilson picture. Benjamin Wilson (1721-1788) was one of the lesser prominent portrait painters of the eighteenth century. This portrait of Franklin is well drawn, solidly modeled and full of mobility of expression that shows it clearly to have been painted from life. Franklin's choice of a painter fell upon Wilson, doubtless because he was known as an electrician and chemist, had published "Experiments and Observations on Electricity," and had been admitted a Fellow of the Royal Society, in 1756. We can, therefore, understand that the painting of this portrait of Franklin was a work of particular interest to both painter and sitter. This head has also done duty for a portrait of Roger Williams, of whom there is no authoritative portrait known. Heretofore Wilson's portrait of Franklin has been known only by the mezzotint of it by James McArdell, in 1761, and although he is one of the foremost British mezzotint scrapers, he took great liberties with this portrait, not only by making it a three-quarter length, standing by a table with a book in one hand, while with the other he points to the streak of lightning, but he changed the expression of the face and expanded the already too bulky wig, so that this timely gift of the distinguished Governor General of Canada, gives us a new portrait of him, of whom Turgot wrote, "He snatched the thunderbolt from heaven and the sceptre from tyrants." The final home of this valuable portrait is to be the White House at Washington, when it will bear an inscription telling forth the generous spirit evinced in its restitution.

CHARLES HENRY HART

# Pacific Coast Earthquakes

BY RALPH S. TARR

[By a curious coincidence the following article, describing the great Alaskan earthquake of 1899, and discussing the instability of the earth's crust along our Pacific Coast, was already in type when the news was received of the similar catastrophe which destroyed San Francisco. At our request Professor Tarr has extended the article to include this new earthquake, which is the result of the same movement. Professor Tarr has for nine years filled the chair of Dynamic Geology and Physical Geography in Cornell University, and is well known thruout the country by his excellent series of school geographies. He has done much research work in the United States Geological Survey, and is associate editor of the *Journal of Geography*.—EDITOR.]

## The Alaskan Earthquake

DURING the summer of 1899 the tourist steamer made its regular trips to the Muir Glacier; but in 1900 it was stopped several miles from the front of the glacier by an impassable barrier of floating icebergs, and for three or four years no steamer was able to make the usual trip to the ice-front. The reason for this unusual accumulation of

icebergs was the shattering of the front of the Muir Glacier during a violent earthquake shock in September, 1899.

In this same month a party of prospectors was encamped on the shore of Yakutat Bay, beside the great Hubbard Glacier, about 135 miles northwest of the Muir Glacier. Last summer, Mr. Flenner, one of this party, related to me his experiences during this earthquake. The ground began to quake on the 3d

Figure 1.—Elevated Bench Cut in the Rock By the Waves Before 1899, When This Part of the Coast Stood Eighteen Feet Lower Than at Present. Lava Plants Grow on the Bench, and Both Barnacles and Mussels (All Dead) Cling to the Rocks. On the Extreme Right the Older Thicket Is Seen, and Here All the Plants Are Mature.

Figure 2.—Barnacles (Near the Knife and Cartridge) Still Clinging to the Rock Where They Grew, But Now Eight Feet Above High Tide. On the Left Are the Leaves of a Four Year Old Alder Bush, Whose Roots Are Among the Dead Barnacles, Where the Sea Stood in 1899.

of September and there were a number of shocks each day until the 10th. On that day there were over fifty shocks between nine in the morning and three in the afternoon, many of them of great severity. They culminated in a terrific shaking, so violent that it was impossible to stand. The air was filled with the roaring caused by the disruption of the neighboring glacier as its front broke and tumbled in fragments into the fiord; and above this rose the sound of huge avalanches which descended the slopes of the mountains on every hand.

While all this was in progress a huge water wave rushed upon the land and washed the party and the camp equipment back into the moraine. The bursting of a glacial lake sent down a stream which carried them out into the bay, whence they were again thrown back on the land by the earthquake wave.

When it was all over they gathered up such of their equipment as they could find, dragged their boat down from the moraine, where it had been stranded, and

started back toward Yakutat, an Indian village at the mouth of the bay, forty miles away. Twice their lives were endangered by renewal of the shaking, which occurred every day until the 20th, but was especially violent again on the 15th, when they once more encountered the water wave.

I have told only a part of the thrilling experiences reported by these prospectors, for some of the tales I do not consider probable. Even this much may seem incredible, but investigation convinces me of its general correctness.

That this party was in the bay at the time is verified by the residents of Yakutat. They also testify to the fact of almost continuous shaking of the ground between September 3d and 20th, with a particularly violent shock on the 10th; but the earthquakes were far less violent than up the bay. Nevertheless, the shaking was so strong that it was difficult to stand on one's feet; the waters of the harbor rose and fell eight or ten feet every few minutes; and the natives were

sufficiently alarmed to leave their houses and retreat to tents on the hills.\*

My main reason for believing in the story of the prospectors is the evidence which I saw around the shores of the bay during the past summer, when I spent two months in camp there. The evidence of a cataclysm is clear and convincing, and the only cause for wonder is that any one could have lived thru it. It is the chief purpose of this paper briefly to present that evidence.

Yakutat Bay, about twenty miles broad at its mouth, is there bordered by a low coastal plain, or foreland, nowhere over 250 feet high. About fifteen miles from the sea the mountains rise abruptly out of the foreland to elevations of from 2,000 to 4,000 feet, and continue to rise inland, where the dominant peaks attain elevations of from 10,000 to 16,000 feet. The bay, greatly narrowed, enters the mountains to the very base of the lofty range, then turns at a high angle and extends back, in approximately parallel course, toward the sea, the whole making a bay shaped somewhat like a bent arm. Where mountain enclosed, as it is for about fifty miles of its length, this bay is one of the grandest fiords on the American continent.

Thruout the fiord section of the bay the mountains descend steeply down to and disappear beneath the waters, forming a bold, rocky coast, with occasional beaches, especially near the streams. At the wave line, in most of the fiord, the cliff is not notched by wave cutting, and it is often difficult to land on the steep, rocky coast even at low tide and when the water is quiet. Several feet above the present high tide line, however, there is a notch, or bench (Figure 1), evidently formed by the waves, but now never reached by them. Without question this bench is an upraised shore line lifted bodily above the reach of the sea.

That it was uplifted recently is proved

\*As an instance of the difficulties under which missionaries labor, it is said that on the 10th (which was Sunday), the missionary was preaching; but becoming alarmed, either for his own safety or for that of others, stopped his sermon and went with the rest to the retreat on the hills. One of my Indian canoe-men told me that he and most of the other Indians could not accept a religion in which the missionary himself had so little confidence, as to fear for his safety while stating its principles to others. The work of years was largely undone, and to the present time this feeling is a serious handicap to the work of the missionary, altho a new man has been sent there.

by several facts, of which only two of the most striking will be stated here. In the first place, marine animals, all dead, occur in abundance upon it. These include barnacles, mussels, limpets, sea urchins and starfishes. The first two of these are still clinging in great abundance to the rock where they grew before the uplift (Figure 2), which could not be the case if they had long been exposed to the weather.

In the second place, land plants have taken root on this upraised strand; but while the neighboring mountainside is usually clothed with woody plants, notably alder and willow, the plants on the elevated benches and beaches are mainly annual plants. Here and there a small willow or alder has taken root, but there is a striking contrast between this sparse growth on the elevated shore line and the dense thickets above it, which form an almost impenetrable tangle of mature plants. Many of the scattered bushes on the uplifted shore were cut down to determine their age, but none were found with more than five rings of annual growth. This fact points to 1899 or the first half of 1900 as the time of the uplift of the coast.

Upon the latter point the testimony of the natives is definite. Since they hunt seal among the icebergs of the bay each spring they are familiar with all the details of the shore line, and they state that between the springs of 1899 and 1900 there was a profound change in the coast line of almost the entire bay. Beaches and benches were uplifted; sea caves and chasms into which the waves reached in 1899 were high above the highest tide in 1900; new reefs appeared; and channel ways between small islands and the mainland were rendered useless by their bottoms being raised above the water. They say specifically that the change occurred in September, 1899.

The amount of change of level, which we carefully determined over a stretch of 150 miles of coast line, varies greatly from place to place. In some parts, notably on the foreland outside of the mountains, there was no change of level; and in a few sections, also mainly on the foreland, there was a slight depression, admitting the waves into the forest, into which they are now throwing sand and

pebbles among the dead and dying trees. But along most of the coast in the mountainous part of the fiord there was an uplift of between one and ten feet. On one stretch of coast, however, the uplift amounted to eighteen or nineteen feet (Figure 1); and opposite this, on the other side of the fiord, from thirty to forty-seven feet for a distance of five or six miles. This is the greatest uplift of

Such a breaking of the earth's crust, occurring in a brief period of time, could not help producing a series of earthquake shocks of violence; and the shocks thus generated must, of necessity, have produced decided effects both on the land and the water. At the present time these effects are still plainly visible in the region.

The mountain slopes are scarred by

Figure 3.—Small Fractures or Faults Formed During the Earthquake of 1899. A Score or More of These Appear in the Picture, Shattering the Rock Along Parallel Fault-Lines.

the land ever recorded as having occurred at a single period of time.

The geological evidence, which will not be stated here, proves that these changes of level were the result of a complex fracturing, or faulting, of the earth's crust at this point. The movements occurred along several lines, lifting several great mountain blocks, many square miles in area, to different heights. Besides these greater faults there were a large number of minor fractures with uplifts of from 1 inch up to 3 feet (Figure 3). In these places the rocks were literally shattered.

avalanches, far in excess of the normal number in such a mountain region. The natives say that in places "the face of the mountain was entirely changed during the earthquake," and the evidence of this change is clearly present in the avalanche scars and the huge piles of *débris* thrown down to the mountain base.

Evidence of great water waves rushing thru the fiord is also visible in a number of places. This evidence is of several kinds, but is clearest where the earthquake waves washed up over forest-covered lowlands. In one place, for example, the forest is thrown down for a dis-

tance of 200 yards from the coast, and the destruction is complete to an elevation of 40 feet above the sea (Figure 4). That any one could have survived such a wave seems almost incredible. There can be no question that the wave was there; and that the prospectors saw it is evident, whether one believes that they were actually seized by it or not.

This deformation of the earth's crust, with its accompanying uplift of the coast, and the associated earthquake shocks, is of decided geological interest entirely aside from the fact that it is the greatest change of level so far recorded. It is a representation of the processes by which mountains have grown in the past—a lesson of the present for use in interpretation of the changes of the past. It shows us plainly, what other regions have shown less strikingly, that the process of mountain growth is still in operation; and it tells us not only that the St. Elias chain is now growing, but that in a single month it was uplifted, in at least one point, as much as 47 feet.

We do not know how far this uplift extended on either side of Yakutat Bay; but the fact that there was such a vigorous shock at the Muir Glacier in the same month suggests the probability that it extended at least 135 miles toward the southeast. Studies in this region will be awaited with interest.

## The San Francisco Earthquake

THE article in this number on the recent change of level in Alaska and its accompanying earthquake shocks acquires unusual interest because of its bearing upon the question of the cause of the San Francisco earthquake of April 18. Both the St. Elias range of Alaska and the Coast Ranges of California lie in one of the two great zones of earthquake intensity. One of these zones extends around the earth in an east-west direction, passing thru the West Indies, the Mediterranean region, the Caucasus and the Himalayas. Fifty-three per cent. of all recorded earthquake shocks have occurred in this zone. The second belt nearly completely encircles the Pacific, and in it 41 per cent. of all recorded earthquake shocks have occurred. This belt extends along the Andes and the

mountains of Western North America from Central America to the Aleutian Islands, thence along these islands to Japan, and on to the East Indies.

Both of these belts owe their frequent earthquake shocks to two facts. In the first place, these are the zones in which the most intense mountain growth in the earth is now in progress. With the growth of mountains the rocks are placed in a state of strain, which, when it becomes great enough, frequently finds relief either in the breaking of the rocks or else in movement along previous breaks, or *fault-planes*. This was the case in the Yakutat Bay earthquake, and, as described in that article, the evidence of the earth movements which caused the shocks is still plainly visible in the uplifted shore lines. The fact that the shores in different parts of that bay were upraised to different heights demonstrates the presence of fault-lines along which the movements occurred.

A second important cause for vigorous earthquakes is volcanic action. When a volcanic explosion occurs a jar passes thru the crust as certainly as would be the case with an explosion of gunpowder. Moreover, even before eruptions, the subterranean movements of the lava in its escape toward the surface send tremors and shocks thru the crust. It is in consequence of this fact that earthquakes frequently precede violent volcanic eruptions. For example, before the great outburst of Vesuvius in the year 79 A. D., which destroyed Pompeii, there were many earthquake shocks. One in the year 63 did great damage to the buildings of Pompeii which had not been completely repaired when the final outburst of the volcano buried the city beneath the volcanic ashes. Between the years 63 and 79 there were many earthquakes, increasing in violence until the great eruption occurred.

While earthquake shocks of volcanic origin are common in both the zones mentioned, there is no reason to believe that the shock which has done such damage to San Francisco is related to this cause. It is true that the mountains of Western America have in recent geological times been the seat of vigorous volcanic activity, and there is fairly good evidence that at least one volcano in Western United

States has been in eruption since settlements were made on the Pacific Slope. It would not be surprising, therefore, if renewal of activity should occur in some of the Western volcanoes; but at the present time there are no American volcanoes known to be active between Mexico and Mt. Wrangell in Alaska. It would be unwise to assert that a new volcano might not develop in California, but there is at present no reason to suspect such an occurrence. All evidence leads us to believe

uplifted beaches and other shore line forms at various points along the Californian sea coast. Even the Golden Gate and the Bay of San Francisco owe their origin to movements of the mountains, which, from the geological standpoint, are of recent date. At a very recent period the Sacramento River passed thru a gorge in the outer Coast Range. A subsidence of this part of the coast has admitted the sea into that gorge, forming the passageway of the Golden Gate, and, expanding

Figure 4.—Destruction of the Forest by the Water Wave Which Rose in Yakutat Bay During the Earthquake of 1899. The Trees Are Thrown Down Here at an Elevation of Forty Feet Above the Sea and Two Hundred Yards from It.

that the earthquake of California is directly associated with movements of the earth's crust such as are normal to growing mountains.

It has long been known to geologists that the Coast Ranges of California, as well as the mountains to the north and south, are in a state of present upward growth. The evidence of this is clear and convincing, and the present earthquake is but one addition to that evidence. That the Coast Ranges are rising by the natural process of folding and faulting of the rocks is proved by the occurrence of

in a broader valley behind the mountains, has flooded it and formed the Bay of San Francisco. Studies of the geology of the mountains near San Francisco show the presence of numerous fault-lines, and it is probable that movements are still in progress along some of these.

While the earthquake of April 18th is the most destructive on record in this region, it does not necessarily follow that it is the most vigorous shock that has visited California since its settlement. With the meager reports now available it is too early to reach a con-

clusion as to the actual intensity of the earthquake shock, altho it is evident enough that it was of great vigor; nor can we yet locate the zone of greatest intensity. It is evident, however, that the vigorous movement of the rocks passed either through or near a part of the city. At present (April 19) the dispatches report violent disturbances at points along north-south lines in the valleys parallel to the axis of the mountains. Whether these disturbances are due to movements along a single line, or along a number of fault-lines, as in the Yakutat Bay earthquake, can be told only after a careful study of facts not yet available. Either condition is a possibility.

From the reports it appears that those portions of the city which are situated on the hard rock of the higher parts of San Francisco were less affected than the areas located on the made land and loose soil. This is not an uncommon condition in earthquakes, for the shaking of the ground weakens the foundations and causes collapse by the disturbance of the loose earth. It is possible, therefore, that a part of the terrible destructiveness of this shock may be assignable to the unfortunate situation of the buildings on unstable ground.

Whatever relative importance this earthquake shock may ultimately receive among those hitherto recorded in California, it is to be classed as one of a series of similar earthquakes, tho doubtless one of the most violent if not actually the most violent. Some of these were mere tremors, detected only by delicate instruments; others have been sufficiently strong to cause alarm; and not a few of them have affected San Francisco itself. For a number of years the United States Geological Survey published annually a list and brief account of the earthquake shocks felt in California. An examination of these reports shows that from twenty-five to fifty earthquakes were felt in different parts of the state each year. Of those which were distinctly felt in San Francisco between 1893 and 1898 the following may be mentioned: In 1893 there were two shocks, one on June 6th, the other August 9th. A slight earthquake shock was felt in 1896, and three in 1897, one on June 20th being strong enough to cause

distinct alarm. On March 30, 1898, San Francisco experienced a very distinct shock, the heaviest, in fact, since the vigorous earthquake of October 21, 1868; by this earthquake of 1898 damage to the extent of \$342,000 was caused in the Navy Yard at Mare Island; chimneys were cracked in the city; and damage to the extent of \$2,000 was caused in the Girls' High School. This same earthquake was felt in many parts of California and considerable damage was done outside of San Francisco. Other shocks have been felt in San Francisco since 1898.

These facts are sufficient to prove that the rocks of the region near the stricken city have been in a state of strain and in an unstable condition, requiring movements for their relief. Having reached a point when the strain could no longer be borne they have slipped over one another, and the earth has been shaken by a shock of great vigor and still greater destructiveness.

The question has been raised whether the San Francisco earthquake bears any relation to the recent eruption of Vesuvius. In answer to this it may be said that, so far as geological studies have been able to discover, there is no known sympathy of action between points so widely separated as Vesuvius and California; nor would this be expected since, as already pointed out, the two areas are on entirely different belts of earthquake frequency. The close association of the two phenomena in point of time seems to be the result of mere coincidence. Movements along the fault-planes of California are in progress and, as has been stated, are occurring every year. Most of these movements are slight and in most instances the centers of greatest disturbance naturally lie outside of the scattered centers of population. This particular shock, doubtless one of exceptional vigor, attracts widespread attention primarily because of its terrible effect on human life and property. It is doubtful, however, if it exceeded in strength of development the Yakutat Bay earthquake of 1899, in the same belt, which passed with almost no notice.

In the description of the Yakutat Bay earthquake it is worthy of note that the disturbance did not consist of a single

shock, but of a series of several hundred extending thru a period of seventeen days and marked by two or three shocks of exceptional vigor. This is a very common, altho not invariable, condition in earthquake shocks. It therefore need not be surprising if the strain which gave rise to the shock of April 18 should require still further relief. If it does, other earthquakes, perhaps of minor strength, will of necessity follow this one. No definite prediction is possible on this point, but experience in other cases warrants the consideration of a possibility of a return of the earth shaking, if not at present, probably at some future date, and possibly again of destructive violence.

It is fortunate that one of the phenomena—the earthquake water wave—which frequently accompanies earthquake shocks along coast lines, has not developed in a destructive form in this case. During the Yakutat Bay earthquake water waves rushed thru the inlet, rising on the shore to a height of forty feet and causing great

destruction up to that elevation. A similar wave on the California coast would carry with it a vast amount of additional devastation, since so much of San Francisco lies close to the level of the sea. Waves of this sort develop only when the shock occurs in part or wholly under the water, or when the movement of the rocks changes the level of the land along the coast line, thus displacing a great amount of ocean water. The faulting which caused the San Francisco shocks seems to have occurred in the interior walls just back of the outer range. A small water wave is reported, but it was such as might have developed in San Francisco Bay itself, which is along the line of inferred faulting.

What geological phenomena accompanied this earthquake cannot now be stated. The movement which generated it may have been entirely beneath the surface, so that no surface indications of it will be visible, tho this is hardly probable. On the other hand, it is possible that the

The City Hall at San Francisco, Destroyed by the Earthquake.  
Copyright, 1905, by H. C. White Co.

line or lines of movement may be apparent at the surface, as was the case in the Yakutat Bay earthquake and in the Japanese earthquake of 1862, in which a fracture line was traceable for a long distance across the shaken land. If the disturbance reached the surface there may also be in this case, as in that of Yakutat Bay, a change in the level of the shore lines in the neighborhood of San Francisco.

It is a fortunate fact that the most densely settled parts of most of Europe and America lie outside the zone of frequent earth shaking. Only four notable earthquakes have visited Eastern United States since its first settlement. Two of these occurred in Eastern Massachusetts in the eighteenth century, the center of greatest disturbance being near Newburyport in 1727 and near Boston in 1755. The third, lasting from 1811 to 1813, and known as the New Madrid earthquake, was one of great violence in the Mississippi Valley, affecting especially the region in and near Southern Arkansas. The fourth was the Charleston earthquake, which, tho not of the greatest violence, did much damage because of its neighborhood to a city, tho far less than that accomplished in the San Francisco

earthquake. The scarcity of shocks in Eastern United States and Northern Europe is due to the fact that vigorous mountain growth is not now in progress there; but at an earlier geological period these regions were also the seats of growing mountains, and doubtless also of abundant earthquakes.

Those who dwell in either of the zones of frequent earthquakes are liable to the visitation of such disasters as that which has fallen so heavily upon San Francisco. In each of these zones the contraction of the earth is thrusting the mountains upward; and as they rise the rocks are necessarily breaking here and there and moving over one another, sending the message in a series of rock waves thru the crust. At one time it is in Chili; again it is in Japan, or in Alaska, or in California. It is the expression of a normal geological process which has been in operation since the first consolidation of the earth's crust; and it will continue as long as contraction continues to cause mountains to rise. When the movement unfortunately occurs near a large city the destruction must be appalling, especially if that city be a modern one of lofty piles of stone and brick.

ITHACA, N. Y.

## Undistinguished Americans

BY REBECCA HARDING DAVIS

[Since we are very directly interested in "The Life Stories of Undistinguished Americans," we have given the book for review, not to one of our regular critics, but to Mrs. Davis, an author in whose independence of judgment our readers will have confidence. In our advertising pages we show our subscribers how they can obtain this book free.—EDITOR.]

AS far as I know, Mr. Hamilton Holt, in compiling his book,\* has struck an absolutely untrodden path in the field of literature. I have not seen anything so interesting or suggestive for years as it is. The thing that he has done is so satisfactory, so thoroly well done, and withal so easy a thing to do that the reader wonders why he himself did not do it long ago. We all have felt the same uneasy grudge against

Edison or Marconi or any other successful discoverer of every day wonders to which we ourselves have been stupidly blind.

The every day wonder which this little book discovers to us is the inevitable stratum of tragedy or comedy which is hidden in all of the ordinary lives around us; in the daily doings of the car driver, the cook, the farmer's boy and the myriads of other commonplace folk who jostle us on the streets.

Mr. Holt, as we are told in the preface, has tried to secure from themselves the

\*THE LIFE STORIES OF UNDISTINGUISHED AMERICANS, AS TOLD BY THEMSELVES. Edited by Hamilton Holt. With an Introduction by Edwin E. Slosson. New York: James Pott & Co. \$1.50.

history of the lives and condition of sixteen men and women. "His aim has been to include a representative of each of the races that go to make up our nationality and of as many different industries as possible."

We, the poor, anxious mongers of novels and stories, who, incessantly for years, have been dredging our brains and raking over the unclean swamps of by-gone history to find characters and situations for our romances, naturally feel a grudge against Mr. Holt, who apparently stumbles against an original hero or heroine every time he leaves his office to cross the street. He has shown skill and fine insight in his choice from out of the crowd of the men and women who should take the *rôle* of the Ancient Mariner and tell us their stories. Each of these sixteen autobiographies is commonplace and normal enough to convince us that it is a confession from actual life, and a significant hint of the condition of the class to which the story teller belongs—be he Scotch farmer, negro peon or Italian bootblack. Nothing has happened to any of the heroes of these brief histories which is not likely to happen every day to tens of thousands of their fellows here in our streets. Neither are any of these narrators, in any sense, abnormal folk. The wandering Greek peddler does not turn out to be a blind Homer, the Polish sweatshop girl is not a masquerading Emma Goldman with a dagger hidden up her sleeve; she is concealing nothing but her poor dimes in the savings bank, against the happy time when she shall marry Henry; neither is the itinerant preacher an unrevealed Saint John. They are simply what they purport to be, and the joys and miseries and chances in life which have come to them are likely to come today to countless other peddlers and shop girls and preachers. All these little gossips have an unmistakable flavor of truth in them. In that are their weight and value.

The collection of these confessions must have been no easy task. The uneducated man is not given to self-analysis nor to the study of the events of his life with a view to finding out their causes and effects. He very rarely sees his own history as a dramatic whole, as these have been set before us.

Mr. Holt evidently has chosen men and women to tell their stories who have either some latent grudge against fate in its hard dealings with them, or some triumph in its unearned kindness—either of which convictions would give them that comprehensive view of their own lives which is the mental effort made most rarely by men of their class.

I remember that I once heard Horace Greeley say that if any ignorant man—a man whose life had been entirely commonplace—would write an absolutely truthful account of it, with not a single concealment or apology, the story would have a power and value which no novelist that ever lived could give to it. In several of these histories we feel this rare peculiar force of the naked truth. It is the stronger because the editor has refrained from urging the meaning of the individual lives upon us by any comment whatever. He states the facts, and leaves the reader to find out for himself, with whatever wit or insight he may have, the meaning which each of these experiments in living spells out.

The purpose of the whole book, too, is not the gratification of the curiosity of even humanitarians as to the modes of life of their foreign born or needy neighbors. It means something higher.

It is but a little more than a century ago since Washington, Patrick Henry, Jefferson and a few other sincere men gathered in the little town of Philadelphia, resolved to try the experiment of giving to all the peoples of the earth a chance for life, liberty and the pursuit of happiness. Here was a vast, empty continent in which the teeming millions of the world for ages to come, might, if they chose, find plenty of food for their bodies, work for their brains and peace for their souls. They read this proclamation on the green square of the town; they rang the bell, whose motto was to "Proclaim liberty to all the earth and to the inhabitants thereof."

The gates were set open. The chance was ready for every man. Nobody can complain that the peoples of the world have slighted the invitation. They have come by myriads; there is not a tribe on the round globe which has not sent its deputation to find out what they could make of the opportunity. They are coming by myriads still.

Now, as far as I know, this little unpretentious volume is the first effort to show in detail how the experiment has succeeded; how the incomers have seized and used the chance.

Sixteen living men and women—the majority of them ignorant and poor, of differing races and religions and occupations, each tell us the story of their struggle for bread and for happiness in the United States.

The first is a young man in Chicago, who was the son of a peasant in Lithuania. He could not read nor write his own language; he was forced to go to Russian schools, to worship in the Russian Church, to serve five years in the Russian army, to pay taxes to the Russian Government that left him naked and starved. When his day's work was done he danced with his sweetheart, was content with her and his neighbors for company, mourned bitterly for days over his old mother lying dead. His life was bare and tragic. But there were in it wholesome, sweet human influences. Now, he is a prosperous cattle butcher in the Chicago Stock Yards. He bought the chance to work. In Chicago, he says, you have to buy all chances. He is married. He and his wife, he tells us, make a hard fight every hour for more money. They talk all day of money—of graft, graft. She dresses finely. They never go to church. "Church is too slow." Sometimes they are homesick for the green hills of Lithuania. They do not send their boy to church schools, "but to one where he is taught how to get on—get on." He sums up the moral of his American life. "To live well you must get money."

There is, too, the story of Rocco Corresca, an Italian bootblack, who worked for a fisherman, near Naples, for his food. The food was scarce enough, but the work was light, and there were dancing in the evenings, and lots of fun in the day. He learned from the priest to say his prayers, and that it "was bad to steal or tell lies." Now he has two or three bootblackening stands in Jersey City. He has saved \$700 and wears smart clothes and a gold chain. He plays cards in the evenings and does not go to church or take lessons in conduct from priests any more.

There is also a significant story of a

Greek pushcart peddler who landed in New York with a few francs in his pocket, and is now the owner of a fruit business valued at \$50,000. He credits himself, apparently with justice, with push and honesty and shrewdness, but his success, evidently, was due to his alertness in adopting the Yankee practice of bribing the police, and thus securing good stands for his stalls on the best thoroughfares. He went back to fight for Greece in the last war. He is eager to make money in the American way, and to adopt American inventions and habits of life. But his religion, his zeal, his patriotism, all that is vital and human in the man, belong to his native land.

Among the most tragic and significant of these biographies is the story of a negro released from a Georgia peon camp. It is dyed so black with horror as to appear unreal. There is, too, the long drawn out complaint of a farmer's wife, who is a prosperous, wideawake American. Her grievance appears to be that the work set before her by the Giver of work, is that of a wife and mother, and not of a literary celebrity. This very fact, perhaps, makes her story a more typical utterance of her class of average women as they are at the present time.

There is a history of the life of a poor Scotch-Irish cook, who is a very fair example of the force, the honesty and the thrift of that most sane and virile race.

There are a Swedish farmer, a French dressmaker, an Itinerant Minister, a Syrian, a Japanese, a Chinaman, an Igorrote chief, and men and women of other races and occupations. All have been successful in this country in making money, and in securing more easy, comfortable lives.

But there are two significant traits common to all of these confessions. First, the importance of success in money making is given the first place in every one of them. Secondly, there is not in a single one of these histories of life, a word of acknowledgment or gratitude to the country which gave them the chance and the success.

Why is this?

Was there anything lacking in the gift?

# MUSIC ART AND DRAMA

## The Close of the Season

The closing events of the art season, that opened rather quietly, are of considerable significance. Besides the final step in the consolidation of the Society of American Artists and the National Academy of Design, which took the form of a sort of love feast, celebrated in the Vanderbilt Gallery by about a hundred artists a couple of weeks ago, the month has brought forth two new art organizations. In Washington, on March 20th, was issued the first report of the National Society of the Fine Arts, which hopes to become a strong influence in promoting the cultivation of the arts, by holding meetings, lectures, discussions, exhibitions, etc. The "Lesser Arts" can hope for encouragement thru the new National Society of Craftsmen, which is in process of formation, with Amy Hicks as chairman, J. J. Murphy as secretary, and such workers interested as Volkmar, the potter; De Vinne, the printer; the Misses Foote and Preston, bookbinders; Mrs. Leonard, ceramic worker; Mrs. Douglas Volk, textiles; Arthur Dow and other workers in, and teachers of various crafts. The

new society, will occupy the present Arts Club.

Various small exhibitions of work in the crafts and the larger annual exhibition of the Guild of Arts and Crafts have been held recently, and while an occasional interesting and personal piece might have been seen, the work as a mass compared to that seen, for example, in any of the London crafts shows was of a low average of skill and ideas. We haven't yet produced our William Morris.

## Scuola d'Industrie Italiane

One genuinely valuable work in this department of art has been successfully started among a class of people who do no theorizing about it, but whose output of one winter's labor puts to shame the result of the efforts of the more favored students of the several guilds. Last autumn, as a step toward betterment of the conditions for young Italian girls in this city, a number of people interested in beautiful old laces and embroidery formed a society for the development of the lace-making industry here. Signorina Amari, a patroness of the movement in Italy, volunteered to

Plaster Model of the Captain O'Neill Rough Rider Monument. By Solon H. Borglum. To Be Erected in Prescott, Arizona.

spend the winter here and start classes. A room was set apart for the work in the Richmond Hill Settlement, and factory girls invited to join the class and paid a minimum wage while learning. The response was very encouraging, and the number of capable Italian girls at once available was astonishing. A class of about twenty-five was set to work almost directly upon pieces that when finished were works of art, and the efforts of the founders of the movement were at once rewarded by the ready interest of the part of the public that could be reached. Orders came in for as much work as the class could produce, and the work itself developed an increase of taste for it, so that the industry may be said to be on a fair commercial basis already. The Art Committee that supervises the development of the patterns keeps the standard of beauty very high, and the influence of Signorina Amari, whose knowledge of lace is remarkable, will remain a tradition in the school of the kind without which no art movement succeeds. Visitors are welcome on Tuesday afternoons, at 28 Macdougall street.

### A Sculpture Competition

The year brought to view in sculpture nothing so interesting as the set of designs entered in the competition for the doors of the Naval Academy Chapel, at Annapolis. The problem of conceiving and executing a pair of bronze doors of such importance interested all of the young sculptors, and about thirty made the attempt to carry off the award. An encouraging amount of good work was

shown and much that was trivial and absurd. The first prize, the chance to do the doors, was given to Miss Evelyn Longman. Her design, on a close analysis, does not compare favorably with the best doors of the world in interest, but in a certain charm of line apart from ideas. The largest panel on the left side shows a seated old man representing Science, instructing two youths in various studies connected with the life the

Academy prepares for. The right panel shows a female figure suggestive of the Delphic Sibyl of Michael Angelo, but here representing the instruction in patriotism that is also among the functions of the Naval School. She calls and a shouting boy responds, looking away from us toward a marching troop in the background. The symbolism and indicative gestures thruout the design are of the obvious kind that our artists are all too prone to conceive, but there were many worse offenders in this direction in the collection. When it comes to modelling, Miss Longman will

probably give us something very clever, indeed. The second prize was won by Weinman, with a design in which the dominating figures were out of scale, but in which the presentation of such ideas as there were was attractive. The third prize went to the design by Noquet, whose tragic death, after a balloon ascension, took place a day or two later. His design was vigorous but not enough of a unit.

### Landscape

Van Perrine still lives with his Palisades and shows them to us as Jack London shows us his views of life in an-

Miss Longman's Doors, for the Annapolis Academy Chapel.

other field, in their rugged primitiveness and unimpressed by the civilization that lies all about them. He prefers their loneliness at night and their gruesomeness in storm and their bleakness and mystery to their aspects familiar to passengers on the river boats. Year by year he is becoming a painter of deeper things and a cleverer craftsman. Some of his canvases, like low reliefs, almost depend

### Eastman Johnson

Eastman Johnson, who died recently, was almost the last of the men who in the field of figure painting may be called contemporaries of the "Hudson River School" of landscape painters, and who produced work of a transitional character before the French influence began to predominate in our art. Born in 1824.

Road Round the Cliff (The Palisades Series), by Van Dearing Perrine, at the New Gallery.

for their effect on having the light strike them a certain way to catch the edges of the brush marks and give the intended accent. In "A Winter Night" the air fairly crackles and we feel the misery of nipped fingers. In "Bleak Winter" we feel a greater chill in the night air thru just the slightest change in the dominant hue of the picture. "The Rain Storm" is a mighty convulsion of nature. One feels that Mr. Perrine's nights with nature on the Palisades have become personal experiences and not that we are looking at pictures of them.

he painted portraits in Washington and Cambridge before going abroad in 1849. There he was for a while the companion of Leutze, the painter of "Washington Crossing the Delaware;" traveled in Italy and France, and then settled for five years in The Hague. Tho offered there the position of court painter he returned to New York in 1860, and until the last few years of his life painted solid, serious portraits, and certain genre pictures like the "Old Kentucky Home," "The Cranberry Pickers," "The Husking Bee," etc., which of their kind were

probably the best that America had produced.

### The Russian Symphony Society

With its April concerts the Russian Symphony Society of New York closed its third and most successful season. Started with the avowed purpose of making propaganda for the works of Russian composers, it was expected to bring to our hearing a miscellaneous and a curious lot of unfamiliar music; and, of course, among the con-

Eastman Johnson.

certgoers of a city rich in concerts thruout the winter season misgivings were not lacking as to the quality of the unknown Russian music and the degree of artistry with which an orchestra made up wholly of Russian musicians would fulfil its mission. The music it has played has been interesting, invariably; and often it has revealed new beauty. Especially at its later concerts this year has this been true.

Since its tentative beginnings in Cooper Union Hall three years ago, the orchestra

"Old Kentucky Home," by Eastman Johnson, at Lenox Library.  
Copyright, 1905, by The Macmillan Company.

has made a steady advance. This year it has been enlarged and improved materially, until now it ranks among the best orchestras of the metropolis. Its attainment of this position is due in large measure to the efficiency and untiring zeal of Mr. Modest Altschuler, the able young conductor of the society. Mr. Altschuler's task of confining himself almost exclusively to the study and production of new and unfamiliar works has been a difficult one; but in the doing of it he has acquitted himself well, and the evidences of his growth in musical stature from year to year have been unmistakable. He is today the most promising young conductor in America.

### Last Philharmonic Concert

Fritz Steinbach, of Cologne, presided over the last concert of the season by the New York Philharmonic Society, and according to present intentions he was the last of the series of "guest" conductors to be invited to conduct its successive performances. Herr Steinbach has a big reputation in Europe as a specialist in the music of Brahms, and his program included the second symphony of that master. Yet this was by no means the most effective of his offerings. It is undoubtedly the best of the four symphonies written by its creator, and it had already been performed four times in Carnegie Hall this season. And yet, with each repeated hearing one felt inclined the more to agree with the estimate of the Russian Tschaikoffsky—the greatest symphonist of his age—who asked: "Is not Brahms in reality a caricature of Beethoven?" and summed up the achievement of the leaden-footed German as that of one who "has set before himself, once and for all, the aim of trying to be profound, but he has only attained to an appearance of profundity. The gulf is void. It is impossi-

ble to say that the music of Brahms is weak and insignificant. His style is invariably lofty. He does not strive after mere external effects. He is never trivial. All he does is serious and noble, but he lacks the chief thing—beauty."

Herr Steinbach's interpretation of all that he played was energetic, forceful and authoritative. He has sympathy and in-

Arnold Daly. Author of "Arms and the Man."

sight and is a thoro technician; and, while he did not arouse his hearers to the frenzy of enthusiasm that some of the Philharmonic's visiting conductors have done, he obtained from the orchestra a higher degree of finish than some of his predecessors had been able to secure.

At its last concert of the season the New York Oratorio Society sang the Saint-Saëns opera "Samson and Delilah"—in oratorio form. The work is not without considerable beauties.

"The Death of Mozart." A Painting by Munkacsy.

### The Marum Quartet

A musical organization that has been steadily forging toward the front rank in this its first season is the Marum Quartet, comprising Ludwig Marum and Michel Bernstein, violinists; Jacob Altschuler, violist, and Modest Altschuler, violoncellist. Each of these gentlemen is a skilled musician and an artist on his instrument, and in the course of the last few months their ensemble playing has come to be characterized by a rare distinction of style, a noble spirit and a lofty beauty. Their concerts have been invariably delightful. As the season advanced they increased in charm. By giving its concerts at Cooper Union and charging a very moderate admission fee, the quartet has been doing an excellent work in kindling the taste and ultimate love and enjoyment of chamber music among the people of the great East Side. Its efforts have been crowned with a goodly measure of success this year, and it deserves a still greater success next.

### Music by Americans

The second and final concert of the year by the New Music Society of Amer-

ica served to bring forward compositions new to New York by Henry Holden Huss, of this city; David Stanley Smith, of New Haven, and F. S. Converse, of Westwood, Mass., besides George W. Chadwick's dramatic overture, "Melpomene," which had been played here a few times before. Of the new pieces Mr. Converse's orchestral fantasy, "The Mystic Trumpeter," made the deepest impression. It is intended as a sort of musical paraphrase of the section of Walt Whitman's "Leaves of Grass," called "From Noon to Starry Night," and is notable as perhaps the first attempt at the composition of a modern tone-poem on a subject drawn from American literature. It may in time secure a place in the regular concert repertory of other orchestras than those specially engaged for the exploitation of music written by Americans. There is no good reason why it should not do so. It revealed its author as a musician with a large command of the technic of orchestral expression, and, moreover, as one fertile in musical ideas. Familiarity should increase appreciation of the work.

While much has been done in recent years in this country to stimulate other

"The Death of Mozart." The Stage Setting in the Last Act of "The Greater Love."

forms of artistic endeavor, it has not been easy hitherto for most American composers to get a hearing. Such an effort as the New Music Society is making to supply a medium for the discovery and presentation of whatever in American-made music justifies this recognition deserves generous public support.

### Poster Art

At the Arts' Club were shown some photographs of display advertisements, here, there and everywhere in our city and uniformly hideous, a few posters from abroad, with some designs by Americans suggestive of what we might have instead, and a large collection of studies and a few decorative paintings by Alphonse Mucha, who is with us now in the winters. Mucha is astonishingly and delightfully a clever craftsman, and yet he is in his fairly rampant versatility a sort of vaudeville designer. He will design you anything from anything in the heavens or the earth or the sea. One of his drawings is an education in a certain

kind of technic, but a collection of his finished designs leaves one wearied of such a riot of whirling lines. His influence on American students may be a good one, as he possesses at least one set of esthetic ideas in which we are painfully lacking.

### Portraits

The Century Club gives us the rare pleasure of a dozen or more portraits by that always interesting and individual man, Wilton Lockwood. Here we can see refined people with minds making first impression before we have obtruded upon us any idea of their clothes. Always careless of arrangement and weak in the more obvious ways of draftsmanship, Lockwood is still subtle enough in the drawing of faces and hands where the material interests him. And his people exist subjectively from the moment we meet them on the canvases. One great bunch of peonies in a green vase among the pictures of people gives us a glimpse of the artist's delight in the exquisite pleasures of the color vision.

Hugo Ballin's "Susanne at the Bath."

## The Best Plays of the Year

Now that the dramatic season has drawn to its close we can sum up in a paragraph the best things that have appeared. As the most important plays of the year we would name:

Classical—Marlowe and Sothorn's "Merchant of Venice." Literary—Shaw's "Man and Superman." Fairy play—Barrie's "Peter Pan." Historical—"Lincoln." Comedy—"The Fascinating Mr. Vanderveldt." Musical Comedy—"The Vanderbilt Cup."

Next to these, as deserving of high praise, must be mentioned Marlowe and Sothorn's other Shakespearean plays, Richard Mansfield's repertory, in which Schiller's "Don Carlos" is the chief novelty; Sara Bernhardt's standard French dramas, and Robert Mantell's revival of "King Lear." In the distinctly literary drama we have had an opportunity to see several of the Shaw plays, by the Arnold Daly Company, Ibsen's "Ghosts" and "Master Builder," given in Russian,

and Maeterlinck's "Monna Vanna." Two interesting Wild West melodramas have appeared, "The Girl of the Golden West" and the "Squawman." The most important of dramas dealing with problems of modern life are "The Duel," "The Lion and the Mouse," "Alice-Sit-By-The-Fire" and "The Strength of the Weak." "The Greater Love," as an historical play is almost the equal of "Lincoln."

## The Plays of the Month

The two most important plays that were put on the boards last month in New York depicted the life of two of the world's greatest geniuses. The drama of "Lincoln," in which Mr. Chapin takes the part of the martyred President, we have fully noticed in our issue of April 5th. Suffice it to say that it is one of the most inspiring plays that an American can see, and we shall be greatly surprised if the people do not require Mr. Chapin to spend the rest of his life

"Souise-Anna at the Bath." Cartoon in the Fakir's Exhibition.

in bringing home to them the great character of the most beloved American. The other play is entitled "The Greater Love," and Mozart, the great composer, is the hero. It is one of the most simple, wholesome and beautiful little plays we have ever seen. Howard Kyle takes the part of the composer, and is made up strikingly like the pictures of Mozart. The rest of the cast is excellent. It is a play that really is, too fine to be very popular, but every one, with discrimination, will come away touched by its purity, sweetness, pathos and tragedy. Mozart's music is played between the acts as well as thruout the drama, and the curtain falls on the dying Mozart at the rehearsal of "The Requiem," as seen in the accompanying illustrations.

Mr. Arnold Daly and his excellent cast of Bernard Shaw players returned to town last week and produced their master's—not masterpiece—bit, "Arms and the Man." This comedy was written more than a decade ago and does not show off Shaw at his best. It is more

conventional than his other plays, if such a word as conventional can be applied to Shaw, and the author does not seem to make so many faces at his audiences thru his epigrams. In humor, human interest, and importance of theme it is inferior to "Candida," "You Never Can Tell," and "Man and Superman." Still that is not saying it is not superior to the products of most of Mr. Shaw's rival playwrights. "Arms and the Man" is a satire on military hero worship and military heroes, and that is its lesson. Miss Crystal Herne carried off the honors of the acting as Raina Petkoff. The play is decidedly worth seeing, or better still, reading.

Most of our American plays are no more worth criticising than is a plate of ice cream, so it is a great pleasure to find "The Strength of the Weak" one that really can be discussed as one would discuss a foreign play or a work of fiction. Possibly owing to its two authors, Alice M. Smith and Charlotte Thompson, the play is an incongruous com-

posite. The first part is George A. Le and the second part is Ibsen. It would require very great genius indeed to combine them. The first part is well done. The "American University for Women" gives an attractive and novel setting, and the four college girls are finely characterized. The problem is ingeniously developed and placed before the audience in the midst of the frivolity and excitement of the commencement season. The players are well selected and admirably

cised. Miss Florence Roberts has genuine tragic power of a high order. She imitates Mrs. Fiske, but so do all our young actresses, and, since they have to begin by imitating somebody, they could not choose a better model.

But the fatal weakness of the play is in its closing scenes, particularly its ending. Why this is false can be readily seen by comparing it with the ending of "Hedda Gabler" which it resembles in form. But Ibsen has prepared us for

"He that is without sin among you let him first cast a stone."  
Will H. Low's Conception of Christ. In the Exhibition at the Harmonie Building.

managed, altho some of the cheap jokes, designed to win laughs and not needed for the effect of lightness, should be ex-

the denouement all thru the play from its very beginning, and we instantly recognize Hedda Gabler's act as the logical

"He that is without sin among you let him first cast a stone."

Frank Vincent Du Mond's Conception of Christ. In the Exhibition at the Harmonie Building.

outcome of the situation. We have become acquainted with her impetuous character, her impatience of restraint and her physiological condition. We have even been introduced to General Gabler's pistols. At the sound of the fatal shot the tension of the situation relaxes as a thunderclap clears the atmosphere. We realize that her removal is the best thing for all concerned, and this is proved by the quickness with which everybody settles down. But the pistol shot that ends the life of Pauline Darcy shocks the audience. It is not dramatic, but merely erratic. It relieves nothing; it settles nothing; it is the consequence of nothing. It is out of harmony with Pauline's character as well as with the rest of the play. The only conceivable explanation of it is that the

dramatists got stuck and could not think of any other way to stop the play in time for the carriages.

We do not often in this country have an opportunity of seeing a Schiller play, except in the German theaters, and "Don Carlos," being such a long and incoherent tragedy, is a great rarity. Consequently we are grateful to Mr. Mansfield for producing this play in his usual sumptuous manner. It is unnecessary to say that he departed very widely from the conventional German style of acting it. It was heavily cut and, on the other hand, certain scenes, especially the last, were over-elaborated. The play as written is what an astronomer would call "a binary system." It has two stars, one of which sets as the other rises, during the progress of the play. This defect, which Schiller himself recognized, Mr. Mansfield has remedied in a characteristic manner by reducing his rival, Marquis Posa, to the ranks of a strictly subordinate character. By giving to his impersonation of Don Carlos a suggestion of degeneracy, Mr. Mansfield has come nearer to the historic original than to Schiller's ideal.

In "The American Lord" Wm. H. Crane has a congenial part and as usual captures the sympathy of the audience by the naturalness of his impersonation of a Dakota Congressman who has greatness thrust upon him in the form of an English title. His attempts to inculcate the tenants of his estate with American ideas and his success in settling the hereditary feud as well as in making three matches, give plenty of opportunity for amusing situations. Mr. Crane is one of the few actors who can be funny without being ridiculous.

Of a more farcical character is "It's All Your Fault," by Edgar Selwyn, in which more than the usual amount of the entanglements of prevarication afford more than the usual amount of amusement to the audience. It is given by a very clever company of players. It is worth the whole price of admission to see Miss Closser make up a face when she begins to cry.

# The Social Lynching of Gorky and Andreiva

BY FRANKLIN H. GIDDINGS, Ph.D., LL.D.

THE mighty American people, called and set apart by Destiny to be the biggest thing on earth, has made another record. It has had two spasms in one short week. In the State of Missouri it has physically lynched three negroes, accused of rape, but actually innocent. In the city of New York it has morally and socially lynched two distinguished visitors, Maxim Gorky and Madame Andreiva, for unconventional marital relations.

In the long annals of man's inhumanity to man there are few chapters likely to be more interesting to the investigator of social psychology than this episode of the moral mobbing of Gorky and Andreiva. In almost every detail it is typical. First came the unsupported accusation of wrong doing. A newspaper story was published, with sensational and question-begging headlines, setting forth that the lady who accompanied Gorky to this country was not his legal wife, altho he introduced her as such, and that he had never been divorced from the first Madame Gorky. This accusation might have been quite true, but no proof was offered. So far as any reader could possibly know, it might be an ordinary newspaper contribution to the history of a never never land. Judgment of condemnation, however, was immediately passed, and the accused was told that it would be impossible for him now to carry out in this country his mission of obtaining sympathy and financial aid for the Russian revolution. Immediately the whole pack of headline melodists took up the cry, and in a few hours a scandalized community had offered up fervent thanks to all the social deities for a timely ex-

posure that had saved decent people from the frightful blunder they were about to commit of inviting disreputable characters to their houses, or meeting them at public receptions. Panic-stricken, the proprietors of hotels, one after another, drove these accused guests into the streets, until, late at night, strangers in a strange land, it had become impossible for them to find any respectable public roof to shelter them, or even to rent an apartment. Their choice lay between a cell at the police station, or the private hospitality of pitying friends.

In the whole affair, from beginning to end, there was not one interposition of cool reason, of fair play, of giving the accused the benefit of a doubt, of insistence upon suspension of judgment until the case could calmly be looked into upon its merits. All was assertion, accusation, suggestion, innuendo, imitation, hysteria. If, regarded as a psychological phenomenon, there was one essential difference between this eminently respectable mob action in New York City and the conduct of the negro lynchers in Missouri, I hope that some acute observer will discover it.

In their lucid intervals, Americans commonly insist that the methods of "La Foule"—the hysterical crowd, the lynching mob—are unjustifiable, even when directed against persons almost certainly guilty of monstrous crimes. We profess to believe in the excellence of deliberation, and in the principles of civil liberty. We hold that it is better to assume the innocence even of the prisoner at the bar, against whom a formal indictment has been found, until his guilt has been proven beyond a reasonable doubt to the

mind of every one of a jury of twelve unprejudiced men. We do not subject him to inquisitorial process. We do not compel him to incriminate himself. We do not even compel him to establish his own innocence. This is our attitude, these are our rules of procedure, when we are entirely sane; that is, when we are not obsessed or "throwing a fit." I use this phrase of Bowery slang because, like many another gem of slang, it is an accurate bit of psychological description.

If then, Maxim Gorky and Madame Andreiva had been presumably guilty of even infamous conduct, the treatment to which they were subjected would have been indefensible from the standpoint of sober-minded, reasoning men. What condemnation of it, then, is severe enough, in view of the fact that the conduct for which they were condemned was conduct upon the rightfulness of which enlightened men and women, wholly conscientious and sensitive to points of honor, hold widely differing views. Have we indeed come to this—that Americans, long accustomed to the gibbeting and roasting of negroes without due process of law, are now prepared to settle once for all every doubtful case of morality by the conclusive logic of the mob mind?

Maxim Gorky and Madame Andreiva believe that a preference of one chosen man and one chosen woman for each other, and before all others, is the pre-eminently rightful and decent basis of the marriage relation. They insist that it is not right to set up a technical legal relationship, an economic convenience, or a circumstance of social conventionality as morally superior to the spontaneous preference of a man and woman who know, and whose friends know, that they love each other. In this belief Gorky and Madame Andreiva are not singular. In whole or in part it has been held and taught by some of the best men and women that have yet lived. Dante foretold it in his "Vita Nuova." Petrarch proclaimed it in his fidelity to Laura. John Milton, the sanest, as he was the mightiest prophet of Puritanism, iterated and reiterated it in his famous tract on divorce, which no ecclesiastic with a self-respecting regard for his own intellectual reputation has ever dared try to answer. Shelley and Goethe preached it in both

word and deed. Richard Wagner stood for it unflinchingly thruout life, and gave it expression in the imperishable music of "Tristan and Isolde." John Stuart Mill, the calm-minded philosopher, held fast to it thruout his relations with Mrs. Taylor, when his cherished friends cut him dead because of it; George Eliot proclaimed her own loyalty to it by a life of very quiet but very effective defiance of Mrs. Grundy and all her British matrons, and Herbert Spencer carefully formulated it in his "Autobiography." Perhaps all these eminent persons, being gifted beyond most of their fellow men, were a little bit cracked in the head, and altogether unsafe. That, we know, is the charitable view which is taken by conventional folk that haven't been able to understand or to agree with them. Be that as it may, they all in their day and generation stood for the sort of thing that Gorky and Madame Andreiva stand for to-day.

The Gorky case is in fact essentially like the George Eliot case, as has been shown in the published statement made on Gorky's behalf by Mr. Leroy Scott. Lewes could not get a divorce from the first Mrs. Lewes because British law did not grant divorces in cases such as his. Gorky cannot get a divorce from the first Madame Gorky so long as he remains a Russian subject. In all decency and consistency, therefore, the ladies and gentlemen who have taken part in the social boycotting of the Gorkys should instantly with a long pair of tongs pick up any stray copies of "Adam Bede" or "Romola" that may be lying about their houses, and cast them into the fire, preferably with a pinch of brimstone.

Other aspects of this remarkable affair well deserve consideration. One is the cool impertinence with which many local newspapers have presumed to instruct Mr. Gorky in the elements of morality and common sense. Conspicuous among journals that have not descended to such performances has been the sheet that "shines for all," whose discovery that "the purity of our inns was threatened" has been the saving gleam of humor in the situation. Perhaps we should except also, as humorous in quite another way, the *argumentum ad hominem* solemnly

delivered by an eminently dignified oracle that entertains conservative views about the humor that is fit to print. It reminded Mr. Gorky that, having come to study a country where public opinion rules, he had been enlightened all of a sudden. Unhappily, this pleasantry may miss its mark, because Mr. Gorky, as an intelligent gentleman of an inquiring turn of mind, if he is too vehemently assured that the phenomena which he has witnessed are ebullitions of public opinion, may hasten away incontinently to discover a land that is ruled by public hysterics.

One further phase of the business is more serious, and I wish to speak of it quite seriously. Our newspapers proclaim themselves our true critics and our rightful censors, because their word reaches all sorts and conditions of men, as the word of the preacher, of the orator and of the essayist no longer does. They resent the insinuation, when it is made, that their judgments are dictated by the circulation department or the advertising manager. They profess to be guided in all their utterances by stern views of public duty.

Very well, let us take them at their word. What, then, are the moral principles that they steer by? In this age of the world they ought not to deal in the occult. Professing to shape public opinion, they ought to give us at least a hint of their rules of procedure.

I will be specific. A few years ago there died suddenly in one of the chief cities of America a man of great wealth who controlled vast business interests, and who had been a prominent figure in national politics. Within twenty-four hours every reporter, managing editor and editorial writer on the New York press knew all the circumstances of a tak-

ing off that would have made one of the most interesting stories ever committed to print. Not one newspaper in this city told that story. And this act of decent self-restraint was, I suspect, in the minds of right-minded men generally, about the most creditable episode in the history of American journalism. How is it, then, I should like to ask, that these same newspapers find it inconsistent with their public duty to practice a similar restraint when opportunity opens to spare or to assassinate the private reputations of men and women who do not happen to be powerful, or to be surrounded by powerful friends? Maxim Gorky came to this country not for the purpose of putting himself on exhibition, as many a literary character has done at one time or another, not for the purpose of lining his own pockets with American gold, but for the purpose of obtaining sympathy and financial assistance for a people struggling against terrible odds, as the American people once struggled, for political and individual liberty. Whereupon the American press, which had been so discreetly careful of the reputation of a man whose business associates could have made the newspaper publishing business a precarious means of obtaining a livelihood, deliberately set about to "queer" Mr. Gorky, and to make his mission impossible.

The profession of the daily newspaper writer is followed by thousands of high-minded, loyal men. I yield to none in my respect and admiration for them. But when the newspaper press does the sort of thing that it has been guilty of in this Gorky case, it owes an explanation to a public that is not made up exclusively of the unintelligent, and which has, after all is said and done, a sensitive regard for fair play.

Shelby M. Cullom.

# The Meaning of Mormonism

BY SHELBY M. CULLOM

[The Hon. Shelby M. Cullom, United States Senator from Illinois, Chairman of the Senate Committee on Foreign Relations, member of the Interstate Commerce and other important committees, has been in active public service for half a century and remains, to-day, in public and private esteem, one of the fairest minded, most earnest and conscientious of our legislators. He is a veteran fighter of Mormonism, from the early days when the Church tried to lay its foundation in Illinois, and was ousted, bag and baggage. His opinions and the degree to which they have changed in past years will be especially interesting and instructive at the present time.—EDITOR.]

A QUESTION vitally connected with the meaning of Mormonism to the United States is soon to come before the Senate, in connection with the appeal to deprive Senator Reed Smoot, of Utah, of the seat which he now occupies; but not in so wide and broad a way as the public apparently understands, judging from the multitude of petitions which have recently been presented to the Senate, demanding drastic measures in accordance with the appeal and along the lines of the popular agita-

tion which has to some extent overspread the land.

The Committee on Privileges and Elections, under the chairmanship of the able and earnest Senator Burrows, has devoted many months to a careful examination of witnesses and most painstaking and conscientious investigation, probing the question deeply and upon many sides. What the finding of the committee will be and just how the matter will be presented to the Senate, in the near future, even the members of the

committee cannot say as yet; and to discuss what their action or the eventual course of the Senate may be or ought to be would be unjust, unwise and indelicate in the extreme.

In view of the tendency of many of the petitions, however, which apparently anticipate action upon the broadest generalities that can be gathered together for condemnation, it may be well to say that in an individual case of this kind such sweeping denunciation cannot be brought to bear. There is a grave constitutional question which presents itself, regardless of what the personal sentiments of the Senators may be. The parliamentary matter of a seat in the Senate must be considered upon purely constitutional and parliamentary grounds and decided without fear or favor according to honest convictions of what is the law.

Outside of this it is perfectly proper for me, or any one, now or at any time to discuss the broader and more vitally important subject of the meaning of Mormonism to the United States and its possible or positive position as a menace to the best development and integrity of our country. This much I shall attempt, with no direct or implied application to the parliamentary questions which will soon claim the attention of the Senate.

For fifty years, in various official capacities, as Speaker of the Illinois House of Representatives, Governor of the State and Chairman of the Committee on Territories in the National House of Representatives, before entering the Senate, I have vigorously opposed Mormonism with all the force which I could bring to bear. I had the honor—and as Mormonism used to be, at least, I consider it a signal honor—of framing the first anti-Mormon bill, which passed the House and was buried in the Senate, but which afterward became the frame and substance of anti-Mormon legislation. In the Committee on Territories we also framed the anti-polygamy act, restricting the Territory of Utah. My opinions have only changed in these fifty years so far as I have been led to believe that the ethics of Mormonism had really and radically changed, on the two vital issues—polygamy and hierarchy—which, to my mind, have always constituted the true

meaning of Mormonism, as a threat or a menace to the United States.

That is the question today, and practically the only question, with which we have a right to deal as a nation. In these two features has Mormonism materially changed, to what extent, and is the change final and irrefragable? It will not do, in this matter, to rely too much upon vociferous declarations of those most interested to make reformation apparent—neither is it by any means just to accept the vituperations of agitation, too often based on incorrect premises or insufficient information. Truth is often in a solution of venomous assertion, but it is always there with an intent to do injury. As loyal citizens it is our duty to arrive at legitimate and trustworthy conclusions, and then enforce our convictions for the best good of our country, so far as it lies in our power to do so.

Words cannot overestimate the danger to a republic of any tendency, either public or private, religious, judicial, communal or individual, to set at defiance or even to evade or ignore the laws of the land under which the perpetrators claim protection. Such an internal condition, however small or remote the center of evil may be, is a malevolent influence which must be eradicated. There is no possible excuse for the man or corporation, community or court, Church or State, that would ignore or set aside the laws under which it exists. If laws conflict with conscience there are always two methods for relief. If the conflict is general the law can be changed. If it is individual the individual can move away from under it. There is nothing which can justify the deliberate and persistent breaking of any law, and a tendency or attempt to do so is a serious condition, threatening the integrity of all who are even remotely connected with the wrongdoers.

No one can deny that there was once a time, at least, when Mormonism was a grave and serious menace to this country. Polygamy and hierarchy, as promulgated and perpetrated in the early Mormon Church, the two cardinal features, were a disgrace and a danger to the integrity of any community in which they were permitted to exist. With

their natural outgrowths they constituted the meaning of Mormonism and its menace. Beyond the influence of these features it is quite probably true that there is much which is encouraging to development, much which is commendable in the conditions pertaining to the Mormon system; but just so far as these two elements exist, today, Mormonism is a menace—tho not so much a menace—to this country as it was in the beginning. Not so much because there is inherent weakness in each element which must yield to contact with the world where it could flourish in the isolated conditions of a few years ago.

Statistics seem to show that the practice of polygamy is steadily dying out. Many statements have been made, under oath, to the effect that it is already dead as a principle, tho it cannot be denied that to a limited extent polygamous lives are still lived, obviously justified by the Church, since the First President publicly acknowledges himself a polygamist; winked at by society and ignored by courts of justice, on account, we are told, of certain mitigating and extenuating circumstances. I do not find much sympathy with this plea. Mitigating and extenuating circumstances may condone many things between individuals, and in the present peculiar conditions it is possible that there are some who have honestly persuaded themselves that they are sufficient to the malevolent influence of deliberately setting the law at defiance, but it is a mistake. So far as any law of the land is being set at defiance or set aside, under cover and protection of Mormonism, Mormonism itself is a menace to the whole country, regardless of any and all extenuating circumstances.

That is the danger—the shielding of the lawbreaker and defiance of the law, indorsed by the Mormon Church. For polygamy, in the abstract, as it presents itself in Utah today has not the serious element in the influence of Mormonism which was exerted twenty, or even ten, years ago; while the defiance of law has grown more pronounced and offensive.

In its early days Brigham Young was the Mormon Church, temporal, spiritual and material. He was the prophet, priest, seer and revelator, the First President, treasurer and trustee of the

Church of Latter-day Saints. I remember a sermon which he preached, in which he said:

"I never yet preached a sermon and sent it out to the children of men that they may not call Scripture. Let me have the privilege of correcting a sermon and it is as good Scripture as they deserve."

Doubtless most of his hearers believed his claim that he spoke to them from God, and it is easy to understand how such a man, at the head of such a church, is a danger to any community or country. There was nothing doubtful about the proposition when we began our fight. There seems to me to be nothing doubtful about the fact that some features remain which should be condemned, today. But it is earnestly and repeatedly asserted that the old *régime* is abandoned, and before we form too sweeping a judgment of condemnation, today, we should be sure just how much the conditions—the fundamental conditions—have really changed; how materially the sentiment, as well as the institution has altered—not merely been temporarily modified to the demands of the moment or the fear of the revelator, but radically re-formed. If the reconstruction has been as thoro as is claimed, and is lasting, then very much of the menace of Mormonism has been removed.

There is no question but that the conscience should be awakened to obedience to the law, but beyond that, polygamy as it stands, today, is not of the gravest importance, for it is a practice so contemptible, so deprecated by and abhorrent to all right minds that, Church or no Church, it will slink away and hide itself in shame before the inroads of the clean theories of good lives permeating its stronghold. Irrespective of legislation it would never have held out long against the higher sentiments of humanity, even under the shadow of its Endowment House, when the railways entered, bringing civilization, real men and women, into its solitudes. From without, better than from within, comes the assurance that polygamy is no longer anything but a fetid memory of Mormonism. The vital spirit to protect what is left of it by defying the law is the serious feature.

Personally, I believe that the principle of polygamy, even at the start, was only

a matter of policy. It was promulgated as a revelation, by one who believed that the practice would promote the system and strength of the community he was developing. It flourished and Mormonism flourished with it till President Arthur, at my request, appointed my old law partner, Judge Zane, Territorial Chief Justice of Utah. He made such a vigorous assault on the violators of the law that another revelation was promulgated, which, publicly at least, relegated the contracting of plural marriages to a grave somewhere in the shadows of the Temple. It is doubtless true, as alarmists say, that another revelation might easily resurrect the principle, so far as the Church is concerned, but if the law is enforced that is of slight consequence, except as it would disgrace the Church in the eyes of all the world.

It was under the second revelation that Utah became a State, with the condition inserted by Congress, that anti-polygamy legislation should be enacted. This was done. The State law is in force, but from the first it has been more or less ignored. This, at least, should not be tolerated. It is not incumbent upon any one to remain in Utah if the laws conflict with his conscience or convenience; but it is the duty—the common law of self defense—for loyal citizens to see that the laws are obeyed by all who take advantage of their protection. If the State of Utah or any other State is unable or unwilling to cope with violators of such a practically universal law, there should be a constitutional amendment giving Congress the power to make and to enforce it. It is a perfectly practical proposition, for it is not the State of Utah, but the United States, which suffers from such disloyalty and dishonor. Such an amendment would forever do away with any danger from one of the two features which have made Mormonism a menace to the United States.

The other I consider by far the most important at the present time, as well as the most difficult to deal with. The spirit of hierarchy in any form, but especially Church hierarchy, has too often proved dangerous to be overlooked because it occupies so comparatively small a space in a great nation. It is not the abstract ethics of the Mormon Church with which we have any right to come in contact and conflict, for we are pledged, as a nation, to freedom to worship God. Every man has the inalienable right to accept the faith that pleases him and believe what he will. Indeed, I am willing to accept the assertions that in many details the Mormon faith is a strong advocate of justice, righteousness and integrity. It is not improbable, as its advocates claim, that the ethics of Mormonism include many principles, which, in themselves, tend to produce good men. If "By their fruits ye shall know them," then, for sobriety, industry, thrift, the characteristics attributed to Mormon communities, speak well for the dominance which has curbed and incited them. But if the hierarchy of the Mormon Church exists as it once existed; if it penetrates, as it once penetrated into the affairs of citizenship; dictating, as it once dictated courses of conduct at variance with the laws of the land under whose flag it claims protection and privilege, then we have something in our midst that is a real menace, demanding our strenuous and persistent efforts for reform. We cannot too earnestly denounce and combat every tendency of hierarchy to dominate law. The organization which sets its tenets above the Constitution of the United States, demanding allegiance either by oath or admonition to that which is at conflict with the welfare of the community and the country cannot and must not be tolerated. If that is still the meaning of Mormonism then Mormonism is still a menace to be condemned.

## Hall's Immigration

IT appears to be in the necessary order of things that from time to time we should grow somewhat hysterical over the question of immigration. Even in the first decades of the nineteenth century, as Mr. Hall points out,\* statesmen were exercised over the danger of the submerging of American institutions by immigrant floods. Every one is aware of the Know Nothing panic of the middle of the last century; and the recent record breaking immigration people trembling for the purity of our American blood—even tho their names may end with "vitch" or "stein" or "mann" or "sen." In our present agitated frame of mind, there is little comfort for us in Mr. Hall's book. All the familiar charges against recent immigration are rehearsed, and scores of new and more terrifying ones are advanced and all with uncommon skill and vigor. The immigrants are the source of a disproportionate amount of crime, pauperism, insanity, disease. They lower our standard of living, they mar our cities with reeking slums, they take our jobs, they multiply like rabbits and keep us from multiplying at all. They corrupt our politics and spoil our English. If they would but stop with that! But they are going to change the shape of our heads, ruin our fair complexions, lower our stature, substitute abstract ideas for our American push and energy. And we sit idly by!

There is no denying that the case against immigration, as presented by Mr. Hall, will come very near convincing any reader that our present immigration policy needs radical modification. Yet it may not be amiss to point out that the argument is that of an advocate, and is to be accepted with reservations. Much stress is laid upon the fact that the foreign born are more criminal than Americans of several generations standing. But statistics of criminality reach only those criminals who have been *caught*. Recent events have created an impres-

sion that if anything happens to shake one of our native American corporations, something that looks remarkably like a gang of criminals comes tumbling down—tho it is of course impossible to jail them. With all his shrewdness, the American ought to find it easier to escape punishment for his misdeeds than the ignorant immigrant. As for pauperism, since the immigrant, being a weak bargainer, probably sells his labor nominally at a price which yields a good profit to the employer—generally an American—it may be doubted whether the burden of supporting a few paupers of the foreign-born class argues a net loss to the country from that class. Political corruption is rife in cities with large immigrant population—but let us remember native American Philadelphia. The Sicilians are illiterate, unquestionably, but we have poor white trash of our own.

Following a suggestion of President Walker, Mr. Hall ascribes the decline in the birth rate among native Americans to the increase in immigration. It may be doubted whether this view is tenable in the light of Australian experience. The decline in the birth rate is no less marked there, altho Australia has not suffered from excessive immigration. A declining birth rate is rather ascribable to the cityward tendency, made possible by improvements in transportation.

To quote an excellent suggestion of Mr. Hall's (employed in another connection):

"Our beliefs and purposes are little dependent upon logic or intellectual information. What is impressed on two men will produce widely different results, according to the way they react towards it; and this reaction depends upon those vast, vague undercurrents of life which are largely determined by heredity."

The vast, vague undercurrent in our immigration restrictionist logic is the feeling that the foreigner's ways are not our ways; he is therefore our enemy. That we should detest the ways of the stranger is natural, and probably as justifiable as the love of life. Having a mistaken notion, however, that this is not respectable, we traduce the character of

\*IMMIGRATION AND ITS EFFECTS UPON THE UNITED STATES. By Prescott F. Hall. New York: Henry Holt & Co. \$1.50.

the stranger that we may ground our de-  
testation of him in pure reason.

## The Political History of Eng- land

THE new *Political History of Eng-land*,\* of which four volumes have now been published, is the most ambitious attempt that has yet been made at a general English history. It is planned to appear in twelve volumes, each by an author who is considered an authority in his particular period. Each volume will run to about 500 pages, with an appendix containing an account of the authorities used, and with maps and an index. Of the twelve authors, nine are Oxford men, and one only—Prof. G. B. Adams, of Yale—an American. The other two—Dr. Hodgkin and Professor Pollard—are from University College, London. The scheme of the history as set forth in the general preface by the editors, the Rev. William Hunt and Mr. Reginald Lane Poole, is

"To deal primarily with politics—with the history of England, and after the date of the union with Scotland, Great Britain, as a state or body politic; but as the life of a nation is complex, and its condition at any given time cannot be understood without taking into account the various forces acting upon it, notices of religious matters and of intellectual, social and economic progress will also find place in the volumes."

Histories of England are abundant; but the last twenty or thirty years have made available a great mass of new material—of records, chronicles, memoirs and letters—and have seen the publication of numerous monographs on special phases or periods. Hence it seems as tho it might be worth while to bring out a history, which, while detailed and scholarly, shall not be beyond the scope of the general reader. Whether or not this new venture of Messrs. Longmans, Green & Co. will fill this demand will depend on the ability, the care and the accuracy of the different authors to whom the several periods have been assigned.

\*THE POLITICAL HISTORY OF ENGLAND. In twelve volumes. Edited by Rev. William Hunt, D.Litt., and Reginald Lane Poole, M.A., Ph.D. New York and London: Longmans, Green & Co. \$2.60 per volume.

Vol. I, From the Earliest Times to 1066. By T. Hodgkin.

Vol. II, 1066 to 1216. By George Burton Adams.

Vol. III, 1216 to 1377. By Thomas Frederic Tout.

Vol. X, 1760 to 1801. By the Rev. William Hunt.

In reading it continuously the effect is like that of the composite novels, of which one chapter shall be contributed by each of a group of well-known novelists. In the case of Professor Tout, this resemblance is marked, because for a time the reader seems to have lost completely the thread of the story which has run clearly and smoothly thru Professor Adams's work; but which only re-emerges after a while in Professor Tout's book, and needs very careful following in its tortuous and sometimes tangled course through his pages.

Professor Adams in Volume II of the history carries the story from the Battle of Hastings to the death of John, almost immediately after the signing of the Magna Charta. Had distinctive titles been given to the separate volumes, this one would have been well named "The Birth of the English Nation"; for it was during this period that England was welded into one great unity; that it became possible to speak of Saxons, Danes and Normans, of Northcountrymen, East Anglians and Cornishmen, all as Englishmen; and to trace the beginning of a sense of solidarity and patriotism in the new-made nation. The story of England during this eventful period is the two-fold story of the feudal system and the English Church. On the one hand is the introduction by William the Conqueror of a feudal system modified to suit his conception of the rightful position of a strong king. This all important modification, by which every holder of land swore fealty to the king in addition to his fealty to his immediate overlord, was in fact the beginning of democracy in England.

On the other hand, it is the history of the English Church, of its reformation in ideals, morals and learning thru the Continental influences brought to bear upon it after the coming of William, and his appointment of Lanfranc as Archbishop of Canterbury; and then of the long struggle between English King and Roman Pope as to who was to control this great factor in the national life. Professor Adams brings out dramatically the varying fortunes in the struggle, and the enormous importance of the matter at issue. That the people as a whole were with the King in this age-long struggle, which was not to end until Henry VIII should re-

puddiate all Papal authority at the Reformation, seems probable; tho Professor Adams warns his readers not to accept too implicitly the modern idea that England was indignant at the act of King John in acknowledging himself the vassal of the Pope. "England thrilled at the news with a sense of national shame such as she had never felt before," wrote John Richard Green. "There was nothing that seemed degrading to that age about becoming a vassal," says Professor Adams, and "there is no evidence," he continues, "that John's right to take this step was questioned by any one or that there was any general condemnation of it at that time." Tho Professor Adams may be right in this contention, he shows clearly on which side the national feeling lay; and in Professor Tout's succeeding volume this feeling is shown to have been intensified by the natural dislike of Englishmen to seeing benefices and places of dignity in the Church filled by foreigners at the will of the Pope.

This period covered by Volume III. is marked by the extraordinarily long reigns of the four kings who ruled England during its 161 years. The shortest of the four, that of Edward II, is of the quite respectable length of twenty years; while the longest—that of Henry III., lasting fifty-six years—is surpassed only by the reigns of George III. and Queen Victoria. Another characteristic, and one which is unfortunate for the continuity and unity of Professor Tout's story, is the number of foreign wars in which England was involved. But the crowding of all these transient, tho exciting, details into the story somewhat obscures the working out of England's national development, and makes much of this volume seem somewhat out of place in a political history of England.

Mr. Hunt's volume should appeal particularly to American students of English history; for within his forty-one years comes the end of the war with France and the conquest of Canada; the war with the revolted American colonies; the break-up of the system of government by family connections established by the Whigs soon after the Revolution of 1688; the period of George III.'s personal rule; the final development of the system of government by party; the reorganization

and establishment of the Tory party during the seventeen or eighteen years when Pitt was Premier; the full development of government by party, with administrations dependent on popular support in the House of Commons; the constitutional and economic reforms which were made in Ireland later than 1768; and finally the Act of Union, which made an end of the nondescript Irish Parliament in 1800 and sent Irish members across St. George's Channel to plague and distress, almost from the first, British administrations, whether Liberal or Tory.

It will attract American readers; but it is scarcely conceivable that it will secure their commendation or be ranked on this side of the Atlantic among the standard works covering the history of the Revolution. It is written by a Church of England clergyman from a Tory standpoint; so much so that Mr. Hunt justifies the closing of the port of Boston, the employment by the British of German mercenaries and Indians, and sneers at Henry, Adams and Hancock and all the other personalities in politics and war of the Revolutionary period except Washington, of whom the worst he notes was that his education had been neglected. In a spirit that is difficult to understand he persists almost thru his story in writing of the Revolutionary forces as rebels and insurgents, as tho the Revolution never got beyond the dignity of a street fight, and as tho the Continental Congress, with which the British Government made efforts to treat long before Yorktown, counted for nothing in the national uprising which brought the United States into existence.

With American social and economic conditions of the Revolutionary era Mr. Hunt displays but a poor acquaintance. He shows no understanding of social and economic conditions which differed so much and for the better from the social conditions of the common people of England in the first two decades of the reign of George III. It is the same with the political literature of the Revolutionary period; and at times his topographical knowledge also is much at fault or is set forth in a slipshod way.

There are sections more exclusively English which are much better done; but it would be possible to cite instances

in which even as regards English history the volume is lacking in breadth of view and inclusiveness, but personal opinions are unwarranted. Two of these instances may be cited—his *abiter dictum*

It was a great factor in keeping the Province of Quebec loyal to the British connection; but had Mr. Hunt divided a month between Quebec and Montreal, and then made a longer

JOSEPH JEFFERSON AS RIP VAN WINKLE.

From "Joseph Jefferson: Reminiscences of a Fellow Player." By Francis Wilson. Scribner's.

that the effects of the Royal Marriage Act of 1772 "have been beneficial to the nation"; and his remark that the Quebec Act of 1774 was a "wise and just measure." The Quebec Act was undoubtedly of service to the British after the Revolutionary War had broken out.

sojourn in English-speaking Canada, especially in Ontario, the probability is that he would be disposed to revise this judgment, and regret the treaties and the British legislation which entrenched the Catholic Church in Quebec and put the English language in the second place.

As to the Royal Marriage Act, it can scarcely be said to have achieved the end George III. had in mind in 1772, in view of the Prince of Wales's marriage with Mrs. Fitzherbert and the turmoil ultimately brought upon the English nation by the subsequent marriage—in accordance with the provisions of the Act of 1772—of the Prince with Caroline of Brunswick.

Mr. Hunt writes with much sympathy of the position of the Roman Catholics in England and in Ireland during the first half of the reign of George III; but it is possible to read his book from beginning to end, even the chapter devoted to the religious life of the nation, without learning that there were any other Nonconformists than the Wesleyan Methodists. Technically a beneficed clergyman of the Established Church is not supposed to know that there are Free Churchmen in his parish. Nevertheless the Free Churches cannot be ignored in the writing of history.

## An Actor's Record of an Actor

THE book\* which Mr. Francis Wilson has just finished on Joseph Jefferson will serve as a very suitable companion volume to the actor's "Autobiography." For, by the faithful and sympathetic records which Mr. Wilson has preserved, he has succeeded admirably in picturing what will be of inestimable value to future generations of playgoers—the personality of Joseph Jefferson.

The leveling process has begun in the case of this actor. His "Rip" has become even now a tradition, and the characterization, as George William Curtis foretold many years ago, has passed again into literature. Jefferson once avowed that there was nothing so useless as a dead actor, but in saying this he did not reckon with his own personality. His fame would live, so he thought, not on his work as an actor, but because of his "Autobiography."

Mr. Wilson's book is written in a naïve manner. Perhaps it is fragmentary in its character, but there is a charming touch revealed in it by the way in which

he so openly probed for the flashes that would best show Jefferson, the man, in his infinite variety.

The "Autobiography" is a record of the actor's life, with views and comments upon persons and things which influenced him directly. Being a personal record, yet it is more impersonal than Mr. Wilson's book, which is avowedly devoted to Jefferson in whatever phase the actor showed himself in response to Wilson's questioning.

Jefferson loved his profession—that is evident numberless times when Wilson asked him had he to choose again between acting and painting, which would he take? On the other hand, Jefferson's fondness for the brush was imminently close to his liking for the stage. Of Dickens it is often said that had he not been a great novelist, he would have been a great actor; Jefferson inherited a two-fold gift—and his painting, had it been given the ascendancy, in which case he most assuredly would have rectified his deficiency in the technic of drawing—would have added a distinctive phase to the history of American art.

With the zeal of a Boswell, Mr. Wilson has set down "Rip's" views on painting, anecdotal and critical, and there are chapters on Jefferson the lecturer, Jefferson the author, and Jefferson the angler. Whatever remark he made in reference to the transitory character of acting, to immortality, to the changing hand of progress, Wilson has been faithful in reproducing.

The volume only covers the last few years of Jefferson's life, whenever he and Wilson happened to be together. But there is a *resumé* of Jefferson's long career, a partial synopsis of the "Autobiography," and a reproduction of several lectures given at different functions—these aid in making the volume a complete narrative.

Quite as much as it depicts the genial, warm-hearted Jefferson, does this new book likewise serve to throw considerable light on the personality of Francis Wilson himself. His tastes are reflected in the questions asked and in the trend of conversation, which he somehow succeeded always in directing. Altogether, with its many pictures, Mr. Wilson's reminiscences of Joseph Jefferson are not only

\*JOSEPH JEFFERSON: REMINISCENCES OF A FELLOW PLAYER. By Francis Wilson. New York: Chas. Scribner's Sons. \$2.00.

interesting but of permanent value to theatrical literature.

## Literary Notes

Next to the pain of having given currency to an error is the pleasure of correcting it. We published in our issue of December 28th from a trusted European correspondent, an article on the medal to be given by the Italian Government to Mr. J. Pierpont Morgan in honor of his returning a very valuable piece of ecclesiastical embroidery. With the article was the illustration of the proposed medal. But we are now informed that "this medal, altho appreciated, was not accepted by the Royal Ministry of Public Instruction," and the work has been entrusted to a prominent Italian artist.

...Notwithstanding the fact that Lewis Buddy, III, has been the art editor for Dodd, Mead & Co. for some time, he still finds opportunity to issue on his own account occasional volumes bearing the imprint of the Kirgate Press, East Orange, N. J. Mr. Buddy's last publication is entitled *Wisdom of Horace Walpole with a Foreword*. The volume is limited to seventy-five copies on hand-made Italian paper and five copies on Imperial Japan. It is the first book to be printed in the Bodoni type especially cast for the University Press, Cambridge, U. S. A. The format of the book thruout copies the style usually affected by Bodoni.

The "First Folio Shakespeare," when it was published in 1623, was sold for one pound; now a copy is worth \$10,000. Nevertheless, a library which had bought a copy then and sold it now would lose \$30,000 on the transaction, for the five dollars invested at six per cent. would have amounted to over \$40,000. This is one of the amusing paradoxes that Mr. Plim puts in his book on *The Seven Follies of Science* (Van Nostrand, New York, \$1.25). The "Seven Follies" which he explains in an elementary way with much borrowing from Dr. Morgan and others, are squaring the circle, the duplication of the cube, the trisection of an angle, perpetual motion, the transmutation of metals, the fixation of mercury, and the elixir of life.

## Pebbles

TRAMP—Lady, I am dying from exposure.  
Woman—Are you a tramp, politician or financier?—*Judge*.

AN Irishman was walking along a road beside a golf links when he was suddenly struck between the shoulders by a golf ball. The force of the blow almost knocked him down. When he recovered he observed a golfer running toward him.

"Are you hurt?" asked the player. "Why didn't you get out of the way?"

"An' why should I get out of the way?"

asked Pat. "I didn't know there were any assassins round here."

"But I called 'fore,'" said the player, "and when I say 'fore,' that is a sign for you to get out of the way."

"Oh, it is, is it?" said Pat. "Well, thin, when I say 'foive,' it is a sign that you are going to get hit on the nose. 'Foive.'"—*New York World*.

THE New York *Sun* criticizes Mr. Alfred Austin's poem, "The Coming of the Daffodils," recently published in THE INDEPENDENT, and suggests the following improved version:

"A part of the third stanza, however, has had misfortunes. At present it reads:

"The madcap lambs around their staid dams

Are skipping as, one time, they did;  
And, proud of the cheat, will the cuckoo repeat  
Soon the tale of the nest invaded."

"With all humility we propose this emendation:

"The April bock with the foam a-chock  
Is dripping as erst it did, did;

O sweet and strong, to be sipped long  
From the mouth of the stein heavy lidded."

"Is not the improvement obvious?"

A DULUTH pastor makes it a point to welcome any strangers cordially, and one evening, after the completion of the service, he hurried down the aisle to station himself at the door.

A Swedish girl was one of the strangers in the congregation. She is employed as a domestic in one of the fashionable homes, and the minister, noting that she was a stranger, stretched out his hand.

He welcomed her to the church, and expressed the hope that she would be a regular attendant. Finally he said that if she would be at home some evening during the week he would call.

"Tank you," she murmured bashfully, "but ay have a fella."

Three of the members of the congregation heard the conversation, and in spite of the fact that their pastor swore them to secrecy, one of them "leaked."—*Christian Endeavor World*.

Two commercial travelers, one from London and one from New York, were discussing the weather in their respective countries.

The Englishman said that English weather had one great fault—its sudden changes.

"A person may take a walk one day," he said, "attired in a light summer suit, and still feel quite warm. Next day he needs an overcoat."

"That's nothing," said the American. "My two friends, Johnson and Jones, were once having an argument. There were eight or nine inches of snow on the ground. The argument got heated, and Johnson picked up a snowball and threw it at Jones from a distance of not more than five yards. During the transit of that snowball, believe me or not, as you like, the weather changed and became hot and summer like, and Jones, instead of being hit with a snowball, was—er—scalded with hot water!"

—*Biblioteca Sacra*.

## Earthquake and Fire

By a combination of the two most terrible and uncontrollable forces known to man, one of the great cities of our country, the metropolis of our Pacific Coast, has been devastated and destroyed. First, a convulsion of the earth overthrew its walls, and then a mightier conflagration than the history of the world had known since the burning of Rome completed the desolation. We tell elsewhere the story of the catastrophe, and a careful scholar explains what we know of the how and the wherefore of earthquakes.

San Francisco is destroyed, but it will be rebuilt, and will be a grander city than ever. Hundreds, perhaps thousands, of lives have perished, but men will rush in to take the place of the lost, and the world will not miss them long—only their personal friends will mourn them. It sometimes seems as if human lives are the cheapest of all values, we throw them away so recklessly and we forget their loss so soon. And if two or three hundred millions of wealth have been destroyed, more hundreds of millions will flow in, and the void will very soon be filled. Instead of rickety old rookeries there will go up close-jointed steel structures, and the new San Francisco will be a finer, nobler city than the old. It will lose some of its strange romance, a good deal of its contrasts so fascinating to tourists, its palaces of wealth and its Chinese rat-holes, its Nob Hill and its ghettos. Those whose chill delight is in the ethnologic observation which gives the *littérateur* a racy tang of caviare will lament the change, while the social reformer and the altruist will delight to see healthier, airier homes, wider parks and better moral conditions take the place of the dens of huddled vice. Everything depends on the point of view, what you wish of the world, how much you care for men.

It is a great blessing to a new city to be burnt out, if it has the heart of courage to recreate itself. So Chicago, Boston, Baltimore have been blest by their great fires. There is no lack of courage in the men who have lost by this mighty

disaster. The elemental forces are tremendous, but the spirit of man can conquer them. Measured aright, an infant's single will is more stupendous than all the universe of physical forces continued thru all the celestial ages; and the sufferers by this tremor and flame, stunned for a day, quickly recover their poise,

"for the mind and spirit remains  
Invincible and vigor soon returns,"

and all is not lost so long as the unconquerable will stands firm. Nature has fixt the city there, by its incomparable bay; there is no other place for it, and there it will be rebuilt as fast as blocks of stone can be locked to beams of steel.

But there are some things that are lost irretrievably. We do not yet know just what they are, but they are precious records, mementos, treasures of art, books, libraries, museums, memorial relics and shrines, those strange, rare things that connect us with the past, which can never be replaced. We shall have better, but we want the old—and they are gone. From this time Californians will date, not from the Spanish missions nor from the golden revolution of Forty-Nine, but from the Fire of 1906. That is the epoch which, with earthquake shock, has battered out the old era, and will ring in the new with clatter of hammer and welding of jointed steel.

For a day, for three days, for less than a week, the city fell stunned by its calamity. Already her rebuilding is contracted for. For a day the country was amazed and incredulous. Then the heart of our people was touched, for we are kin. Then the millions suddenly flowed in. Then we learned what our Army was for; not to fight enemies, but to aid our own people. Then we found that General Funston was really a hero. Then we learned that red tape can be cut. Then we sent word to the nations abroad that we were able to care for our own in their suffering and loss, and needed no help, only sympathy. We are not proud of the generous response, for it is only what we had a right to expect of our people—we should have been ashamed if it had been lacking—but its heartiness and its speed are very grateful to the ~~car~~ and the

heart. And how fortunate it is to live in these days, when all the forces of nature except earthquake and volcano are bitted and bridled for our use, and electricity and steam can, without an hour's delay, send all needful aid to meet a colossal necessity. With no railroads and no telegraphs, tens of thousands would have died from exposure and famine. Now all the unlimited engines of immeasurable forces are coupled instantly by skilled beneficence and compassion to save the suffering and restore their loss in the intelligence and altruism of this wonderful century.

### Mr. and Mrs. Gorky

THE terrible disaster at San Francisco eclipses all other topics, even the question whether Madame Andreiva can properly be received at an American hotel as Mrs. Gorky. And yet the latter question is settled somewhat severely in our columns this week by Professor Giddings, and we need to add a word on the subject.

It is not true that it is nobody's business whether Mr. Gorky and the lady with him are really husband and wife. To be sure, the presumption was, and is, that they are; but marriage is so sacred an institution, and looseness is so detestable, and so properly condemned by society, that we have the right to know whether those who seek our hospitality are living in virtual marriage or are masquerading. But, we say, the presumption is that their relations are legitimate.

Now we have been informed, in definite terms which we are obliged to accept, as to the facts. Mr. Gorky's first marriage was not a happy one. The nature of the uncongeniality is partly told. The wife was not sympathetic with, but hostile to, the political purposes of his life. They separated. Whether he left her or she left him, or they separated by mutual agreement, we do not know. At any rate, it was a case of desertion. There was no legal divorce. We are told that it would have been impossible under Russian law. She took a new husband; he a new wife; not under law or Church, but Russian custom. We are told that what we here call a common law marriage is a frequent thing in Russia; that

custom allows it and society sanctions it. Where the law makes no provision, and the parties wish to live together in permanent marriage, and so proclaim themselves, society accepts the fact. So, we are told, Madame Andreiva became, by mutual agreement and proclamation, Mrs. Gorky.

Now, if the facts are as told—and we cannot traverse them—it is a case of that kind of divorce and remarriage which American law would have allowed. Such divorces occur here under law. Such marriages, without form or ceremony, have been allowed to be legal. The question is as to a case where law does not permit the precedent divorce, but where custom justifies it. There are countries on the American Continent where legal marriage is made too difficult and expensive for poor people to indulge in the privilege, and where divorce is impossible. When we went to Porto Rico we found the larger part of the population living in real marriage, faithful to each other, recognized as husband and wife, but never having had their bonds blessed at church. No one could blame them. They were living in the best sort of marriage available to them. It is very unfortunate to live where there are such laws. Russia is not a country whose conditions conduce to the legal decencies which we expect here. If Mr. Gorky and his first wife had lived in this country they would have easily secured a legal divorce, and Mr. Gorky and Madame Andreiva would have gone thru the legal form before a justice of the peace or a clergyman, instead of marrying themselves.

We may well be grateful that we live in a land of reasonable laws, which provide safe sanctions for marriage, as they do for property. The basal essence of marriage is mutual consent; the law comes in to certify and to protect it. In a primitive state of society marriage is a purely personal or family affair. The parties and the family agree to it and that is all. There is no ceremony beyond the social feast, perhaps not even that. Then the state came to recognize what the parties had done, and provided that property should descend to the heirs. Then the Church, which originally had nothing to do with marriage, came in to bless

the union, and the state made the priest a magistrate for the purpose.

In a country like ours, with decent codes, the common law marriage of the present Mr. and Mrs. Gorky would be indefensible. Society would properly condemn it, for if there were any justification for divorce, the fact should be legally proved and divorce granted. Without such divorce the present relations would be scandalous, and our distinguished visitor would be properly refused social recognition. But Russia is not America. We cannot utterly condemn Mr. and Mrs. Gorky for doing what is done many a time in this country, simply because they could not do there what they could have done here. The socially strict Queen Victoria could receive the Shah of Persia, who had a harem of wives, and the very religious Emperor of Germany visits the Sultan of Turkey; and we do not see our way clear to be more severe with Mr. Gorky than we are with our own people.

### Railway Monopoly of Coal

AFTER the Government had won its case against the railway combination in the Northwest known as the Northern Securities Company, the existence of other apparently unlawful combinations of parallel and naturally competing roads was pointed out by critics who asked that the law should be enforced without discrimination. It was quite clear, however, that in some of these cases the public could gain nothing by a dissolution of certain combinations effected long ago by the open purchase of competing roads. These were combinations in which control of the production and distribution of commodities was not involved. The association of the anthracite coal roads, however, owing to their possession of about four-fifths of the anthracite output, was by many regarded as a combination with respect to which the law ought to be tested. Beginning in 1902, Mr. Hearst, in a proceeding before the Interstate Commerce Commission, brought to light much evidence tending to show violations of the law by these roads, but the Government made no use of it.

Under a resolution of Congress providing for an investigation, the Commis-

sion has recently obtained much interesting evidence relating to a similar combination of railways which controls the bituminous coal trade of the Eastern States. The Supreme Court has also announced a decision that facilitates enforcement of the Sherman Act by enabling the Government to take the evidence of the books of corporations engaged in interstate commerce without thereby extending such immunity as would defeat the purpose of the proceeding. Now it is made known that eminent counsel—Mr. Charles E. Hughes, of New York, the insurance investigator, and Mr. Alexander Simpson, Jr., of Philadelphia—have been retained by the Government to consider the facts disclosed, and to prosecute, if these facts call for such action.

The importance of this step has not, we think, been fully realized by the public or the press. It is quite probable that it will lead to proceedings involving greater interests and more powerful corporations than were affected by the memorable Northern Securities case. If these gentlemen and the Government decide to prosecute, the defendants will be the railroad companies which control the production and transportation of anthracite coal, and also those which are not less powerful in the bituminous coal trade of the East. In both groups the Pennsylvania Railroad Company, directly and thru its subsidiary roads and allies, is the dominating influence. Its chief ally is the New York Central. With these will stand, in the bituminous field, the Baltimore & Ohio, Chesapeake & Ohio, and Norfolk & Western; in the anthracite district, the Reading, Lehigh Valley, Delaware & Hudson, Lackawanna, Erie, Jersey Central, and others. The roads traversing the Eastern bituminous field are controlled by the Pennsylvania, thru partial ownership. A majority of those engaged in the anthracite trade are controlled by the Pennsylvania and the Central, and all of them are practically in combination, so far as anthracite is concerned, thru the agency of one comparatively small corporation.

What is substantially a monopoly in each of these great coal fields and coal industries has been established by the

companies named above. These are monopolies resting not only upon railway combination or agreement, but also upon the actual possession of a large majority of the mines by the railways. They are monopolies which have been harmful both to the consuming public and to the independent producers of coal. Of the latter, not many now survive. They have been crowded out of the business. Depending upon railways for the transportation of their output, they have learned that railway companies desiring to get possession of their properties have many ways of making their business difficult and unprofitable.

Neither the consumer nor the independent mine-owner has had a square deal. There is plenty of evidence of this. Therefore these are cases in which the Government should, in the interest of the public and of fair play, ascertain whether the law has been violated, and, if it has been, enforce the statute and exact the penalty. It has already been shown, by the testimony of the railway officers themselves, that the companies have broken the law by pooling agreements which allotted traffic and determined rates. This testimony, with that of independent producers and of the officers of railway coal corporations, tends to show that the companies have broken more than one law. Unlawful combination and pooling appear to have been accompanied by unlawful discrimination. Mr. Hughes and Mr. Simpson would not have been retained if the Government had not been satisfied that there was work for them to do.

Our railroad companies should be compelled by law to confine their energies exclusively to the transportation industry. Our railroad capitalists should understand that a popular demand for Government ownership of the railways is surely stimulated by such proof of injustice and lawless greed as the Commission recently obtained from the testimony of railway executive officers at Baltimore.

### Public Control of Industry

THAT an effective public control of the hours and conditions of labor, and of industry in various other aspects, can be achieved in the United States only thru

a good deal of constitutional amendment, has been made plain in various decisions, notably in the decision of the New York Court of Appeals setting aside as unconstitutional an eight hour law that was passed at the instance of Governor Roosevelt and signed by him. That the people are beginning to look favorably upon a program of amendment, sufficiently broad to authorize a real public control, was indicated when the commonwealth of New York at the last election approved an amendment to meet the decision of the Court of Appeals in the eight hour case. Senate and Assembly have now passed a bill, introduced by Senator Page and Mr. Rock, re-enacting the old law. In the Assembly the point was raised that the constitutional amendment authorized eight hour legislation applying to public work only, and the Judiciary Committee reported a bill of such limited scope. By a vote of 67 to 52 the Assembly favored the original law. Whatever the final action in this particular case may be, it is evident that the principle of public regulation has a wide and increasing support.

Upon the expediency of this program, however, men will differ according to their views of the class struggle now taking shape in American politics, and its probable outcome.

Those who insist that prosperity is best assured by unrestricted liberty of private enterprise and freedom of contract, and who are confident that they can win out against the forces that are making for collectivism, make no concessions and stand ready to fight point by point every specific attempt toward governmental control. The socialists, equally uncompromising on their part, regard every experiment in regulation as a hindrance rather than a help to the realization of their plans. They see no thoroughgoing relief for the workingman in any governmental action that falls short of a collective ownership of the means of production. A study of the voting strength of these two groups of extremists indicates that the former is daily losing ground, but that the latter is making only slight gains, and very slowly. The vast majority of the people is obviously becoming day by day more deeply interested in the possibility of combining the

actual ownership and management of industry by private individuals or corporations with an increasing public control of their operation in specific ways for the general good.

It is probable, therefore, that we are to see some interesting experiments in this method of obtaining results that socialists desire, without committing ourselves to their more radical scheme of ways and means. We shall have rate regulation, in some instances price making, in some instances possibly wage fixing, and in many industries a limitation of working hours, by public authority.

The plan has at least the merit of flexibility and adaptableness. Experiments that work can be continued and expanded; those that do not work can be modified or abandoned. It is a plan, moreover, that does not prevent experiments of another kind, including the public ownership and operation of plants employed in the general service of the community, such as railways, or gas, and electric lighting works.

Can public control be carried out without injustice and corruption? Can such an expansion of the function of legislatures and administrative bodies be made without increasing the reign of graft and opening wide the door to all manner of discrimination? Experiment only can determine. We have had rather too much of dogmatizing on the true limits of government. England is already far ahead of us in many respects, partly because Parliament makes its own constitutional law, and, therefore, can experiment freely. If the working classes are as competent to organize a socialistic state, as they claim to be, they should be able to get about what they want under a plan of public control. It is a question of votes, and votes in the long run are pretty sure to be determined by the success or failure of policies adopted.

### More Naval Carelessness

THE disaster on the "Kearsarge," which has resulted in the death of several men, including two of the most talented young officers in the navy, again directs public attention to the succession of casualties which, during the last few

years, have taken place in the fleet. As in the case of the "Missouri," during target practice, a great mass of powder became exploded, this time in its transit between the turret and the magazine below. The details have not been publicly made known, and judging from the impenetrable veil of secrecy and do-nothing which has been thrown over the last disgraceful "accident" (the grounding of the ships in broad daylight in the best known channel on the coast, New York harbor), it may be doubted whether they ever will be, in any intelligible form. It appears, however, that this particular slaughter took place at "record" target practice. Record target practice means racing guns to make most hits in least time, and incidentally to secure trophies and rewards. It is a matter of this or that gun "beating" some other gun, whether in the same ship or a different ship; and, throughout the navy, it is beginning to assume somewhat the proportions of a mania, to which everything else is becoming subordinated in importance. The capturing of the "5-inch record" or the "6-inch record" is discussed in about the same way as the contests of the football field or the turf. And the same sort of overstimulated excitement among the younger officers is resulting.

Record target practice does not represent conditions of actual battle afloat, any more than individual sharpshooting reproduces them in conflicts ashore. It takes place under specific conditions of fixed range and selected circumstances, and it enforces a rate of speed in loading and firing heavy guns which is abnormally high, and, therefore, measurably, as likely to be detrimental to the best efficiency in actual contest as one abnormally low. The value of a ship as a fighting machine depends upon the combined effect of all her powers upon their *interworking*, as well as upon their individual working; and, in brief, she needs to be what is termed an "all around athlete"—a well balanced, thoroly workable unit, efficient everywhere—in engines, helm, discipline, and not a mere platform for transporting individual guns in order to make "crack shots" over measured distances. Whatever differences of opinion there may be as to this, one thing is certain, and that is that the

possibility of such accidents as the present goes far to neutralize any benefits resulting from the conditions which cause them. We don't want ships which are more dangerous to their own crews than to the enemy. Such an explosion as that in the "Missouri" or in the "Kearsarge," if taking place during actual fight might well put the whole vessel at great disadvantage, even if it did not determine her defeat. It is especially timely to remember that Paul Jones's victory over the "Serapis" was not due to his gunfire—for that had become inconsiderable—but to the chance explosion of the British frigate's own cartridges, brought up from her magazines and awaiting transport to her guns.

At the time of the "Missouri" disaster it was strongly urged that means should be provided for preventing fire from reaching charges in transit. The public wants to know why this has not been done, and who is responsible for the omission. Sixty-five men killed in the "Bennington," thirty odd in the "Missouri," eight in the "Massachusetts," and now a half dozen more in the "Kearsarge" is a terrible and scandalous showing, which is not palliated by easy official platitudes about lives as honorably lost in this way as if in battle. The country will mourn these victims and honor their memories; and meanwhile will move with accelerated speed toward the conviction that it is getting high time to try the efficacy of a few courts martial for gross neglect of duty upon some people in high responsible position—if only *"pour encourager les autres."*

## Where They Live the Simple Life

WE write and preach many beautiful things these days about the joys and virtues of the simple life; but the fact is only saints and savages are in a position to practice it. And they are two classes of people who do not set the fashions in this world; the rest of us have long been apostates from the gospel upon which such a life is founded. We are too ingenious, too restless. We have lost that ancient peace of the mind which once made great poetry and great scriptures of living.

But if any one wishes to watch the experiment, in spite of this discouragement, he does not really need Mr. Wagner's book nor any other doctrinaire's tract on the subject in order to inform himself concerning the rudiments and principles of such an existence, for the thing is achieved with remarkable success every spring time in plain sight of everybody. When the old Merlin oaks put forth their beard of bloom, and every tree in the forest sweeps like a green wave in the rape of the wind, the birds found a commonwealth upon the flowering crests of that emerald sea which lasts as long as it is needed. And it is the only one in existence where the simple life is really exemplified. They have but one industry there, the building and food supply business; but one institution, the home; but one virtue, domestic fidelity, and but one end in view, which is to hatch and start the next generation on the wing. Nothing is experimental with them, not even a song. The red bird has been singing the same noon tide serenade for a thousand generations, and the robin has been trusting Providence with the same kind of stick shack on the perilous outskirts of the cherry tree since the first robin built his nest in Adam's garden. To be sure there may be some bickering between the jays and catbirds over the choice of front lot boughs, but this is temperamental, and has never affected their hereditary ideas of architecture or changed the color of their eggs. Nothing changes with them. That is their great economy.

But when all is in readiness, when every lover has a mate, when every tree is a bird estate and every nest a cradle, there is such joy of expectation among the waiting forefathers of the next bird generation that they rhyme the heavens and earth together with their nuptial songs. It is because they are prospective parents who do not feel the burden of the future. And if, in the meantime, they come to arms, the duel is over a matter of life and death importance. They do not contend against one another for the possession or show of things. They are all Thoreaus, male and female, without Thoreau's conceit. The wren really prefers her nest hidden under the eaves or behind the primrose leaf, and

the dove never aspires to a mansion nest in the Merlin oak. None of them have a policy of social or political economy that extends beyond the bough upon which rests the frail bark of all their hopes. And they have no doctrine which cannot be proclaimed somewhere between the vesper hymn of the hermit thrush and the lark's matin song. But they have made of life a sweet dogma older than the oldest scriptures among men. And they have solved problems in living that we never shall solve until we also have wings.

Now that is the simple life. And we never can live it so well. We live too long, we remember too much. We have too many prophecies to fulfil, too many institutions to defend, too much wealth to invest, too much pride of poverty to overcome—and we lack the wings.

### The Hero With a Past

AN old and mischievous idea has been rehabilitated in a few modern novels, one of them a book so good that it is a surprise to find an old foe lurking therein. In "Lady Baltimore," by Owen Wister, we find the old ideal of manhood restated by one of those delightful Southern ladies whom it is a privilege to know.

"Virtue is *our* business; it is enough for a man to be brave,"

or words to that effect. And it is repeatedly asserted by the narrator and by the hero himself that John Mayrant was not "innocent." He makes a boast of his "past," whatever ugly shape it may have worn. For sin is ugly. It is sordid and unclean; a sign of a weak nature instead of a strong one. We recall a strain of this false logic in an earlier work of Mr. Wister's.

"In order to be a manly man, one must have had every lurid experience of life. I wish to depict a manly man; therefore, he must have lived at some time the picturesque life of a breaker of the moral law."

It is time for a protest against this weak and wicked fallacy. One might as well make a plea for murder as essential to a strong character! On the stage, in poem and novel and in the speech of too many otherwise intelligent people, a lie like this is reiterated. Mr. Wister's heroes get drunk, and are addicted to knocking people down to prove their

right to the part of leading man—surely this is enough without hinting at other vices so near the level of the lowest brute who infests the dens of iniquity that a decent imagination sickens at thought of them. Mr. Wister's otherwise admirable "Virginian" when he is with the other cowboys "trolls some careless tavern catch, of Moll and Meg and strange experiences unmeet for ladies." There is a finer "Americanism" in the reply of a great soldier and statesman when some companion began a story with the preface: "As there are no ladies present," "I trust there are gentlemen present," and the story was untold. That is the sort of true American hero, with physical and moral courage, self restraint and purity of lips and life. The Puritan has never lacked bravery when he has faced the Cavalier in battle. There is no need to exploit the man with an evil past, in order to show examples of the highest kind of courage, virtue—*virtus*—used to mean just that. Most people have an entirely gratuitous horror of perfection. There is no danger of the best human nature we know attaining it. The severest test of the novelist is to make a good man or woman attractive—only the highest art can achieve the feat—but shall we, therefore, praise the inferior art because it falls short?

The hero will not be perfect, if he is drawn truly, tho he may never have lain down in the sty, nor have fouled the whiteness of his soul with impure experiences. Our young men need to attune their ears to the bugle notes of "Sir Galahad" rather than listen to this discordant and decadent music—the hideous cry of lost souls, accepted as an invitation to become like them, and not as a wail of warning to keep free from the morass, in which they die an unclean death. "The Hero with a Past" ought to be as repulsive to a clean reader as any Becky Sharp or Paula Tanqueray among heroines. "Virtue" is *not* the "business of women" solely, and if it has ever seemed to be so, it is time for a little reforming of literature and of life.

**Senator Tillman** Senator Tillman is seeking reelection from the people of South Carolina. Personally he is bluff and attractive enough, when his

pitchfork is laid away; but one cannot help asking what he has done of value for his State or his country. Before he was elected Senator twelve years ago, and while he was Governor, he declared publicly that in certain cases he would lead a lynching mob; and since he became Governor, when a distinguished editor was murdered he had not a word to say in support of the popular demand for the punishment of "blood guiltiness," and there were personal reasons for his silence, and the murderer went free. Public sentiment has somewhat improved in this matter in the State, but not by any word of his. Instead, he has been lecturing thru the country to people attracted by his extreme utterances, to whom he has talked of nothing but the danger of negro domination. He has helped not at all in the agricultural betterment of South Carolina, being wholly devoted to keeping down the negro and helping the dispensary and whisky monopoly, during the time that cotton sold for 5 cents a pound. Not a word has he had to say for the crusade against child labor in the new factories of his State, and not a word for compulsory education or longer school terms or better schools for the common people. All the social and moral movements have made progress without him, by the help of the newspapers which he is attacking, and especially of *The State*, of Columbia. His removal from the Senate would be a loss chiefly to the sightseers, who ask from the galleries of the Senate to be told which is Tillman, of South Carolina, just as they like to see the Jumbo elephant at a circus.

**Mrs. Conger and the Empress of China** There have been stories printed to the effect that, while her husband was United States Minister at Peking, Mrs. Conger devoted herself to the effort to make a convert to Christian Science of the Empress of China. That story may be dismissed since the publication of the correspondence between Mrs. Eddy and Mrs. Conger on the subject. While Mrs. Conger is a devoted adherent of that cult, she says:

"However much I may have desired to have the Chinese accept an understanding of Christian Science, I never taught nor even talked it to them. In the first place, I was not author-

ized to do this; I was not sent a Christian Science missionary into China. In the second place, I was not equipped for such a work; I did not speak their intricate language, nor did the Chinese ladies speak mine. We always conversed thru an interpreter. While these interpreters were educated, broad-minded, lovely ladies, and in sympathy with me in my methods of reaching the hearts of the Chinese and winning their friendship, they were not Christian Scientists, but orthodox missionaries. These missionaries knew from the first that I was a Christian Scientist. My religion of love never seemed to offend them. It was my watchful prayer to live my blessed faith in all my intercourse with them and with the Chinese. I met them on their ground and strove to learn of them; there was much for me; I learned some of my most valuable lessons in China."

It is a long and charming letter which Mrs. Conger writes to Mrs. Eddy, published in *The Christian Science Sentinel*; and we learn from it that the only woman's daily paper in the world is published in Peking.

Now that we are beginning to realize the extent of the revolution in physical science caused by the discovery of radio-activity, it is a great misfortune to the world that the leader in the new science, M. Pierre Curie, should be killed in the streets of Paris by being run over by a wagon. He was only forty-seven years old and his twenty-five years of hardship and self-denial had secured for him a position and recognition which afforded him an opportunity to carry on his investigations with greater efficiency and success. He was peculiarly fortunate in finding as a wife Marie Sklodowska, a Polish woman, as poor as himself, but, like himself, a scientist by heredity and training. It was a model marriage of minds as well as of hearts, and the labors of the two have been inseparable. M. Curie constantly refused any honors or rewards in which his wife did not equally share, so the La Caze prize of \$2,000 in 1901 and the Nobel prize of \$40,000 in 1903 were expressly given to them both. Never was money more needed or more profitably used; for to procure the tiny grains of the salts of the new elements, radium and polonium, which they discovered, required the reduction of enormous quantities of rare uranium minerals. To get money for their experiments the couple often had to reduce their living expenses

almost to the point of personal privation. It is to be hoped that Madame Curie will not allow her grief for her husband to interfere with the important researches in radio-activity that she is now carrying on.

### The French Outbreak

It is over thirty years since the Republic took the place of the French Empire, and by the order of previous events it is time for a revolution. But we have persuaded ourselves that France is thoroly converted to a Republic, and will never again go back to the rule of the Royalists or the Imperialists. But there is another alternative, a Socialist state, such as has been tried for a very brief period. The very grave disturbances now existing grow only in small part out of the Clerical resistance to the law separating Church and State, but come from a greater danger, that of the workmen's rebellion against organized government, and in the real interests of what is little less than Anarchism. M. Clemenceau, who is Minister of the Interior, and really the head of the Government, has shown himself surprisingly weak. He has allowed the mobs to attack the troops and drive them back, while the soldiers were forbidden to use their weapons. They sat quietly on their horses, as if their stern presence alone might awe the strikers, while the crowd pelted them with stones and wounded them by the score, and drove them to unresisting and inglorious defeat. It was an extraordinary, and, it would seem, unpardonable weakness. M. Clemenceau is not a Socialist, but he is the avowed friend of organized labor. When, however, organized labor becomes a mob, as it has since the terrible disaster at the mines, and seizes the shops, and takes possession of great districts, it is shameful weakness to yield. Perhaps our way is better which puts the responsibility for order first on the States, and does not centralize all authority as in France. Thus we localize such dangers, and the National Government is not compromised until the danger reaches a limit which the States cannot control. But let it be understood that it is not Clericalism, but virtual Anarchism, that is now threatening France, and which makes

Paris fear the 1st of May. Yet Clericalism stands behind the mob, and, indeed, sets the bad example of resistance to law.

It is not surprising that so much interest is felt in the proposals for the reform of English spelling. Many have written us to ask where they can get the list of the shorter spellings recommended. They can receive lists and other documents by writing to The Simplified Spelling Board, No. 1 Madison Avenue, New York City. A curious feature in the reform is the British resistance. Thus an American publisher, like Henry Holt or Funk & Wagnalls will receive an order from London for a thousand copies of a book if its spelling will put *u* in *honour*. Of course, the order is accepted. The English are belated, except in postal reforms. They hang on to their ancient ornamental and functionally obsolete Kings and Queens and House of Lords, and entail and established Church, and other vermicular appendixes, so that their persistence in this orthographic obsolescence need not surprise us. The Simplified Spelling Board will have to establish a branch in the office of Murray's Oxford Dictionary.

It is said to be Mr. Roosevelt's ambition to be United States Senator from New York when he ceases to be President of the United States. That is a most worthy ambition, and the State could not be better represented. We fully believe that he will not accept a renomination in 1908. When John Quincy Adams laid down his office as President he was willing to represent Massachusetts in the House of Representatives, where he was the most distinguished figure and where he performed some of his best service for human liberty. It is understood that neither Senator Platt nor Senator Depew will be re-elected. Mr. Roosevelt will be fifty years old in 1909, when Mr. Platt's term will expire, and his experience might be of great value in the Senate for twenty years at least, unless he be renominated for President in 1912.

Dr. S. Harris, Professor of Medicine in the University of Alabama, at Mobile,

has been telling the President that more negroes die than are born, and that the negro race will become extinct thru the ravages of consumption and other diseases. The census tells another story. The number of negroes has increased from 6,580,793, in 1880, to 8,840,789, in 1900, and that without any immigration. That Mobile medical college has a record for prophecy. Dr. Nott, of that institution, at the end of the Civil War printed a lurid pamphlet, in which he told us that the liberated negroes could not support themselves, and that they would fade away, dying of starvation, if the North, that freed them, did not support them.

The word *electrocution* has reached England, and is charged with being an American barbarism, illegitimately derived; and a British purist asks that *electroicide* be substituted. What, asks another, is not *electroicide* a mongrel, half Greek and half Latin, like *automobile*? And another declares that in Greek *electron* means *amber*, and that, following the analogy of *parri-cide*, the word would mean *to kill amber*. To our notion the first element in *electrocute* does not come from any Greek word, but from an English one, or, at worst, a present day Latin one; while the full form of the word would be *electrosecution*, which has been shortened by dropping a syllable, just as *idolatry* has been shortened from *idololatry*.

Exactly why the Grand Lodge of Masons of Washington should have been chosen to perform the ceremony of laying the corner stone of the new office building to be attached to the Capitol it is not easy to say. They represent but a section of the citizens, one of the secret societies, an organization to which many other citizens are much opposed. It is a question whether, if they are to be thus honored, on another occasion some other society or lodge should not be recognized, such as the Sons of Temperance or the Order of Elks.

The trustees of the Carnegie Fund for pensioning retired college professors have had to decide the question, What is a college? and they have done it with

sufficient liberality. They say that a college must have at least six professors giving their entire time to instruction, with a course of four full years in the liberal arts and science, and with the usual academic preparation. Even this will shut out some institutions which have the same right to be called colleges that Paul had to address believers as saints, when they were only "called to be saints"; embryonic colleges, that expect to reach their ambitious name.

The Chinese boycott of American products, and the murder of Americans in China, and the Boxer revolt are simple elemental utterances of the growing national spirit of patriotism aroused by the aggressions of Christian nations, and the treatment in this country, by our Government, of the Chinese. We get an illustration of what our attitude has been in the answer of a Chinese to a settlement nurse. She asked him what had become of his missing companion, and she received this surprising reply: "Him in ho'pital. Clistian gentleman hit 'im in the head."

Women's suffrage must be coming when we see it favored from two such opposite quarters as the Russian revolutionists and the Catholic Church. Bishop McQuaid, of Rochester, one of the most honored of the Catholic bishops, says:

Nothing counts in the United States but votes. The time will come when women will vote, and then we will see the greatest voting the world ever saw. We are not afraid of woman suffrage. Our Catholic women will save the day for us.

The Hague Conference is to be postponed till after the American Conference at Rio. The most serious task before that Conference ought to be the reduction of expenses for armies and navies. The insistence on heavier and heavier taxation for ever larger war budgets is making for Socialism more than any other cause, and the cabinets do not seem to know it.

The Conservative press of England makes much of the fact that there are forty representatives of labor in the new House of Commons; but they have little to say of the fact that there are two hundred Free Churchmen, who know what they want and will get it.

# Insurance

## The San Francisco Losses From an Insurance Standpoint

THE appalling earthquake and fire at San Francisco last week was a disaster that will probably outrank the Chicago fire of 1871, when property valued at \$190,000,000 was destroyed; certainly the Boston fire of a year later, in which the insurance companies suffered losses aggregating \$80,000,000, and the Baltimore fire of 1904, when the insurance losses in the Monumental City reached a total approximating \$60,000,000.

It would be useless at the present time to attempt to give exact figures, as confusion still prevails in the stricken city, and only estimates are possible at the home offices, while the California representatives of the companies on the spot are unable to wire definite information. In a general way it may be said that the hazard of various insurance companies in San Francisco was in the neighborhood of \$200,000,000.

At an important meeting of the San Francisco underwriters, held on Saturday last, it was the sense of the meeting that the impression should not be given out that any losses would be paid by any insurance companies in interest except those for which the various companies were individually liable. Doubtless there will be a fine distinction drawn between loss by earthquake, for which the companies are not liable, and that by fire, for which they are liable. The question of property destroyed by means of dynamite or from the bombardment, which destroyed many fine mansions and their valuable contents, which was resorted to in the attempt to stay the consuming flames, will probably lead to considerable litigation. *The Standard* prints the following table setting forth the total insurance, as indicated by the premiums received by various companies, on San Francisco business written last year, which means at least \$200,000,000 of binding insurance, and constitutes substantially the only available data from which any estimate can be made of each company's liability:

| CALIFORNIA COMPANIES. |                             |                   |                             |

\*Part of year only.

George L. Chase, of the Hartford Fire, in a recent interview regarding the San Francisco situation, stated:

"I believe our surplus is intact and that it considerably more than covers our losses in San Francisco."

President William B. Clark, of the Aetna, in a similar interview, said:

"We have approximately \$4,000,000 liability in the city of San Francisco, and if every dollar of this is lost we can pay it from our surplus and have a very handsome surplus left."

The losses of the Home, of which Elbridge G. Snow is president, may reach \$1,500,000, which can easily be paid out of the capital and surplus. Henry Evans, president of the Continental, reports that the Continental losses can be paid with the cash in bank and without selling a dollar's worth of securities.

## From New York to Boston

WE may reasonably entertain some doubts as to the prompt construction of an air line electric road (with a ten-hour schedule) from Chicago to New York, for which a company has been incorporated in Chicago; but President Mellen's project for a new air line, with a four-hour schedule, between New York and Boston, is something much more substantial. Mr. Mellen says that engineers are at work upon a revision of the old Air Line (by way of Willimantic) that will make the distance from one city to the other, by rail, approximately only 200 miles; that on this proposed line it will be feasible to take trains thru in four hours by steam and in less time by electricity; and that the line will be in use before charters for any competing electric road can be obtained. That might be a long time, for it is not clear that any one intends to ask for such charters in Massachusetts and Connecticut, or that, if sought, they would be granted. It appears, however, that President Mellen and his company are engaged upon a revision of the old Air Line and have in contemplation a reduction of the present running time between the two cities by more than 20 per cent.

THE stockholders of the Westinghouse Electric and Manufacturing Company have voted to increase the company's capital stock from \$25,000,000 to \$50,000,000.

....The record of monthly output at the iron furnaces was broken again in March, when the quantity produced was 2,165,632 tons. February's output was 1,904,032.

....Last year's cotton crop, according to the Government's report, recently issued, was 10,697,013 bales. The great crop of 1904 was 13,697,310 bales, and the yield in 1903 was 10,015,721.

....For taxation in 1906, the official valuation of the franchises of public service corporations in New York city is \$361,479,300, an increase of nearly \$60,000,000 over the valuation for 1905.

....Lyman I. Gage, formerly Secretary of the Treasury, has resigned the

office of president of the United States Trust Company and will retire permanently from active business. His successor is E. W. Sheldon, who has been the company's counsel.

....Negotiations for the acquisition of the Great Northern Railway Company's iron ore lands by the United States Steel Corporation appear to have been interrupted by differences of opinion as to the terms. One trade authority estimates the ore deposits at 300,000,000 tons.

....The chairman of the Merchants' Trust, of London, an investing institution, said recently at the annual meeting that the United States was still the best place to invest in, the River Plate country standing next. His company's railway investments here yielded last year an average of 4.87 per cent. and had advanced 24 per cent. in value.

....The Pennsylvania Railroad Company will specify in its rail contracts hereafter that the rails shall be of open-hearth steel. Probably the Vanderbilt system will take the same course. This will require the manufacturing companies to expend great sums in providing for the production of large quantities of steel by the open-hearth process.

....Harriman interests have bought a tract of seventy acres, with half a mile of deep water frontage, in Tacoma, for the chief terminal of the Harriman (or Union Pacific) system on Puget Sound. This tract is near one of 100 acres recently bought by the St. Paul system. The new Harriman line, from Portland to Tacoma, will probably be finished before the completion of the St. Paul's extension from South Dakota.

### ....Dividends announced:

Atch., Top. & S. F. R'way (Stamped Adjust. Mort.), 2 per cent. (interest), payable May 1st.

Amer. Graphophone Co. (Preferred), 1½ per cent., payable May 15th.

West Penn. R'ways Co. (Preferred), 1½ per cent., payable May 1st.

Am. Exchange Natl. Bank, 5 per cent., payable May 1st.

Buff. & Susq. R'way Co. (1st Mort. 4½ per cent.), Coupon No. 6, payable May 1st.

Am. Telephone & Tel. Co. (5 per cent. Gold Coupon Notes), coupons payable May 1st.

## Survey of the World

### The Condition of San Francisco

At the beginning of the present week there were about 60,000 persons in the large camps at San Francisco. It is said that dwellings occupied by more than 100,000 were spared by the fire. In or near Oakland there were 100,000 refugees, and thousands had gone to other towns. Although the homeless in the city had suffered much discomfort on account of rain, there was little sickness. The few cases of smallpox were carefully guarded. Abundant supplies of food were at hand, and there was no lack of water in the higher parts of the city. There is nothing but praise for the police work of the soldiers of the regular army, but the militia are not so highly commended. Members of the citizens' patrol, however, are held responsible for most of the reckless shooting about which many reports have been published. Many of them were young men who were subject to no restraint. It was by members of the patrol that Mr. Tilden, of the Governor's staff, a prominent and active member of the Relief Committee, was shot. General Greely, who returned to the city last week and resumed command, asked the War Department for 2,500 more regulars, and 2,000 have been sent to him. He has quite warmly commended the conduct of General Funston, who remains in command of the forces employed for the preservation of order. Owing to reports that in caring for the homeless there had been some discrimination against the Chinese, President Roosevelt, in a letter to Secretary Taft, urged that the work of the Red Cross be done without regard to persons. He was promptly assured by the Mayor and

by officers of all the charitable and relief organizations that the Chinese had no cause for complaint. General Greely also informed him that the Chinese had not been neglected, and that in the relief work neither the citizens' committee nor the army had known any difference of race. The President had asked the public to send their contributions to Dr. Devine, representative of the Red Cross. This displeased the local authorities. On the 25th, therefore, in a long proclamation, the President asked that all contributions should be sent to ex-Mayor James D. Phelan, the head of the local relief organization, saying that the people of the city, with energy and courage beyond all praise, had appointed the necessary committees and cared for 300,000 homeless citizens, and that there was no longer any need of employing the Red Cross, except as an auxiliary. There was some disappointment in the city, on the 28th, when it was learned that only \$300,000 of the national appropriation of \$2,500,000 would be available for local use in cash expenditures. It was explained at Washington that the remainder, or nearly all of it, had been or was to be expended for the purchase of army supplies of various kinds in place of those used in San Francisco for the relief of the people there. It is estimated by Coroner Walsh, that the number of the dead is about 1,000, but General Greely reports that the number is less than 300, and that a little more than 1,000 injured persons are in the hospitals. Estimates of the loss of property range between \$250,000,000 and \$500,000,000. Probably the actual loss does not much exceed the first of these sums. The insurance loss is conservatively placed at about

\$120,000,000, altho the officers of some insurance companies think it is considerably larger. Nearly all of the public libraries were destroyed, with about \$3,000,000 worth of books. In the private libraries many rare volumes and early records of the Pacific Coast were lost. The ruins include eighty churches, missions and convents. The Mutual Life Insurance Company, of New York, lost the records of 12,000 policy-holders, involving about \$50,000,000 of insurance. Of the paintings that were burned, the most famous and valuable was one by Millet, commonly known as "The Man with the Hoe." The bank vaults will soon be opened. Their contents, \$30,000,000 in money and \$91,000,000 in securities, are believed to be uninjured. Altho the three Government cruisers in process of construction at the Union Iron Works were not harmed, two completed ships owned by corporations were sunk there. One of them was on a dry-dock. —At San José the loss was \$8,000,000, and 5,000 residents of that place are homeless. All the prominent buildings are down. Among the hotel guests killed there was Thomas O'Toole, a very wealthy man, largely interested in cattle ranches. At Santa Rosa, where sixty-three were killed, the people knew nothing of the disaster in San Francisco until the news was brought by a party of more than a thousand refugees. At Hollister, in the north, there was a loss of \$500,000; at Lakeport, several buildings were wrecked; several sawmills were injured at Albion, and fissures appeared in the earth at Anderson. On the night of the 27th, three shocks were felt at Salinas, 120 miles south of San Francisco, and for a considerable distance the bed of the Salinas River was depressed several feet. There were shocks in Southwestern Oregon on the 23d; and in San Francisco, on the 25th, a shock upset a chimney, which, falling, killed a woman in the Mission district.

#### Preparing to Rebuild

Some time ago, Daniel H. Burnham, of Chicago, the well known architect, was employed by an association of prominent citizens of San Francisco to make plans for reconstructing and beautifying the

city. The chairman of that association, ex-Mayer Phelan, is now the head of the stricken city's relief committee. Mr. Burnham's plans were completed. They called for changes which, if made before the fire, would have cost about \$40,000,000. Now the ground is cleared for the adoption of the plans at much less expense to the municipality. It remains to be seen to what extent they will be followed.—Workmen are already engaged in repairing the tall steel frame structures. The height of temporary buildings will be restricted to two stories until the building laws are revised. Twenty-five architects are going to San Francisco from Chicago, under the leadership of General SooySmith, an expert authority in steel construction. It is said by labor leaders in New York that the labor unions of the ruined city will lay aside for one year their controversies with employers concerning wages. The new Chinatown will be at Hunter's Point, on the bay shore, at the southern extremity of the county. Knowing the effect of a Government guarantee in reducing the interest on a loan, prominent citizens are considering the expediency of applying for such a guarantee upon bonds to be issued by the city for the costly public improvements that must be made.—By popular subscription, including the receipts of benefit performances in theatres all over the land, more than \$18,000,000 has been raised for the homeless in the burned city. About \$3,500,000 of this has been given in New York. President Gompers, of the Federation of Labor, asks all union men to give one day's pay. At Chicago, Mme. Bernhardt appeared in a great tent for the sufferers, and wept as she made a little speech for them at the end of the play. In Congress, a bill removing the tariff duties on steel and other imported material to be used in rebuilding the city is the subject of much discussion.—Interviews with survivors have given the newspapers many pathetic stories. We can refer to only two or three. Mr. and Mrs. William Stone, of Iowa, were in the city on their wedding journey. He was killed by her side in the night. She escaped, and was barefoot until she reached Ogden, where some one gave her a pair of shoes. Mr. and Mrs. H. A.

Rouse had gone from Los Angeles to San Francisco for their honeymoon. Both came back in coffins. They were killed in a hotel by a falling chimney. On a train at Omaha was a Mrs. Evans, returning to her early home in Pennsylvania. She had lost her husband and all of her three children, and of her supply of clothing had saved only a wrapper. Among the refugees seen on a train in Colorado was a young woman named Logan, who had lost a finger. It had been cut off, after she had fainted in the street, by a robber, who thus stole her ring. Many young children, whose parents are unknown, have been found in neighboring cities. Several cases of this kind have been reported to the Governor of California by local authorities in Oregon and elsewhere. Many marriage licenses have been issued in San Francisco, where the destitution of engaged young women has hastened the unions which were to have taken place at later dates. Five hundred physicians are said to have lost all their possessions, their diplomas included. The Eastward mails have borne hundreds of unstamped messages, written on torn scraps of paper. "Still alive, but have lost everything" is the burden of most of them.

#### Railway Questions

Altho no date for a final vote has been fixed, the end of the Senate's long debate on the Railroad Rate bill draws near, as all have agreed that discussion of the many pending amendments shall begin on the 4th. For some time past the main subject of debate has been the constitutional questions raised by Senator Bailey's amendment (depriving the inferior Federal courts of power to suspend the Commission's orders), and by his powerful speech in support of it. Senator Spooner consumed the better part of two days, last week, in a reply to Mr. Bailey's attack upon his argument in an earlier speech. Senator La Follette spoke for three days, advocating a radical policy. In his judgment, the pending bill did not go far enough; it should empower the Commission to fix all rates, to pass upon the classification of freight, and to make a valuation of all railroad property. Mr. La Follette having very

recently entered the Senate, it appears that many of his associates resented his delivery of a three-days' speech at the beginning of his term, as indicating a disregard for senatorial traditions. Therefore, his argument was heard by very few on the Republican side. The withdrawal of so many of his associates led him to remark that the temporary absence of some of them from their seats might be made permanent by the people in the near future.—In the investigation of the relation of the Pennsylvania and other roads to the soft coal trade much additional testimony has been taken, tending to show, mainly by the admissions of railway officers, the association of the several companies by pooling agreements and under the domination of the Pennsylvania. A. C. Fulmar, an independent mine-owner in West Virginia, testified that he had been driven out of business by Senator Elkins and his relatives, who owned a branch road connecting with his property and would give him no cars. Mr. Elkins has recently, in the Senate, denounced such discrimination, and has proposed amendments designed to prevent it.

#### The Coal Mine Controversy

President Mitchell and his associates in the committee of the miners' union submitted to the anthracite operators on the 26th ult. two new propositions. They were convinced, they said, that no proposition to arbitrate, "however fair or impartial," would be accepted by the operators, who had suggested "arbitration to ascertain whether or not there is anything to arbitrate," and had then restricted the investigation within narrow limits. This suggestion, if accepted, could have no other effect than to bring arbitration into disrepute and ridicule. The first of the new propositions was that the terms of the Commission's award be renewed and continued, subject to modifications involving an increase of wages for all persons employed in the collieries, washeries, strippings and breakers, as follows: 15 per cent. for those receiving \$1 a day or less; 12½ per cent. for those receiving from \$1 to \$1.25; 10 per cent. on wages from \$1.25 to \$1.50; 7½ per cent. for those receiving

from \$1.50 to \$1.75; and 5 per cent. for all others. The second proposition was that a wage advance be granted equal to 10 cents a ton on the total output; this to be added to the present wages of all, and to be apportioned by mutual agreement of the two committees. The miners' committee argued that less than \$2 a day was not enough to support a family, when there were not more than 225 working days in a year. Thousands of men were receiving from \$1.17 to \$1.75. On the following day both of these propositions were rejected, the operators expressing a hope that the miners would accept the award for three years more or consent to arbitration within the limits recently suggested. "Failing to meet us on either of these propositions, the responsibility for a strike must rest upon you." By the first of the miners' two propositions, the operators added, the cost of mining would be increased by much more than 10 cents a ton; by the second, with the sliding scale, the increase would be 36 cents, and, without the sliding scale, it would amount to \$6,100,000. The miners had said that this would impose no additional burden upon the public. Where, then, was it to be obtained? The companies' profits were small, and had not been increased since the award.—This reply will be considered at a miners' convention on the 3d. Mr. Mitchell said, after it had been received, that the operators had learned nothing from strikes in the past. In twenty-five years, he continued, they had granted nothing, but every concession had been wrung from them by strikes and the pressure of public opinion. Every conciliatory overture from the miners had been interpreted by the companies as a sign of weakness; their conservatism had been regarded as evidence of cowardice. Replying to the operators' question, he suggested that the proposed wage increase might be taken from the companies' exorbitant freight rates. In the mining district a strike appears to be expected.

#### Rioters Shot at Mt. Carmel

Seventeen strikers, or idle miners, were shot, four of them receiving mortal injuries, at Mt. Carmel, Pa., on the 30th ult., by troopers of the mounted police.

The troopers had been sent to protect workmen employed at the Sayre colliery of the Lehigh Valley Company. There were seventy of these workmen. They were not mining coal, but building a breaker and sinking a shaft. On the night of the 28th, they were attacked by a mob, and several were injured. The Sheriff called for the mounted police, and twenty-two troopers arrived on the morning of the 30th. When they sought breakfast they were boycotted at restaurants and hotels. In one of the latter they did their own cooking. Leaving the house after this meal, they were attacked in the street with stones and clubs, and at last were in such danger that they fired upon their assailants, who were pursuing them on their way to the colliery. Seventeen were wounded, and four will die of their injuries. The troopers passed the night behind the colliery stockade and were reinforced in the morning. Their commander was arrested by the local authorities for assault, and released on bail.

#### Washington Topics

It is reported in Washington that the Senate Committee on Interoceanic Canals will recommend a reduction of the salaries of the Canal Commissioners, and especially that of the Chairman. Mr. Shonts would resign, it is said, if Congress should reduce his pay. All the members of the committee are reported to hold that a canal officer should perform the duties of only one office. The Governor of the Zone is a Commissioner and also Minister to the Panama Republic.—Capt. Richmond P. Hobson, who won fame at Santiago, has carried the primaries in the Sixth Congressional District of Alabama, against Representative John H. Bankhead, who has been in the House for many years.—The House bill removing the tax on denatured alcohol for use in the arts and industries is opposed by Senator Aldrich, Chairman of the Senate Committee to which it was referred. It is too late in the session, he says, to secure action based upon wise principles, much testimony should be taken, and no bill providing untaxed alcohol for fuel and light can have his support. It is reported that the bill is disapproved by the Standard

Oil Company.—Mr. Tillman's bill forbidding national banks or other corporations organized by authority of any law of Congress to contribute to campaign funds has the unanimous support of the Senate Committee on Elections. This bill also makes it unlawful for any corporation whatever to contribute in connection with any election at which national executive officers or members of the national Senate or House are chosen.

#### M. Clemenceau and the Strikers

Minister of the Interior Clemenceau is handling the portentous strike situation in France with characteristic originality. He is determined not to be the tool of any man or party, and the mine operators who have assumed that as an official he would naturally take their side and the labor leaders who from his years of fighting against the Government in behalf of the people have believed he would not enforce a law against them are equally disappointed. He is not willing to rely upon second hand information, but has gone alone and unguarded into the midst of the riotous district. In his two visits to Lens he came in touch with all parties, visiting the hospitals to place the Cross of the Legion of Honor upon the breasts of the officers killed and wounded by the stones of the strikers, endeavoring to persuade the mine owners to raise wages, consulting with M. Basly, the leader of the "pure and simple" labor party, and then addressing the revolutionary faction in their own hall under the red flag. He was not satisfied with this as a day's work, but at night visited a number of laborers' cottages, chosen at random, to find out from the men themselves whether they wanted to work or strike. In the first cottage at the door of which he knocked the miner was asleep, but came down in his nightshirt to receive the Minister of the Interior. In reply to his questions he said he hadn't any opinion at all on the strike, and wanted to get to work. The next miner interviewed declared wages were too low and work too uncertain, and he favored the continuation of the strike. Having made up his mind as to the exact

conditions in the Pas-de-Calais district he was prepared to act with energy and decision. The soldiers were still ordered not to fire unless necessary, but arrests were made of the leaders in labor riots, particularly the Anarchists, who had come in considerable numbers into the district and changed the strike for higher wages into a revolutionary manifestation. Great alarm existed in Paris for fear of another revolution on May 1st, when the Confederation of Labor was preparing for a great demonstration of their power and a general strike. M. Clemenceau placed the Prefect of Police, M. Lepine, in absolute command of the military and civil forces of Paris, with full authority to prevent May Day riots. Fifty or sixty thousand troops were assembled in Paris and stationed at strategic points thruout the city to prevent the revolutionists from carrying out their threats of destroying the gas and water mains, looting the banks and blowing up the Metropolitan Underground Railroad. The General Secretary of the Confederation of Labor and the real head of the movement is Citizen Griffuelhes. Presuming upon his former friendship with M. Clemenceau he came to him directly to protest against being shadowed by detectives, when the following remarkably frank interview took place:

"Citizen Griffuelhes—I find that you have set detectives upon me. What are your intentions? Do you mean to arrest me?"

M. Clemenceau—I don't feel like taking you into my confidence just now concerning the intentions of the Government.

Citizen Griffuelhes—You will make a great blunder if you do that.

M. Clemenceau—You must remember that in my capacity as Minister of the Interior it is my business to be aware of the existence of the Confederation of Labor and of the manifestation arranged for May 1. In regard to the Confederation of Labor my own personal views are different from those of most of my colleagues, but these purely personal views are of no importance when public order and security are concerned. I will tell you most frankly that I shall crush all attempts you may make to create public disturbance. You may talk and preach and say what you like, but, my good friend, you must bear in mind that just at this moment you and I are not on the same side of the barricade."

Later M. Clemenceau arrested Griffuelhes and seized his papers. He also arrested Count Durand Beauregard, an illegitimate son of Napoleon III, and a

leader of the Imperialists. A number of other houses were searched for evidence of conspiracy against the Republic, including those of Monarchists, Imperialists, Clericals and Anarchists. The Government claimed to have evidence that the reactionaries were working together with the Anarchists to overthrow the Republic, and, under the guise of collecting subscriptions for the victims of the Courrières disaster, were financing the riotous faction in the Lens district. The explosion of two bombs in Paris has added to the general fear of an outbreak. One bomb was placed in the window of the villas of the President with the intent of assassinating M. Loubet. The other bomb was intended to destroy the Argenteuil Bridge and disable the Western Railroad. The first bomb was seen and extinguished before it exploded, the second one injured the railroad but did not destroy the bridge. Striking jewelers, postmen and printers have made street demonstrations in Paris, but have been kept from violent disorder by the presence of the troops. Tourists left the city in large numbers, and hotel keepers, private houses and embassies laid in supplies of food and water as tho for a siege, but there were no serious riots.

#### British Finances

The first budget of the new Liberal Administration was presented in the House of Commons by Mr. Asquith, Chancellor of the exchequer, on April 30th. He stated that during the last financial year the revenue had been larger and the expenditure less than had been anticipated, consequently there was a surplus of \$17,330,000. The postoffice receipts were \$5,000,000 in excess of those of the preceding year. There had been a steady diminution in the revenue derived from spirits, wine and beer. The exports had increased to an unprecedented extent. They were 23 per cent. greater than six years ago, amounting now to \$1,650,000,000. Mr. Asquith estimated the expenditure for the year 1906-7 at \$708,930,000 and the revenue, according to the proposed bill, at \$724,300,000. Of the surplus, after allowing \$2,000,000 for contingencies, \$1,500,000 would be applied to the reduction of the national

debt and \$775,000 to the Board of Education for the improvement in the public schools. The national debt of England now amounts to the enormous sum of \$3,944,950,000, but bears about the same relation to the financial condition of the Government as it did in 1870. The Administration proposed to apply the surplus to the reduction of the duties, by retrospective action, thus restoring part of the revenue to those from whom it had been unnecessarily collected. The coal duty would be repealed from November 1st and the tea and stripped tobacco duties reduced from July 1st.

#### The Liberal Movement in Russia

In spite of the efforts of the Government to check it, even by threats and force, the Liberal majority in the Duma continues to increase. In the Baltic provinces the revolt against the German land owners which took the form of rioting and burning last fall has now become a political movement. The Letts, Esthonians and Jews have united with the Russians to defeat the "German barons," and radicals and constitutional democrats have been chosen as electors. The representatives elected by the peasants are more radical than those by any of the other classes, and will stand for the division of the land among the people. So far 316 seats in the new Duma have been filled, and of these the constitutional democrats and their allies have secured 218. There are 96 more deputies to be elected in Russia and 33 in Poland. It is not expected that the Czar will attend the Duma in person, but he will come to the Winter Palace and there receive the delegates and administer their oath of office. The fundamental law, which is virtually Russia's constitution, promulgated by the Czár, is a great disappointment to the Liberalists, as by it the Czar retains absolute control of the army and navy and foreign relations, with power to declare peace and war, and also the right of declaring cities, districts or provinces under martial law, or in "a state of reinforced security." St. Petersburg has been in a state of reinforced security since 1882, so the Czar will still be autocrat over as large a portion of his

territory as he wishes, and for an indefinite length of time. The Duma is further restricted by not being allowed to interfere with the expenditures for Court and other allowances of the Imperial Family unless they exceed the present amount, and Ministers can only be interpellated for violence of the law. The Emperor has power to dissolve the Duma at will, and there is no time fixed within which the new Parliament must be convened. The revolutionists have been active during the past week. The Chiefs of Police of Cholm, of Odessa and of Czenstochowa were the principal victims of the week. A deputation of workmen appeared before the City Council of St. Petersburg asking that public works be started for the relief of the 20,000 unemployed workmen in the city. The Council decided to begin public works at a cost of \$1,500,000, and in the meantime to distribute \$250,000 to the destitute. Ten political prisoners who were confined in Warsaw awaiting trial were released by a bold strategy of their comrades, seven of whom, dressed in the uniform of the police, drove up to the prison in carriages and presented forged orders for the delivery of the prisoners to them, to be conveyed to the citadel.

#### England Determined and Turkey Recalcitrant

It seems absurd that a dispute over a strip of desert land, valueless to either claimant, should threaten to bring about a general European war, but Europe is in a state of such nervous strain that any conflict is viewed with suspicion. The British think that this control of Suez is endangered by the occupation of Taba by the Turkish troops. The Turks believe that the British are annexing part of their territory in order to gain control of the Peninsula of Sinai. The cause of the conflict is that both governments were planning to run railroads to the head of the Gulf of Akaba, the eastern arm of the Red Sea. The Turks proposed to run a branch line of the Hamidich-Hajaz Railroad from Kalaat Mda-wara to Akaba, and the British were to lay a track from Suez to Taba, an insignificant town on the Gulf of Akaba a few miles west of Akaba. But the Turks checkmated this plan by putting a gar-

rison in Taba, and refused to comply with the British demand to evacuate the place pending negotiations for the settlement of the dispute. The British claim that the boundary of Egypt is a line connecting Akaba on the Red Sea with El Arish on the Mediterranean. The Turks claim all the territory to the south of the line from El Arish to Suez and north of the line from Suez to Akaba. The legal basis of the question is the interpretation of the Firman of 1841, which made the Khedivate hereditary in the family of Mehemet Ali and entrusted the Sinai Peninsula to the Egyptian Government for the protection of the route of the pilgrims to Mecca. This arrangement was modified in 1892, after the pilgrims had ceased to go by land, and the Turkish Government took back the vilayet of Akaba, which it now claims includes the port of Taba. The British Ambassador, at Constantinople, has been unable to see the Sultan, who is either sick or pretending to be, and the negotiations have, therefore, been carried on at Cairo, between Lord Cromer, representing the Egyptian interests, and Mukhtar Pasha, the Ottoman High Commissioner, who is a hater of the English and suspected by them of being in the pay of Emperor William. Both parties are apparently preparing to use force. Four siege guns and as many mountain batteries are reported to be on their way to Akaba by the way of Damascus. The boundary monuments near El Arish have been removed, but Mukhtar Pasha denies that this was done by the Turks. The British garrison in Egypt has been increased by 3,000 men, and there are rumors of the mobilization of an army corps in England. King Edward, who was at Naples, has been recalled to England by the gravity of the situation.

#### The Natal Rebellion

The insurrection of the Zulus of Natal is spreading and assuming alarming proportions. The Natal Government has offered a reward of \$2,500 for Bambaata, the chief who first went on the warpath, and every effort has been made to restrain the other tribes. Siganandi, a chief with 1,274 huts, and N'Pubi, with 998, on the borders of the forest where Bambaata has

taken refuge, have refused to aid the British in his capture, and are likely to join the rebellion. At the beginning of the outbreak Dinizulu, chief of an important tribe, sent a message to the Government protesting his loyalty and offering to send an impi, or war party, "to capture this dog Bambaata, who has been allowed to enter Zululand and disturb our peace," but now there is reason to believe that he has formed an alliance with Bambaata. It is also feared that the natives of Swaziland will rise. The Government of Natal has been forced to call out the first reserves in seven districts to put down the insurrection. Chief Bambaata on the 30th attacked a convoy taking provisions to Colonel Mansell's field force.

#### Higher Education of Women in Germany

The higher education for women in Germany has evidently come to stay. According to latest reports there are now twenty-three secondary schools for women in the Empire that lead up to the university. The latest addition to these is a gymnasium in Berlin according to the "Reform" plan, *i. e.*, one in which the lower classes exclude language instructions, the course being based on scientific studies. A convention of savants was recently held in Berlin at the invitation of the Cultus Minister for the special purpose of advising the Government in reference to the higher educational schools for women. The conference consisted of about as many women as of men, and was thoroly representative in character, the Church, the State and the school participating thru many leaders. The outcome of the deliberations was the advice that the Government establish two kinds of lyceums for girls, one of eight years, corresponding to a high school, and a supplementary four years institution preparing directly for the university. If these measures are adopted the higher educational institutions for girls will be thoroly revolutionized; but will also be placed practically on an equality with those for boys. The attendance of women at the twenty-one German universities is this semester greater than it has ever been, namely, 1,907. Of these only 138 are regularly unmatriculated,

and hence candidates for examinations and degrees, while 1,769 are merely "Hörerinnen," *i. e.*, merely attend lectures without any academic honors or recognition in view. All of these unmatriculated women are found in the six universities of South Germany, as those of Central and North Germany, especially those of Prussia, will not admit women to regular enrollment. It is certainly significant that the women students do not resort to those universities that are open to them on an equal condition with the men, but flock particularly to the institutions of Prussia, where they receive only a cold welcome, but which have the reputation of having, as a rule, the best corps of instructors. Berlin's woman contingent alone is more than six hundred.

#### Crisis in Norway

The new Kingdom of Norway is already passing thru its first crisis, which is of an ecclesiastico-political nature. The Cultus Minister, Christian Knudsen, has resigned and his place has been filled by Dr. Theol Jensen. The trouble was occasioned by a matter that has been vexing and perplexing the country for several years, namely, the selection of an incumbent for the principal theological chair in the country, that of systematic department in the University of Christiania. The candidate of the Liberals, Dr. Ording, altho exceedingly able, had been, in response to a vigorous protest of the pastors, refused this position, because he was not orthodox on the subject of baptism and some other matters. A special committee of Scandinavian savants and church men was appointed to pass on the merits of the three leading candidates, Benson, Ihlen and Ording. The Christiania faculty itself asked for the orthodox Ihlen, but the university senate asked for the definite appointment of Ording. Knudsen, himself formerly a pastor, wanted to appoint the candidate of the orthodox party, but both the King and the colleagues in the ministry declined to agree to this. As a result the Cultus Minister resigned, and his successor will doubtlessly appoint the Liberal. It is confidently predicted that this controversy will seriously affect the coming election to the Storting.

# Vesuvius in Eruption

BY SALVATORE CORTESI

**T**O the present generation Vesuvius in eruption has been considered merely as a magnificent, awe-inspiring spectacle, one of the "sights" by the tourists, or a great asset for attracting foreigners, and therefore a good money-maker, by the Neapolitans. Now one and all regard it as a terribly potent force for evil, to be treated with respect—at a distance.

I had the good fortune to arrive early on the scene, so that I was able to watch the different phases of the eruption, and, what to me was more terrible still, the different gradations of terror and despair in the people.

Entering Naples from Rome, I had intended to keep my eyes open for everything, but after a tremendous day of work, tired Nature gained her way and I

went sound to sleep. I was suddenly awakened by a most tremendous clap of what I took to be thunder, and opened my eyes full on a scene which few people have been privileged to witness. On a background of piled up heaps of yellow-gray smoke, seeming great puffs from a giant fire, rose a perfect, straight column of burning material, without a flaw or deviation, to what seemed thousands of feet above, spreading at the top and throwing out myriads of iridescent globes in all directions; no simile can be so perfect as that of a Cyclopean rocket. This unique rocket issued from a burning caldron in which red hot glowing material boiled up and over, flowing down the side of the mountain so quickly that I imagined I could see it advance as I watched.

Digging Route to Turn the Flow of Lava.

Eruption of Vesuvius, April 10, 1906.

The lava eruption and that of the cinders and ashes were totally distinct; one all might, gorgeousness, awe; the other grayness, desolation, terror. The lava phase was the first to begin and was the first to cease. We arrived at Boscotrecase in an automobile in the most gorgeous, clear moonlight I have ever witnessed. Below us on one hand stretched the calm Mediterranean, with its misty outline of hills, pearly white in the moon-

light, a perfect picture of heavenly purity and calm, while above the volcano gleamed red and enraged, vomiting fire, death and destruction. We seemed to be in Purgatory, between Heaven and Hell.

The town then only held a few hundred people in whom the love of home was stronger than the fear of death; and as we passed thru the silent streets a white face would now and then peep at

us from a window, as tho wondering what could have possibly brought us there, "into the gates of death, into the mouth of Hell." The lava was then already near the cemetery; and as we walked toward it on a country road, the atmosphere became warmer and warmer, and breathing more difficult. On came the mass, red, seething, flaming and omnipotent, throwing off steam and fumes, engulfing, or rather, devouring everything in its way, but not stopping a moment. One had the feeling that it was a human organism with a definite goal in view, and that you yourself were that goal. This impression was so strong that men fled shrieking before it, clasping their crucifixes and calling wildly upon the Madonna to save them. Above, the source of this terrible inexorable enemy was raging and roaring; and when the wind changed and the smoke lifted for a few minutes, as far as eye could reach all was fire, broken by the rocket-like column which sprinkled its million glittering balls for miles around. One could imagine that the gods were

*en fête*, and that these were gigantic fireworks organized by Vulcan to please his mistress, the voice of Jove booming out in praise of a spectacle worthy of himself. The smoke would then suddenly envelop us, the gods had retired, the curtain was down, the play ended, leaving us with the reality of human disaster. When the gods play men suffer.

Some days after, when the lava had almost stopped and the ashes were already a scourge, I revisited Boscotrecase, in the train with his Majesty, King Victor. At Somma the automobiles were abandoned, the King with his suite going on horseback, we tramping it. As we plodded on the sky became more and more terrifying. The smoke rolled over us in majestic masses, puff tumbling over puff, as tho the volcano could not get rid of it fast enough, turning from black to yellow, or taking a red tinge at times, always sinister and malignant, harbinger of worse things to come. Every fifteen or twenty minutes, after we had floundered thru masses of ashes, falling into holes and stumbling over

Peasants Carrying the Madonna to Stop the Flow of Lava.

obstacles in a kind of yellow darkness, we were stopped entirely by a veritable blizzard of ashes and cinders. So impetuous was the rush of the storm, so penetrating the material, and so paralyzing the darkness, that in self-preservation we sat down wherever we happened to be, covering our heads and faces and hoping against hope that our last moments had not come, while our blood was turned to water by the deafening detonations, following each other in rapid succession: gentle reminders that if the monster was invisible he was certainly

about in the ashes, mute and listless, with apathy in their miens and despair in their hearts. What was the use of anything? Their fetich was determined to ruin them, so why fight him? Every now and then a dull roar would announce the fall of another roof, whereupon the gray wanderers would raise their hands, as tho to ward off evil and disappear in the gloom, but without uttering a word.

From all quarters, from Italians, Englishmen, Americans, Frenchmen, Germans, comes the same story of the won-

Barrier Erected at Boscotrecase to Stop the Flow of Lava.

near and active. One seemed to be in the inferno without a guide. After the storms passed we rose, shook off the ashes and went on our way, glad once more to have escaped with our lives.

The appearance of Boscotrecase when we arrived was melancholy in the extreme. From the inferno we had stepped into the underground world. All, without exception, was gray—houses, streets, trees, palms, vegetation, atmosphere, animals, all a uniform gray; and this world was inhabited by gray automata, ghouls who slipped noiselessly

derful abnegation and self-control with which this light-hearted, gay people have seen themselves ruined. The first terror over, they were quiet and tearless; none complained; none asked anything of any one; none pretended to anything. In silence they gathered their few portable precious belongings in a handkerchief, and with their children and wives left their houses, homeless and ruined, and probably going toward hunger and perhaps starvation. Vesuvius had spoken and they obeyed.

Interesting comparisons have been

made between the present eruption and past, almost forgotten ones. An unedited description of that of 1779 is intensely interesting, showing that the conditions were absolutely similar to the present ones. The full moon was shining, but lurid light was cast for miles around by the flames of the eruption, before the smoke shut down. The people rushed into the churches and brought out their saints, especially Saint Gennaro, the patron of Naples.

"During the night all the inhabitants of Torre Annunziata, Resina, Portici, Ottajano, Bosco and Somma fled, abandoning everything

turity; but much did, contrary to nature and the season."

At that time, as now, the Director of the Observatory stuck to his post, sending reassuring messages to the people; but while now the King has been in the worst places, the monarch of 150 years ago fled to Posillipo, where he stayed until all danger and discomfort were over.

In the eruption of 1872 the same panic occurred, with loss of life, for the same reason, *i. e.*, the collapsing of buildings thru the weight of the ashes and cinders. On that occasion it rained, so that a reg-

Lava Descending from the Volcano.

and thinking only of saving their lives. The destruction was general, especially at Ottajano, where all the houses fell or were ruined. The miserable inhabitants escaped to Naples, their packs under their arms, by any conveyance or mode possible."

The author finishes by an interesting note:

"The fruit trees, altho burned, being green at the roots and aided by their sap and the rain which fell, threw out new branches, and were, to the astonishment of all, in full bloom in October, seeming a second spring" (the eruption took place in August). "The fruit following in most cases did not come to ma-

ular tempest of mud fell, together with boiling water, which phenomena did not occur this time.

In a long talk which I had with a noted Italian scientist he said that the present eruption may be considered to resemble that which destroyed Pompeii and Herculaneum more than any other since that time. He considers that it entirely depends upon the nature of the lava whether the spot submerged will yield vegetation again. For instance, on the Island of Ischia, in the Gulf of Naples,

which is dominated by a dead volcano, the last eruption of which was in 1302, in certain parts not even a blade of grass has ever grown since, but fortunately the case of Vesuvius is different. The lava is scum; and in a minimum of ten years or in a maximum of fifty the land covered will again yield under cultivation, as scum-lava, under the action of atmospheric agents gives way very readily to vegetable growth. The ashes, when in a limited quantity, are good fertilizers,

as they contain soda, potash and iron, but they must be mixed with lime and phosphates. However, where the ashes and cinders have gathered in great quantities it will take four or five years for the atmospheric action to decompose the volcanic material.

Naples is again gay and bright, while grief and desolation reign at her doors. It is another fulfilment of the old proverb, "Naples commits the sins and Torre pays for them."

ROME, ITALY.

## What of the Night?

BY ELIZABETH C. CARDOZO

WATCHMAN, what of the night?  
The sun drops red on the hill,  
And the dark draws near apace,  
And the night wind wreaks its will.  
And I—I have run my race,  
I have fought my latest fight.  
Watchman, what of the night?

Watchman, what of the night?  
Is it fraught with many a fear?  
Is it silent and dark and cold?  
Is there never a comrade near,  
And never a hand to hold,  
Nor promise at last of light?  
Watchman, what of the night?

Watchman, what of the night?  
I have fought and fallen and lost,  
I have fought and striven and gained,  
And which at the heavier cost?  
But a whisper still remained  
Of an unrevealed delight—  
Watchman, what of the night?

Watchman, what of the night?  
Nay, is there aught to tell?  
Can it prove more strange than this?  
If I wake, why, it is well,  
If I sleep, why, well it is.  
So there come no dreams to fright—  
Watchman, what of the night?

NEW YORK CITY.

# The Gypsy Moth Pest

BY A. H. KIRKLAND

MASSACHUSETTS STATE SUPERINTENDENT FOR THE SUPPRESSION OF GYPSY MOTHS.

**A**FTER having spent over \$1,100,000 in the attempt to exterminate the gypsy moth, an attempt which would, without any question, have been successful but for the calling of an unfortunate halt in the work in 1900, the State of Massachusetts has again taken up the task of combatting the pest.

There is but little use in attempting to disguise the enormity of the undertaking which those in charge have now before them.

The gypsy moth in 1900, when the former State work against it came to an end, was a district issue. Now it is a New England issue. In 1900 it was simply an area in Eastern Massachusetts that was affected, and the moth had appeared in only 359 square miles. Now the moth is found in more than half of Middlesex, practically all of Plymouth, half of Norfolk and all of Essex and Suffolk counties, and far down on Cape Cod, thus covering one full quarter of the State, in round numbers 2,300 square miles. More discouraging still, it is also found now in Rhode Island and South-eastern New Hampshire, and within a month a colony has been discovered in Stonington, Conn.

The moth danger was once regarded, in part at least, as a creation of the scientific mind. Now the National Government has realized the danger, and a national appropriation is urged to prevent its sweep over all New England. Furthermore—and this is the saddest part of it—the chance of actual extermination, which was very promising six years ago, has vanished now, and the best that can

be hoped for is the control of the moth. Then it was a question of using ordinary means to conquer the danger. Now it is appreciated that human aid alone will be taxed to accomplish this, and for the past year the Old World has been searched for parasites to help man in his campaign against the pest.

The gypsy moth, without exaggeration,

is more than a pest; it is a catastrophe. It is not a mere blemish on the country side, it is a blight. It swarms in city parks and country pastures, and it devastates all vegetation which comes in its way. It is this which makes it so dangerous, for once it gets a foothold it kills coniferous and deciduous trees alike. Within one season it can reduce real estate values by thousands of dollars. Its ravages may be seen in the eastern part of Massachusetts, where wood lots

Full Grown Gypsy Moth Caterpillars.

have been stripped so that only bare trunks are left—memorials as impressive as those from forest fires. Almost as striking as the great destructiveness of the moth is the expense of ridding a territory of it. It is necessary to go over the trees by hand and kill the egg clusters, which are found high and low. In second growth wood lots in many cases it has been found cheaper to cut and burn rather than face the expense of hand labor, and this has been done in numerous cases. But even fire, unless of an intense kind, cannot be depended on, and the ground often has to be burned over with an oil torch to make the destruction complete.

The gypsy moth is an imported pest. It was in 1868 that a French scientist, Prof. Leopold Trouvelot, then living in Medford, imported the moth in connection with some experiments he was making with silk producing insects. He had the caterpillars netted in on a shrub in his yard, and, according to the general report, the netting was torn during a gale of wind and the insects escaped. He realized the importance of this disaster

tion of a little more effort when the moth would have been exterminated. Unfortunately, that additional aid was not given and despite the protests of various scientific men, the State ceased work. Their predictions of the evil to follow were soon borne out. There was a lull for a time and then reports of damage by the moths began anew. Finally, in 1904, in desperation the citizens of the various afflicted sections organized them-

Caterpillars Clustered on the Trunk. From Photographs Taken at Arlington, Mass., June 30, 1905.

and at once notified the public, but they failed to appreciate as he did the possibilities of danger from the event. Thus it was not till twenty years after, when the moths had become so abundant in Medford that trees were stripped, that they were first formally identified by Dr. H. T. Fernald as the notorious gypsy moths of the Old World.

In 1890 the Legislature inaugurated the State work of extermination against the gypsy moth, which was carried on until 1900 under direction of the Board of Agriculture. About \$1,100,000 was spent, but at that time it was only a ques-

selves into a formal body and again asked aid of the Legislature. Governor Douglas and the Legislature held out helping hands, and finally authorized, in May, 1905, the organization of a new department of work against the moths with a single head as superintendent, who should be directly responsible to the Governor for what was done. The new bill under which the work was begun carried an appropriation of \$300,000, and was also framed with an appreciation that the co-operation of every land owner was absolutely necessary. Thus, while in the old moth hunting days the State

did all the work and paid all the bills, now it is provided that while the State directs the work, the cities and towns must bear part of the financial burden, due allowance being made for the small, poor towns which may be badly moth-infested, and the large rich towns which can easily assume the burden. Actual operations in the field are carried on by the city and town forces.

While, as has been said, the Legislature has realized that extermination of the gypsy moth is impossible now and suppression is all that can be hoped for, the work against the moths is being prosecuted with all possible vigor. Besides the actual manual labor of killing all forms of the moth, we have devoted much attention to securing parasites from abroad in the hope of bringing natural forces to our aid.

Taking a broad view of the problem, the Legislature of 1905 appropriated \$30,000 to be spent in three years for the purpose of experimenting along this line.

By arrangement with the United States Department of Agriculture, the co-operation and assistance of Dr. L. O. Howard, Chief of the United States Bureau of Entomology, was secured. It was possible to make comprehensive plans in the matter of importing parasites, for in addition to the sum appropriated by Massachusetts, Congress had also made a small appropriation for the purpose of investigating the subject. Dr. Howard went abroad in the interests of the work last summer and is in Europe at the present time on the same errand. He has secured as collectors of parasites men of recognized standing as entomologists in Italy, Austria, Switzerland, Germany and France. From these sources various shipments of parasites have been already received and many more are to follow. While the matter of successfully importing and propagating parasites is an experiment, pure and simple, the superintendent is hopeful that the importation of natural enemies of the moth from abroad may help solve the great problem of the suppression of the gypsy moth.

Intelligent co-operation by the people being an absolute necessity in the present plan of work against the gypsy moth, the central office, besides directing operations, has taken steps to arouse popular

interest by lectures, addresses and the circulation of literature on the moth and the best way to destroy it.

One feature which complicates the work of suppression is the increasing use of the automobiles. Traveling from forty to one hundred miles a day, these vehicles transport gypsy moth caterpillars from section to section. Their responsibility in this matter is well known by the fact that the places where the machines stop at the end of favorite drives are frequently infested with the moths. The distribution of the gypsy moth by vehicles occur chiefly when the caterpillars are young and small. They then have the habit of spinning down by their silken threads from trees. When these overhang the roadside the caterpillars fall on vehicles which carry them in all directions. Of prime importance, therefore, is work against the moths on street trees so that the danger of the further spread of the insect may be done away with.

The gypsy moth, like all insects of its class, exists under four different forms during the year. Its eggs are laid in July and August in a yellowish, hair-covered mass averaging about one and one-half inches long and about three-fourths of an inch wide. To the eye the egg mass resembles a small, tightly stuffed, oval, buff-colored cushion. The eggs hatch about May 1, and each mass or "cluster" yields a swarm of small caterpillars, the bulk of which become fully grown by midsummer.

The mature gypsy moth caterpillar not infrequently attains a length of 3 inches. It is very hairy and along its back in a double row of spots, there being first, counting from the head, five pairs of blue spots and then six pairs of dark red spots. No other New England caterpillar is like it.

It is the caterpillar which eats the foliage. From July 15 to August 15 the winged moths emerge from the pupæ. Fortunately, it is the male moth alone which flies, and the natural spread of the insect is, therefore, slow. After mating, the moths live but a short time. The female dies after depositing her egg mass. The male moth is brownish-yellow and is smaller than the female, expanding about 1½ inches. The heavy bodied female moth is nearly white, with

Gypsy Moth Caterpillars Swarming at Sticky Band on Tree. From Photograph Taken at Arlington, July, 1905.

numerous small black markings and expands about 2 inches.

In destroying the gypsy moth, the main effort is directed against the egg masses, which are found on tree trunks and the under side of limbs and in sheltered crotches and holes in trees, crevices in or under rough bark, etc. They are also found on shrubbery, buildings, scattered and heaped rubbish, barrels, boxes and similar objects standing out of doors, wood piles, stone piles, fences, walls, boulders and the like. The egg masses wherever accessible can be killed from August to May, by soaking them thoroly with creosote. Where trees and shrubbery (especially low cost woodland and unimproved tracts of brush) are exten-

sively infested with the eggs of the gypsy moth, the growth should be cut and burned.

Spraying infested foliage with arsenate of lead at the rate of 10 pounds to 100 gallons of water is very effective when the caterpillars are small. Any of the common hand outfits will suffice for the spraying of shrubs or flowering plants. For use on trees, a pump mounted on a barrel or hogshead is desirable. The poison should be thoroly mixed in water, and applied, if possible, on a clear, dry day, in such a manner as to cover the leaves, rather slowly, with a fine mist.

This work is most effective when done during May and early June.

If a strip of burlap or other coarse,

cheap cloth is tied about an infested tree trunk by the middle, in such manner that the flaps hang down, the caterpillars, as soon as they have acquired the night feeding habit, will gather under the cloth and can then be destroyed by crushing or by cutting with a sheath knife. The burlap should be examined daily, or, when the caterpillars are in great numbers in a locality, several times a day. Burlap can be successfully employed from the latter half of May to the first or middle of August, for the caterpillars commonly pupate under burlap and winged moths lay many eggs under it. It should be borne in mind that the cloth band is in no sense a tree protector; nor is it a trap. Its function is simply to

give the shelter which the caterpillars seek by day. Serving, as it does, as a hiding place for various insects, it is better off the tree than on, unless it can be attended to and kept clean. At the end of the caterpillar season, all burlaps should be removed and burned. To insure best results on high trees, such as street elms, burlaps should be placed around some of the larger limbs, as well as around the trunk, as many caterpillars will seek shelter up in the tree rather than descend to the ground. The most effective results in using the burlap are obtained where cavities, crevices, etc., in the trees have been first filled with cement or covered with zinc and all loose bark removed. If these hiding places are de-

White Pine Stripped by Gypsy Moth Caterpillars. From Photograph Taken at Malden, Mass., July 12, 1905. This Pine Has Since Died.

stroyed, nearly all the caterpillars will seek the burlap at some time during the season.

Banding a non-infested tree with insect lime or other sticky substance or mixture to keep the caterpillars out of it is an effective means of protection, provided the branches of the tree do not interlock with those of an infested tree, and provided the two do not stand so near that the small caterpillars can pass from the infested tree to the other by means of their fine threads. A band, of whatever material composed, to be effective must remain sticky. When caterpillars are numerous in a place, they often, in their attempts to cross the band, bridge it over with their threads and

dead bodies, with the result that other caterpillars coming later are able to descend the tree. For this reason and in order that the caterpillars which collect beneath may be killed, the sticky band should be frequently inspected. If the many caterpillars which frequently "herd" below the sticky bands are not killed, they will in time leave the trees for shrubbery, where they are less easily destroyed, there to complete their feeding period and transform into moths. Insect lime, raupenleim, tanglefoot, bodlime, printer's ink or even axle grease are among the materials most used for banding. All may be dangerous to the tree and should be removed after the caterpillar season has passed.

READING, MASS.

## Fiction and Fact

BY THE BACHELOR MAID

[The article which we printed in our issue of April 5th, entitled, "A Week of System," by "The Bachelor Maid," with the reply of a "Wise Woman," introduced into an editorial, seems to have excited a great amount of interest among our readers, judging from the many letters we have received. As "The Bachelor Maid" and her admiring family do not seem satisfied with our editorial, we shall gallantly allow her to have the last word in this interesting discussion, unless we later change our minds.—EDITOR.]

WHEN I discovered that "A Week of System" had been taken seriously enough by THE INDEPENDENT to elicit an editorial answer, I turned its pages eagerly and with lively hope for the enlightenment which I should find in the solution of a "wise woman." The impression left upon me after several conscientious perusals of her remedy is still interrogative in form: What would she have prescribed if she had not known that the patient was a bachelor maid?

It was very simple, and a tempting opportunity for epigram, to preach from the text, "Don't be a Bachelor Maid"; but suppose that I had not signed my complaint, and the editor had expunged a few "give-away" sentences, what answer would she have had for the real difficulty, which, so far as I have ever observed, is in no way contingent upon the presence or absence of a wedding ring? My mother and Alice, tho married, gnash their teeth quite as often as I over their

numerous and apparently useless interruptions, and I can no more believe that it is merely a family peculiarity than I can that it is a feature exclusively attendant upon spinsterhood. Therefore, I submit that the "wise woman" has "answered" nothing, nor pointed any universal moral, but merely embraced the opportunity to pay off a few scores against an individual Bachelor Maid.

Under such circumstances I should hardly steal the time from my Saturday mending to continue the exchange of personalities, did she not take occasion to present in more than ordinary baldness a number of statements very often heard also from those not generally tabulated as "wise." One might most concisely reply to her dissertation by the simple remark that it was absolutely untrue from text to peroration, but, of course, that, besides being highly impolite, would, like all sweeping statements, fail to carry conviction. Therefore, I beg her and the gentle reader in general to lend a recep-

tive ear to something at once more extended and less emphatic. I once heard of a woman of eighty who claimed that it was better to live a married life of misery than to die an old maid; I had not supposed, until I absorbed the sapient closing words of that editorial, that there lived any one of *this* day and generation who would preach such doctrine. And in all my strictures upon matrimony as practiced there is one phrase upon which I have consciously refrained from saying much, because it seemed to me that I might well be charged with motives exceedingly vain if I argued that a woman had any right to be influenced in the choice of her life's work by the consideration of its probable effect upon her personal appearance. But I take it that I have been mistaken in my low estimate of this element of the "woman question," since the dominant note of "wisdom's" warning to me is, "Your good looks will desert you, if you don't watch out." It is, indeed, appalling to look forward to the day when young men will attend me to the street car or slum children sit under my religious instruction only at their mothers' command or when frightened into it by the compelling force of my "strong face" and the "wiry" voice proceeding from my "stringy" throat, but I don't know why I should prefer attentions accorded for identical reasons to the round shoulders, the "sagging" skirts and the "waddle" of the fat and shapeless mother of children. And how can any one who hath eyes in his head and a regard for the truth in his heart deny that the latter specimen abounds in our midst far in excess of the former?

Not many years ago I attended a reunion of the old students of the academy where I was prepared for college. The attendance of the "girls" of my own period was especially large. They all brought their babies and came—and *such* an array of feminine unloveliness I never beheld. The two "beauties" of the school weighed 200 each, and those who did not suggest the classic simile of "a meal-bag with a string tied 'round the middle" were bent, flat-chested and skinny. Except Eva Leigh. She hardly looked a day older than when we used to giggle together over the lachrymose tendencies of the pious Æneas; but then she has no

children, and is, I'm told, a leader in the female suffrage club of her city. One of our old teachers came up to us and said, "Girls, you're the prettiest things I've seen today. In all this crowd you two are the only ones who seem like the girls I used to teach."

Altho in this I evidently differ widely from the "wise woman." I should consider the loss of these physical attractions bearable if it were compensated by a corresponding development of those spiritual and mental graces which might win for us still that admiration which I readily admit that we all desire. But I do not observe that males of any age are falling over one another in their effort to be attentive to the "wise women's" model wife and mother. The young physician with whom I heard "Die Walküre" is younger than I (and he knows it), but he professes to like me because, so he says, I am "different from most women, and have a lot of hard sense," it being his additional opinion that "most women are fools." I'm sure I can't say what has thus gained me (and my kind) a position in a separate class, but it *may* be philology.

True, even the "wise woman's" preferred type of matron occasionally escapes being physically a fright and intellectually a bore, but then, on the other hand, is she not aware that the "bachelor maid" *never* becomes the "old maid?" Evidently her wisdom was not acquired in a modern college or she would know, as I do, the many well-dressed, gracious and attractive middle-aged women who will be charming "bachelor maids" (and not "swaggering") as long as they live. They are "female authorities on the origin and history of words," but not even the men think them "ugly." And even if they were, is it so much worse to "flatten out" as that sort of authority than as one upon the various causes of infantile colic?

"But did anyone ever hear of a married woman's grieving because she could not find time to devote to philology?" cries THE INDEPENDENT'S purveyor of "morals," as if the question's absurdity were it's own answer. Permit me to quote in reply from the indignant letter called forth by that editorial from one of my young married friends: "I should

like to inform the 'wise woman,' she wrote, "that in some sections of this country, if not in the one which she adorns, there are married women who still feel an interest in Latin and Greek roots, and would be ashamed to be *contented* with such an existence as she eulogizes."

It is generally to be observed that a contempt for "ologies" and "isms," as for religion and good manners, is characteristic of those who know nothing about them. The initiated do not need to be told that philology is as full of really human interest as many things whose names happen to be less obviously Greek. Why, after all, is the development of a nation's speech from its infancy a less fascinating study than that of your own first-born? Or, again, why is the analysis of words less worthy the attention of a woman than their synthesis to fill a magazine at so much per line? Or who will say that it is not contributing about as much in proportion to its bulk to the present advancement of culture and civilization?

But, as my above quoted correspondent justly adds, the wise one's plan of escape from the exasperating distractions and interruptions of life offers the most amazing "moral" of all. It is: Marry, and thenceforth be as selfish as you like, since nothing is expected of the mother but to live for self and for children, because they are a part of self. Truly, in this light, and it is not a false one, "dividing her time between husband, children and home," does not seem so much more glorified a mission than spending her life "patching out other people's systems." And it is not true that "it pays better" to surrender the ambition to cultivate the mind and talents that one may "bring up sons and daughters who will do the singing for her." The best loved, the best obeyed, because the most respected, mothers in all the world are the ones who can guide their children's intellects and have something better to their credit than the number of babies they have brought into the world. Evidently the "wise woman" is personally quite as ambitious on *that* score as the "newest" of us, else she would not be stealing time from her husband and children to write editorials for magazines.

But suppose it were true that the pure-

ly domestic mother does more to train her daughters into Christian women (tho somehow she gets much less conspicuous results out of twenty years or so spent on a few than the bachelor maid Y. W. C. A. secretary from four years' work among many), is it also true that her last years are more insured against loneliness and dependence than those of even the real "old maid"? There may come a day when I shall be reduced to such a life in my brother's home as the oracle of THE INDEPENDENT predicts (tho if my future sister-in-law prove at all particular about the quality of her button-holes I think I shall be safe on that score after she has seen my first one!), but can it be asserted that all or even most of the pathetic old women whom we see dependent on the bounty of others for support or employment are labeled with the prefix "Miss"?

For a good many years there lived near us two elderly women, widows, and not related, but bound together only by a common grief. One had buried all her seven children from consumption, the other had known the unspeakable sorrow of having every one of her sons disappear in early manhood, and of them all only one, and he on his deathbed, ever gave any sign of his existence to the mother who had lived only for her children. I have no words to describe the utter emptiness of those women's lives, the woe stamped upon their faces. But the piteous, the hopeless feature of their case was that, when their homes went to pieces, there was *nothing*—absolutely—left in life for them. Homekeeping was the only art they knew; when they no longer had homes to keep they lost equally their reasons for living, and nothing remained for them but to move into a house together and wait for death to come.

Such a fate as theirs is hardly conceivable for the studious women. It may be true that "no one can teach forever," tho no more so than that no one can keep house forever; but tho the student lose her beauty, her friends, her money she has yet something, for the head and heart are after all not so distinct and wide apart that the latter's emptiness may not be filled in a measure from the other's wealth. The scholarly

woman has stored up for herself those things which not only "*adulescentiam alunt*," but which "*senectutem ablectant, secundas res ornant, adversis perfugium ac solacium praebeant*," the only earthly treasures secure against the "moth and rust" of loneliness and misfortune.

It is not necessarily the matter of being married or single which determines our usefulness, our happiness or our charm in either youth or age; it is our education and the use we make of it. I am willing to admit quite freely that it need not spoil a woman to become a wife or even a mother, provided she retain the ideals of a bachelor maid! For those are the only ideals really not selfish, the only ones which can be trusted in the end to bear fruit, because they are the seeds of a purposeful life. After all, to speak very seriously, I believe that a purpose is a better thing than a system. It is not so easily thrown out of gear, and it runs on broader lines, for in one single statement the "wise woman" was right—none but a thoroly selfish person can be also thoroly systematic. Therefore, I trust the mishaps of my "week" prove to all how entirely unselfish a bachelor maid can be!

But still I feel disposed to urge a little the moral which it seems to me the "wise woman" so entirely missed. I believe that we do owe to our fellows a certain amount of our time and our thought; therefore, I have never grudged to my pupils or my friends that time and thought which I believe actually helpful to them. But I think we forget, and

most often in the case of my sex, that to be truly helpful to others we must make the most of ourselves, and that to do that we need to *claim the right to ourselves* more than society now permits. My complaint against the "wise woman" and many men really wise (on other points) is that the breed of woman which they are striving so hard to perpetuate will never recognize that claim for either herself or others. She it is who irritates me with her selfish and frivolous interruptions and demands; she it is who sets our social standards so that even sensible women are afraid of giving offense if they say to one another, "I have not the time to talk to you today," or, "I cannot conscientiously join your club or help with your church entertainment, good as its object is," and so carry on their life-work in a sort of see-saw between subterfuge in attempts to escape and overwork in attempts to carry these extraneous burdens. "The star with a home orbit and a diurnal system of her own" does manage somehow in defiance of all known astronomical laws to play a deal of mischief with other systems, and I have never yet seen her with children enough to make her a fixed star "after the work is done up." I pray for her speedy and permanent occultation by those whose system is guided by the pursuit of that which

*"Aeque pauperibus prodest, locupletibus aeque,  
Aeque neglectum pueris senibusque nocebit."*

If the philosophic Roman bachelor were among us today I am confident that he would add "*virginibus uxoribusque*."

# How I Became a Provençal Poet

BY FREDÉRIC MISTRAL

[It will be remembered that two years ago Mistral, the famous Provençal poet, was given the Nobel Literature Prize. At that moment he was busy compiling his memoirs, which are to be published this summer. The distinguished author has been good enough to send us the following chapter concerning his schoolboy days, which is here printed for the first time.—EDITOR.]

When I was about fourteen, the longing I felt for a sight of my fields and for the sound of my Provençal tongue took such a hold of me that I grew desperately homesick.

"How happy," I would say to myself, like the Prodigal Son, "are the servants and shepherds on our *mas*,\* who eat the good bread my mother bakes for them, and the playmates of my childhood at Maillane, also—they live free in the country, and plow and sow and gather the grapes and olives under God's blessed sun, while I am shut in between four walls, and have to worry over translations and exercises."

And my irritation was blended with a loathing for this artificial little world in which I was a prisoner and a hankering after a vague ideal which glimmered before my eyes on the verge of the horizon. Now, it happened that one day, while I was reading something or other—I think the *Magazin des Familles*—I came upon a page that contained a description of the Chartreuse at Valbonne, and of the silent, contemplative life led by the Carthusian monks.

"You will go," I said to myself, "and knock at the gate of the convent; you will beg for admission and weep until the monks are pleased to receive you; then, after you have been received, you will spend the whole day in wandering, saint-like, beneath the trees of the forest, absorbed in the love of God and sanctifying yourself in the manner in which the good Saint Gent sanctified himself."

But this reminiscence of Saint Gent, whose legend was familiar to me, made me pause.

"And your mother," I reflected, "to whom you have never even bade good-by! and who, as soon as she learns that you have disappeared, will be in a state of despair, and will be running up hill and down dale in search of you, screaming; the poor heart-broken mother, just like the mother of Saint Gent!"

And, thereupon, I faltered, and, with a swelling heart, I wheeled round and found the road that went to Maillane, all of which meant that I must embrace my parents before flying from the world, embrace them for the last time. But, according as I drew nearer to the paternal home, my fine scheme and lofty purpose to become a monk melted in the emotion of my filial love, as rapidly as a snowball brought near the fire on the hearth, and when I stepped across the threshold of the *mas*, late in the evening, and when my mother, astonished at seeing me drop in on her so unexpectedly, said:

"Why in the world have you left boarding school before the holidays?"

"I was low-spirited," I answered, all in tears and already ashamed of my escapade, "and I don't want to go back to that big, fat Monsieur Millet's, where they give you nothing to eat but carrots."

The next day I was given in charge to Rock, one of our shepherds, and led back to my detested jail, but with a promise that I should soon be liberated from it.

Somewhat like the cats who often carry their kittens from place to place, my mother, on the opening of the school

\*The *mas* comprises the residence, with all its out-buildings and farm buildings. The word is akin to the English *manse* and *mansion*.

year, took me to Monsieur Dupuy, who was a native of Carpentras and wore eye-glasses; he, too, had a boarding school at Avignon, in the Pont-Troué quarter. And here, by the way, my relish for the Provençal was fully slaked.

This Monsieur Dupuy was the brother of Charles Dupuy, author of "Le Petit Papillon," one of the most delicious poems in our modern Provençal anthology; he was Deputy for La Drôme at the time of his death. His younger brother also rhymed in Provençal, but he did not boast of it, and he was right.

Well, some time afterward, there came to us from Nyon a young professor, with a fine black beard, who belonged to Saint Rémy. His name was Joseph Roumanille. As we were countrymen — Mailane and Saint Rémy are in the same canton—and as our parents, both agriculturists, were old acquaintances, we were soon close friends. Nevertheless, I was, for some time, ignorant that this Saint Rémyan was also interested in Provençal poetry.

On Sunday we used to be conducted to the Church of the Carmelites for mass and vespers. We were placed in the choir stalls behind the high altar, and accompanied the choristers with our boyish voices. Among the latter was Denis Cassan, another Provençal poet, and one of the most popular at the evening meetings in the quarter; he wore a surplice, and, with his quaint appearance and bald head, had a comical look to our eyes when he intoned the anthems and hymns. The street in which he lived bears his name today.

Now, one Sunday, while the vespers were being sung, the idea came into my

head to translate the Penitential Psalms into Provençal verse, and then I began writing stealthily, with the stump of a pencil, the quatrains of my translation in my half-open book:

Que l'isop bagne ma caro,  
Serai pur: lavas-me lèu  
E vendrai pu blanc en caro  
Que la tafo de la nèu.

But Monsieur Roumanille, whose duty it was to keep an eye on us, came behind me, seized the sheet of paper on which I was writing, read it, and then gave it

to read to the prudent Monsier Dupuy. Apparently, the latter was not disposed to interfere with me. After vespers, when we were taking our usual walk around the ramparts of Avignon, Roumanille called me to him and spoke as follows:

"So this is the way you amuse yourself, my little friend, making Provençal verses?"

"Yes, sometimes," I answered.

"Would you like me to repeat a few? Well then, listen."

And he recited, in his resonant, magnetic voice, "The Two Lambs."

I had read a little Provençal before this, but in a desultory fashion, and had

often been provoked at seeing modern writers turn it into derision by the use they made of it; Yasmen and the Marquis de Lafare; with whom I was not acquainted, being exceptions to a custom that was almost general. But Roumanille, who was easily the foremost of the masters of the idiom of today, was able to express every feeling of the heart under a simple and fresh form, yet with dignity and distinction.

The result was that, although he was my elder by a dozen years (he was born in 1818) we formed a close friendship,

Statuette of Frédéric Mistral. After Th. Rivière.

and under a star so propitious that, for half a century, we have marched, shoulder to shoulder, in the prosecution of the same ethnic work, and never for a moment has our affection or our zeal been relaxed. Roumanille was glad to discover a confidant of his muse who was capable of comprehending him, and I was burning to enter the sanctuary of my dreams; so we clasped hands as sons of the same diety.

One evening a party of us were play-

And immediately, without by-your-leave, or if-you-please, he takes a run and lands the length of three open hands beyond the mark left by our best jumper. We all clapped our hands, and asked:

"Where do you come from, to do such a thing as that?"

"I come," said he, "from Chateaneuf, the country where they make the good wine. Have you never heard of Chateaneul, Chateaneuf du Pape?"

"Yes. What's your name?"

Frédéric Mistral in Middle Life. After Hebert.

ing at "the three jumps" in the yard, when suddenly a new boarder entered and joined us. He had thin legs, a nose *à la* Henri Quatre, a rather oldish air, the stump of an extinguished cigar in his mouth, and his hat was cocked over his ear. With his hands stuffed in the pockets of his jacket, he said, as cool as you please, just as if he had been one of us:

"Well, what are we going to do? What do you say to me having a try at the three jumps?"

"My name, is it? Anselme Mathieu."

And thereupon he plunged his hands in his pockets and drew them out full of old butts of cigars, which he offered to each of us smilingly, and with the most ceremonious courtesy.

We, who for the most part had never dared even to think of smoking, at once felt the highest reverence for this newcomer, who did things in such a grand way, and who, clearly, knew what high life was!

It was in this fashion that we made the

acquaintance at the Dupuy boarding school of Mathieu, the amiable author of "La Farandole." I once related the incident to our friend, Daudet—who was very fond of Mathieu—and it pleased him so well that he turned it to account in the romance of "Jack," where Mathieu's largest of the cigar stumps is placed to the credit of the little negro prince.

With Roumanille and Mathieu we were, then, the three—*tres faciunt capitulum*—who were to found the Félibrige, a little later on. But as for our honest friend, Mathieu, he was seldom seen, except at meal times or during recreation. It was a mystery to us how he managed things. As he had already the look of a little old man, altho not much over sixteen, and was somewhat backward in his studies, he succeeded in getting a room to himself under the tiles, claiming that he would be able to work with more freedom. There in his garret, where might be seen pictures nailed to the walls, little figurines of Pradier on shelves, nudities in plaster, he dreamed, smoked and made verses the whole day, or else rested his elbow on the window and examined the people passing along the street, or the sparrows winging their flight to their nests with beakfuls for their little ones. Then he indulged in some broad jokes with Mariette, the chambermaid, ogled the masters' young lady, and, when he came down among us, he had all sorts of idle tales to relate about what he had seen.

He was grave enough, however, when he spoke of his noble pedigree.

"My ancestors were Marquises," he used to say, with the utmost seriousness, "Marquises of Montredon. At the time of the Revolution my grandfather abandoned his title; and, having lost everything afterward, he never resumed it, because he could no longer bear it in a fitting manner."

For that matter, there was always something romantic, something mysterious, in the life of Mathieu. Now and then, he would vanish from our eyes, suddenly and unaccountably. We would raise a shout: "Mathieu!" No answer. Where was he? Up yonder on one of the house tops that rose above the tiles. He was keeping an appointment, he assured us, with a very beautiful young lady.

It happened that we had all taken our places on the Pont-troué on the festival of Corpus Christi to see the procession pass. It was our usual station on this occasion, and we were watching for it eagerly.

"Frédéric," said Mathieu, "do you want to see the young lady I am in love with?"

"Nothing would please me better."

"All right then," he returned, "look sharp. When the band of girl chorus singers passes in their white dresses and tulle veils, you will notice that all have flowers pinned to the middle of their breasts, all except one, with hair like threads of gold, and she will have the flower pinned to her side. There, look now; that's the young lady."

"That is your sweetheart?"

"She, and none other."

"Why, old chap, she's grand! But how did you manage to get so fine a young lady stuck on you?"

"I'll tell you all about it," he answered. "She's the daughter of the confectioner at the Carretterie. I have been there now and then to buy things, and so we became quite friendly. After I had made known to her, one day that she was behind the counter, that I was the Marquis of Montredon, I said:

"'Fair maid, if I thought you as wanting in wisdom as I am, I should propose a little excursion.'

"'Where to?'

"'To the moon,' I answered.

"The young lady burst out laughing, and I continued:

"'This is how we'll fix it: You will go up, my darling, to the terrace above your house at any hour that you desire or are able to do so, and I, who am ready to lay my heart and fortune at your feet, will climb every day to the spot you see yonder and make love to you.'

"And so the thing turned out. At one end of my fair one's house there is a raised platform, as is the case with so many houses in Avignon, where the linen is hung out to dry; I have only, then, to go up on the roof and crawl from spout to spout, and there you are! I reach my lovely little blond, who is laying out or folding her little wash; our lips meet, our hands clasp, all in the most gentlemanlike and ladylike fashion, as

The Cradle of Frédéric Mistral.

between knight and damozel; we are in Paradise!"

And now you see how pleasantly our Anselme, the future *Félibre des baisers*, passed through his classes on the roofs of Avignon, studying at his ease in the breviary of love.

Speaking of processions, I must, before leaving the pontifical city, say a few words about those religious pageants, which, in our young days, created the greatest excitement thruout Avignon for a whole fortnight. Notre Dame de Dons, which is the episcopal seat, and the four parishes of Saint Agricol, Saint Pierre, Saint Didier and Saint Symphorien vied with one another in making the finest appearance. As soon as the sacristan had gone thru the streets, ringing his bell, along which the Host was to pass under the canopy, there was a general sweeping and watering. The fronts of the houses were adorned with green boughs and hangings. The rich spread their embroidered and damasked tapestry over the balconies; the poor exhibited their finest quilts. Then arose at the appointed places the monumental *reposoirs* (stations of repose for the Sacrament), lofty as pyramids and covered with candelabra and vases of flowers. The people awaited the procession, seated in front of their houses, and, in the interval, before its appearance, consoled themselves by eat-

ing meat pies. The young beaus and ladies' men, and some of the tradesmen and artisans, strutted along, throwing roses and making eyes at the young girls under the awnings of the streets, made quite misty by the smoke of the censers.

When, at last, the procession, headed by its red-garbed beadle, with its bands of white-veiled virgins, its congregations, brothers, monks, abbés, choristers and music, filed slowly along to the beating of drums, you heard on its passage the murmurs of the devout, who were telling their beads.

Then, in the midst of a great silence, all bent the knee or bowed the head, and the resplendent monstrance was raised high above the crowd by the officiating priest.

But the greatest attraction during the day was the Penitents, who made their rounds after sunset by the light of torches. Especially when the White Penitents, in their cowls and long cloaks, defiled thru the city, like spectres, some carrying portable tabernacles, others reliquaries, others censers, some a triangle with an enormous open eye in the center, some a great serpent twined around a tree. You would have said that it was an Indian procession of Brahma.

These confraternities were as old as the League and the Schism of the West, and their leaders and dignitaries were

usually the first nobles of Avignon, Aubanel, the great *Félibre*, was all his life a zealous White Penitent, and died and was buried in the habit of the confraternity.

The man who superintended our studies and recreation hours at the Dupuy establishment was an ex-African sergeant, named Monsieur Monnier. He would have liked, he told us, to be a Red Penitent if a confraternity of that color had existed in Avignon. He was frank, like every old soldier, and as ready to swear. He had a coarse mustache and imperial, and was as neat and spruce as he well could be, all over, from top to toe.

At the College Royal, where we learned history, there was never any question about the politics of the time. But Sergeant Monnier, who was an enthusiastic republican, undertook our education in this department. During recreation he stalked up and down, with a history of the Revolution in his hand. He caught fire as he read, gesticulated, swore, fairly wept, in his transports. "Oh, how grand this is! And this!" he would shout at us. "What men they were! Camille Desmoulins, Mirabeau, Bailly, Vergniaud,

Danton, Saint-Just, Boissy d'Anglas! *Nom de Dieu*, what worms we are today in comparison with the giants of the National Convention!"

"Yes, they were glorious fellows, those giants of the Convention of yours! They were great at cutting off heads and dragging crucifixes thru the dirt! Some were unnatural monsters who devoured one another, and Bonaparte bought the others whenever he felt like it, as easily as he might buy swine at a fair!"

And so they never met without a wrangle, which continued until our good Mathieu came on the scene and brought about a reconciliation for the time by some wild prank or other.

It was amid these simple, kindly surroundings that I finished my studies in the month of August, 1841. Roumanille, to increase his small income, entered the Seguin printing office as foreman, and, thanks to this employment, he was able to bring out, at little expense, his first collection of verses "*Les Pâquerettes*," his reading of which was a delicious treat for us, as soon as he received the proofs. And next, as gay as a young colt when it is let out to graze freely in the meadows, I returned to our *mas*.

MAILLANE, FRANCE.

## The City by the Sea

BY ROBERT GOLDSMITH

THE world was wrapped in placid peace:  
For Day had gone to rest,  
And Night had set a starry watch  
Upon each cloudy crest,  
And sweet calm lay, in no dismay,  
Within each tranquil breast.

When lo! from out the molten earth  
A mumbling and a moan;  
A rending of the rocks of gray;  
And Terror mounts his throne;  
And every cry that cleaves the sky  
Dies faintly in a moan.

'Tis yester-night! And all is bliss,  
And busy are all marts;  
The sinking sun the hills doth kiss,  
Then, lingering, departs:  
'Tis morrow-morn! Our strength is shorn,  
And broken are our hearts.

We smite our breasts and bow our heads  
Before dread destiny,  
But yield nor heart, nor hand, nor hope,  
Nor curse God's strange decree;  
For we will build again our home,  
The City by the Sea.

NEW YORK CITY.

# Still the Muck Rake

BY JOHN GRAHAM BROOKS

[Mr. Brooks is one of the best known lecturers on economic and sociological subjects in the United States. For two years he was the expert of the United States Department of Labor, making a report in 1893 upon "Workingmen's Insurance in Germany." He is President of the National Consumers' League, and his volume, "Social Unrest," is perhaps the best analysis of present day politico-sociological tendencies in America.—EDITOR.]

MANY of us have wondered when the revolt would come. It is, I think, seven years since the gallant author of "Wealth Against Commonwealth" told me that his massed evidence must at least frighten some of the overlords of high finance. It is the kind of book that goes far to kill the writer of it. Its pages throb with the pain of delivery. Lloyd sent me an early copy for inspection, but, to my present shame, I gave but a half hearted response. It seemed to me turgid in parts and overstrained thruout. Even now, as a work of art, I think its emotional emphasis at fault. To the real strength of the book, I was, however, blind.

Two years later I gave a copy to a quick witted financier in the very heart of the great scramble. I begged him to read it with honest care and tell me his impression. Within a fortnight he brought me the volume penciled from cover to cover. The book, he said, has some errors of fact, which he explained to me. He then added: "The real limitation of the writer is that he did not get on to half the iniquity he was attacking."

But was my flayed victim in those chapters frightened? Not by a tremor.

One of the great ones "had it read," and later listened for a half hour while a clerical retainer amused him with low farce travesty of its contents. Another so far winced under a sharp personal thrust as to threaten a libel suit. A legal henchman pointed to the sworn testimony of his own accredited agents before a legislative committee, confirming every word that Lloyd had set down. The awkwardness of going behind this evidence was so obvious that the attempt

to strike back was dropped. Further than this I never could learn that the philippic of this Saint George among social reformers raised a ripple of alarm, yet Lloyd was a man with the muck rake.

In the spring of 1903 the New York *Evening Post* prepared its statement of political and business lewdness in Rhode Island. The exposure was as pitiless as it was true to the fact. Even to the fool that runs, it made clear the cancerous spots in our national life. Where politics touches those forms of business that are entrenched by unfair or stolen privileges, disease follows with a swift foot. It is a thing for national sackcloth and ashes that it has taken us so long really to look this ugly fact in the face. At home and abroad students and publicists have long since pointed out the evil. Before 1840 so farseeing and friendly a critic as de Tocqueville wrote us down as conspicuously a law abiding people, but he saw a coming peril in the "lawlessness" of the rich, but until just now, the great mass of middle class respectability has not believed a word of these charges. Strangely enough, it has been left to a group of young journalists to tell the story so that even our great well to do averages are startled into attention. They have been forced to listen. With felicitous departure from all academic timidities these new instructors have camped in the market and the mine; with lobby and legislative committee, reporting straight and without fear the thing that is.

It is as shabby as it is cowardly of us to condemn what is best in the work of these new messengers, because necessarily open to this or that fault—as of

"sensationalism" or "inadequate investigation." The best of this group are doing the highest and most saving moral work in this country.

The clergy should be doing it, but as a class they have lost their chance. They are condemned to give out counsel from a distance too safe and protected. The really strong; those who do things are as indifferent to pulpit utterances as to the political or business opinions of a pretty woman.

Why at last in the seats of the mighty is there anxiety? When the *Evening Post*, and later, Steffens, told plain tales of Rhode Island rottenness; a rottenness so expansive as to include among its *causes* her most petted political leader, as well as franchise magnates and much gig aristocracy of Providence. Why did none of them strike back? That an attack so definite, so personal, so charged with criminal accusation should be flouted and ignored is more sinister than the charge itself. Think of a social condition in which one can afford to keep silence before such indictment! Yet how long had this been the state of Philadelphia, St. Louis, Cincinnati, and, indeed, most of our American cities?

No one flinched in the least at the first irrefutable proof in general terms that where the business of special privilege impinged upon politics, politics is corrupted. The supreme service of these journalists is in giving concrete and intelligible illustration to the larger general fact. At least they have begun to make the people understand the futile mother mischief of our would be Republic.

It is quite momentous to get the main proposition into our heads that, if any corporate privileges (lighting, transportation, mining, Beef Trust) once develops the power of great speculative gains, they not only soak the public, but immeasurably worse, they *must* corrupt a swarm of attendant politicians in city, State and nation. At this stage of the discussion, it is either a very dense or prejudiced person who denies this fact. Far more momentous is it to turn this proposition into definite material for propaganda. This is the work of translation into the mother tongue. It has been done by those who have run back

and forth between the centers of business and the centers of politics until they have made connection. In countless instances they have taught the public precisely what this connection is. They have called names, places, dates and documents. Yet several years of this task work were necessary before a public, long drugged by the phrases of our competitive ethics, began to waken. From every quarter the signs of this awakening are at hand. It is the beginning of the revolt of which I first spoke. It is so unmistakable that those same seats of the mighty are felt by the sitters to be insecure. They were, of course, the last to waken, and like one roughly aroused before dawn, they stagger a little to get their bearings.

The senior Senator from Massachusetts is at the front in sounding the alarm. "Who are these disturbers of our peace?" With senatorial gravity we are admonished to be on our guard against the defamer of dignities. Others are on the alert, angered, grieved, pathetic, according to temperament. The steel of St. George has at last struck home, but they will not have him so named. He is to be "The Man with the Muck Rake."

This we might have learned from every page of really vital reform history. Every shining name on the frontier of social change was a man with the muck rake. To English factory owners, in 1830, such a one was Shaftsbury. So was Robert Owen to the Bishop of Exeter and all his kind. William Cobbett and the doughtiest knights who tilted against the rotten boroughs worked in muck with the same implement, because the muck was there. To the whole landlord gentry, Cobden and Bright were no better in the early forties. Midway in the century, Charles Kingsley, Hughes, Ludlow, and even the saintly Maurice, were set upon by English sweaters with a virulence hard, at this distance, even to understand.

To four-fifths of Boston's élite, Garrison and Sumner were men with the muck rake.

The crisis in England in 1832, or our own in 1861, was no whit graver than that we now face. The one hope is that we are becoming *conscious* of the evil. It is this which at last frightens the poli-

tician and the freebooter. They are alarmed for precisely the same reason that proprietary medicine men are in arms against *Collier's Weekly*. This evil is as old as quackery, but something of its devastating effects have been made so dear as to startle the public. To the whole solemn phalanx of charlatans who sell bad alcohol and poisonous drugs under lying names, *Collier's* is, of course, stirring muck.

Nothing now concerns the American people quite so vitally as to understand the issue at stake.

The real work for the man with the rake is but just begun. Largely by mere fortuity of a pinched stock gamester and a family quarrel we have had the insurance sore opened, but are we so smitten by blindness as to think for an instant that the speculation excesses of insurance companies constitute the only sore, or the most dangerous one?

The probing of railroad abuses is known by every competent person to be in its initial stages. That the express companies should have thus far gone scot free is humiliating, but there is no hope for this new or unfinished task except thru the agency of those who will have to bear the stigma of the muck rake.

What now is most to be feared is also a well worn story in the history of political and economic reform. When blood is let, when once disturbed vested interests are driven to their defense, the commonest device is to vilify the agitators.

It is in the very nature of these struggles to attract aggressors of most diverse character; from the highest to the most wayward and erratic. As it ever was, so again we shall have men like Lloyd, Hapgood, Steffens, Baker purposely confused in one motley fellowship with every abusive journalistic skate whose sole aim is pelf. One of the

hardest of our buccaneers has said it: "The whole cursed business is the work of a newspaper gang out for the dough." This was an honest opinion, lying level with his own career and business method. Far above this is the intelligence of many others who have been made to smart by the truth telling. These, to our certain knowledge, propose to use every weapon that lifelong skill and measureless resources put at their disposal to silence this agitation. For the cranks among these critics they have only contempt. They know enough of human nature to understand that mere strident defamation will be discounted to a zero by the American people. It is the gray fact of truth and sobriety alone that they fear. A Latin motto reads: "He teaches well who distinguishes clearly." Let us be on our guard against this cunning confusion of the best and the worst of our social censors. If the Harlequin is at the jousting, so too is St. George, and no one shall cozen us into mistaking the one for the other.

The man with the muck rake at his lowest is not our peril. Our peril is in seeing too late what it means to have democratic government in control of speculative business interests powerful enough to silence or make servile the twenty strongest men in our most dignified political body.

Who has heard from a soul of them one searching or indignantly effective protest against evils known as thoroly as Ohio Senators knew their partnership with a creature like Cox of Cincinnati?

The reasons for this dumb subservience constitute a peril compared to which the muck rake is innocent as a child's toy.

Upon nothing does the public safety and a cleaner public life more depend than upon the unflinching continuance of this brave surgery.

CAMBRIDGE, MASS.

# What Prohibition Has Done for Kansas

BY CHARLES M. SHELDON

AUTHOR OF "IN HIS STEPS," ETC.

ON the first day of May, this year, Kansas celebrates twenty-five years of her prohibitory law, which is a constitutional amendment. So many lies have been told about Kansas in a variety of ways concerning her political, social and other features of life that it ought to be refreshing occasionally to hear something which approximates the truth. The number of lies told about Kansas, which have to do with her prohibitory law, are so numerous that this brief article does not pretend to answer them. It only attempts to state affirmatively some things which the writer believes to be the facts in the case after seventeen years' residence in the State, after careful observation, and con-

sultation with other old and reliable residents.

First.—It may safely be said that in three-fourths of Kansas today the prohibitory law is as well enforced as other laws. A certain number of well known towns and cities, but not a large number, have disregarded the law from the beginning and have adopted in defiance of the constitution practically a license system in the collection of monthly fines. Traveling men, visitors to the State for a short time, have found these conditions existing in these towns and cities and have inferred from them a general lawlessness over the entire State. We are all familiar, of course, with the Englishman who comes to New York or Bos-

Charles M. Sheldon.

ten, stays two or three weeks, goes home and writes his impressions of America. Kansas history has been written in the same way by men who have entered a joint in a whisky town in Kansas and gone back home to say that prohibition is a failure. Facts in the case, however, show that in at least eighty counties out of 105 the prohibitory law is respected and enforced.

Second.—Practically every school teacher in Kansas (10,000) believes in this law after twenty-five years' trial of it. Every minister of every denomination, so far as I know, without exception. An overwhelming majority of the editors of newspapers believe in it. A majority of business men in the State, and of professional men as well. The manager of the Santa Fé Railway, Mr. J. E. Hurley, has just said:

"I regard the prohibitory law of the State of Kansas as of very great value, especially to the railroad men, who are in some ways tempted along the line of intemperance as other working men are not tempted, owing to the nature of their work, their enforced absence from home, etc.

"The difference between conditions in Kansas and those in States where the saloon is permitted by license is very marked. I do not hesitate to say that the advantage is all with the State of Kansas, even under the handicap of its being surrounded by States where the saloon is allowed. I regard the law as a great blessing in every particular to the social, moral and general welfare of working men, and especially of railroad men, with whom I have lived nearly all of my life, and I do not hesitate to say to the world that all railroad men the world over would be greatly benefited by the passage of such a law as that which is on the statute books in the State of Kansas."

It would be difficult to find a higher and more sweeping testimonial to the benefit of this law than is given by this railroad man, who has been in the business practically all his life. Governor Hoch says a quarter of a million young people have grown up in Kansas who have never seen a saloon. That, in itself, is a tremendous advantage to the State.

Third.—The working of a prohibitory law has thruout the State put the stamp of the criminal upon the brewer and the liquor seller. He has no social standing whatever, not even in towns where the law is deliberately nullified. In the East it is not uncommon to find the brewer living in the most expensive house in the

town, and if not with a defined social standing at least with tremendous political influence and other power exerted over the press and the people generally. In Kansas such condition is unknown. The steady educational influence of the law has gradually placed the saloonkeeper and the brewer in the rank with criminals, and he is classed as a criminal along with burglars, counterfeiters, thieves and perjurers. This, in itself, is a tremendous educational factor, especially to the young people born into this atmosphere.

Fourth.—The economic value of the law is beyond dispute. Kansas has the smallest number of paupers to its population of any State in the Union, about one to every 1,000 inhabitants. Kansas has the smallest number of drunkards of any State in the Union in proportion to its population. We reckon that we save to the State between seven and eight million dollars every year from this one fact alone. There are towns in Kansas of 10,000 people where the entire cost of enforcing the prohibitory law is not more than 15 cents to a citizen, and where whole months go by without a single criminal case on the docket, and it does not pay to keep up the poorhouse. In spite of the fact that the man who comes into the State for a few days and goes out again and says prohibition does not prohibit, the brewers' journals themselves, and the United States Revenue reports show that year after year less than 10,000 barrels of liquor are sold in Kansas, over against more than 200,000 in Nebraska, and over 1,000,000 in Missouri.

Fifth.—The prohibitory law has done splendid service in uniting men and women of different political and religious faiths. Time and again in the history of scores of towns in Kansas the churches have united on this issue, and time and again in scores of towns men have departed from their party allegiance to band with others of any party faith on this one issue of law and its enforcement. It is seldom that there is a municipal election in Kansas into which this moral issue does not come. It is a disastrous thing for any people when a political campaign is carried on without a definite moral issue. All political issues are

moral, but the politicians do not always make that fact appear. It is impossible, however, to evade the moral issue in the political campaign where either law or lawlessness is the plain issue. That fact, in itself, has repeatedly united the people. During his recent revival service in Kansas, Rev. J. Wilbur Chapman made the statement that he had never been in a State in the Union where the church people were more united than in Kansas. This is due almost wholly to the fact that they have united on this broad question of the enforcement of the prohibitory law.

Sixth.—The prohibitory law has educated the people of Kansas, especially the young people, to regard the social custom of drinking as an evil, something to be shunned and be ashamed of. There are many towns in Kansas where the habit of social drinking would put a social ban upon the person who indulged, and even be the political death of a candidate for office if he indulged in the habit in his own home. That also, in itself, as a fruit of the prohibitory law is no small thing. It is, in fact, a tremendous advance on the easy custom which prevails in many whisky States of continuing the drinking habit upon which no ban is placed socially. Political clubs meet in Kansas in banquets where no liquor is ever served. The newspapers of Kansas, with the exception of about twenty, never print any liquor advertisements. Over 800 publications, daily, weekly and monthly, and out of that number there are less than twenty-five that ever print liquor advertisements. That also is a significant fact when it is considered that the poor country editor is often tempted by the liquor men who would be glad to pay promptly large sums for advertisements of their wares, but the condemnation that would follow such a use of the press would be swift and unmistakable. Where the fear of such condemnation does not exist the educational feature of the law, which has put the liquor business under the ban, influences the press.

Seventh.—After all else has been said this remains for the fact of twenty-five years of prohibition in Kansas. The people, by a majority, are more firmly fixed in their faith in the efficacy of the law than ever. There is no talk of re-

submission. In spite of the fact that the law is disobeyed, that faithless officers in some towns fail to do their duty, that juries are fixed and county attorneys are on the other side, it yet remains true, that, take it as a whole, the State has been an incalculable gainer from the law in social, political and commercial ways, and that is the only fair way to judge of any law in any State as to its general effect upon the people as a whole as the years pass on. Even in places where the law has been disobeyed for years there is the leaven of a protest against it; and because the law stands on the books it is always possible that a change of administration in the city may make possible at any time a change in conditions. The people have threshed out the question of the status of the saloon business and do not have to create, in most places, a sentiment against it. People in the East sometimes say to me: "You are always having trouble with your prohibitory law in Kansas aren't you?" And I sometimes say, "We are, and we think it is better to be always having trouble with the devil than to sit down and be at peace with him, the way you do." And I may say, truthfully, that the worst condition we have ever known in the city of Topeka, when the city administration and the county administration were against the law, when the town was what is called "wide open," and joints were numerous; even then the worst condition we have ever had is one hundred times better than the condition in any licensed saloon town of the same size that I have ever seen. In a recent trip thru New England, including New York city and Pennsylvania, I saw more drunken men and more men drinking, and more women also, in three weeks than I have seen in the whole State of Kansas in seventeen years.

After twenty-five years of prohibition the men who have lived in Kansas and watched the operation of the law welcome twenty-five years more of the same law with the growing hope of increasing its efficiency and finally wiping out, with the help of the United States Government, which ought to go out of the liquor business entirely, the last vestige of the worst business known to men on the face of the earth.

# Is the Navy Getting a "Square Deal"?

BY PARK BENJAMIN

It is currently reported that Secretary Bonaparte is to be translated before long to the office of Attorney-General, and is to be succeeded in the Navy Department by Mr. George L. Meyer, hitherto our Ambassador at St. Petersburg. Mr. Meyer's past services have been distinguished, and there is no reason to assume that his ability to administer the affairs of the Navy is anywise less in degree than that of his immediate predecessors, Messrs. Long, Moody, Morton and Bonaparte, at the time of their respective appointments.

It is, therefore, to be understood that in what follows, no criticism whatever is directed to Mr. Meyer's general eligibility as a citizen of known talent and reputation. It is also freely conceded—nay, insisted—that a public servant who has filled a great office with credit to his country and himself is, beyond most men, well fitted to go higher.

In common, however, with Messrs. Long, Moody, Morton and Bonaparte, Mr. Meyer will assume his new place without known special qualifications. That is to say, it has not been made publicly apparent that Mr. Meyer has ever exhibited any special knowledge of naval affairs, or even manifested any special interest in them, or that, as in the cases of his before-named predecessors, he will not have to be wholly educated for his work after he undertakes it.

It is true that all officials at the outset must, to some extent, be educated to their tasks, especially if they have not advanced by promotion from lower grades; but in none of the Cabinet offices is the kind of knowledge required, so far out of the general run of civilian attainments as that pertaining to the Navy. Nor was there ever a time when the questions to be decided by the Secretary were more perplexing, more technical, and yet more vital. The law gives him no responsible military advisor. He is constantly called upon to draw conclusions from the conflicting opinions of experts. He is often obliged to de-

fend his decisions before other laymen in legislative office; and this, at times, against interests pecuniary and interests political. The Navy tells its wants thru him. This is only the barest outline of the task with which he has to grapple and to the like of which in business life only men of long experience and proved special ability are ever called.

A brief statement of the chief naval problems urgently demanding solution, will show why the position now requires knowledge at the outset.

I. *The Problem of Competent Admirals.*—The attention of the country was first called in the columns of THE INDEPENDENT, several years ago, to the fact that our naval commanders were too old; that this condition was rapidly going from bad to worse; that we were fast reaching the stage where we should have no competent admirals and no system which would produce them. The few Cassandra voices which then cried this are now echoed by the whole commissioned personnel of the Navy in chorus. Concrete and reasonable propositions for relief have been made. Self-sacrificing as the naval officers always are, never before have men to whose individual careers such remedies would be destructive, more urgently advocated their adoption. They are making it very plain that continued neglect in this matter is little short of criminal. There is no certain sign yet that the persistent obduracy of Congress is being overcome. Much will depend upon the Secretary's influence.

II. *The Problem of the Fleet.*—Since the naval rise of Japan, it is idle to fix attention on protecting only the Atlantic Coast. We have got to provide for the defense of the Pacific side. Until the Panama Canal is completed fleets in one ocean will not be within supporting distance of fleets in the other. Does that mean two Navies, and, if so, of what strength?

No one disputes our need of an "adequate" Navy, but what "adequate" im-

plies is sharply contested. Does it mean one powerful enough to whip that of Great Britain and of her ally, Japan, combined; or only just sufficient to keep Kaiser Wilhelm from comfortably disembarking his army, or in conjunction with the English fleet able to enforce and maintain the peace of the world? Does it mean ships designed solely for war, or ships designed partly for war and partly for ocean police, or only for ocean police? The extremists on one side want to crowd every faculty, military and police, in every fighting ship; those on the other sigh for the days of Jefferson and his 237 mosquito craft.

Are we to go on exaggerating at enormous expense the present empiric type of battle ship, or seek original designs? Are we to lead in naval progress or wait and profit by the experiments of other nations, at the risk of being caught unprepared?

III. *The Problem of Desertion.*—The high rate of desertion in the enlisted force of the Navy is a source of anxiety. Out of a total of 30,804 men, 4,427 absented themselves last year without authority, of which 3,227 were marked as deserters, and about one-third of these were in the boiler room force. We managed to catch and convict 447. No better facilities appear to have been provided for the apprehension of these criminals who turned their backs on their colors. And the official mind seems unable to suggest any.

"Until public sentiment is set right," wails the Bureau of Navigation, "and a larger percentage of men enlist who have a true sense of obligation to their oath no appreciable decrease in the percentage of desertions may be looked for." Is it not conceivable that a Secretary of the Navy, equipped with adequate knowledge of it, might see his way thru the tangles of red tape and official conservatism which underlie this helpless outgiving of the Bureau?

IV. *The Problem of Economical Administration.*—The extravagance of the present system is excessive. It is now reported that of the \$8,000,000 appropriated last year for repairs to be performed under the Bureau of Construction and Repair, only \$4,000,000 can be accounted for by the Chief of Bureau;

and that, in the Bureau of Steam Engineering, out of an appropriation for the same purpose of \$4,000,000, only one-half appears to have gone to its authorized destination. This is not graft, involves no malfeasance of any sort, and does not reflect in the slightest upon the integrity of the officers now at the heads of the Bureaus. The fault is not in men, but in the system which has resulted in the outlay of the funds set aside for repairs in expensive administration and unnecessary navy yards.

V. *The Problem of Responsible Military Advice.*—The need of a general staff for the Navy, or of some body, no matter under what name, charged with responsibly advising the Secretary in military matters, is clear. Their very complexity makes it necessary, and that complexity is growing all the time.

The present situation, which leaves the Secretary dependent upon wrangling "boards," is absurd and dangerous. It is also very expensive.

Beyond this, it is becoming evident that the supply bureaus of the Department, the business offices which deal with contractors and buy things for the Navy, ought to be segregated wholly from the military bureaus—both in function and name. It is just as ridiculous to call bookkeepers rear admirals as it is to call rear admirals bookkeepers. Military offices need military men, and the latter do not require business men to help them handle their weapons or to tell them how. But the provision of these weapons is a business matter, and can best be done by business men.

All of which indicates what is generally agreed upon, namely, that the Navy Department has outgrown its present organization, which was effective enough in the days of 8 knot steamers and 9 inch Dahlgren guns, and needs remodeling.

VI. *The Problem of the National Naval Reserve.*—For the last quarter century, and even longer, the necessity for a National Naval Reserve, wherein during times of peace men can be prepared for service in the navy in time of war, and by the Navy itself, has been steadily, tho unavailingly, pressed upon Congress. Other nations—and especially Great Britain—have perfected such an organization. No good reason can be or ever has

been advanced why we should not do the same.

The distinction between the State Naval Militias and a National Naval Reserve many people do not see. They have no relation at all. Of the existing State Militias, it was recently said by a naval officer of long experience with them, that in point of experience, in case of war, "a naval militia crew would be about equal to a crew of ordinary recruits which had been drilled for a month." This may be too harsh a verdict. Whether it is or not, the State Naval Militia is one thing and the National Naval Reserve is another. The one is controlled by the State Governor, the other by the President. The first educates itself under a languid sort of Navy supervision; the second is the Navy—actually a part of it—but in active service only in war. Many bills have been prepared for organizing the National Reserve. One of the best and simplest was drafted by the late Admiral Taylor. There are many debatable matters involved.

VII. *The Problem of Insufficient Officers, Their Promotion and the Jack-of-All-Trades.*—The fleet is seriously under-officered. How successful the attempt has been to meet the conditions by crowding large classes of boys into the Naval Academy, the recent breakdown in discipline of that institution sufficiently shows. The "Bennington" has illustrated what can happen to an under-officered ship. And if war came, we should get more illumination—still more expensively. How we are to obtain more officers, whether we should appoint them from civil life or insist on all going thru the Naval Academy—these are difficult questions. Are the line officers to specialize in engineering and ordnance, or to continue, as now, naval jacks-of-all-trades, with a continuance of the breakdowns in machinery which has attended the removal of competent engineers from the engine rooms? Even more complex are the problems of seniority, promotion and of selection. Shall we continue keeping the Navy the only hierarchy in the world in which men rise by mere seniority into dead men's shoes, or shall we prefer them by merit and risk the dreaded interference of political pull?

VIII. *The Problem of Naval Pay.*—

Not only are the officers of the Navy overworked, but they are underpaid in a way which is causing needless dissatisfaction. Some time ago Congress reduced their salaries, while on shore duty, 15 per cent. below that of corresponding grades in the Army and Marine Corps. The reason assigned was, in substance, that the naval officers (despite the patent fact that most of them are doing two men's work and some that of three) were presumably likely to shirk sea service if shore billets were not made pecuniarily unattractive. Naval officers do not select their own employment, but are ordered to duty and go where they are sent. There are many cases in which shore service is even more important than that at sea. For example, the officer in charge of the great gun factories at Washington has 4,000 men under him, and manages the huge plant which turns out nearly all the guns in the Navy, a position which in civil life would command a salary anywhere from \$15,000 to \$30,000 per year. He gets his pay docked 15 per cent., from \$4,500 per year to \$3,825. He has been forty-three years in the Navy. Under his command is a lieutenant-colonel of marines, who looks after the marine guard of the station. That officer, who entered the Navy eighteen years after his superior, and because of his corps is not subject to the salary reduction, draws \$175 per year more pay.

In return for services in the General Board of the Navy, the highest of all advisory places, the members, Admiral Dewey alone excepted, are mulcted 15 per cent.

The officers in charge of the several lighthouse districts, who take care of the lighthouses on our coasts, suffer the same reduction.

For inspecting ships in process of building, upon which we are spending millions; for proving and testing guns and ammunition and certifying to their quality—in brief, for watching contractors and for seeing to it that we get what we pay for—we fine the inspecting officers 15 per cent.

For having a human being's inclination to see his children and to make the acquaintance of his wife for a period longer than the few days possible to be snatched from deck duty when his ship is in port

near them, we cut down the only means he has for their support and extort from him—from them, in fact—15 per cent. And what is even worse, from his point of view, we publish to the world that his services are less appreciated by his country than those of his brothers of the Army or of the Marines by just 15 per cent.

Does any one suppose that this sort of thing is calculated to help the efficiency of the Navy?

The list of problems concerning which the Secretary of the Navy ought to have previous understanding might easily be extended, but the foregoing are sufficient for present purposes.

To hand the Navy Department over to a man who has given no sign of knowl-

edge of any of them, or, worse, merely to make it a stepping stone for him to some other preferment, is not the way to ensure a definite, intelligent and well considered naval policy, or the best management of the fleet. Nor is it giving the Navy a "square deal."

With both Naval Committees suffering from lethargy and practicing mere opportunism, the man whom the country needs as its Naval Secretary is one whose interest in the service is already known and proved, who understands the Navy and who is capable of deciding its questions and of driving at Congress until he gets results.

There are such men in the United States; but where is the evidence that Mr. George L. Meyer is one of them?

NEW YORK CITY.

## Eidola

BY HENRY AUSTIN

EARLY one pearly dawn I heard a bird singing—

Lavishing high notes that still be ravishing mine ears—

While seemed for miles the sylvan aisles with elfin echoes ringing.

Until I lost myself in a rapture deep as tears.

Slowly the Holy Dawn thru trees no breeze troubled

Seemingly stole on to lure me, dreamingly, along

By secret bowers of shyest flowers to a laughing fount that bubbled.

As 'twere to kiss my quaffing lips into shining song.

Kneeling, with feeling strange, I quaffed—oh! draught mighty!

Glowingly that fountain blushed and flowingly it sung

Of woman's face and woman's grace: no festal Aphrodite.

But a shy soul, a vestal; tho brightly, warmly young.

Clearer and nearer now the Dawn came on, smiling.

She was all a youth might dream and free was all her way

From coyish feint or cloyish taint of seeming-sweet beguiling.

She bade me keep on dreaming: my Dawn-dream should bring Day.

Low, in monotone, last night I heard a bird, mocking

Those high notes of memory still ravishing mine ears.

Slow, with many a moan, the trees in a listless breeze were rocking

The empty cradles of my dreams, dead dreams of wasted years.

And wandering with pondering steps, thru Life's obscure forest,

While clouds, like slumbrous condors, on sumbrous wings trailed on.

My soul beheld the glimmering ghost of youth—ah! truth sorest!

With blank, blind visage seeking still the love-dream of its Dawn.

PASSAIC, N. J.

# Literature

## Fungus Fiction

WHAT has become of the sensible, respectable people who used to go about behaving themselves even in fiction? Back in the 1840's the heroine was always introduced at morning prayers or innocently dreaming over her embroidery frames, and, while the hero might have been a little "wild," the reader never learned the midnight particulars of his wildness; but now that is all we do learn about him. And it is a question if a publisher would

risk a story in which the heroine could not be tempted either by the author or hero into a compromising situation. As for modesty, it is out of fashion in fiction. There used to be a suggestion of spirituality about the girl who let down her hair in the oldtime romance and knelt before the moonlit window in her nightgown to say her prayers, but now Bernard Shaw will thrust a woman into the drawing-room of his story clad only in a red satin corset and her petticoats, and we must be thankful if

he makes even this contemptuous concession to decency. In the old days a man did occasionally run away with the other man's wife, but not nearly so much was made of it in fiction. And what was said went to prove that the way of such transgressors was hard; but now such wicked couples are found in too many modern novels, and the worst of it is that they are represented as having "found happiness" at last—all of which means that it is a liberal education in vice to read current fiction. From six of the best written novels of this season the reader may learn more about ways and means of polite damnation than the aver-

age bad man can from actual experience. And this is true not because men and women are less good than they were, say, in the 1840's, but because we have become more intellectually interested in the phenomena of evil. It appeals to the imagination with a sort of dark-winged fascination, because we are just now realizing the lower world of animal consciousness from which we have sprung, and about which science has so much to say. The novelist has grasped the idea

not so much as a fact as his opportunity to dramatize this horrid mental reversion to type.

And there is another reason for the growing license in fiction: Formerly even literary people had to think of the reader's morals, now nothing is further from their conscience. Less regard is shown for his environment than for that of the worst criminal class in the country. He is made temptingly acquainted with all that is morbid, wrong or criminal.

His taste has been

so corrupted by the goings-on of the heroes and heroines in the books he reads that he has a sickness of the mind, so that now he actually craves what is depraved. He is interested not in literature as evidential of life, but in that fiction which is founded upon fungus growths, the passing fevers of social diseases. And if any one doubts this, let him note the kind of novels which prove to be the "best sellers." Never mind about soup kitchens and settlement house workers. They are in a fair way to prosper.

The artistic trouble with this class of fiction is that it is not literature in the

Miss Edith Rickert, Author of "Folly."  
Copyright, 1906, by the Baker & Taylor Co.

sense of being representative of the average life, but it presents only the obsessions of those who fall below the common standard in morals. It is a fungus art which nudges us in the dark of our minds, which never rises above a sublimated form of materialism, or clears the sky line above weak mortality with an immortal aspiration.

For when it is not distinctly bad, the novel of this class often teaches the utter futility of life and effort with a zeal that is diabolical. Anne Douglas Sedgwick's new story<sup>1</sup> illustrates this fault. The story is interesting, the scenery is charming, and the author leads her characters thru it according to her despair, a despair which she spreads over the reader's mind with astonishing wisdom of words. In the first place why should any one overlay life with the "Shadow" of metaphysics when originally it was intended to be so simple that a wayfaring man tho a fool might undertake it with confidence. And she has done something worse than complicate the plain right and wrong of things by presenting a hero who is an impostor of life and an unfaithful disciple of his own death-creed. He is a materialist who does not believe in his own reality, a spiritually minded man who does not accept the doctrine of immortality, but who dare not commit suicide lest he should be tricked thus by his own automatic will into another state or form of existence. He practiced virtue, but entertained a philosophy which denies moral responsibility. He was incapable of love or hate, but was known for his charity. He had respect for himself thru the same instinct which causes a healthy cat to keep its fur licked clean, but he was devoid of principle *on* principle. However, no good ever comes of it when a woman drags metaphysics into life or fiction. She may write it, but she cannot *hope* her way thru it. That was the trouble with George Eliot. She could think further than she could hope. And when they put it into their stories, some of the characters are sure to die of it. In this book the heroine passes away because she believed that life was stronger than death, and because her lover could not

love her because he believed that life was an hallucination. On this account nothing was worth while, neither love, nor marriage, nor children, nor anything else that would help nature to carry on the farce. The personal effort she makes to outshine his pessimism brings on nervous prostration, and she dies, which is the last thing she should have done to prove that life is stronger than death. But the author was between the horns of her dilemma, a place where logic and metaphysics count for little with a woman, so she ends the tale according to the sorrow of her own feelings. This is another limitation of the female mind in dealing with the subtleties of metaphysics. They lapse into what they think is the very nirvana of mysticism, but as a matter of fact they are temperamentally debarred from such an experience, or even the imaginary expression of it. They feel too much and mysticism is a state into which feeling does not obtrude. It is the final silence and stillness of the soul, where life is visualized by an intelligence already in the grave, so to speak, or which has at least separated itself in consciousness from the vision and the experience. Now women have the emotions of spirituality, but they are not really very spiritually minded. They feel so much, and, therefore, they can never really understand anything so unfeeling as that mystic state they are so prone to dramatize. The very idea is absurd. This is why somebody has to die in their novels when a great moral crisis is to be met. It is usually the heroine who goes off into a cataleptic fit while the author talks ethics and mysticism. And the only way to finish the tale is on her death bed, for it is perfectly evident that she is not equal to the situation, and for her to survive means an anti-climax. They are good girls, but futile. And their fate is always depressing to the reader.

But what shall we say of an author who raises his fungus characters within normal conditions and a healthy mountain atmosphere? For a number of years now Eden Phillpotts comes out upon the ridges of Dartmoor and sneaks, knife in hand, after the men and women in his stories. He has peopled that region with traitors, murderers and "secret women."

<sup>1</sup> THE SHADOW OF LIFE. By Anne Douglas Sedgwick. New York: The Century Co. \$1.50

History and natural law contradict the veracity of such a performance, but that is no reason why he should not find it profitable. The truth is, when the air is good, the food wholesome, social conditions simple and primitively decent, women do not hanker after other women's husbands as they do in Mr. Phillpotts' last novel<sup>2</sup>; neither does a man go mad in a moment and rush out to kill every other living person in the tale. A man has to be physically diseased before he can go insane. But this has always been Phillpotts' distinction, to fit the most perverted traits and the most degraded notions of morality to natural and social conditions that ought to produce exactly the opposite results in character.

Thru this kind of fiction we return to that state of existence in which the issue between the sexes was the chief issue of life. These writers make an art of exposing the primal instincts of life. They belong to that class of moral meddlers who have thrown delicacy to the winds in order to tell all that ought not to be told. Sex has become the root of evil in life, yet the explanation of religion according to their representations. They write about it in every chapter, the characters feel it, always immorally. Every motive which stimulates them to action is the serpent of sex, every denouement a temptation founded upon the perversity of sex. Interest consists in one sex teasing the other. The only morality happens when some woman dies of the strain and thus saves her virtue, for if she lives thru the tale she usually loses it. Could a more impotent notion of chastity be conceived of? And we are given to understand that it is not so bad to be bad after all. Howard Overing Sturgis represents the heroine of his last story<sup>3</sup> as a good sort, only lacking in the one little item of good character, personal virtue. And as he reads her views from page to page, the alarmed reader hardly knows whether he is learning a new diablerie of the reasoning faculties from an improper person, or if he is listening to lectures from a lady who tells from her own experience how to become moral, where one has been immoral, without repenting. It

is the most normally written, least emotional book of the season; and it may be a good one, but, if so, goodness may be regained, like the health, by a change of scene, diet and climate. After being abandoned by her lover, this woman retired to a quiet place in the country, where the scenery suggests Ossian's poetry, lived simply and found herself so completely restored morally at the end of six months that she was enabled to decline the next man who asked her to become his mistress. This author, without saying it in so many words, has identified the soul with the stomach, and he writes out his notions so formally and shrewdly that many will think he has solved the question of morality upon the only normal basis. But the facts of life show that we cannot cure a sinner of his sins by turning him out to graze as if he were a sick horse.

It is intended that certain savage instincts shall preserve us from utter depravity where more cultured morality sometimes fails. And one of the most shocking developments of fungus fiction is the way men and women act in it contrary to natural antipathies. Thus we have a new novel of English life<sup>4</sup> in which the heroine abandons her husband for another man. The man is too sick to be glad to have her, but conceals the fact. When about to die, however, he sends for the husband, returns the wife to him with such representations that, instead of killing him, the wronged man offers his hand in generous admiration. A more revolting denouement can only be imagined by Bernard Shaw. In his drama of marriage as *The Irrational Knot*,<sup>5</sup> the wronged brother talks pleasantly to his sister's seducer, and an outraged husband rebukes a man for running away with his wife and then abandoning her. Shaw, by the way, is a typical mushroom genius. He grows upon what is bad. His stunt is to show neither decency nor mercy and to hold a cynicism which embraces all, especially himself. His one literary secretion is moral poison. He entertains a strong personal aversion toward the characters he creates, the fountain of his hatred being in himself for himself, and

<sup>2</sup> THE PORTREEVE. By Eden Phillpotts. New York: The Macmillan Co. \$1.50.

<sup>3</sup> ALL THAT WAS POSSIBLE. By Howard Overing Sturgis. New York: G. P. Putnam's Sons. \$1.50.

<sup>4</sup> FOLLY. By Edith Rickert. New York: The Baker Taylor Co. \$1.50.

<sup>5</sup> THE IRRATIONAL KNOT. By G. Bernard Shaw. New York: Brentano's. \$1.50.

they all come up out of that dark place glistening with their maker's venom, brightly colored fungus souls called into existence by curses.

Women write more fungus fiction than men, altho they have less genius for it, because the female author develops her evil intentions painfully, seriously. She lacks the bad but essential courage to abandon herself to her own immoral ideas. She holds on to virtue with one hand while with the other she helps the hero to lead the heroine astray. She beckons the reader aside and regretfully whispers of darker sins hidden in the subsoil of her character's intentions. And in every possible way she prevents him from enjoying the *diablerie* which she offers. Now when a man undertakes a novel of bad life, he abandons himself cheerfully to the task. Thus Morley Roberts's new story of *The Idlers*<sup>6</sup> in London society has more of what he calls "rotters" in it than any other book which has appeared this year. But he does not harrow the reader nor even the consciences of the "rotters" themselves just for the dramatic effect. The reason is a man has more intelligence about the uses of evil than women have.

He is more regnant, less passively receptive of its influences. They sustain an objective rather than a subjective relation to it, and that is why they survive it better than women do in life or art. Therefore the fungus fiction they write is less puerile, and far less damaging to the reader even when it portrays a worse state of affairs. This is noticeable in the last chapters of Morley Roberts's story, when the hero is to be reformed and properly married. There is less to be done than if a woman had written it, because Roberts has kept the hero's instincts sane. He has passed thru pollution, but pollution has not

passed entirely thru him. This is a distinction which women writers do not know how to make. They are too frightfully thoro when it comes to registering the damning effects of sin upon the conscience. That is a purely feminine characteristic and accounts for the fact that so few women can recover themselves once they have gone astray. Men are less morbidly conscientious in realizing their own iniquities. There is nothing to redeem *The Idlers* from being the worst of fungus fiction except this element of masculine health in closing the situation. The author helps the young man to forget and forgive his own transgressions by getting him married to a very nice

country girl. There is no retrospect, no qualms or pangs. A woman author would have hid the skeleton in his closet, he would have been miserable tho repentant, and he would have lived the virtuous life languidly, hopelessly, from a sense of duty.

Another novel which was intended to be a good book is *Saints in Society*.<sup>7</sup> But it is simply another case of people being led into temptation instead of out of it. A poor young couple become suddenly rich and experience all the debilitating effects

of great wealth and a high social position in consequence. The husband forsakes the noble ideals of his younger days and finally dies unhappily. The widow founds a baby farm, where she lives quietly until it is decent for her to receive the lover whom she acquired, but held virtuously at bay, during her husband's lifetime. But why should even the respectable married women in fiction always be tagged with lovers? In real life ladies who behave so respectably do not acquire lovers. If only some one would write a story where they did something natural and interesting and where they

ANNE DOUGLAS SEDGWICK,

The Century Co.

<sup>6</sup> *THE IDLERS*. By Morley Roberts. Boston: L. C. Page & Co. \$1.50.

<sup>7</sup> *SAINTS IN SOCIETY*. By Margaret Baillie Saunders. New York: G. P. Putnam's Sons. \$1.50.

did not feel so much that was unnatural and bad! But it is useless to hope for the impossible, and even if it were to happen, the heroine would spoil everything by marrying the wrong man. Here is the story of *Judith*,<sup>a</sup> a decent, well intentioned girl, who makes the reader unhappy for 400 pages because she marries the man she does not love from a sense of duty, when it would have been easier and pleasanter to marry the one she did love. The sense of duty in the average heroine is about the most senseless thing she is capable of, which is putting it very strong. If she is a good girl she says her prayers and does everything wrong from a sense of duty; if she is a bad one, she says her prayers just the same and does wrong on purpose. Holding on to God is characteristic of them all in fungus fiction, just as it is in Sabbath school library literature. A woman who elopes with her husband's friend will kneel before the first shrine she passes to ask a blessing upon her sin. It is all monstrous, illogical and stupefying.

MRS. L. H. HARRIS.

## A Woman's View of Napoleon

THE title of this volume reminds us that when Napoleon was in a royal humor, he used sometimes to make two or three "queens" a day of his sisters and other relatives. Parvenu queens they were for the most part, who had to learn their manners after they were crowned, and many of whom never learned any morals at all. Desirée, the one about whom the incidents of this delightful book are arranged, so that they form a splendid background for a rather insignificant character, was an exception, in that she was virtuous and lived happily with her husband. Napoleon was himself engaged to her when he was only an aspiring young soldier, and she, the pretty daughter of a rich silk merchant in Marseilles. But he broke this engagement to marry Josephine Tascher de la Pagerie. Two years later Desirée married Jean Baptiste Bernadotte, then a general in Napoleon's army, and very

soon afterward one of the Marshals of France. In 1810 he was offered the crown of Sweden, and in that country Desirée spent the last thirty-seven years of her life, one of the few queens of Napoleon's court whose "royalty" surmounts the account of life at Napoleon's side during the fall of his Empire.

The author of this book gives an insight, without concerning herself with those great military movements which changed the face of Europe at that time. The Emperor is not represented as the invincible genius of war, but he is introduced, first as a sensitive, ugly, tyrannical, ambitious young man. His development is simply the fierce flowering out of these qualities, according to Catherine Bearne, who does not admire him. Much is made of his dictatorial relations to his own family, and of his licentious, uncouth relation to society. In short she takes the Englishman's view of his character and would keep him out of her tale as a person unworthy, if she could. But Napoleon made the life stories of most of the men and women who surrounded him, and while Desirée is only the pretty figurehead, whom the author pets, it is evident that Napoleon thrust her up into the blaze of his own glory, even if he did it cynically, and with a sort of animosity which he always felt toward her husband.

No more interesting book of gossip about famous and infamous people has appeared in recent years. It contains anecdotes, pen pictures, shrewd feminine interpretations of every notable man and woman who lived in Paris during the reign of Napoleon. The literary style is graceful and as admirably adapted to the material chosen as a woman's tongue ever is to petty personalities. And the excellent index adds a value to the volume which every reader will appreciate.

**The Hebrew Prophet.** By Loring W. Batten, Ph. D., S. T. D. New York: The Macmillan Co. \$1.50.

In the entire history of religion there is no field of study more interesting and profitable than that of prophecy in ancient Israel. It is the broad result of modern Old Testament research that the prophets and not the law made the Hebrew faith, that the elements of moral

<sup>a</sup> *JUDITH.* By Grace Alexander. Indianapolis: The Bobbs-Merrill Co. \$1.50.

<sup>\*</sup> *A QUEEN OF NAPOLEON'S COURT. THE LIFE STORY OF DESIRÉE BERNADOTTE.* By Catherine Bearne. New York: E. P. Dutton & Co. \$2.50.

and religious truth which constitute the divine revelation in the earlier and larger part of the Bible were worked out in the souls of seers rather than thru the devices of legislators or the liturgies of priests. Not only were Amos and Isaiah mighty men, men of renown, whose personalities are worthy of most careful observation, but the ideas of these men and their spiritual attainments created the permanent and valuable elements of the Hebrew religion." The literature for the study of the work of the prophets is large and embraces works of great value, such as Professor George Adam Smith's commentaries on Isaiah and the minor prophets, Professor Cheyne on Jeremiah and Isaiah, and President Harper on Amos and Hosea. Dr. Batten has undertaken to follow the course of prophecy as an institution and to trace the development from the early seer who was consulted to find lost property and predict the issue of a battle to the later preachers of national and personal righteousness. He discusses the origin and character of the early prophetic guilds, and the work of the men who are mentioned only casually in the historical books. The popular supposition is that there were only a few Hebrew prophets and that they were mostly noble heroes like Jeremiah and Hosea. Dr. Batten's study brings out the true perspective and shows that those whose names we know were exceptional men, standing out against a great mass of time servers and hirelings. He has done his work well, with conscientious study of the sources and earnest resolution to discover and tell the facts as they were. He is skeptical as to many recently suggested emendations of the text, and gives more credence to late documents and glosses than is now common. It speaks well for the American pulpit that a work of such ability comes from the rector of an important city parish.

**The Building of The City Beautiful.** By Joaquin Miller. Trenton, N. J.: Albert Brant.

Few writers of the day have succeeded so well as Joaquin Miller in surrounding themselves with the atmosphere of romantic mystery. And for this reason

*The Building of the City Beautiful* will interest many readers, since it contains so many foundation stones from the author's own life. The allegorical form is not much in use now, but Mr. Miller employs it effectively. The scene opens in Jerusalem, when Sir Moses Montefiore hoped to rebuild it and to gather home in Judea the wandering Jews of the world. A beautiful Jewess is the seer and prophetess of the tale, and thru her the author gives his own reverent interpretation of the Lord's Prayer, which is really the foundation upon which he bases a system of social ethics that is fit for poets and dreamers, but not for the fierce hard-fisted humanity of the common herd. He gives the result of his own effort to build a "city beautiful" in the New World. He was the only builder in it and the only inhabitant, which give him the advantage over most adventurers of this kind. But things did not go well with him, and in the end nothing is left but a hope underlying all adversity. One bold peculiarity of Mr. Miller's literary composition is his personal pose in it—as if he had written the whole book upon the skin of his own body. And he is a writer who does not fear, even if he suspects, the anti-climax of his own thoughts. He sets the whole thing down reverently, because he thought it, lived it, and therefore it must be good. Still he has copied into these shadow sketches of existence upon a stony mountain steep something to recommend them even to the most critical reader.

**Trusts, Pools and Corporations.** By various writers. Edited, with an introduction, by William Z. Ripley. New York: Ginn & Co. \$1.80.

**Trade Unionism and Labor Problems.** By various writers. Edited, with an introduction, by John R. Commons. New York: Ginn & Co. \$2.50.

A notably valuable service has been rendered by collecting the many excellent papers which are contained in two volumes on economic problems, issued by Ginn & Company. The plan followed is "a deliberate attempt," in the words of the editor, Prof. William Z. Ripley, "at the application of the teaching of economics of the *case system*, so long successful in our law schools." Each chap-

ter deals with a single concrete problem. There is observable, of course, an unevenness of treatment, due to the personal equation; but most of the contributions attain, each in its own way, a high standard of merit. The first volume—that on corporations—contains 19 papers in all, including an introduction and a chapter on “The Capitalization of Public Service Corporations,” by Prof. Ripley; papers on the Salt Trust and the Whiskey Trust, by Prof. J. W. Jenks; and the text of the Federal Supreme Court’s decision in the Northern Securities case. The introduction is particularly helpful in giving the reader a comprehensive survey of the whole trust problem. The final chapter, “Trust Literature: Survey and Criticism,” by Prof. Charles J. Bullock, must also be mentioned. It is an excellent account of the various writings on the trust problem, tho it closes in a blind alley on the matter of remedies for trust evils. The second volume is edited by Prof. John R. Commons, who furnishes six of the twenty-eight papers. Mr. J. W. Sullivan contributes an exceedingly valuable paper on “The Printers’ Health”; Prof. W. E. Burghardt Du Bois and others a symposium on “The Negro Artisan”; Frank J. Warne a paper on “The Miners’ Union,” while other contributions treat of the Chicago teamsters, the New York and Chicago masons and builders, the clothing workers, the slaughterers and meat packers, the Pennsylvania textile workers, and many other divisions of wage-earning men and women. It would be idle to attempt to give an adequate understanding of a book containing so great a variety of valuable information. To choose for mention matter from one place would be only to slight equally meritorious matter from another place. It is enough to say that to any student of labor problems the book is indispensable.

**Men and Things.** Compiled by Mark Twain. [Mark Twain Library of Humor.] New York: Harper & Brothers. \$1.50.

One is reminded, in reading this curious book, of the countryman in Boston, who, looking for a hall in which Mark Twain was to speak, blunderingly strayed into a place where the Rev. Joseph

Cook was expounding psycho-theology. When he came out he met a friend who asked him: “Well, was it funny?” “Er—yes,” he replied, hesitantly, “it *was* funny. And yet it wasn’t so — funny either.” This book will burst no waistcoats and detach no buttons. A good deal of it, indeed, is rather of the mournful sort. There is a gleam of humor in the preface, wherein the compiler explains that the two selections from his own pen were chosen by his collaborators, and that had he done the selecting there would have been more. But one joke does not make a jocose volume. It would seem that each author is represented by his inferior work only. We presume that there are to be other volumes to come, and we shall hope that in these the compilers may show a more humorous inclination.

**Old Fashioned Flowers.** By Maurice Maeterlinck, with illustrations by Charles B. Falls. 16mo, pp. 106. New York: Dodd, Mead & Co. \$1.20.

This is one of the dainty flower books, after the style of Alfred Austin’s “The Garden that I Love.” The illustrations are charming. The book is full of sentiment, and tho many of them are called wild, they all bloom in a carefully cultivated literary garden. They are not Lucy’s “violet by a mossy stone,” or “a primrose by a river’s brim,” or Bliss Carmen’s Quaker Ladies, but dainty wreaths on Brussels or Italian lace or roses and forget-me-nots on French ribbons.

**The Truth About Tolna.** By Bertha Runkle. New York: The Century Publishing Co. \$1.50

The truth about Tolna need never have been told. He is a sort of singing machine about whom his manager tells lies to stimulate interest and insure financial success. But the thing is better done by the advance press agent of almost any opera company. The ones recorded in this story lack even the cheap charm which usually attaches to ingenious fabrications. And those of us who read “The Helmet of Navarre” thought that this was Miss Runkle’s strong point. If she had written this story before she wrote that, nothing

would have been said about it. The reading public would have passed it over charitably as the amateur effort of a matinee girl trying to give literary expression to a sort of imagination com-

MARGARET BAILLIE-SAUNDERS,  
Author of "Saints in Society." Putnam's.

mon in girls of that age. But as it is she has let the cat out of the bag and signed her own death warrant as a writer of fiction. For most people will think, either that she wrote "The Helmet of Navarre" and did not write *The Truth About Tolna*, or they will think she *did* write it, but did not write "The Helmet of Navarre." And however unjust they are, the latter are likely to be in the majority.

**The Law-Breakers and Other Stories.** By Robert Grant. New York: Charles Scribner's Sons. \$1.25.

These short stories belong to the literature of exposure; not the sort denounced by President Roosevelt in his "muck rake" speech, but Judge Grant is an exposé of social lies, and of those interpersonal and self-deceptions so dear to all of us. Each story has a definite problem, or rather thesis, clearly stated and logically argued; rather too clear and logical for the stories to retain much of the illusion of life, for in real life things do not happen as they happen here. But in these days of hazy writing, which we suspect is mostly due to vague thinking,

it is a pleasure to find an author who means something and says what he means so we all can understand. The question argued in the title story is one that might well form a topic for a debating society. It is this: Is a man who cheats the custom house officer so fundamentally untrustworthy in character that a good woman should not trust her life to him? For the particulars in the case and the verdict of the author we must refer our readers to the book.

**The Menace of Privilege.** A Study of the Dangers to the Republic from the Existence of a Favored Class. By Henry George, Jr. New York: The Macmillan Co. \$1.50.

Mr. George writes simply and convincingly of the great modern accumulations of wealth, and the contrasted luxury and poverty that inevitably flow from them. To him present-day evils are the result solely of "privilege"—and by "privilege" he means "private ownership

Copyright, 1902, by J. E. Purdy, Boston.

ROBERT GRANT,  
Author of "The Law Breakers." Scribner's.

of natural opportunities; tariff and other taxation on production and on its fruits; special Government grants and grants under general laws, and immunities in the courts." The Socialist criticism of the private ownership of the means of production finds no echo in Mr. George's

HENRY GEORGE, JR.,  
Author of "The Menace of Privilege." Macmillan.

pages. He is a single taxer, and his book is written from an unqualified single-tax standpoint. In assembling so many and such striking instances of social and industrial evils he has rendered a most praiseworthy service. For much of his information, moreover, he has gone to original sources, and a part of it—in particular that relating to Colorado and West Virginia—he has gleaned from his own experiences. So sweeping, and, in general, so convincing, an indictment of the modern industrial *régime* has not recently appeared. But we do not think he has shown an equal merit in tracing causes, and we are skeptical of the adequacy of the remedy offered. The frequent recurrence to eighteenth century phraseology in the matter of a "natural order," "natural ordinances," and the like, is disappointing. There is nothing more "natural" in the single tax or the alleged benefits that would come from it, than in a protective tariff or Chinese exclusion. Among minor errors, the author has drawn altogether too golden a picture

of the early days of the republic. "Full political and approximate social equality" (page 1) was certainly *not* a condition of the first three decades of the nation's life. Nor, despite the testimony of Jefferson and De Tocqueville, was poverty unknown before the fifties. The contemporary testimony of Frances Wright, Thomas Skidmore, L. Byllesby, Seth Luther, Horace Greeley and Parke Godwin is totally contradictory of such a view.

**Vikings of the Pacific.** By A. C. Laut. New York: The Macmillan Co. \$2.

The thrilling history of the early exploration of the North Pacific is little known. Mr. Laut, whose "Pathfinders of the West" has already been well received, has done a splendid piece of work in presenting this popular history of the adventurous sea rovers, who first sought our Western shores. Among some of the original documents delved into for information were some thirty thousand folios relating to the Bering expedition,

which are preserved in St. Petersburg, and over one hundred old log books of Russian seal hunters, saved from wrecked or confiscated vessels, and sent to Washington. Such a great quantity of these early records were found that only a portion could be carefully examined. From this mass of dry material a story is told as thrilling as Prescott's "Conquest of Peru." The ambition and sufferings of Vitus Bering, the Dane, who was compelled to transport every requisite for his expedition, even to the bolts in his ships, over seven thousand miles of bleak and wind swept steppes, before he could actually start on his work of exploration, read like a story. After these great difficulties were overcome, the hardships and privations of the expedition only commenced. The crew were stricken with scurvy, and the ship was finally wrecked on one of the desolate Aleutian Islands, where the whole company was forced to winter in dug-outs. Bering himself was among the many who failed to survive famine and the terrible winter. The remnant, haggard and unrecognizable, escaped to Kamchatka in the spring, in a small boat of their own construction. The adventures of the other early explorers, driven on in their wild greed for furs and gold, or in their frenzied efforts to locate the illusive Northwest Passage, hold one's interest from cover to cover.

## Pebbles

## Labor Unions in Politics

CONSIDERABLE comment has lately been aroused, especially among those intimately acquainted with the personal views of President Gompers, of the American Federation of Labor, because of his recent statement that "There is nothing left for labor to do, but to make its power felt at the elections." This remark came after an unsuccessful conference of the executive committee of that organization with President Roosevelt, Senator Frye, and Speaker Cannon concerning the Anti-Injunction Bill now before Congress, the lax enforcement of the Eight Hour Day Law, and various other matters, and was followed with the additional threat that organized labor would administer "a stinging rebuke to men or parties who were indifferent, negligent or hostile" to the demands of the unionists. Many concluded, therefore, that labor had at last decided to enter politics, and that we should soon see our two millions of workers marching to the polls and electing to office, as representatives of their class interests, the candidates of an Independent Labor Party.

Such, however, was not the idea of President Gompers. All that he proposed doing was to have the workers capture the primaries of the Democratic or Republican parties, and nominate men favorable to the demands of labor when it was not possible to find candidates who would reply satisfactorily to the questions asked them by union officials. Circulars explaining this scheme were mailed to all organizations affiliated with the American Federation of Labor, and workers were urged to act as a unit at the polls, regardless of party lines.

Thus it is the same old story. Organized labor must not go into politics. It can only question, petition and endorse the Republican or Democratic candidates. The union must forever remain a pure and simple economic fighting machine. Under no consideration is it to be allowed to nominate men from its own ranks, who shall stand upon a platform of working class issues.

But what more could be expected from

the President of the American Federation of Labor? Thruout his entire career as head of the organized workers of the United States, he has consistently opposed the formation of an Independent Labor Party, and has fought the attempts of the Socialists and others who have tried to induce labor to transfer to the political arena its fight for wages. It was only a few months ago, at the last convention of the Federation at Pittsburg, that he unceremoniously ruled out of order two resolutions which contained suggestions relating to political action by the unionists.

For years the American Federation of Labor has been urging Congress to pass the Anti-Injunction and Eight hour bills, only to suffer repeated defeats. And now, after having learned that labor can expect little from lobbying and from lobbyists, Mr. Gompers suggests that the workers throw aside all party lines and vote into office those men who, before election, promise faithfully to support the demands of labor.

Such methods of obtaining representation for the interests of the workers can result only in failure. The Knights of Labor tried this scheme when it was in its palmy days; so did the Grange, and so did the American Federation of Labor but two years ago. The result in each case was—absolutely *nil*. Petitions and questioning have failed, and must fail. Voting for "favorable candidates" has failed. But one thing remains. If labor is to obtain these specific demands from the legislative and judicial branches of our Government, it is bound to go into politics. It will organize a separate political party, nominate men from its own ranks, and elect them upon a working class program. Employers and corporations have long ago realized the advantages of united political action, and this, in a measure, accounts for the large sums of money which they have continually poured into the coffers of the Republican and Democratic parties. The time will also come, in this country, as it has in Europe and Australia, when labor will

decide to go into politics in order to obtain those things which it desires.

In England, the Taff-Vale decision, permitting the employer to sue the union for damages because of a strike or a boycott, and to collect the court's award from the treasury or from the individual members of the union, taught the workers the necessity of political action.

They then organized the Labor party, and at the late election surprised the world by their strength. In Germany, the laborers have universally supported the Socialist party, and at present have eighty-five representatives of their class in the Reichstag, while in Australia the Laborites hold the whip hand in all governmental matters. But in the United States, strange to say, in the country which is farther advanced industrially than any other nation on the face of the globe, organized labor has consistently kept out of politics. Altho the workers have struggled shoulder to shoulder against the employers while fighting upon the industrial field, they have always divided upon the political field as Democrats and Republicans, and have fought each other, at just that time when unity of action would have been the most effective. They have still to learn the secret of applying the principles of trades unionism to politics.

There are many forces today which are making for the organization of a labor party in the United States. The use and abuse of the injunction, the smashing of the unions by the employer's associations, the control of courts and legislatures by corporations, the exposure of graft in high places, the agitation of the Socialists for united political action, these and many other things are doing more than can be realized toward teaching the unionist the necessity of voting into office the representatives of his class.

Such a labor party as the future may produce will probably not be socialistic in nature. In England, as well as in Australia, the Laborites and the Socialists are affiliated with separate organizations. This will undoubtedly be true in the United States. Many of the prominent labor leaders, who have acknowledged that political action is the only refuge for the unions in the near future, do not wish to ally themselves with So-

cialism. They consider its program to be too theoretical and not applicable to present day conditions. The result will be that in time we shall perhaps see the formation of a strong independent Labor party in this country. An attempt in this direction has already been made in Chicago by the organization of "The Chicago Progressive Alliance," which proposes to be the political agent of union labor in Chicago. In San Francisco we also see the repeated victories of the Labor party of that city. Future developments in this field of organized activity will be closely watched by the friends, as well as by the enemies, of unionism.

## The Heresy Trial

HERESY trials there must be so long as creeds are made and held for the purpose of holding people to statements of doctrine. If the purpose of a denomination is not solely to make people love God and man, but in part to maintain certain propositions of theological philosophy, it must limit its membership, or at least its teachers, to those who hold to its purpose.

We suppose that the Protestant Episcopal Church, which has been trying Dr. Crapsey for heresy, is one of these denominations with a creed, which it must protect. We do not mean the Thirty-nine Articles, for they are neatly tucked away in the Prayer Book somewhere, where nobody ever finds them; no clergyman has been expected to believe them these fifty years. They are thoroly Calvinistic, but the Episcopal seminaries teach Arminianism, or did before men ceased to be interested in the difference between the two. We presume that most clergymen are as indifferent to distinctions between Calvinism and Arminianism as they are to that between *homoousion* and *homoiousion*. But the Prayer Book, as a whole, is not out of date, and certainly not the Apostles' Creed. To that Episcopalians profess assent vocally every Sunday, priests and people; and they mean it not only as an act of worship, but as a profession of required faith. Therefore the Crapsey trial.

For it is perfectly clear to the blindest eye that Dr. Crapsey does not believe in the entire Apostles' Creed. He repeats

it; he says he believes it; but he believes it in a sense that is not the historical sense of the words, nor the present-day sense of them. He puts on them a novel, arbitrary meaning not yet in vogue and accepted, altho we do not know but it may later be accepted.

Let us explain what we mean. There is a clause in the Apostles' Creed which says: "I believe in . . . the resurrection of the body." Historically that meant, "I believe in the resurrection of the flesh," Latin, "*carnis*," Greek, "*sarkos*." Those who wrote it meant the resurrection of this physical body, and so those that repeated the creed, and most other Christians, understood and believed until a generation or two ago. Now they do not so believe. They interpret "body" to mean some other sort of body than this physical body, perhaps a spiritual body, if modern psychology knows what that is; or, more likely, simply the immortality of the soul. Nobody could now be tried on the charge of heresy because he does not believe in the resurrection of the flesh, for by general consent the clause has been eviscerated of its true meaning, and a new meaning has been imparted into the term. A man can stay fairly and honestly in any Church now, without criticism, who does not believe in the resurrection of the body, *carnis*, because a new meaning is accepted.

But such is not the fact as to the two doctrines which Dr. Crapsey has denied, namely, the Virgin birth of our Lord and his resurrection from the dead. These are clearly asserted in the Apostles' Creed, "Born of the Virgin Mary"; "The third day he rose from the dead." Beyond all doubt the historical meaning of both these statements is precisely what is on the face of the Gospel records, that Jesus was born of a virgin, with no human father; and that he showed himself alive after his resurrection, so that the disciples could see the wounds in his body and feel his body, for "a spirit hath not flesh and bones, as ye see I have." As yet these words in the Creed have not been discharged of their historical meaning, as the phrase "resurrection of the body" has been. One of these days they may be, but not yet. At present Dr. Crapsey plainly denies the doctrines there

taught, under the present meaning of the words.

He says that his ordination vow, or "contract," held him only to loyalty to the Scriptures. It does this, and more. When ordained a deacon he was asked: "Do you unfeignedly believe all the canonical Scriptures of the Old and New Testament?" and he answered, "I do." When ordained a priest the Bishop asked him:

"Will you then give your faithful diligence always to minister the Doctrine and Sacraments, and the Discipline of Christ, as the Lord hath commanded, and as this Church hath received the same, according to the Commandments of God?"

and he replied: "I will so do by the help of the Lord." That requirement and promise or, as Dr. Crapsey says, "contract," includes "doctrine," and it must be, "as this Church hath received the same." There is no sort of doubt how the Church has received these two doctrines. It is nonsense to deny or explain away the usually accepted and historical meaning, not yet altered or spiritualized. It is, ecclesiastically, a perfectly legitimate thing, in an ecclesiastical court, under ecclesiastical law and penalty, to convict and depose him. And to do this is not persecution. Whatever wrong there may be is in the law, not its application or enforcement. We do not doubt that Dr. Crapsey is a true Christian, nor that he has a right to be in the Universal Church of Christ. But he is also in a Church which has the misfortune to have a creed not yet made utterly elastic. We think it most likely that in the Episcopal Church, and other Churches, the process will go on in the interpretation of the Creed, which has already been reached in the phrase "resurrection of the dead." We have seen enormous changes, quite revolutionary, in theological doctrine as to the Old Testament in the past fifty years. Now, practically, no competent scholars in Europe or America believe in the Mosaic authorship of the Pentateuch, in the single authorship of Isaiah, or in the composition of Daniel during the Exile. With these changes has gone much that was supposed historic. Beyond all question we now see the same process going on as to the New Testament. Some, like Dr. Crapsey, boldly

deny their belief in the accounts of the Nativity and the Resurrection; they "spiritualize" them. They substitute something like "immaculate conception," or "personification of all that is pure," with no taint of sin, to our Lord, in place of the virginal birth; and they try to put this meaning into the words of the Apostles' Creed. Equally they tell us that Jesus did not really rise from the dead in a bodily form, but that Peter and Paul saw him spiritually, not physically, or that the Gospels were written late and include stories of legends that grew up in the Church.

Now, when the Episcopal Church, or any other Church, is so infected, or enlightened, as to hold these newer views, which are becoming more and more prevalent, then the language of the Creed will take on the new meaning, and there will be room for both sorts in the Church. Meanwhile, those who are in advance of the new definitions, those who originate them, have to suffer for their prematurity. It was just thirteen years ago that Professor Briggs was suspended from the Presbyterian ministry; but no one would now suffer in that way; and it may be that Dr. Crapsey is making a safe road for those who shall succeed him.

It looks so. The Dean of Westminster explains that these are not so serious lapses from the faith that they need disturb us. The leading organ of the Episcopal Church in this country deprecates the trial of those who would hold by the Church, and declares that the decision of doctrinal differences should be left to the court of reason. It is clear that an increasing number of those who believe themselves Christians are eliminating the New Testament miracles as a burden to faith. But if we are to approach that conclusion we believe it will not be by the process of "spiritualizing," but by the frank, more honest, and more rational way, of admitting that legends, or myths have entered largely into the New Testament as well as the Old Testament history.

But then what will become of Christianity? Is its meaning also to be eviscerated? That we cannot believe; for the essence, the core, the heart of Christianity is not its philosophy of doctrines,

not its history, not even the biography of its great Master, but that which makes disciples, worshipers and children of the Father, lovers of God and lovers of man. To that extent we may spiritualize by putting the spirit above the letter, the life above the form; and we may regret that Christians of any denominations should so bind themselves to creeds made by men less wise than themselves, that they must exclude those whom Christ would receive into the kingdom of grace and glory.

### Program of The Hague Conference

WE have before us the text of the circular of invitation of the Russian Government to the nations, asking them to take part in the Second Peace Conference of The Hague, and the program proposed. This program is not wholly satisfactory. There is about it nothing to excite moral enthusiasm.

It will be remembered that after the meeting of the Interparliamentary Conference in St. Louis, the President of the United States, by request of that Conference, proposed to call a second meeting at The Hague, and to ask The Hague Conference to consider the matter of a legislative Congress of Nations. It was then no time to ask the nations to meet at The Hague, for the Russo-Japanese war was going on. But when that war was happily concluded by the Peace of Portsmouth, the President was so pleased, and so filled with generous sympathy, that he demitted his right and privilege, and asked Russia to call the second Conference, as she had the first. This, which seemed most commendable, now seems to have been an unfortunate concession, for the program carefully tries to forbid the very subjects that are most important.

It was in the heart of the Czar, when he called the first Conference, to see what could be done to reduce armaments, and so relieve the burdens of the European nations. Since that time the burdens have been growing more intolerable. One might have expected that at least this effort might have been repeated, even altho not much was accomplished on this line in 1899. But not a word

of this is in the present Russian program; only a suggestion as to the developing and perfecting of the system of arbitration. Instead we have as the chief questions those which arise out of a state of war.

Since 1899 there has occurred the terrible war between Russia and Japan, in which Russia was badly defeated and her armies driven out of Southern Manchuria. It is the questions of difference that grew out of that war which Russia now presents; such as how war shall be declared. It will be remembered that Japan made no formal declaration of war, after she had warned Russia that she would have to take active measures if her demands were not accepted. Thus as to the practices of land warfare the Czar suggests rules as to the opening of hostilities and the rights of neutrals. He makes fuller suggestions as to naval warfare, including the bombardment of towns and ports, the laying of mines, the transformation of commercial vessels into war vessels, the private property of belligerents at sea, the rights and duties of neutrals at sea, the question of contraband, and the destruction of prizes at sea. These are all questions that have been raised by the late war with Japan. Thus great complaint was made by Japan that France gave prolonged shelter to the Russian fleet; and equally that Russian cruisers burnt at sea prizes which they could not carry into port. On some of these points it is not likely that any agreement can be reached. Thus nations are not likely, if they go to war, to consent not to transform their commercial into naval vessels, nor are they likely to limit very much the liberty to lay mines.

But the most unfortunate matter about the proposed program is its attempt definitely to exclude what ought to be a main subject, namely, the reduction of armaments. The language is as follows:

"The Imperial Government, believing that it is necessary *only* to examine questions which press with particular energy, inasmuch as they arise from the experience of recent years, and *without touching on those which belong to the limitation of military and naval forces*, proposes therefore as program for the Conference the following points."

When the Conference of 1899 was called a Russian publicist had lately issued a book on the burden of armaments

which had much impressed the young Czar. He was then anxious to reduce this burden, and it was with this object especially in view that he surprised the world with the call. Since then he has had experience of a most notable war. He would rather increase his army and create a new navy. But we hope that the nations that meet will not consent to exclude this subject. In 1899 a subject not on the program was introduced, and the Court of Arbitration was the chief fruit of that Conference. Now the delegates to this second Conference should be at liberty to introduce the two most important subjects, which are, a Congress of the Nations and the reduction of armies and navies.

### The Significance of the Art of Crete

THE archeological exploration of Crete bids fair not only to revolutionize our knowledge of the beginnings of European history, but also to raise numerous minor questions of fascinating interest. Chief among these are certain fundamental problems in the theory of art. For not only have the recovered examples of an art that flourished eighteen hundred years B. C. thrown new light upon the historical evolution of art, but they have compelled us to re-examine our prejudices in favor of the classical types of Greece.

In perfected Grecian art the artist has attained complete mastery of his materials and his methods, and is in that sense free. All the rigidities, symbolisms and conventionalities of Egyptian, Babylonian, Hittite and Phenician designs have disappeared. Perspective and modeling are perfectly attained. Yet, in another sense, the classical art of Greece is not free. It holds strictly to character, to types, to generalizations, almost to universals. It wholly lacks the sweep—the true Hellenist perhaps would say the lawlessness—of romanticism, and it lacks even the suggestion of impressionism. As one critic has quite accurately said, it never gives us an account of moods. It is serene, poised, harmonious. As the classical age faded, a few artists were beginning to experiment in romantic directions. Examples of the latest

Athenian work do give expression to the more terrific emotions—of anger, of hatred and of horror. But a mastery of the subtler emotional transitions, of what we moderns call the play of feeling, was never attained by Greece.

In the art of Crete, it was precisely the impressionistic, the romantic, that was everywhere a dominant note. There are battle scenes that are handled with a boldness startlingly modern. The men are not types. They are individuals. The ground upon which they struggle is uneven. There are hummocks and dales, and the perspective is sometimes almost photographic. The portrayal of animal life shows a modeling that would bear comparison with the drawings of our modern illustrators, and, in addition, it displays a spirit that makes one think of the pen pictures that are drawn for us today by Thompson-Seton and Jack London. The carving of a young antelope, tugging at the udders of its dam, is a veritable note from "The Call of the Wild."

All this means that romantic feeling in art, so far from being a breaking away from the restraints of classicism, is, in truth, a very early, perhaps a primitive mood of European art instinct. It suggests that we may have been all wrong in assuming that the thought of discontent, the belief in progress, the wild impulse to break thru and outgrow all barriers, to resent conventions, may not have been, from the first, a characteristic of European, of Western,\* as distinguished from Eastern, psychology.

This possibility is in a measure supported by what we know of the strictly primitive art of those neolithic folk that left their handiwork on the ivory tusks found in the caves of France and Spain. They show the same mastery of untrammelled feeling. It is supported further by the earliest examples of the kindred art of literature. The songs and epics of the earliest Europeans totally lack that artificial balancing, that studious regard for proportions, which is the true classical quality. They are wild, rugged, lawless things, expressions of the untamed spirit of men who have not yet been hammered into a docile conformity to set patterns in religion, in law, or in politics.

This thought is more than merely interesting. It is inspiring. It strengthens in us the conviction that the European stock was mentally differentiated from the beginning as one equipped and qualified to lead the human race along the paths of progress. Its earliest self-expression, like its self-expression today, was a proclamation that it could not and would not be bound by those restraints which imposed finality upon the imperfect civilizations of the East. From the first the European mind has been plastic, sensitive, adventure-loving, creative and recreative, untiring, ever seeking something new; that which it has done but an earnest of the things it expects and intends yet to achieve.

Not the formalism of the middle and later period of the East, not the symbolism of the Nile, not even the classicism of Athens, can we regard as the highest expression, or even as the truly representative expression of human genius. The restless, inquiring, struggling, aspiring spirit of romanticism is the perennial, the living, the achieving soul of man. The record of Crete is but an earlier declaration of the great modern poet's philosophy of civilization:

"Better fifty years of Europe  
Than a cycle of Cathay."

## Billiards

To the thoughtful observer, informed as to the demands of the game upon him who would excel in it, the result of the recent billiard tournament in New York was especially impressive because the honors fell to veterans, now in their sixth decade. Thus was Dr. Osler put to shame. To contend with these veterans, whose achievements have been known to billiard players for a quarter of a century, there came a wonderful youth who had won a championship abroad in a variety of the game a shade more difficult than the one to be played here. Some expected to see him an easy victor. But he lacked the steadiness and staying power which added years will probably give him. At the end of the tournament he was below the middle of the list, and at the top were Slosson and Schaefer contending for the first place as they had fought for it in tournaments of the past.

When a man in his sixth decade wins a world championship in a game of skill, where success depends upon absolute control of muscle and nerves, perfect co-ordination of hand and brain, extreme delicacy of touch, and accurate measurement of all gradations of force, his success bears testimony to the enduring excellence of the human machine that has been kept in good order. In no other game of skill are the qualities we have named so essential to distinguished achievement. Back of these there must be knowledge of what a free rolling ivory ball will do under varying conditions of impulse and impact, and, with knowledge, practice; but in a crucial test both knowledge and practice are of no avail if perfect control of the human machinery be lacking.

This game of billiards is one of most interesting and curious possibilities. Most of these are reserved for the expert, but much that is extraordinary and entertaining lies within the reach of the average player. There is healthful exercise in it for the mind, the eye, the hand, and not a little for the whole body. It is a game that has grown. As it is played in this country today, it is a product of evolution, due to the increasing skill of French and American experts. To baffle this skill, or to stimulate it, changes have repeatedly been made. Without going back to the days when the gaping pockets, still so dear to the benighted English player, were attached to every American table, we may begin to trace these changes from the time when experts in Paris and New York made the game on a pocketless table tiresome (while it was in their hands) by a practically endless procession of successful strokes.

In order that this growing facility might encounter more difficult conditions, various devices have been adopted, one after another. Balk lines have made upon the surface of the table parallelograms and squares in each of which, one excepted, the player is subject to a certain restraint. But the development of skill has not been checked by the progressive enlargement of these spaces or the application of more severe restraint to action within their boundaries. The lesson of the recent tournament appears

to be that, in the near future, the expert must be restrained even in the central parallelogram, the only bounded space in which he is now free.

To readers who have little or no knowledge of the game, our excuse for this technical description is that it enables us to point out the expansive tendency and upward thrust of the American mind. It was, chiefly, to confine the American player within reasonable bounds, and to set up fresh difficulties against his constantly growing skill, that these successive restraints were, by common consent, imposed. Still, we must not wholly overlook the Frenchman.

Billiards has suffered in the estimation of many good people by reason of its frequent association in public places with the sale of intoxicating liquors. Even in saloons, however (in this country, at least), it is very rarely used as a means of gambling or betting. It is in social clubs and in private houses that the game is seen in its best estate and most appropriate surroundings. The use of billiard tables cannot be withheld from the wicked, but the game played on them is of such high and even noble rank that it deserves a place of honor in the homes of the good.

### The English Education Bill

THERE is a hot time on in England over Mr. Birrell's Education bill. The Easter vacation is over, and the press is full of protests and replies. The Liberal party in the House of Commons is pledged to such a drastic bill, while the Church of England and the Roman Catholics are lined against it. It is four years that the present act has been in force, and it was the complete and the last victory of the two Churches over the popular will. Under that Act of 1902 there have 12,717 parochial schools in England and Wales been supported by the public taxes. Of these, 11,658 are conducted by the Anglican Church, and 1,059 by the Catholic Church. They have over 30,000 head teacherships, whose salaries the taxes must pay, while only the clergy control their election and the religious teaching.

The bill of the Minister of Education, now going thru its various Parliamentary stages, makes drastic changes in a very

simple way. After January 1st, 1908, no schools except those which are under popular local control will receive any support, either from the Imperial Treasury or from municipal funds.

Before 1908 the Church of England and the Roman Catholic Church must turn their schools over to the local educational authorities or shoulder the burden of their entire maintenance. The Churches can sell or rent their school-houses to the education authorities, but when once the schoolhouse has been sold or rented, no control of any kind will continue to be vested in the local clergy. It is to be open to the clergy to attend in these erstwhile parochial schools to give denominational teaching to children whose parents request that they be so taught. This denominational teaching is, however, to be given out of school hours. No charge for it is to fall on public funds; the staff teachers are to have no responsibility for it; and, for the first time since the Church of England associated itself with elementary education, in 1811, religious tests are to be eliminated in the appointment of all teachers in all schools maintained at the public expense.

Both the Churches are in arms against the bill. Pastoral letters have been issued against it. Sermons in protest have been preached all over the country, and popular demonstrations on the Hyde Park order have been organized in scores of towns to assail the measure. Not since the Catholic Emancipation Act was passed in 1829 has the Roman Catholic Church in England been so assertive or so demonstrative as it has been since it was known that the Bannerman Cabinet was committed to this measure of reform. Had the Liberal Government been dependent on the Irish Nationalist vote, as it was in 1885-86, and again in 1892-95, a measure on these lines would have been tantamount to the resignation of the Government, for the Government could not have gone on when deprived of the support of the Nationalists. Today the Government is more absolutely independent of the Irish vote than any Whig or Liberal Government has been for seventy years. Moreover, it has a mandate from the constituencies for the bill; and this fact will have due weight with the House

of Lords, the influence of the Bishops notwithstanding, for the Lords have never persisted in opposing a measure demanded by the country.

It is well for English education and for the wholesomeness of English social and religious life that the Established Church and the Roman Catholic Church in the last years of Tory reaction pushed matters to the extreme in 1902. The Churches then achieved what they had been working for since 1870. They destroyed the popularly elected school boards which came into existence in that year, and which had accomplished so much good work in London, Manchester, Birmingham, and most of the other large cities; and the Churches also threw upon the public funds the burden of maintaining their schools without parting to any appreciable degree with the control over them, which in the case of the Church of England had been exercised from as far back as 1811.

The Act of 1902 was the greatest Parliamentary victory which the Established Church or the Church of Rome had achieved in the modern history of England. But it was to be a short lived triumph; for the act, with its injustice to the Free Churches, and its hampering of educational progress, was to be the beginning of the end of ecclesiastical control. It aroused the Free Churches as they have never been aroused since the Test and Corporations Acts of Charles II were repealed in 1828. The present generation of Free Churchmen have been associated with no such agitations for religious equality as that which went on in England from 1902 to the general election of 1906. All the Free Churches came into the movement. The Wesleyan Church, which is usually the most conservative of the Nonconforming bodies, and more tinged with Toryism than the older Free Churches, was vigorously and whole heartedly of this agitation of 1902-6—quite as much as the Congregationalists and the Unitarians, who in the past have usually led in the assaults on the privileges of the Established Church.

Just as soon as the tax gatherers began the work of collecting the local taxes, in 1903, members of the Free Churches inaugurated the Passive Resistance move-

ment by refusing to pay that part of the tax which was to meet the municipal contribution for the maintenance of the Church of England and Roman Catholic schools. Between 1903 and the end of 1905 over 70,000 men and women appeared at the local police courts as Passive Resisters. In most of these cases magisterial orders were made for the seizure and sale of the defaulters' household belongings; but in 176 cases men and women went to prison rather than contribute as taxpayers to the maintenance of the sectarian schools.

In this way, and by action at the Free Church Conferences, the agitation was kept going until the General Election. Then Free Church electors demanded of the Parliamentary candidates for whom they voted that they would pledge themselves to amendments of the Act of 1902, by which all schools maintained at public expense should be brought under direct local popular control; that an end should be made to the system of parochial schools which had been developed by the Established Church and the Roman Catholic Church since 1811; that religious tests for school principals should be abolished; and that all sectarian or denominational religious teaching should be deleted from the curriculum of the elementary schools.

There were more Free Church candidates than at any preceding general election. Over 170 of them were elected to the House of Commons; and, moreover, practically all the Labor members who were chosen to Parliament—all the 51 members who now form the three distinct groups of Labor men in the House of Commons—were, like the Free Church members, pledged to legislation making an end of the sectarian school system and freeing all publicly maintained schools from the last vestige of clerical control.

#### An Ideal San Francisco

We have had occasion previously to say that we may expect a finer city to arise out of the ruins of San Francisco. How fine it may be should be a principal thought of those who are to rebuild it. There is now an opportunity to do with comparatively little loss what Napoleon III. did for Paris under the

plans of M. Hausmann. There new avenues were laid out with no regard to what destruction there might be of old buildings. So there is a plan for the improvement of Washington, making it more nearly than it now is an ideal city. Ex-Mayor Phelan and Architect Burnham had made the reconstruction of San Francisco their particular effort, and now the destruction of the city gives opportunity at reduced cost to lay out the best plans on a *tabula rasa*. It will cost much to condemn property for new avenues, but San Francisco has a very small debt, and it can be done. This—and this chiefly—might be a reason for considering the propositions to be brought before Congress to have the Government guarantee a loan of \$200,000,000 at a low interest for the rebuilding of the city. One is not inclined to approve the proposition, but if it could give us an ideally reconstructed city, the advantage would be great and even national. It will be remembered that the plan of the new capital of Australia, laid out in the wilderness, is to be made as perfect as possible; and the new manufacturing city of the Steel Corporation, in Indiana, will give the chance to devise an ideal plan for a manufacturing city of a hundred thousand people.

#### The Olympic Games

We offer our heartiest congratulations to the young American athletes at Athens, whose great lead over the representatives of the other nations of the world makes them practically certain victors of the Olympic Games of 1906. Their success is all the more notable as many of the best athletes in America are in our universities, and could not leave their work long enough to go to Athens, and four of the team who did go were hurt in an accident on the voyage over. Even thus handicapped, the Americans, at the present writing, have scored 56 points to Sweden's 24 and England's 14, their nearest competitors. The general opinion at the Stadium seems to be that "the American team is the best all-round athletic combination in the world." We hope to give our readers shortly an account of this great international event from the pen of the Director of the Amer-

ican Classical School at Athens. In the meantime, suffice it to say that, from the time of the first Olympic Games, in 776 B. C., up to the present, the nation that has achieved the most in athletics has also led the world in intellectual prowess.

**The Index Still Busy** *L'Osservatore Romano*—the Vatican's organ—of April 6th announces these condemnations: "L'Infallibilité du pape et le Syllabus," by Paul Viollet; "Essai de philosophie religieuse" and "Le Réalisme chrétien et l'Idéalisme grec," both by Rev. P. Laberthoumière, a priest of the Oratory; "Il Santo," by Fogazzaro, a Senator of Italy. Now these are three striking instances which show the reactionary tendencies now at work in Rome. Viollet is a member of the Institute of France and Professor at the Sorbonne. A devout Catholic, he is less ultramontane than Gallican. He has a son, a priest, whose ordination was held up by the faculty of Saint Sulpice because the youth was a disciple of Loisy. Cardinal Richard, however, took the matter into his own hands, catechised the aspirant privately and agreed to his ordination on condition that young Viollet would forsake the study of scriptural subjects and turn to social questions. The author of the second and third books placed under the ban is a thoroly good priest, who has never been allied to the advanced scholars. Everybody loves and respects him. Probably his very goodness of heart led him into undertaking that reconciliation of the Church and science, which Rome forever balks at and rejects. He will probably submit; but it is doubtful if Viollet will do so, and almost certain that the third writer will refuse. "Il Santo" is the last of a trilogy, and is really a defense of the mystic life. Like all his countrymen, Papal as well as anti-papal, Fogazzaro looks upon the Papacy both as a political machinery and as an excellent museum of antiquities; as the former unbearable to mankind, but as the latter the most attractive perhaps in the world. The hero of the condemned book is an ascetic. The place of mysticism and asceticism is found by Fogazzaro in the whirl of modern life and in the university of modern knowledge and research. Sci-

ence, he thinks, has still an honored place for the ascetic. He may prove to be right. But Rome repudiates this. She can allow no link between the tenth and the twentieth centuries; between Suliaco and the University of Naples or Bologna; between the Sorbonne of Aquinas and the College of France of Renan; no union, that is, between such wide apart views of life and ways of living. But in banning "Il Santo" Rome widens the breach in Italy not indeed between the whites and blacks, the progressives and the Jesuits, but between the Vatican and the Italian nation. Grant to Pius X the years of his namesake, Pius IX or those of Leo XIII, and, if he continues to walk this road the Catholic Church will suffer irreparable loss. It is Loisy's turn next, and he cannot recant.

It is while Archbishop Ireland is in Rome that the news comes that the Papal authorities have decided that the millions paid by our Government to the Dominican, and, we suppose, other orders, is to be held by the Pope in Rome, and the income used in part to support the Church in the Philippines, and in part for the orders there. Something like that is what Archbishop Ireland has been seeking to accomplish, and we shall give him a good share of the credit for it. Another windfall is promised in the announcement that the Empress Eugenie's wealth of \$30,000,000 is by her will to go to the Roman Church. It is remembered that her only son died in South Africa, killed by a native assegai. On the other side there is the surprising announcement that in Plymouth, Pa., a Catholic priest, with his congregation of forty families, has asked to be received as a church by the Methodists. They are Poles.

In an address to Yale students at New Haven last Monday Secretary Taft discussed our duty to the Philippines along that high plane of beneficent duty which he has always held up before our country and which THE INDEPENDENT has so constantly urged. Among other things, he said that it is the duty of our country to give absolute free trade be-

tween the Islands and the United States. He believes it will come, and says it ought to come now. But Congressmen are afraid that if we do that it will somehow imply that Filipinos are citizens, and that ultimately they might constitute Territories and States. That is precisely what we hope will finally come to pass, with equal rights to them as to us, nothing less.

If any bureau in our Government is responsible for Father Sherman's starting on his march thru Georgia along the line led by his father in our Civil War, and if, as reported, several United States troopers are to accompany him in his effort to gather historical data, those that approved it were badly advised. We are not surprised that it provokes the sons and daughters of the Confederacy, so that the Acting Mayor of Savannah is reported to have said: "If it were left to me I would have him caught and hanged before he reached Savannah." There are other less sensational and irritating ways of getting historical records.

Soon it will be a poor sort of a town that does not have a nurses' home. There are now 200 such organizations in this country, where there were only fifty-three five years ago. There are hourly nurses, school nurses, contagious disease nurses, tuberculosis nurses, settlement nurses—all plying their trades in the home among those too poor to pay for the service, or those who can pay for a daily visit, but not for the full time of a trained nurse. The 500 nurses engaged in this beautiful work already form a sort of gild, not exactly a sisterhood or religious organization, but much like them, and very democratic—a fine new social vocation.

Twenty-six Russian writers, so called, protest against the insult by Americans to a Russian author and a Russian lady by "drawing attention to their private life." It surprises them and they express their "profound indignation." We are not aware of any insults by the American people. We have simply asked a serious question, and held our action in suspense, while waiting for information

whether the parties are or are not living in a state of marriage. We have the right to ask that the "private life" of those we entertain shall be reputable.

Can it be that Count Witte is really out of office? Is it possible that now, when the Duma is about to meet, his resignation has been tendered and accepted? We have heard of his resignation so many times, and of the victory of his reactionary enemies that we wait for further advices. It may be that he has resigned as Premier to become President of the Council of the Empire, which will make him President of the Upper House of the Duma.

The weeks are going by, and as yet we see no action taken by the United States Government to punish the members of the mob at Chattanooga which took a prisoner by force out of the custody of a United States court and killed him. We see it intimated that detectives have been carefully gathering evidence, and that indictments will follow. Courts are a mere mockery if such contempt is not punished; it must not be overlooked.

There has been a battle in Mount Carmel, Pa., between rioting miners and a troop of the State Mounted Police, as reported elsewhere. But this has been going on for days in the coal fields, dynamite and killing. In such a case what is most needed is vigorous suppression, and let those that stir up violence feel the weight of the law administered by determined sheriffs and police.

Exactly where the *London Times* is to get its money back in its proposal to go into the book business, and sell \$1,100,000 worth of books at one-tenth of the booksellers' price, is not clear. It is a strange attempt to break down a business by selling below cost, which we have been told in this country is illegitimate.

One must not be too English, you know, when he tries to be English, at least in his spelling. It is amusing to see the *London Athenæum* criticise the spelling in Breasted's "History of Egypt" for such "Americanisms" as "labouriously" and "vigourous."

## The New San Francisco

THE citizens of San Francisco, having literally passed thru the fire, are taking stock of what remains undamaged, and are now undertaking the creation of a new and better San Francisco, built upon the ruins of the old city. With the passing of time the largeness of the first estimates are being somewhat scaled. President Sheldon, of the Phoenix, has estimated the total loss of all the companies interested as low as \$60,000,000. The Insurance Commissioner of California, on the other hand, has lately estimated the insurance loss at \$175,000,000, which, altho less than last week's figures, is nevertheless now considered by New York experts familiar with the conditions in the burned city as being too high. There are many manifestations of the determination of merchants to rebuild and resume business. Clearings are being made. Permits to open safes are issuing, and the first permit for the erection of a new steel building was granted last Friday. The first car was run last week, with the Mayor of San Francisco as motorman. Altho the burned area, as shown in the accompanying diagram, is much larger than that in Chicago, there are abundant signs of the city's literally rising phoenix-like from its ashes, and that right speedily. The insurance companies are all arranging to pay their losses, and few, if any, will be unable to do so. One result of the San Francisco conflagration will undoubtedly be an increase in rates, to which there can be no reasonable objection. The Home of New York has already given notice of an increase in rates in the congested districts of Greater New York, and the Chicago Association has taken action looking toward a similar increase. As an evidence of the attitude of the various insurance companies regarding their San Francisco losses it may be said that the Liverpool and London and Globe Insurance Company,

of which H. W. Eaton is manager, announces that it will at the earliest possible moment satisfy its contracts at San Francisco. On account of the very large surplus of this company and its honorable career for fifty-seven years, no one has doubted but what the San Francisco losses of the Liverpool and London and Globe Insurance Company would be fully and promptly paid.

The Hartford Fire Insurance Company, of which George L. Chase is president, has voted to issue 7,500 additional shares of stock at \$500 per share, the par value being \$100. This adds \$3,750,000 to the present assets of \$18,061,926. Of this increase \$750,000 has been added to the capital and \$3,000,000 to the surplus, thereby increasing the capital stock from \$1,250,000 to \$2,000,000, and the net surplus, over and above capital stock, to exceeding \$8,000,000.

The accompanying cut from the Indianapolis News shows graphically the area covered by three great conflagrations of the United States at Chicago, Baltimore and San Francisco.

## The Continental Insurance Company

AN admirable brief history of the Continental Insurance Company of New York has been written by William Loring Andrews, one of the company's directors, well known as the author of several excellent works relating to the early history of New York, and also by reason of his connection, as trustee or otherwise, with prominent institutions devoted to art and letters. This fire insurance company's highly honorable and useful career was begun in 1853, its first policy having been issued in January of that year. It was in 1852 that a number of the city's most prominent merchants decided to organize a fire insurance company that should have ample capital and be guided in its operations by the best underwriting experience. New York's great fires of 1835 and 1845, which ruined so many companies, had discouraged investment in the shares of such corporations and left the people with inadequate insurance protection. Among the gentlemen whose regard for public interests led them to organize the Continental, and who became members of its first board of directors, were Abiel A. Low, Horace B. Claflin, Henry C. Bowen, Samuel D. Babcock, Hiram Barney, Wilson G. Hunt, Thomas Tileston, Joseph Battell, Simeon B. Chittenden, Aurelius B. Hull and William V. Brady. The last named, who had been Mayor of New York, was the company's first president. Mr. Hull is the only member of this original board who is still living. New York's largest fire company at that time had a capital of only \$300,000. So great was the public confidence inspired by the character of the incorporators of the Continental that its capital of \$500,000 was largely oversubscribed in two hours after the opening of the books. The company speedily attained high rank among institutions of its kind. Its losses in the Chicago fire of 1871 were nearly \$1,750,000. Four days after the beginning of that fire the directors held a meeting, and, after discussing the situation for only fifteen minutes, unanimously resolved to double the capital by adding \$500,000 in cash at once. This

sum they themselves subscribed before they left the room. Public confidence in their management was shown immediately thereafter by the stockholders and others, who subscribed more than \$1,000,000 for the new stock, altho only \$500,000 could be accepted. Thirteen months later, the great fire in Boston caused an additional loss of \$700,000. The directors promptly subscribed \$400,000 to meet an assessment, and were speedily sustained by stockholders and other capitalists, who subscribed more than \$1,000,000, or nearly three times as much as could be taken. By such prompt and vigorous action in all unexpected situations, as well as by the exceptional ability of its official management, the company has continually strengthened itself in public estimation. Its growth is indicated by its report at the beginning of the present year, when its assets were \$16,384,000. Having a capital of \$1,000,000, it had accumulated a net surplus of nearly \$8,500,000. The reader of Mr. Andrews's history must be impressed by the wisdom which has been shown in the selection of the company's chief officers. These have been experts and recognized authorities in the field of fire insurance, and they were advanced by well-deserved promotion. George T. Hope, president for twenty-eight years (including the Civil War, and the Chicago and Boston fires), began with the company as its first secretary, bringing much practical experience to the duties of that office. President Lamport rose to the highest place from twenty-eight years of service below it. President Francis C. Moore, whose books on fire insurance are recognized at home and abroad as standard authorities, served as a clerk twelve years and eight years as vice-president, before his fourteen years as chief executive. Mr. Henry Evans, now president, was fitted for the highest rank by a quarter of a century of excellent work in subordinate offices. Promotion for merit, following careful selection, has served the company's interests. Thus is common sense effectively used in the management of corporations. Mr. Andrews's book contains good photographs of the officers we have named, and of the Continental's office buildings.

No. 2997

## Survey of the World

### Freight Rates for the Oil Trust

President Roosevelt sent to Congress, on the 4th, a special message, accompanying Commissioner Garfield's report concerning railroad freight rates in connection with the oil industry. The Commissioner's investigation was made in response to a resolution adopted by the House on February 15th, 1905. It relates chiefly to rate discrimination in favor of the Standard Oil Company. Mr. Roosevelt remarks that the report is "of capital importance" in view of the effort now being made to enlarge the Interstate Commerce Commission's powers. The facts set forth in it, he says, are for the most part not disputed, and dispute as to the inferences drawn from them is limited to the question whether the transactions are or are not technically legal:

"The report shows that the Standard Oil Company has benefited enormously up almost to the present moment by secret rates, many of these secret rates being clearly unlawful. This benefit amounts to at least three-quarters of a million a year. This three-quarters of a million represents the profit that the Standard Oil Company obtains at the expense of the railroads, but of course the ultimate result is that it obtains a much larger profit at the expense of the public."

Shortly after these secret rates were discovered by the Commissioner, he continues, the majority of them were corrected by the railroads. This was an acknowledgment that they were wrong, but yet had been persevered in until exposed. The Department of Justice will take up the question of instituting prosecutions "in at least certain of the cases." The hands of the Government have been greatly strengthened by the recent decision of the Supreme Court which permits the Government to examine the books and records of any corporation en-

gaged in interstate commerce, but it is most desirable (the President says) to enact the Knox bill, in order that the interpretation of the immunity provision, as set forth in Judge Humphrey's recent decision, may be corrected. Concerning favoritism in open rates, the President says:

"But in addition to these secret rates the Standard Oil profits immensely by open rates, which are so arranged as to give it an overwhelming advantage over its independent competitors. The refusal of the railroads in certain cases to prorate produces analogous effects. Thus in New England the refusal of certain railway systems to prorate has resulted in keeping the Standard Oil in absolute monopolistic control of the field, enabling it to charge from three to four hundred thousand dollars a year more to the consumers of oil in New England than they would have had to pay had the price paid been that obtaining in the competitive fields. This is a characteristic example of the numerous evils which are inevitable under a system in which the big shipper and the railroad are left free to crush out all individual initiative and all power of independent action because of the absence of adequate and thoroughgoing Governmental control. Exactly similar conditions obtain in a large part of the West and Southwest."

It is not possible, the President says, to put into figures the exact amount by which the Standard profits thru the gross favoritism shown to it in connection with the open rates. This profit is derived largely from the higher prices which complete control of the market enables it to exact. He points to parts of the report which show how the law is evaded by treating as State commerce what is in reality merely a part of interstate commerce. This device is employed on the New York Central and other roads in such fashion as to amount to thwarting the purpose of the law.

"It is unfortunately not true that the Standard Oil Company is the only great corporation which in the immediate past has benefited, and

is at this moment benefiting, in wholly improper fashion by an elaborate series of rate discriminations, which permit it to profit both at the expense of its rivals and of the general public. The Attorney-General reports to me that the investigation now going on as to the shipments by the Sugar Trust over the trunk lines running out of New York city tends to show that the Sugar Trust rarely if ever pays the lawful rate for transportation, and is thus improperly, and probably unlawfully, favored at the expense of its competitors and of the general public."

#### Remedies Proposed by the President

Such investigations as the one made by the Commissioner in this case disprove, Mr. Roosevelt says, the allegation that to confer upon some governmental body the power of supervision and control over interstate commerce will tend to weaken individual initiative. On the contrary, the proper play for individual initiative can be secured only by such governmental supervision as will curb those monopolies which crush it out. Without such aid from the Government the railroads themselves cannot defend the interests of their stockholders against "one of these great corporations loosely known as Trusts":

"In the effort to prevent the railroads from uniting for improper purposes we have very unwisely prohibited them from uniting for proper purposes—that is, for purposes of protection to themselves and to the general public as against the power of the great corporations. They should certainly be given power thus to unite on conditions laid down by Congress, such conditions to include the specific approval of the Interstate Commerce Commission of any agreement to which the railroads may come. In addition to this, the Government must interfere thru its agents to deprive the railroad of the ability to make to the big corporations the concessions which otherwise it is powerless to refuse. The Government should have power by its agents to examine into the conduct of the railways—that is, the examiners under the direction of the Interstate Commerce Commission should be able to examine as thoroly into the affairs of the railroad as bank examiners now examine into the affairs of banks."

Evil conditions, such as the report discloses, cannot be materially improved, he continues, merely by lawsuits. The Commission should have power to make its decisions take effect at once, subject only to such action by the courts as is demanded by the Constitution. In conclusion, the President speaks as follows of the free alcohol bill and of the oil

and coal lands which the Government now controls:

"The Standard Oil Company has, largely by unfair or unlawful methods, crushed out home competition. It is highly desirable that an element of competition should be introduced by the passage of some such law as that which has already passed the House, putting alcohol used in the arts and manufactures upon the free list. Furthermore, the time has come when no oil or coal lands held by the Government, either upon the public domain proper or in territory owned by the Indian tribes, should be alienated. The fee to such lands should be kept in the United States Government whether or not the profits arising from it are to be given to any Indian tribe, and the lands should be leased only on such terms and for such periods as will enable the Government to keep entire control thereof."

#### The Commissioner's Report

Commissioner Garfield's report says that the general result of the investigation has been to disclose the existence of numerous and flagrant discriminations by the railroads in behalf of the Standard Oil Company, which has been found to enjoy in almost every section of the country some unfair advantage over its competitors. Freight discrimination, in some instances affecting enormous areas, has been granted in various forms—by secret or semi-secret rates, by the arrangement of open rates, by classification and rules of shipment, and by the treatment of private tank cars. It is shown in detail how monopolistic control of markets in large areas has been obtained and held by an ingenious adaptation of open rates to the Standard's sources of supply, by the use of secret low rates within State limits, by combinations of these State rates with interstate rates, by weight regulations, and by numerous other devices familiar to expert rate makers and traffic managers. Rebates were not actually paid in recent years except in California, but rebates would not have been more effective or more unjust than these other forms of discrimination. The report is full of technical details, which cannot be summarized in a brief statement.—Officers of the Standard Oil Company, replying to the report and the message, deny that the company has been or is now knowingly engaged in practices which are unlawful. The pipe line system was not, they assert, developed as the result of

special agreements with railroad companies (as the Commissioner says), but in the face of the violent hostility of the railroads. If railroad companies have made unjust rates, they, and not the Oil Company, should be blamed. If there was discrimination in violation of law, why did not the Commission prosecute? The National Government, it is asserted, has no control over State rates. Concerning the President's remark that only the inferences, but not the facts, are disputed, the officers say: "The Standard Oil Company furnished the facts, and a man with a muck rake dug out such as, under his manipulation, he felt would prove damaging."—The Senate, on the 4th, by unanimous vote, passed an amendment to the pending railroad bill, providing that corporations transporting oil by pipe lines should be held and treated as common carriers under the supervision of the Commission.

#### Agreement on the Rate Bill

All controversy in the Senate over the provisions of the Railroad Rate bill concerning review of the Commission's orders by the courts appears to have been settled by a proposed amendment, to which the name of Mr. Allison is attached, vesting in the Circuit Court of the district containing the carrier's principal office jurisdiction to hear and determine any suit brought to enjoin, set aside, annul, or suspend such orders. This has the approval of the President and of nearly all of the Republican Senators. As it is satisfactory to Mr. Aldrich, some say that the President changed his attitude and accepted a broad review by the courts. But the President insists that the bill, if so amended, will be just what he has sought from the beginning. It is explained by some that under the proposed amendment the scope of the judicial review, whether broad or narrow, would be determined by the court.—In New York, a Federal grand jury has reported seven indictments in the Sugar Trust rebate cases. The defendants are the New York Central Railroad Company, Vice-president Guilford and Traffic Manager Pomeroy of that company, The American Sugar Refining Company, and C.

Goodloe Edgar and Edwin Earle, sugar merchants of Detroit. If found guilty the four persons accused may be punished by imprisonment.—The Baltimore & Ohio Railroad Company, apparently owing to the recent official inquiry concerning its relation to the coal industry, has sold for about \$5,000,000 its controlling interest in one of the largest coal mining companies served by its lines.

#### Miners Decide Not to Strike

At their convention in Scranton, last week, the anthracite miners decided that there should be no strike, and that they would accept the original proposition of the operators, or railroad companies, which was that the terms of the Arbitration Commission's award should be continued in force for another term of years. Such a result had not been expected by the people of the mining districts or by the newspaper correspondents who had assembled in Scranton. On the first day of the convention, a majority of the delegates appeared to be in favor of ordering a strike. While President Mitchell urged them to decide for themselves, he controlled the situation, and by his influence, unobtrusively exerted, the action of the convention was determined. The whole question was referred to the General Scale Committee, and then, by that committee to the small sub-committee which had been conducting negotiations with the operators. Recommendations were to be reported to the convention on the 5th. As submitted on that day by President Mitchell, they were that the union should resume work on the basis of the Commission's award for such a period as the two parties should agree upon, "provided that all men who suspended work on April 1st or since that time, or who have been dismissed because they stated that they would refuse to work if a strike should be declared, are reinstated in their former positions and working places." This had been signed by every member of the Scale Committee, and the convention approved it by a unanimous vote. A conference with the operators' committee was held on the 7th. An agreement was speedily reached and signed, providing that the terms of the Commission's

award should be accepted for three years more, and that all men who had not committed violence to persons or property should be re-employed in their old positions.—In his address to the convention, Mr. Mitchell said that neither wages nor conditions were satisfactory to him, but all the possibilities should be considered. If he were sure that a strike would be successful he would advise the union to strike. But he feared that the miners were not in shape for a strike, and he knew that many of them were not in sympathy with a strike movement. "We must retain what we have rather than lose what we have gained in the last two strikes." On the first day of the convention he conferred for two hours with Charles P. Neill, Federal Commissioner of Labor. Dr. Neill said that he bore no message from President Roosevelt, whom he had not seen for several weeks and who did not know that he had come to Scranton.—There has been no more fighting at Mt. Carmel. Twenty-four warrants were issued for the arrest of the troopers, but at last reports had not been served. These mounted police are called Cossacks by the miners who attacked them, most of whom are Russians or Slavs. Governor Pennypacker issued on the 2d a proclamation, calling upon all citizens by their conduct, example and utterances to assist in upholding the law:
